All comments received before September 12, 1980 will be considered before final action is taken. Late filed comments will be considered so far as practicable. All comments will be available for inspection at the Dockets Branch, Materials Transportation Bureau, between the hours of 8:30 a.m. to 5:00 p.m., before and after the closing date for comments. No public hearing is contemplated, but one may be held at a time and place set in a Notice in the **Federal Register** if requested by an interested person desiring to comment at a public hearing and raising a genuine issue.

(49 U.S.C. 1672; 49 CFR Part 1.53(a), Appendix A of Part 1 and Appendix A of Part 106).

Issued in Washington, D.C., on August 12, 1980.

Melvin A. Judah,

Acting Associate Director for Pipeline Safety Regulation, Materials Transportation Bureau.

BILLING CODE 4910-60-M

[Docket No. 79-7W, Notice 1]

Transportation of Natural and Other Gas by Pipeline; Petition for Waiver

The Champlin Petroleum Company has petitioned the Materials Transportation Bureau (MTB) for a waiver from compliance with the cathodic protection requirements to Subpart I of 49 CFR Part 192, requiring the installation of cathodic protection on the Champlin owned gas gathering pipelines in the Wilmington, California, oil fields.

The Champlin Petroleum Company operates approximately 500 oil producing wells in the Wilmington Oil Field, which is located within the boundaries of the city limits of Los Angeles and Long Beach, California. Incidental to the production of oil, a total of approximately 1,600,000 cubic feet a day of natural gas is produced by these wells. This gas is transported from the casing of each well by a Champlin owned gas gathering pipeline that is operated at a vacuum through royalty meters to the pipelines of another company.

Most gas gathering pipelines operate at a positive pressure because the natural gas is generally produced in confined underground reservoirs that are pressurized naturally by geology; however, in the case of the Champlin gas gathering pipelines, the gas is dissolved in the crude oil and has little "natural" pressure. This makes it necessary to remove the gas from the oil at the wellhead by a vacuum gas collection system which maintains a negative pressure, or vacuum, within all of the gas gathering lines.

The Federal regulations in 49 CFR 192.3 define a "gathering line" as a pipeline that transports gas from a current production facility to a transmission line or main. Furthermore, the regulations do not apply to onshore gathering of gas outside of an area within the limits of any incorporated or unincorporated city, town, or village, and, any designated residential or commercial area such as a subdivision, business, or shopping center, or community development. It is because parts of the Wilmington Oil Field lie within the city limits of Los Angeles and Long Beach that Champlin's gathering lines in these incorporated areas are regulated by the provisions of 49 CFR Part 192.

The gas gathering pipelines upstream of the royalty meters are installed entirely on Champlin's property, and do not cross any public areas. The property where the pipelines are installed is entirely fenced to exclude the general public, and is uninhabited except for the Champlin employees that are on the property during working hours. The fencing to exclude the general public is installed under a requirement of local regulatory agencies, and Champlin expects that these local requirements will keep the property in which the gas gathering pipelines are installed permanently uninhabited.

Because of the negative pressure maintained in the gas gathering lines, any opening in a pipeline (e.g., a hole caused by corrosion) would cause air to enter the system rather than a leak of gas to the atmosphere. The gas received at the processing plant to Long Beach is monitored continously for air content, and this monitoring permits early detection of any leak occurring on a Champlin owned gas gathering pipeline.

The majority of the gas gathering lines are installed above ground, but many thousands of feet of bare steel lines are underground. In the event of a leak occurring in the pipe, the system supplying the royalty meter is shut down until the pipeline is repaired. During 1977 and 1978, Champlin states that a total of 12 leaks occurred in the gas gathering pipelines due to external corrosion. These leaks were repaired at a cost of approximately $200 each, or an average of only $1,200 per year. The cost to install cathodic protection on the scattered buried portions of the gas gathering system is estimated to be $290,000 with operating and maintenance costs of $24,000 per year.

MTB is considering granting the requested waiver from the cathodic protection requirements of Subpart I of 49 CFR Part 192 for the following reasons:

1. The general public is excluded by fences from the incorporated, but uninhabited, parts of the cites where the gas gathering pipelines are located.

2. Because the pipelines operate at a negative pressure, any corrosion pits or holes will ingest air into the pipelines rather than exhaust gas; and, with a negative pressure, these gas gathering pipelines cannot rupture due to over pressure.

3. To further insure operating safety, the gas received at the processing plant through this pipeline system is monitored continuously for air content which permits early detection of corrosion holes in the gas gathering pipeline system. Upon confirmation of air at the processing plant, a check of the air content of the various royalty meters is made immediately to determine the exact location of the hole, and the defective pipe section is shut down until repairs are made.

4. The cost to install cathodic protection on the scattered buried portions of the gas gathering system (Champlin estimates $290,000), and the annual operation and maintenance costs of a cathodic protection system (Champlin estimates $24,000) do not appear to have a corresponding safety benefit in view of the inacessibility of the public and the fact that leaks do not release gas during normal operation of the pipelines.

Interested persons are invited to comment on the proposed waiver by submitting in triplicate such data, views, or arguments as they may deire. Communciations should identify the docket and notice numbers and be submitted to the Dockets Branch, Materials Transportation Bureau, Department of Transportation, Washington, D.C. 20590.

All comments received before September 19, 1980, will be considered before final action is taken. Late filed comments will be considered so far as practical. All comments will be available for public review at the Dockets Branch of the Materials Transportation Bureau in Room 8426, 400 Seventh Street, S.W., Washington, D.C., between the hours of 8:30 a.m. and 5:00 p.m.

(49 U.S.C. 1672; 49 CFR 1.53, Appendix A of Part 1, and Appendix A of Part 106)

Issued in Washington, D.C., on August 11, 1980.

Melvin A. Judah,

Acting Associate Director for Pipeline Safety Regulation, Materials Transportation Bureau.

BILLING CODE 4810-22-M

Internal Revenue Service

Art Advisory Panel; Closed Meeting

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of Closed Meeting of Art Advisory Panel.

SUMMARY: A closed meeting of the Art Advisory Panel will be held in Washington, D.C.

DATE: The meeting will be held September 17 and 18, 1980.

FOR FURTHER INFORMATION CONTACT: Tom Hartnett, T:C:E:V, 1111 Constitution Avenue, N.W., Room 5547, Washington, D.C. 20224. Telephone No. 202–566–4427 (Not a toll-free number.)

Notice is hereby given pursuant to section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. app. (1976), that a closed meeting of the Art Advisory Panel will be held on September 17 and 18, 1980 beginning at 10:00 a.m. in Room 3313, Internal Revenue Building, 1111 Constitution Avenue, N.W., Washington, D.C. 20224.

The agenda will consist of the review and evaluation of the acceptability of market value appraisals of works of art involved in Federal Income, Estate, or Gift tax returns. This will involve the discussion of material in individual tax returns made confidential by the provisions of section 6103 of Title 26 of the United States Code.

A determination as required by section 10(d) of the Federal Advisory Committee Act has been made that these meetings are concerned with matters listed in section 552b(c)(3), (4), (6), and (7) of Title 5 of the United States Code, and that the meetings will not be open to the public.

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the Treasury Directive appearing in the **Federal Register** for Wednesday, November 8, 1978. (43 FR 52122.)

Jerome Kurtz,
Commissioner.

Performance Review Board

AGENCY: Internal Revenue Service, Treasury.

ACTION: Notice of members of performance review board.

SUMMARY: The members of a Senior Executive Service Performance Review Board for Inspection must be published in the **Federal Register**.

DATE: Performance Review Board effective August 1, 1980.

FOR FURTHER INFORMATION CONTACT: James W. House, RM:P:X, 1111 Constitution Avenue, N.W., Room 1213, Washington, D.C. 20224, Telephone No. 202–566–4633, (not a toll free number).

SUPPLEMENTARY INFORMATION: Pursuant to section 4314(c)(4) of the Civil Service Reform Act of 1978, the members of the Internal Revenue Service's Senior Executive Service Performance Review Board for Inspection are as follows: William E. Williams, Chairman, Deputy Commissioner. Leon C. Wigrizer, Inspector General, Department of the Treasury. Lester Stein, Deputy Chief Counsel (Technical).

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the Treasury Directive appearing in the **Federal Register** for Wednesday, November 8, 1978. (43 FR 52122.)

William E. Williams,
Deputy Commissioner.

BILLING CODE 4830-01-M

Office of the Secretary

[Department Circular, Public Debt Series No. 26–80]

Treasury Notes of August 31, 1982 Series V–1982; Auction

August 13, 1980.

1. Invitation For Tenders

1.1. The Secretary of the Treasury, under the authority of the Second Liberty Bond Act, as amended, invites tenders for approximately $4,500,000,000 of the United States securities, designated Treasury Notes of August 31, 1982, Series V–1982 (CUSIP No. 912827 KZ 4). The securities will be sold at auction with bidding on the basis of yield. Payment will be required at the price equivalent of the bid yield of each accepted tender. The interest rate on the securities and the price equivalent of each accepted bid will be determined in the manner described below. Additional amounts of these securities may be issued to Government accounts and Federal Reserve Banks for their own account in exchange for maturing Treasury securities. Additional amounts of the new securities may also be issued at the average price to Federal Reserve Banks, as agents for foreign and international monetary authorities, to the extent that the aggregate amount of tenders for such accounts exceeds the aggregate amount of maturing securities held by them.

2. Description of Securities

2.1. The securities will be dated September 2, 1980, and will bear interest from that date, payable on a semiannual basis on February 28, 1981, and each subsequent 6 months on August 31 and February 28, until the principal becomes payable. They will mature August 31, 1982, and will not be subject to call for redemption prior to maturity.

2.2. The income derived from the securities is subject to all taxes imposed under the Internal Revenue Code of 1954. The securities are subject to estate, inheritance, gift or other excise taxes, whether Federal or State, but are exempt from all taxation now or hereafter imposed on the principal or interest thereof by any State, any possession of the United States, or any local taxing authority.

2.3. The securities will be acceptable to secure deposits of public monies. They will not be acceptable in payment of taxes.

2.4. Bearer securities with interest coupons attached, and securities registered as to principal and interest, will be issued in denominations of $5,000, $10,000, $100,000, and $1,000,000. Book-entry securities will be available to eligible bidders in multiples of those amounts. Interchanges of securities of different denominations and of coupon, registered and book-entry securities, and the transfer of registered securities will be permitted.

2.5. The Department of the Treasury's general regulations governing United States securities apply to the securities offered in this circular. These general regulations include those currently in effect, as well as those that may be issued at a later date.

3. Sale Procedures

3.1. Tenders will be received at Federal Reserve Banks and Branches and at the Bureau of the Public Debt, Washington, D.C. 20226, up to 1:30 p.m., Eastern Daylight Savings Time, Wednesday, August 20, 1980. Noncompetitive tenders as defined below will be considered timely if postmarked no later than Tuesday, August 19, 1980.

3.2. Each tender must state the face amount of securities bid for. The minimum bid is $5,000 and larger bids must be in multiples of that amount. Competitive tenders must also show the yield desired, expressed in terms of an annual yield with two decimals, e.g., 7.11%. Common fractions may not be used. Noncompetitive tenders must show the term "noncompetitive" on the tender form in lieu of a specified yield. No bidder may submit more than one noncompetitive tender and the amount may not exceed $1,000,000.

3.3. All bidders must certify that they have not made and will not make any agreements for the sale or purchase of any securities of this issue prior to the deadline established in Section 3.1. for receipt of tenders. Those authorized to submit tenders for the account of customers will be required to certify that such tenders are submitted under the same conditions, agreements, and certifications as tenders submitted directly by bidders for their own account.

3.4. Commercial banks, which for this purpose are defined as banks accepting demand deposits, and primary dealers, which for this purpose are defined as dealers who make primary markets in Government securities and report daily to the Federal Reserve Bank of New York their positions in and borrowings on such securities, may submit tenders for account of customers if the names of the customers and the amount for each customer are furnished. Others are only permitted to submit tenders for their own account.

3.5. Tenders will be received without deposit for their own account from commercial banks and other banking institutions; primary dealers, as defined above; Federally-insured savings and loan associations; States, and their political subdivisions or instrumentalities; public pension and retirement and other public funds; international organizations in which the United States holds membership; foreign central banks and foreign states; Federal Reserve Banks; and Government accounts. Tenders from others must be accompanied by full payment for the amount of securities applied for (in the form of cash, maturing Treasury securities or readily collectible checks), or by a payment guarantee of 5 percent of the face amount applied for, from a commercial bank or a primary dealer.

3.6. Immediately after the closing hour, tenders will be opened, followed by a public announcement of the amount and yield range of accepted bids. Subject to the reservations expressed in Section 4, noncompetitive tenders will be accepted in full, and then competitive tenders will be accepted, starting with those at the lowest yields, through successively higher yields to the extend required to attain the amount offered. Tenders at the highest accepted yield will be prorated if necessary. After the determination is made as to which tenders are accepted, a coupon rate will be established, on the basis of a ⅛ of one percent increment, which results in an equivalent average accepted price close to 100.000 and a lowest accepted price above the original issue discount limit of 99.750. That rate of interest will be paid on all of the securities. Based on such interest rate, the price on each competitive tender allotted will be determined and each successful competitive bidder will be required to pay the price equivalent to the yield bid. Those submitting noncompetitive tenders will pay the price equivalent to the weighted average yield of accepted competitive tenders. Price calculations will be carried to three decimal places on the basis of price per hundred, e.g., 99.923, and the determinations of the Secretary of the Treasury shall be final. If the amount of noncompetitive tenders received would absorb all or most of the offering, competitive tenders will be accepted in an amount sufficient to provide a fair determination of the yield. Tenders received from Government accounts and Federal Reserve Banks will be accepted at the price equivalent to the weighted average yield of accepted competitive tenders.

3.7. Competitive bidders will be advised of the acceptance or rejection of their tenders. Those submitting noncompetitive tenders will only be notified if the tender is not accepted in full, or when the price is over par.

4. Reservations

4.1. The Secretary of the Treasury expressly reserves the right to accept or reject any or all tenders in whole or in part, to allot more or less than the amount of securities specified in Section 1, and to make different percentage allotments to various classes of applicants when the Secretary considers it in the public interest. The Secretary's action under this Section is final.

5. Payment and Delivery

5.1. Settlement for allotted securities must be made at the Federal Reserve Bank or Branch or at the Bureau of the Public Debt, wherever the tender was submitted. Settlement on securities allotted to institutional investors and to others whose tenders are accompanied by a payment guarantee as provided in Section 3.5., must be made or completed on or before Tuesday, September 2, 1980. Payment in full must accompany tenders submitted by all other investors. Payment must be in cash; in other funds immediately available to the Treasury in Treasury bills, notes or bonds (with all coupons detached) maturing on or before the settlement date but which are not overdue as defined in the general regulations governing United States securities; or by check drawn to the order of the institution to which the tender was submitted, which must be received from institutional investors no later than Tuesday, August 26, 1980. When payment has been submitted with the tender and the purchase price of allotted securities is over par, settlement for the premium must be completed timely, as specified in the preceding sentence. When payment has been submitted with the tender and the purchase price is under par, the discount will be remitted to the bidder. Payment will not be considered complete where registered securites are requested if the appropriate identifying number as required on tax returns and other documents submitted to the Internal Revenue Service (an individual's social security number or an employer identification number) is not furnished. When payment is made in securities, a cash adjustment will be made to or required of the bidder for any difference between the face amount of securities presented and the amount payable on the securities allotted.

5.2. In every case where full payment has not been completed on time, an amount of up to 5 percent of the face amount of securities allotted, shall, at the discretion of the Secretary of the Treasury, be forfeited to the United States.

5.3. Registered securities tendered in payment for allotted securities are not required to be assigned if the new securities are to be registered in the same names and forms as appear in the registrations or assignments of the securities surrendered. When the new securities are to be registered in names and forms different from those in the inscriptions or assignments of the securities presented, the assignment should be to "The Secretary of the Treasury for (securities offered by this circular) in the name of (name and taxpayer identifying number)." If new securities in coupon form are desired, the assignment should be to "The Secretary of the Treasury for coupon (securities offered by this circular) to be delivered to (name and address)." Specific instructions for the issuance and delivery of the new securities, signed by the owner or authorized representative, must accompany the securities presented. Securities tendered in payment should be surrendered to the Federal Reserve Bank or Branch or to the Bureau of the Public Debt, Washington, D.C. 20226. The securites must be delivered at the expense and risk of the holder.

5.4. If bearer securities are not ready for delivery on the settlement date, purchasers may elect to receive interim certificates. These certificates shall be issued in bearer form and shall be exchangeable for definitive securities of

Sunshine Act Meetings

this issue, when such securities are available, at any Federal Reserve Bank or Branch or at the Bureau of the Public Debt, Washington, D.C. 20228. The interim certificates must be returned at the risk and expense of the holder.

5.5. Delivery of securities in registered form will be made after the requested form of registration has been validated, the registered interest account has been established, and the securities have been inscribed.

6. General Provisions

6. As fiscal agents of the United States, Federal Reserve Banks are authorized and requested to receive tenders, to make allotments as directed by the Secretary of the Treasury, to issue such notices as may be necessary, to receive payment for and make delivery of securities on full-paid allotments, and to issue interim certificates pending delivery of the definitive securities.

6. The Secretary of the Treasury may at any time issue supplemental or amendatory rules and regulations governing the offering. Public annoucement of such changes will be promptly provided.

Gerald Murphy,
Acting Fiscal Assistant Secretary.

Supplementary Statement

The announcement set forth above does not meet the Department's criteria for significant regulations and, accordingly, may be published without compliance with the Departmental procedures applicable to such regulations.

VETERANS ADMINISTRATION

National Memorial Cemetery of the Pacific; Availability of Final Environmental Impact Statement

Notice is hereby given that a document entitled "Final Environmental Impact Statement for the National Memorial Cemetery of the Pacific, Honolulu, Hawaii," dated March 1980, has been prepared as required by the National Environmental Policy Act of 1969.

The preferred course of action is to develop the existing National Cemetery as conceptually delineated in a revised master plan study. Elements of this revised conceptual master plan include: an administrative building; garden crypt/columbarium facilities; expanded service facility; and site improvements at the Punchbowl Overlook. There are several additional minor projects, but the above listing is the most significant.

The Veterans Administration is issuing this final Environmental Impact Statement in response to comments received on the original draft EIS dated July 1979, and the Revised Draft EIS dated March 1980. As a result of serious public concern about the parking facility, this element of the master plan was deleted. The revised master plan also eliminates the mini-bus/train element, and reduces the scope of the administration building.

The Final Statement responds to comments received on Revised Draft EIS (closing date for 45 day comment period was May 5, 1980).

The document is being placed for public examination at the Veterans Administration, Washington, D.C. Persons wishing to examine this report or to request a copy can do so at the following office: Mr. Williard Sitler, P.E., Director, Office of Environmental Affairs (003A), Room 1027A, Veterans Administration, 810 Vermont Avenue, N.W., Washington, D.C. 20420.

Dated: August 1, 1980.

By direction of the Administrator.

Maury S. Cralle, Jr.,
Associate Deputy Administrator.

Part II

Environmental Protection Agency

Rebuttable Presumption Against Registration (RPAR) and Continued Registration of Pesticide Products Containing Captan

V 45 AG 1 8 80 UMI

ENVIRONMENTAL PROTECTION AGENCY

[FRL 1568-7; OPP-30000/34]

Pesticide Programs; Rebuttable Presumption Against Registration (RPAR) and Continued Registration of Pesticide Products Containing Captan

AGENCY: Office of Pesticide Progams, Environmental Protection Agency (EPA).

ACTION: Notice of rebuttable presumption.

SUMMARY: N-trichloromethylthio-4-cyclohexene-1,2-dicaroximide (captan) has been found to exceed certain risk criteria set forth in 40 CFR 162.11. This notice requests registrants and other interested persons to submit rebuttals and other information on the presumption and to submit any other data on the risks and benefits of this pesticide chemical. This notice is the first of several which will give public notification of the Agency's progress in reviewing this chemical.

DATE: Rebuttal evidence and other information must be received on or before October 2, 1980.

ADDRESS MATERIAL TO: Document Control Officer, Chemical Information Division (TS-793), Office of Pesticides and Toxic Substances, EPA, Rm. 447, East Tower, 401 M St. SW, Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Jim Skaptason, Special Pesticide Review Division (TS-791), EPA, Office of Pesticide Programs, Crystal Mall #2, Rm. 711C, 401 M St., SW, Washington, D.C. 20460 (703) 557-7400.

SUPPLEMENTARY INFORMATION: The Deputy Assistant Administrator, Office of Pesticide Programs, EPA, has determined that a rebuttable presumption exists against registration and continued registration of all pesticide products containing captan.[1]

Issuance of this RPAR notice means that potential adverse effects associated with the use of captan have been identified. Further examination will determine if they do exist and, if so, whether they are unreasonable.

Issuance of this RPAR notice means that potential adverse effects associated with the use of captan have been identified. Further examination will determine if they do exist and, if so, whether they are unreasonable.

[1] A position document on captan containing an appendix of references, background information and other pertinent material is published with this notice prepared by the Agency.

I. Regulatory Provisions

A. *General.* 40 CFR 162.11, a regulation implementing the Federal Insecticide, Fungicide, and Rodenticide Act, as amended (FIFRA) (7 U.S.C. 136 *et seq.),* provides that a rebuttable presumption against registration arises if the Agency determines that a pesticide meets or exceeds any of the risk criteria relating to acute and chronic toxic effects specified in 40 CFR 162.11(a)(3). If it is determined that a rebuttable presumption exists, regulations require that the registrant be notified by certified mail and provided an opportunity to submit evidence in rebuttal of the presumption. The public should also be given notice of the bases for the presumption to allow for comment and to solicit additional information relevant to the presumption.

A notice of rebuttable presumption against registration is issued when the evidence related to risk meets the criteria given in § 162.11(a)(3). *A notice of rebuttable presumption against registration and continued registration of a pesticide is not a notice of intent to cancel the registration. It may or may not lead to cancellation.* The notice of intent to cancel is issued only after risks and benefits of a pesticide are carefully considered and it is determined the pesticide may generally cause unreasonable adverse effects to humans or the environment.

All registrants and applicants for registration are invited pursuant to 40 CFR 162.11(a)(4) to submit evidence in rebuttal of the presumptions listed in Part II of this notice. In the case of oncogenicity they are asked to submit information relating to the assessment of oncogenic risks as specified in the Agency's Interim Procedures and Guidelines for Health Risk and Economic Impact Assessment of Suspected Carcinogens (41 FR 21402; May 25, 1976). Registrants and other interested parties may submit data on benefits which they believe would justify registration or continued registration. Any registrant may petition the Agency to voluntarily cancel a current registration pursuant to Section 6(a)(1) of FIFRA.

B. *Rebuttal Criteria.* Section 162.11(a)(4) provides that a registrant may rebut the presumption by sustaining the burden or providing:

(1) In the case of a pesticide falling under the acute toxicity or lack of emergency treatment criteria, "that when considered with the formulation, packaging, method of use, and proposed restrictions on the directions for use and widespread and commonly recognized practices of use, the anticipated exposure to an applicator or user and to local, regional, or national populations of nontarget organisms is not likely to result in any significant actue adverse effects" (40 CFR 162.11(a)(4)(i));

(2) In the case of a pesticide falling under the chronic toxicity criteria, "that when considered with proposed restrictions on use and widespread and commonly recognized practices of use, the pesticide will not concentrate, persist or accrue to levels in man or the environment likely to result in any significant chronic adverse effects" (40 CFR 162.11(a)(4)(ii)); or

(3) In either case, that "the determination by the Agency that the pesticide meets or exceeds any of the criteria for risk was in error" (40 CFR 162.11(a)(4)(iii)).

C. *Benefits Information.* 40 CFR 162.11(a)(5)(iii) provides that a registrant "may submit evidence as to whether the economic, social and environmental benefits of the use of the pesticide subject to the presumption outweigh the risk of use." If the risk presumptions are not rebutted, the benefit evidence[2] submitted by the registrant, applicants and other interested persons will be considered by the Administrator in determining appropriate regulatory action. Section 162.11(a)(5)(iii) provides specifically that if "benefits appear to outweigh risks," the Administrator may issue a notice of intent to hold a hearing pursuant to Section 6(b)(2) of FIFRA. This is to determine whether the registration(s) should be cancelled or application(s) denied. If the "benefits do not appear to outweigh the risks, the Administrator shall issue a notice pursuant to Section 3(c)(6) or Section 6(b)(1) of the Act, as appropriate." If at any time the Administrator determines that a pesticide poses an "imminent hazard" to humans or the environment, a notice of suspension may be issued according to Section 6(c) of the Act.

[2] Registrants or other interested persons desiring to submit benefit information should consider providing data on the following subject, along with any other relevant material:

1. Identification of the pesticide's major uses, including estimated quantities used by crop or other application.
2. Identification of the pesticide's minor uses, including estimated quantities utilized by category such as lawn, garden and household applications.
3. Identification of registered alternative products for the uses in (1) and (2) above, including an estimate of their availability.
4. Determination of the difference in costs to the user of providing equivalent pesticide treatment with any available substitute products.
5. Assessment of regulation impact upon user productivity (e.g., yield per acre and/or total output) from using substitute pesticides or from employing no other pesticides.
6. If the impacts upon user costs or productivity are significant, a qualitative assessment of the regulations's impact on production of major agricultural commodities and retail food prices of such commodities.

II. Presumptions

Registrations and applications for registration of pesticide products containing captan meet or exceed the 40 CFR 162.11(a)(3) risk criteria relating to oncogenicity and mutagenicity. The Agency's basis for concluding that these risk criteria have been met or exceeded is a part of the "Captan: Position Document I" which follows. Copies of attachments to the Position Document not published with this notice are available for public inspection in the Special Pesticide Review Division office. Information protected from disclosure pursuant to FIFRA Section 10 cannot be provided. Specific inquiries concerning the Position Document as well as requests for access to these files should be directed to Section Head Jim Skaptason, Special Pesticide Review Division (TS-791), EPA, Rm. 711C, Crystal Mall #2, 401 M St. SW., Washington, D.C. 20460 (703/557-7400).

A. *Oncogenicity.* 40 CFR 162.11(a)(3)(ii)(A) provides that a rebuttable presumption shall arise if a peticide "(i)nduces oncogenic effects in experimental mammalian species or in man as a result of oral, inhalation or dermal exposure * * *." The preamble to the Agency's Interim Procedures and Guidelines for Health Risk and Economic Impact Assessment of Suspected Carcinogeris (41 FR 21402, May 25, 1976) states: "a substance will be considered a presumptive cancer risk when it causes a statistically significant excess incidence of benign or malignant tumors in humans or animals."

The Agency has concluded that on the basis of scientific studies and information summarized in the Position Document: (1) All registrations and applications for registration of pesticide products containing captan exceed this risk criterion, (2) a rebuttable presumption exists against new or continued registration of such products.

B. *Mutagenicity.* 40 CFR 162.11(a)(3)(ii)(A) provides that a rebuttable presumption arises if a pesticide "* * * induces mutagenic effects, as determined by multitest evidence."

The Agency has concluded that on the basis of scientific studies and information summarized in the Position Document: (1) All registrations and applications for registration of pesticide products containing captan exceed this risk criterion; and (2) a rebuttable presumption exists against new or continued registration of such products.

III. Additional Grounds for Review

EPA is aware that some data have associated captan with teratogenic, fetotoxic, and hypersensitivity effects. Other data indicate that certain uses of captan may cause significant acute toxicity to aquatic wildlife. These data and analyses currently available relative to these effects are not the bases for the issuance of a rebuttable presumption. The Agency, however, specifically solicits further evidence bearing on these possible adverse effects. All comments, information and related analysis received with respect to these potential adverse effects may serve as a basis for a final decision on registering pesticides containing captan.

IV. Rebuttal Submission Procedures

All registrants and applicants for registration listed following this announcement are being notified by certified mail of the rebuttable presumption against registration and continued registration of their products.

Registrants and applicants for registration have 45 days from the date this notice is sent on or before September 29, 1980, to submit evidence in rebuttal of the presumption. The Administrator may, for good cause shown, grant an additional 60 days during which such evidence may be submitted. Notice of any extension will appear in the **Federal Register.**

A registrant or applicant for registration may assert a business confidentiality claim covering part or all of the rebuttal information submitted. The registrant or applicant may assert the claim by placing on or attaching to the information a cover sheet, stamped or typed legend, or other suitable notice employing language such as "trade secret," "proprietary," or "company confidential." Allegedly confidential portions of otherwise nonconfidential documents should be clearly marked.

If a confidentiality claim is asserted, the information covered by the claim will be disclosed by EPA only to the extent and by means of the procedures described in 40 CFR Part 2, Subpart B (41 FR 36906; September 1, 1976). If no confidentiality claim accompanies the information, the Agency will place the material in the public comment file where it will be available for public inspection.

If a confidentiality claim is asserted for some of the rebuttal evidence a registrant or applicant should furnish the EPA two copies of the information. The first copy should contain all of the data submitted in rebuttal with information claimed as confidential clearly identified and will be processed as outlined above.

The second copy should be identical to the first except that all information claimed as confidential should be deleted. This second copy will be placed in the public comment file. The first copy will be treated in accordance with the procedures outlined above.

V. Duty to Submit Information on Adverse Effects

Registrants are required to submit to EPA any additional information regarding adverse effects on man or the environment which comes to their attention at any time, pursuant to Section 6(a)(2) of FIFRA and 40 CFR 162.8(d). Registrants of captan products who have not done so must immediately submit to EPA any published or unpublished information they possess regarding adverse effects. This includes studies, reports, analyses or reanalyses with respect to any contrary effects in animal species or humans, residues and claimed or verified accidents to humans, domestic animals or wildlife. It is mandatory that each registrant responding to this notice submit written certification to the Agency that all information regarding known adverse effects has been supplied. Registrants should notify EPA of any studies in progress, their purpose, the protocol, approximate completion date and a summary of all results observed to date.

VI. Public Comments and Inspection

Specific comments on the presumptions described in this notice and on the material contained in the Position Document are solicited from the public during the time allowed for submitting rebuttal evidence. In particular, it is requested that any documented episodes of adverse effects to humans, domestic animals, or wildlife, and information as to any laboratory studies in progress or completed be submitted to EPA as soon as possible. Specifically solicited is information on the fate and effects of captan, its impurities, metabolites, and degradation products on flora and fauna, particularly animals with metabolism similar to man. Similarly, any studies or comments on the benefits from the use of captan are requested to be submitted. All comments and information received as well as any other relevant data and associated analysis which come to the attention of the Agency may serve as a basis for final determination under § 162.11(a)(5).

All comments and information should be sent to the Document Control Officer at the address given above. Submissions should be in triplicate if possible to

facilitate inspection by the Agency and others interested in the material. The identifying notation "OPP–30000/34" should be exhibited on all data. Comments received after the specified time period will be considered only to the extent feasible, consistent with the time limits imposed by 40 CFR 162.11(a)(5)(ii).

All written comments and information filed pursuant to this notice (excluding those designated as confidential) will be available for public inspection in the Chemical Information Division office from 8:00 a.m. to 4 p.m. during normal working days. Interested persons are encouraged to inspect Agency files during normal working hours. All of the information received may serve as a basis for final determination pursuant to § 162.11(a)(5). Following the rebuttal period the Agency does not plan to publish in the **Federal Register** a summary of information received.

Cooperation is solicited in identifying any errors or omissions which may have been made in the following computer listings. Corrections to the listings may not necessarily be published in the **Federal Register**, but rather handled by mail with affected parties. Omissions will be corrected by notice in the **Federal Register**.

Dated: August 6, 1980.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

July 22, 1980.

CAPTAN: Position Document 1

I. Background

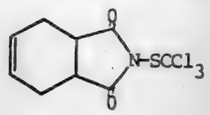
A. Chemical and Physical Characteristics

Captan is the accepted common name for N-trichloromethylthio-4-cyclohexene-1,2-dicarboximide. The chemical is also known by the trade names Merpan, Orthocide, Vondcaptan, Vancide-89 and SR–406. It is in the pesticide classification known as dicarboximides. The pesticide acts as a protectant against fungal infestations, and is used extensively as a fungicide on many food crops and plant seeds. It is also used in several nonagricultural applications.

Physically, captan in pure form is an odorless, white, crystalline substance with a melting point of 178°C. The technical grade material is a pungent, yellow to buff, amorphous powder with a melting point of 160°C to 170°C. Its specific gravity is 1.62 as technical grade product and 1.73 in its pure form. The pure substance has a vapor pressure of less than 1×10^{-5} mm Hg at 25°C. It is moderately soluble in many organic solvents including chloroform, benzene and dioxane but practically insoluble (i.e., <0.5 ppm) in water at room temperature. The molecular weight is 300.57 and the empirical formula is $C_9H_8Cl_3NO_2S$. Its structural formula is:



B. Registered Uses

1. General.—Captan was first patented in 1951 by the Standard Oil Development Company (Patent Number 2,553,771). The company again patented the chemical in 1953 (Patent Number 2,653,155). In 1955 Esso was also issued a patent (2,713,058).

There are approximately 600 federally-registered pesticide products containing captan as an active ingredient. These registrations are held by 139 registrants. No federally registered products contain captan as an inert ingredient. There are approximately 100 applications pending for federal registration of state-registered products containing captan as an active ingredient.[1] In accordance with Section 24(c) of the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), 33 additional captan products have been registered in states that have demonstrated that those products are necessary to meet special local needs.

Captan is used as a fungicide: (1) On a wide variety of fruit, vegetable and ornamental crops, some of which are grown on home and garden sites; (2) on numerous plant seeds; (3) on food crop packing boxes; (4) in soil preplanting treatment; (5) on surfaces inside and outside the home; (6) in cosmetics and pharmaceuticals, oil based paints, lacquers, paper, wallpaper paste, plasticizers, polyethylene, vinyl, rubber stabilizer and textiles; (7) in combination with insecticides on food crops, seed treatment and household pets. Pesticide products containing captan are most widely used as wettable powders (50–80% captan) and dusts (7.5—15% captan). Other formulations are commercially available including 4-pound per gallon aqueous suspensions and coated granules.

2. Tolerances.—EPA has established tolerances, for captan residues (40 CFR 180.103) in or on these raw agricultural commodities:

a. Tolerances for Preharvest, Postharvest or Combination Uses:

(1) 100 ppm (parts per million)—beet greens, cherries, lettuce, spinach;

(2) 50 ppm—apricots, celery, grapes, leeks, mangoes, nectarines, green onions, peaches, plums (fresh prunes), shallots;

(3) 25 ppm—apples, avocados, blackberries, blueberries, (huckleberries), cantaloupes, crabapples, cranberries, cucumber, dewberries, eggplants, garlic, honeydew melons, muskmelons, dry bulb onions, pears, peppers, pimentos, pumpkins, quinces, raspberries, rhubarb, strawberries, summer squash, tomatoes, watermelons, wintersquash;

(4) 2 ppm—beet roots, broccoli, brussels sprouts, cabbage, carrots cauliflower, collards, cottonseed, kale, mustard greens, peas, rutabaga roots, soybeans, sweet corn, turnip greens and roots;

(5) 0.25 ppm—taro.

b. Tolerances for the transmission of captan residues to meat, milk, and eggs from feeding cattle or poultry with the following captan-treated commodities or their by-products are:

(1) 100 ppm—almond hulls;

(2) 25 ppm—beans, grapefruit, lemons, limes, oranges, pineapple potatoes, tangerines;

(3) 2 ppm—almonds.

3. Production.—Section 7(c) of FIFRA requires manufacturers and formulators to submit information to EPA on the production, sale, and distribution of pesticide products. This information is confidential and may not be made available to the public under Sections 7(d) and 10 of FIFRA. However, a confidential memorandum summarizing this information (Williams, 1980) has been sent to the Deputy Assistant Administrator for Pesticide Programs.

4. Usage Data.—The agricultural usage data as presented in Table 1 indicate that between 8.5 and 9.7 million pounds of captan were used annually during 1978 and 1979. The nonagricultural (industrial) usage data estimated by the Agency are indicated in Table 2.

[1] Pesticide products formerly registered under state pesticide registration laws and shipped or distributed for sale solely within intrastate commerce are subject to federal pesticide regulations under FIFRA section 3(a) and 40 CFR 162.17(a). Many registrants who had state-registered products have established the intent to obtain federal registration for intrastate use of these products.

Table 1.—*Preliminary Quantitative Usage of Captan in the United States Agriculture*

(1978–79)

Cropsits [1]	Application	Units treated/year [2]	Application rate/treatment [3] (pounds a.i.)	Treatments/year [4]	Quantity a.i./applied [5] (in thousands of pounds)	Percent crop or site treated/year [6]
Pome fruits:						
Apples	Foliage and fruit	165,000 to 168,000 acres	2 to 4/acre	4–6	2,475–2,520	31.7 to 32.3.
Pears	Foliage and fruit	1,900 to 5,500 acre	3/acre	3–4	20–58	1.9 to 5.5.
Stone fruits:						
Cherries	Foliage and fruit	6,400 to 17,200 acres	3/acres	3	58–155	5.1 to 13.8.
Peaches/nectarines, apricots	Foliage and fruit	73,000 to 84,000 acres	3/acre	3	657–756	18.2 to 21.0.
Plums/prunes	Foliage and fruit	10,000 to 26,000 acres	3/acre	2	60–156	6.7 to 17.3.
Other fruits and nuts:						
Almonds	Foliage and fruit	129,000 to 154,000 acres	4/acre	1–2	774–924	35.8 to 42.8.
Grapes	Foliage and fruit	207,000 to 216,000 acres	1.5/acre	2	621–648	29.6 to 30.9.
Lemons/limes	Skirt treatment	7,000 to 9,000 acres	14/acre	1	98–126	7.1 to 9.1.
Strawberries	Foliage and fruit	35,000 to 39,000 acres	1/acre	2–4	210–234	97.2 to 100.0.
Seed treatments:						
Corn (field)	Seed treatment	1.95 to 1.97 billion lbs. seed	0.875 to 0.938 oz. a.i./100 lb. seed.	1	1,102–1,114	100 pct of seed and planted acres.
Corn (sweet)	Seed treatment	9.2 million lbs. seed	0.175 to 0.2 oz. a.i./100 lb. seed.	1	1–1.2	100 pct of seed and planted acres.
Cotton	Seed treatment	273.6 to 276.0 million lbs. seed (plants 10.5 to 10.6 million acres).	2 oz. a.i./100 lb seed.	1	342–345	80.0 to 80.8 pct of seed and planted acres.
Potatoes	Seed treatment	589,000 to 810,000 acres	1.37/acre	1	807–1,110	48.3 to 66.4.
All other field crops	Seed treatment	(7)	(7)	(7)	690–725	(7).
All other vegetables	Seed treatment	(7)	(7)	(7)	286–330	(7).
Vegetables:						
Lettuce	Foliage	13,000 to 53,000 acres	1.5/acre	1	20–80	20.7 to 84.5.
Tomatoes	Foliage and fruit	7,000 to 17,000 acres	3/acre	2	42–102	29.3 to 71.1.
Other vegetables	Foliage and fruit	(7)	(7)48(7)		35–84	(7).
Commercial greenhouses and ornamentals	(7)	(7)	(7)	(7)	45–50	(7).

regulations provided for the issuance of

metabolite(s), or degradation product(s)

Table 1.—*Preliminary Quantitative Usage of Captan in the United States Agriculture*

(1978–79)

Cropsite[1]	Application	Units treated/year [2]	Application rate/treatment [3] (pounds a.i.)	Treatments/year [4]	Quantity a.i./applied [5] (in thousands of pounds)	Percent crop or site treated/year [6]
All other agricultural uses (including post-harvest.	(7)	(7)	(7)	(7)	45–50	(7).
Home and Garden	(7)	(7)	(7)	(7)	108–160	(7).
Total					8,494–9,728	

[1] The crops/sites presented are those for which usage data are readily available. All fruit, nut and vegetable data are for preharvest use. [2] Units treated represent annual averages based on available data. Ranges are given for those cases where usage figures are most variable. All units can be expected to vary considerably by year due to changes in incidence and severity of diseases problems. Usage estimates may change once detailed crop/site data are gathered and analyses completed. [3] Rates are average values based on one or more of the following: registration data, product labels, usage data, state recommendations. [4] Number of applications based primarily on usage data indicating incidence of retreatment. [5] Estimates derived based on application rates, units treated and number of treatments. [6] Estimates based on units treated per year and acres grown or estimated quantities of seed (corn, cotton) required to plant acres grown. Estimates can be expected to change once detailed crop/site analyses are completed. [7] Available data can not be reliably broken into more specific site estimates. [8] See Table 4.

Table 2.—*Captan Use on Non-Agricultural Sites*[1]

Site	Estimated annual usage level (pounds a.i.) <1,000	1,000–10,000	10,000–50,000	50,000–150,000	Products
Paste				X	Principally wallpaper.
Paint			X		Paints for greenhouses, medical facilities, food packing plants, etc.
Textiles				X	Vinyl-coated fabrics (mattresses, mats, curtains, etc.).
Vinyl	Usage included in textiles				Above uses plus auto vinyl roofs, astroturf, others.
Lacquers	X				Very limited.
Paper	X				Very limited.
Rubber stabilizers	X				Very limited.
Plasticizers			X		Plastic additive.
Polyethylene			X		Garbage bags, pond liners.
Vinyl resins			X		Vinyl precursor.
Packing boxes	Undetermined				
Wood	Little or none				
Surface sprays	Little or none				Mildew control spray additive.

[1] Captan is used to some extent in cosmetics, however usage estimates are not available.

Source: EPA estimates based on a telephone survey of product manufacturers (Fall 1979) and data available from industry studies.

II. Regulatory History

A. USDA Actions

A joint U.S. Department of Agriculture-Department of Health, Education and Welfare statement was published in the **Federal Register** of April 13, 1966, for implementation of a National Research Council recommendation that "The concepts of 'no residue' and 'zero tolerance' as employed in the registration and regulation of pesticides are scientifically and administratively untenable and should be abandoned" (FR 1966). The joint statement specified that registrations of all uses involving a reasonable expectation of small residues on food or feed at harvest should be discontinued as of December 31, 1967 unless data were presented to support a finite tolerance or exemption from a tolerance. Since no such evidence had been provided for the use of captan on gooseberries, cancellation of this use was proposed.

The USDA Pesticide Regulation Division (PRD), issued several regulatory notices from January 10, 1968 to November 22, 1971 concerning safety studies, nonfood use restrictions, cancellation of uses based on "no residue" or "zero tolerances," and one product cancellation.

The PR Notice 68–3 of January 10, 1968 to Manufacturers, Formulators, Distributors and Registrants of Economic Poisons announced that captan uses for seed treatments were classified as nonfood uses (USDA 1968). Therefore, registration of products for these uses was continued in the absence of finite tolerances.

PR Notice 68–5 of January 30, 1968 concerned "no residue" and "zero tolerance" registrations beyond December 31, 1967 (USDA 1968a). This was an extension of registration for uses of captan on asparagus, gooseberries and packing boxes until January 1, 1969. However, the PR Notice 68–8 of April 24, 1968 classified the uses of captan on asparagus and packing boxes as nonfood uses (USDA 1968b). The uses were therefore continued in the absence of data supporting finite tolerances.

PR Notice 69–4, of February 1, 1969, announced that since no evidence was provided to support a finite tolerance of captan on gooseberries the use was cancelled (USDA 1969).

PR Notice 70–8 of March 10, 1970 requested registrants to undertake the additional safety studies necessary to further evaluate captan concerning its carcinogenic and teratogenic potential (USDA 1970). Such tests were to include negative and positive controls. Epidemiological data were also

requested for persons with a known history of high exposure to captan.

The PRD cancelled the registration of Vancide 89RE on November 22, 1971. This was a technical grade product for manufacturing and formulating use. The cancellation action was taken pursuant to Section 4(c) of FIFRA (now superceded by FIFRA Section 6(b) as amended in 1978) due to the registrant's lack of response to the January 8, 1971 notice of intent to cancel.

B. Other Agency Reviews and Findings

The Report of the Secretary's Commission on Pesticides and Their Relationship to Environmental Health by the U.S. Department of Health, Education, and Welfare, reviewed the significance of adverse effects data on a number of pesticides, including captan (Mrak et al., 1969).

The Commission recommended unanimously that human exposure to captan be considered a potential health hazard. The following were among the Commission's findings relating to captan:

(1) It was reported as a cause of dermatitis from apple spraying and allergic dermatitis was demonstrated in agricultural workers;

(2) It produced mutagenic effects in bacteria, human embryonic lung cells and cell lines derived from the kidney of the kangaroo rat;

(3) It induced teratgenic effects in developing chicken embryos; and

(4) It increased tumor incidence in mice, with a significance level of $p = 0.02$.

The Commission specifically recommended: (1) Reducing exposure of the general population from dietary sources of captan pending the completion and evaluation of additional testing of tumorigenicity; (2) minimizing workers' exposure to captan pending completion of safety studies; (3) giving high priority to captan in a testing program for mutagenesis; and (4) restricting captan immediately should it be found to be teratogenic.

Summary results of a National Cancer Institute bioassay of captan for possible carcinogenicity in rats and mice were published in the **Federal Register** (FR 1977). Tumors in the dodenum of mice were associated with captan treatment. There was no convincing evidence that tumors observed in rats were related to captan treatment.

C. Other Regulatory Actions

The United States Department of Labor, Wage and Hour Division, published final rules pertaining to captan in the **Federal Register** (FR 1979). The notice indicated that while current regulations provided for the issuance of waivers permitting employment of 10- and 11-year old minors in hand harvesting of short-season crops, because captan was a suspected carcinogen, no waiver could be issued for minors to harvest captan-treated crops of strawberries or potatoes.

The Environmental Protection Agency's Office of Water Planning and Standards (OWPS) on February 16, 1979 published amendments to the final rule designating captan as a hazardous substance (FR 1979). This action was taken in accordance with the Clean Water Act (CWA) for the control of the discharge of hazardous substances. The OWPS also required that all facilities discharging 10 pounds or more of captan to waters or shoreline report that fact in accordance with Section 311 of CWA. Further, facilities which discharge captan are regulated by CWA Sections 309 and 402 and are required to comply with National Pollutant Discharge Elimination System Permit regulations.

Under 21 CFR 176.170 the FDA has established regulations concerning captan as a component of coatings for paper or paperboard surfaces that contact food. The chemical may be used as a mold- and mildew-proofing agent in such coatings. The amount of captan permitted as a component of the coatings depends on the particular type of food which will contact it. The permissible concentration of captan is established by a determination of the amount of the chemical that can be extracted with certain solvents under certain conditions.

Following an adverse inspection report from the Food & Drug Administration concerning the laboratory testing practices of Industrial Bio-test Laboratories (IBT), the EPA Deputy Assistant Administrator for Pesticide Programs notified all registrants that studies conducted by IBT and used in support of their pesticide registrations must be audited (Johnson, 1977 and 1978). There were 12 such audits completed on May 15, 1979 by registrants of products containing captan. The audits disclosed a large number of IBT testing deficiencies and resulted in the Agency's determination that none of the 12 studies were valid (Auerbach, 1980).

III. Summary of Scientific Evidence To Support Rebuttable Presumption

A. Oncogenicity

40 CFR Section 162.11(a))3)(ii)(A) provides that a "a rebuttable presumption shall arise [that a notice of intent to cancel registration shall be issued] if a pesticide's ingredient(s), metabolite(s), or degradation product(a) * * * induces oncogenic effects in experimental mammalian species or in a man as a result of oral, inhalation, or dermal exposure * * *" Section 162.3(bb) defines the term oncogenic as "the property of a substance or mixture of substances to produce or induce benign or malignant tumor formation in living animals."

The Agency has concluded that all pestcide products containing captan exceed the chronic risk criterion relating to oncogenicity. This finding is based on the studies presented below. In summary, significantly elevated incidences of intestinal and liver tumors were observed in male mice following 20-month and 18-month oral administrations of captan, respectively. Two long-term rat studies resulted in no significantly increased levels of tumors. One rat study and one mouse study were determined to be invalid and therefore cannot be used in evaluation of captan.

Gulf South Research Institute conducted a bioassay for the National Cancer Institute (NCI, 1977) utilizing B6C3Fi mice and Osborn-Mendel rats. The mouse treatment groups consisted of 50 male and 50 female mice per dose level with 10 matched controls per sex. A pooled control group was formed using the matched controls and an additional 70 control animals per sex from other studies being conducted at that time. Captan, at 8,000 and 16,000 ppm, was administered to 35-day-old mice in their diet for 80 weeks. The mice were sacrificed after 11 additional weeks on a control diet. A dose-related increase in the incidence of duodenal tumors (adenomatous polyps and polypoid carcinomas) was seen in both males (pooled controls 0/63, low dose 1/43, high dose 3/46, $p=0.33$) and females (pooled controls 0/68, low dose 0/49, high dose 3/48, $p=0.022$). The rarity of these lesions in this particular strain of mice increases the likelihood that the lesions were caused by the administration of captan. Decreased incidences of hepatomas and lung tumors were also noted in the results of this study. However these observations do not obviate the Agency's concern about the increased duodenal tumors.

Preliminary results from a registrant sponsored (Stauffer Chemical Co. and Chevron Chemical Co.) 2-year mouse study appear to confirm an increased incidence of duodenal tumors among captan-treated mice. However, the Agency has not scientifically evaluated these data or made any conclusions concerning such results (Incomplete Study-Not Referenced).

Innes et al., 1969, administered captan daily to groups of B6C3F2 and B6AKF1 mice. Eighteen males and 18 females were used for each strain, at a dose of 215 mg/kg/day by gavage from the 7th day of age to the 28th day. From the 28th day to the end of the study, captan was administered in the diet at 560 ppm. These same authors reported an increased incidence of hepatomas in males only ($p<0.05$) (Bionetics, 1968). A reanalysis of the data in the Mrak report (1969) using the Mantel-Haenzel method gave a significance level at $p<0.02$ for the hepatomas in males. The tumor incidence among captan-treated females was not significantly elevated. The ability of this study to detect increased tumors was poor, however, since the number of animals was too small, it continued only 18 months, and only one dose level was used (much lower than that in the 1977 NCI mouse study).

The NCI (1977) rat study treatment groups consisted of 50 animals of each sex per dose level and 10 matched controls per sex. An additional 65 animals per sex were used for a pooled control group. The 35-day-old rats were given 8,000 or 16,000 ppm captan in their diet. The high dose level proved to be too toxic and the group was dropped from the study at 18 weeks. A new low dose group was started at 4000 ppm. Twenty-one weeks later the dosage of both groups was halved, resulting in time-weighted average doses of 2,525 and 6,050 ppm for the 80 weeks of treatment. The rats were sacrificed after an additional 33 weeks. No lesions were seen which could be attributed to captan, however the authors reported that: "In rats a positive dose-related trend and a difference between incidences of tumors in high-dose and pooled-control groups were found in females when the data for adrenal cortical adenoma were combined with those for adrenal cortical carcinoma (pooled controls 0/64, low-dose 2/50, high-dose 3/47, $p=0.047$). There was also a positive dose-related trend for the incidence of C-cell adenoma of the thyroid in female rats (pooled controls 1/66, low-dose 1/49, high dose 4/44, $p=0.0035$)."

A study by Hazelton Laboratories (1956) used even fewer animals (10 male and 10 female rats per group) for a 2-year captan feeding study. Substantial mortality occured in many of the groups, including 50% of the control males and 40% of the control females. The high dose group (10,000 ppm) was sacrificed at only 55 weeks, which was insufficient time for tumor development. The medium and low dose groups (5000 and 1000 ppm) were sacrificed at 104 weeks. No tumors that could be associated with captan were seen; however, the ability of this study to detect tumors was very poor due to the small sample size and short term of the high dose testing.

A 15-month mouse study (IBT B9271) and a 2-year rat study (IBT B9267) have been judged invalid by a joint US/Canadian governmental audit (Auerbach, 1980).

B. Mutagenicity

40 CFR Section 162.11(a)(3)(ii)(A) states that "a rebuttable presumption shall arise [that a notice of intent to cancel registration shall be issued] if a pesticide's ingredient(s), metabolite(s), or degradation product(s) * * * induces mutagenic effects, as determined by multitest evidence." Section 162.3(y) defines mutagenicity as "the property of a substance or mixture of substances to induce changes in the genetic complement of either somatic or germinal tissue in subsequent generations." Section 162.3(1) defines degradation product as "a substance resulting from the transformation of a pesticide by physiochemical or biochemical means."

Human exposure to a mutagen has serious implications. The possible adverse effects to people, especially those of reproductive age, are spontaneous abortions, still births, birth defects in their children, and diseases in the adult life of subsequent generations. Any of these effects could result from exposure of the male and/or female parent to a mutagen. In addition, those exposed can be adversely affected by mutations of the somatic cells.

The primary objective of mutagen testing is to determine whether a chemical has the potential to cause heritable genetic alterations in man. Direct methods for this assessment do not exist. As a consequence, non-human and even non-mammalian tests have been utilized in efforts toward this assessment (DHEW, 1977).

Evidence in both prokaryotic (i.e. bacterial) and eukaryotic (i.e. mammalian) systems indicates that captan is a point (gene) mutagen. This means that captan can interact with DNA of several species to produce mutations in both reproductive and other body cells. There is also evidence that captan can induce chromosomal aberrations in somatic cells of mammals. In addition, available data indicate that captan can damage DNA of both prokaryotic and eukaryotic organisms.

Though not all of the available mutagenicity data are presented in this document, the following representative data support the Agency's conclusion that captan is capable of inducing gene mutations, DNA damage and chromosomal aberrations and therefore meets this risk criterion. Additional mutagenicity data are being sought primarily through registrant compliance with FIFRA Section 3(c)(2)(b) requests (Johnson, 1980).

Gene (point) mutations are alterations which affect single genes. These alterations include base pair substitutions and frameshift mutations as well as other small deletions and insertions. Applicable *in vitro* test systems include both forward and reverse mutations assays in bacteria, yeast, fungi, and mammalian cells in culture. The lower prokaryotic (e.g., bacteria) systems detect only point mutations, while higher eukaryotic systems detect multi-locus deletions as well.

The information available as given below on the mutagenicity of captan has shown that it can cause gene mutations in bacteria, in eukaryotic microorganisms and mammalian cells in culture.

a. Bacteria

As an example of bacterial testing to indicate mutagenicity, many mutants have been isolated which block various steps in histidine biosynthetic pathways of *Salmonella typhimurium*. Among these mutants, a series of tester strains have been used in testing captan which revert by specific mechanisms, e.g., base-pair substitution or frameshift mutations (DHEW, 1977).

Captan has been demonstrated to produce reverse mutations in *Salmonella typhimurium* G46, TA 1535, TA 100, and TA 1950 (Ficsor et al., 1977; Ficsor et al., 1976; Marshall et al., 1976; McCann et al., 1975; Shirasu et al., 1976; and Simmon et al., 1977). Marshall et al., (1976) found a mutagenic response in a plate test with *S. typhimurium* TA 1537. However, Shirasu, et al. (1976) and Simmon et al. (1977) observed no response with this strain. Reverse mutations were also induced in the very sensitive frameshift mutant TA 98 (McCann et al., 1975). Captan appears to be more active, however, in base pair than in frameshift mutation.

Escherichia coli WP 2 has been shown to be susceptible to the mutagenic action of captan. This tryptophan auxotroph was reverted to non-dependence on tryptophan by captan (Nagy et al., 1975; Shirasu et al., 1976; and Simmon et al., 1977).

Bridges et al. (1973), found that captan caused a forward mutation to colicin E 2 resistance in *E. coli* WP 2 uvr A-. A streptomycin dependent strain (SA4–73) and a thymine dependent strain were shown to revert to streptomycin independence and thymine independence (Legator et al., 1969). This effect demonstrated that captan can cause point mutational changes in these strains.

A spot test using various strains of *E. coli* WP 2 was designed to detect volatile mutagenic components of captan (Bridges et al., 1972). Captan impregnated filter paper was placed on the agar surface or on the lid of the petri dish. Approximately equal numbers of mutants were observed in each case, indicating that most of the effect of captan was mediated by a volatile mutagen. The frequency of mutation was increased as the buffer pH increased from 5 to 9 on the filter paper on the lid. The vapor phase mutagen was also demonstrated to be short-lived.

Fewer survivors were observed with an ExrA – strain than with an ExrA + strain when the captan impregnated filter pad was applied to the agar, but not when it was applied to the lid and not in contact with the agar. This indicates that there is a second mutagenic (diffusible) component of captan causing repairable DNA damage. The diffusible component causing the effect was not identified.

b. Bacteria with Metabolic Activation

A number of systems have been developed to simulate the metabolic capabilities of intact mammals. The various metabolic activation systems used can be grouped into three main categories: (1) Whole animals are

Table 4.—Continued

employed to activate the test chemical. The systems most commonly used are the host-mediated assay and the analysis of body fluids for the presence of mutagens. (2) Certain strains of mammalian cells in culture are capable of metabolizing chemicals. These are used as feeder cells for the indicator cells which do not have such metabolizing capabilities. (3) Organ homogenates from mammals are used to metabolize chemicals in an *in vitro* system in the presence of the indicator organism (DHEW, 1977). These bacterial assays employ an exogenous source of matabolic activation in the form of a mammalian liver microsomal preparation. The majority of genetic toxicants must be converted into reactive forms before their effects can be detected.

S–9 liver microsome fractions generally seem to decrease the mutagenicity of captan in microbial assays. Whole blood, but not plasma, also decreases the activity in bacterial systems.

Ficsor et al., (1977) examined the mutagenic activity of captan on *S. typhimurium* TA 100 after incubation with a rat S–9 microsomal fraction and found an approximately 33% reduction in mutagenic activity over the untreated captan assay. Rat S–9 microsomal fraction decreased the mutagenicity of captan by approximately 50% in *S. typhimurium* strains TA 1535 and TA 1537 (Marshall et al., 1976). Decrease in mutagenic activity after treatment of captan with S–9 microsomal fraction was also noted in *S. typhimurium* strains TA 100 and TA 1535 by Simmon et al., (1977).

c. Host-and Fluid-Mediated Bacterial Systems

Host-Mediated Assay In the host-mediated assay, the indicator organism is introducted into the peritoneal cavity or injected into the circulatory system or the testes of the host mammal. The host is then treated with the substance under test, sacrificed, and the test organism removed and examined for mutation induction. A wide range of cellular systems have been used as indicator organisms: *Salmonella, E. coli, Saccharomyces, Neurospora,* mouse lymphoma cells, Chinese hamster cells, mouse ascites cells and human lymphocytes.

Fluid-Mediated Assay. After chemicals are metabolized in an animal, they may be excreted in the urine as breakdown products and/or conjugates of the original substance. Microbial indicators have proven useful for the detection of active mutagens in the urine of animals treated with non-mutagenic precursor substances (DHEW, 1977).

S. typhimurium G46 his- and *Serratia marcescens* a21 leu were injected intraperitoneally in NMRI mice previously injected subcutaneously with 500 mg/kg captan (Buselmaier et al., 1972). After 3 hours, the bacteria were recovered and examined for reverse mutations. Mutagenic responses were seen for both organisms.

Ficsor et al., (1977) performed several host- and fluid-mediated assays with captan using strains of *S. typhimurium.* Four host-mediated assays were performed as described below. None of them evidenced any increase in mutagenic activity attributable to captan. (1) Upjohn strain Suris albino male mice were injected intraperitoneally with strain G46. One group was given captan orally at 1,000 mg/kg and another group was given 500 mg/kg captan subcutaneously at 0, 60, and 120 minutes after injection of the bacteria. The bacteria were recovered and examined for revertants. (2) Sprague-Dawley male rats were injected intraperitoneally with strain TA 1950 and given 2,000 mg/kg captan orally. The bacteria were recovered after two hours and examined for revertants. (3) A spot assay with strain G46 was performed using filter discs dipped in blood or uring from mice treated orally with 250 mg/kg captan. (4) Spot assays with strain TA 1950 were performed by placing 3 drops of blood from rats (after oral or intraperitoneal captan treatments) on the assay agar. Quantitative determinations were performed by incubating blood from each sample with strain TA 1950 before plating.

Fluid-mediated assays were performed with strain TA 1950 using human blood, rat blood, plasma, and saline. When captan was incubated in rat blood, the mutagenicity of captan was inactivated at 500 and 1,000 ug/ml captan, but not at 5,000 and 10,000 ug/ml. Captan was mutagenic in saline, in the absence of rat blood. Rat plasma was inactivated by 20 ug/ml captan, but not 200 ug/ml. The researchers reported that this inactivation could be attributed to captan's reaction with glutathione localized in red blood cells. Human blood inactivated about as much captan as rat blood.

d. Eukaryotic Microorganisms

Captan was examined in a point mutation assay using a haploid strain of *Aspergillus nidulans* (Bignami et al., 1977). 8-azaguanine resistant mutations were reported.

e. Mammalian cells in culture

Captan was used to treat cell cultures of V79–4 Chinese hamster lung fibroblasts (Arlett el al., 1975). Treatment with captan in suspension resulted in no absolute increase in the number of 8-azaguanine resistant colonies per plate. However, both the absolute number of ouabain resistant colonies and the number of variants per survivor were increased by captan at 5 and 10 ug/ml. Exposure to vapor from captan impregnated filter paper resulted in an increase in the number of both 8-azaguanine and ouabain resistant colonies

2. DNA Damage [Data Summarized in Table 4]

			–	With metabolic activation.

DNA repair tests do not measure mutation *per se,* but DNA damage induced by chemical treatment of a cell. Microbial test systems measure this damage as cell killing. Mammalian cell systems—both *in vitro* and *in vivo*—measure the damage to DNA either directly, or as it is being repaired (DHEW, 1977).

Captan has been shown to cause DNA damage in bacteria, eukaryotic microoganisms, and in two mammalian cell lines.

Prokaryotic and Eukaryotic Microorganisms

This test is usually performed as a plate test with the chemical deposited in the center of a lawn of the *E. coli* or *Salmonella typhimurium* tester strains. The killing effects are measured as zones of bacteria growth inhibition and the ratio of the size of the zones between the normal and the repair-deficient strains is a measure of the differential killing effects. The test has also been performed by applying the test substance to one end of two or more streaks of indicator organisms on single petri dish and looking for a differential shortening of the streaks. This allows for the simultaneous use of more than one type of repair-deficient strain on a single plate. This method has been used with *Bacilus subtilis* and *Saccharomyces cerevisiae*

Mammalian cells synthesize DNA only during one stage of the cell cycle. This is referred to as "scheduled DNA synthesis." However, when the cellular DNA is damaged, repair synthesis can occur during the time when scheduled DNA synthesis is not taking place. This "unscheduled DNA synthesis" can be measured in synchronously growing cells as uptake of radioactive thymidine into the cell's DNA. It can be measured in cells in culture, or in meiotic and post-meiotic mouse spermatocytes *in vitro* (DHEW, 1977).

a. Bacteria

Captan was shown to cause differential killing of DNA repair deficient strains of the following bacteria: *E. coli* WP 2 and *E. coli* WP 2 uvrA (Bridges, B. A. et al., 1973), *Bacillus subtilis* H17 rec+/*B. subtilis* M45 rec– (Shirasu et al., 1976; Simmons, et al., 1977), and *E. coli* W311 polA+/*E. coli* P3478 polA–(Simmons, et al., 1977).

b. Eukaryotic Microorganisms

Aspergillus nidulans, diploid strain P, was used for a mitotic segregation assay in which somatic crossing over was attributed to captan treatment (Bignami et al., 1977). R. Fahrig (1973) found gene conversion at two loci, ade 2 and trp 5, in *Saccharomyces cerevisiae* after treatment with captan.

c. Mammalian Cells in Culture

An SV–40 transformed human fibroblast cell line, VA–4, was treated with captan, with and without rat liver S–9 microsome fraction (Ahmed et al., 1977). A significant $p<0.05$) increase in unscheduled DNA synthesis as measured by autoradiography was seen at all treatment levels. However, metabolic activation did not significantly alter the effect of captan.

Swenberg et al. (1976) found an increase in the rate of elution of single-stranded DNA from polyvinyl filters after lysing V79 Chinese hamster lung fibroblast cells treated with captan. No effect was seen when an S–9 microsomal fraction was added with the captan treatment. This indicates that captan can cause breaks in DNA.

3. Chromosomal Aberrations [Data Summarized in Table 5]

Table 5

Reference	Assay	Organism	Results	Comments
Chromosomal Aberrations: In Vitro Cytogenetics				
Legator et al., 1969	Cytogenetic	Human embryo lung cells	+	Dose related response in chromosome breaks.
		Rat kangaroo cells	+	Do.
Tezuka et al., 1978	Cytogenetic	Human fibroblasts	No increase in breaks or gaps. Stickiness dose response seen.	Stickiness may not be related to mutagenicity.
Chromosomal Aberrations: In Vivo Cytogenetics				
Tezuka et al., 1978	Cytogenetic	Wistar rats	–	
Chromosomal Aberrations: Dominant Lethal in Rodents				
Collins, 1972	Dominant lethal	Osborne-Mendel rats	+	
	....do	CBA—J mice	+	
Epstein et al., 1972	....do	ICR/H2 Swiss mice	–	Relatively insensitive test.
Kennedy, 1975	....do	Charles River mice		Not valid.
Simmon et al., 1977	....do	ICR/SIM mice	–	Dosed up to 5 g/kg/day.
Tezuka et al., 1978	....do	C3H and SLC–ICR mice		Not valid.

Chromosomal aberrations involve changes in number and structure and may include the loss or gain of entire chromosomes, chromosome breaks, nondisjunctions, and translocations. Tests for these abnormalities involve searching for chromosomal changes in somatic and germinal cells usually obtained from insects and mammals.

Chromosomal aberrations have been reported in two mammalian cell lines. Of the literature examined so far, *in vivo* tests (which are generally less sensitive than the *in vitro* tests) have not revealed significant indications of mutagenicity of captan with the exception of the dominant lethal test in Osborne-Mendel rats and CBA–J mice (Collins, 1972).

a. Mammalian Cells in Culture.

Mammalian cells in culture can be employed for the assessment of chromosomal effects. Human cells, e.g. fibroblasts and lymphocytes, and Chinese hamster ovary cells with and without metabolic activation have been used. Gross chromosomal abberations such as breaks, gaps, and rearrangements can be readily observed in these systems (DHEW, 1977).

A heteroploid human embroyonic lung cell line, L–132, and a line of rat-kangaroo cells were treated with captan (Legator et al., 1969). Mitosis and DNA synthesis were inhibited. A 36% increase over control levels in chromosome breaks was observed 2 hours after addition of captan at 10 ug/ml to the L–132 line. the increase was 41% at 4 to 5.5 hours and 14% at 24 hours after addition of captan. Infrequent exchange figures were also observed at 24 hours. In the rat-kangaroo line, captan also increased the frequency of cells with chromosome breaks, preferentially in the X chromosome. A dose-response effect was apparent.

Tezuka et al., 1978, treated diploid human fetus fibroblasts with captan at 0.5 to 4 ug/ml captan. Mitosis has inhibited at all dose levels and a dose-dependent increase in cells showing stickiness was seen, statistically significant ($p<0.001$) at the 3 and 4 ug/ml dosage levels. No increase in chromosome gaps or breaks were seen and the stickiness may not have been due to mutagenicity. Since the scoring method was not described, the usefulness of this study was limited.

The scoring criteria were not described for a cytogenetic analysis of bone marrow cell preparations from Wistar rats treated orally at single dose levels of 500, 1,000, or 2,000 mg/kg captan or five consecutive doses of 200, 400, or 800 mg/kg (Tezuka et. al., 1978). No chromosomal effects were reported.

There was a consistent, although statistically nonsignificant, increase in gaps but this may have been due to captan's binding to proteins rather than an effect on DNA.

b. Dominant Lethal Tests

Dominant lethal effects in the mouse or the rat seen as fetal wastage are considered to be indicators of chromosomal mutation produced in germinal cells by mutagenic substances (DHEW, 1977).

(1) Collins Study

Dominant lethal effects attributable to captan were reported in Osborne-Mendel rats and CBA–J mice (Collins, 1972). Captan was given for 5 days by intraperitoneal injection in doses of 2.5, 5.0, and 10 mg/kg/day or by oral intubation in doses of 50, 100, and 200 mg/kg/day to groups of 15 rats and 15 mice. The rats were mated with one virgin female each week for the next 10 weeks. The mice were mated with two virgin females each week for 12 weeks. Caesarean sections were performed on the 13th day of pregnancy for the rats and on the 12th day for the mice.

(a) Results in Rats

Significant increases ($p<0.05$) were found in the mean number of early deaths per pregnancy for those pregnancies sired by rats 4 weeks after the rats were given captan orally at a dose of 100 mg/kg/day. Increased early fetal deaths were also found in pregnancies sired by rats at 1, 2, and 5 weeks after treatment with 200 mg/kg/day captan.

When the litter was considered an experimental unit and affected litters were defined as those with at least one early fetal death, a significant increase ($p<0.05$) in the number of affected litters was seen in the rat test group given 100 mg/kg/day orally and mated after 4 weeks. The other two dose groups showed consistent increases in the numbers of affected litters. In addition, there were significant linear dose-response relationships in affected litters from rats mated 3 and 4 weeks after treatment.

When "affected litters" were defined as those with two or more early deaths, the data showed a significant increase ($p<0.05$) in the number of affected litters for rats given a daily oral dose of 100 mg/kg captan and mated 2 and 5 weeks later, and ($p<0.01$) for rats given a daily dose of 200 mg/kg captan, and mated 1, 2 and 5 weeks later.

(b) Results in Mice

There were also significant increases ($p<0.05$) in the number of early fetal deaths per pregnancy among the potential offspring of mice given 200 mg/kg/day intraperitoneally and mated 4 and 5 weeks later. Similar increases in the number of early deaths per pregnancy were reported among the offspring of mice given 100 mg/kg/day and 200 mg/kg/day orally and mated 1 and 2 weeks later.

The groups of mice given captan at the highest doses showed significant increases ($p<0.01$) in the percentage of litters with 2 or more early fetal deaths for matings on week 5 after intraperitoneal administration and on week 1 for oral administration. Significant linear dose responses were seen for different weeks of mating for all combinations of species and routes: intraperitoneally treated rats mated in weeks 4 and 5; orally treated rats mated in weeks 1 and 2; intraperitoneally treated mice mated in weeks 1–3 and 5–7; and orally treated mice mated in weeks 1–5, 9, and 12.

(2) Simmon Study

Captan, administered at up to 5,000 mg/kg/day in the diet for 7 weeks, did not increase the frequency of dominant lethal mutations in ICR/SIM mice (Simmon et al., 1977). The positive control was administered by intraperitoneal injection.

(3) Epstein and Kennedy Studies

The following dominant lethal tests, although reporting no dominant lethal effects, are inconclusive as to whether captan may cause such an effect. Epstein et al., (1972) used ICR/Ha Swiss mice; however, the test was relatively insensitive (i.e. unable to detect small increased effects) since small group sizes were used and the dosages were low. The study performed by Kennedy (1975) also used a low dosage and additionally had no controls.

(4) Tezuka Study

Tezuka et al., (1978) treated C3H and SLC–ICR mice with 5 daily doses of up to 600 mg/kg/day captan; however there were inconsistencies in reporting these observations. Consequently this study is also inconclusive as to whether captan may cause dominant lethal effects. For example, application of the formula given in the paper for calculation of the percentage of dominant-lethal mutations yielded results that differ from those reported. The protocol was not standard, using only a 6–week post-treatment mating period combined with a 2- to 4-day mating period. This regimen may have allowed the more active males to contribute more females to the experiment which may have biased the results.

c. Heritable Translocation Test

The heritable translocation test and the sex chromosome loss test have the capability of determining the heritability of chromosomal damage. These effects are measured in progeny of animals exposed to chemical mutagens. Thus, these assays can be employed not only as a means of detecting potential mutagens but also for the purpose of assessing risk (DHEW, 1977).

A heritable translocation test was performed by Stanford Research Institute (SRI) (project LSV–3493) for EPA (Simmon et al., 1977). Captan was administered in the diet for 8 weeks at levels of 2,500 ppm to 60 male ICR/SIM mice and 5,000 ppm to 61 male ICR/SIM mice. These males, the 60 negative control males, and the 66 triethylenemelamine-treated positive control males were mated with two females each, except for one low dose and one high dose male that were mated to only one female each. At maturity (10–12 weeks), 200 males were selected from each dose level group and mated to three females each. The females were sacrificed 14 days after mating and the uterine contents were examined for live and dead implants as an indication of sterility. A cytogenetic evaluation was made of meiotic cell preparations from the testes of those males suspected of being a translocate or non-breeder after two or three breedings. One translocation was found in the high dose group which would normally be sufficient to classify captan as positive for heritable translocations; however, one translocation was also seen in the negative control group.

This is the only heritable translocation found in over 1600 negative control males at SRI. This is an acceptable historical spontaneous background rate for heritable translocations, however the presence of the event in this study makes it impossible to evaluate the significance of the heritable translocation in the captan-treated group. In order to resolve this issue it would be necessary to re-run this test, preferably using a larger number of animals.

C. Potential for Human Exposure

1. Introduction

The general population is exposed to captan by eating food which contains captan residues. In addition, agricultural workers, and occasionally bystanders, are exposed to much greater amounts of captan when they are present in fields during or after captan spraying. At present, the Agency has only limited data concerning human exposure to captan. Additional data is being sought, primarily through industry compliance with FIFRA Sec. 3(c)(2)(b) requests (Johnson, 1980), however data from any source is welcome. Until these data are available, Agency assessments of human exposure will be made on a "worst-case" basis.

2. General Population

a. Dietary Exposure. Captan is registered for use on a large number of food crops. Its use is extensive (Table 1) and there are a number of established tolerances for raw agricultural commodities (see Section I.B.2.) The Agency has calculated that a theoretical worst-case dietary exposure would be 0.117 mg of captan/kg of body weight per day [2] (Table 6).

[2] This calculation was based on existing tolerances, the extent of crop treated (see Table 1), and an assumed average daily diet of 1.5 kg for a 60 kg person. However, the Agency anticipates that the actual levels of captan on treated crops will be much lower.

TABLE 6—*Dietary "Worst Case" Exposure Calculations for Captan*

[1] Based on data as provided to EPA by registrants (table 1).
[2] No usage data available, hence 100 percent assumed.
[3] Based on data estimates made by EPA (table 2).
[4] Includes seed treatment useage which may not be relevant to dietary exposure.

b. Nondietary (Dermal and Inhalation. There are a number of nonagricultural uses of captan. Some of the treated products (e.g., wallpaper paste), are used in substantial amounts (Table 2) in or around domestic dwellings; therefore, people who live or work in areas where captan treated products are present may be exposed to captan residues.

3. Workers

a. Agricultural. (1) Applicators, Mixers, Loaders and Bystanders

(a) Commercial

Michigan farm workers were studied (Oudibier et al. 1974) to determine the extent of their respiratory exposure to captan. These farmers used airblast speed sprayers drawn through the orchards by tractors. Personnel involved with the mixing and spraying procedures wore respirators equipped with filter pads and midget impingers containing ethylene glycol. The latter device was connected to a vacuum source and used to monitor pesticide levels in the breathing zone. After each spray operation the respirator pads and the impingers were analyzed for captan residues. The respirator pad analyses indicated that respiratory exposure was generally greater for mixers (0.8–1.9 μg/min) than sprayers (0.07–0.66 μg/min). although no captan residues were found in the impinger samples the researchers reported difficulties with this sample collection methodology. A number of weaknesses in the published report were identified as follows: (1) No mention of the type of formulation used; (2) No recovery studies reported for the methodology used; (3) No indication of the dates of sample collection or the dates of the analyses; and (4) No detection limit given.

Captan exposure of farm workers in Maryland was studied (Hansen et al., 1978) during 16 separate orchard sprayings using a tractor-drawn, high-pressure sprayer equipped with a single-orifice handgun. Three men were involved in each spraying: The tractor driver, the sprayer operator and the observer. Following each spraying the exposure was determined from captan residues on respirator pads and patches attached to clothing and on orchard foliage.

The average dermal exposure was calculated to be 1.98 mg/person/hr with a maximum of 3.3 mg/person/hr. This was based on an assumed dermal exposed area of 0.294 M^2 when no protective clothing was worn. The amounts of captan residue collected from respirator pads of the tractor driver and sprayer operator averaged 0.032 mg/hr, with the highest concentration sample obtained from any one worker being equivalent to 0.081 mg/hr. The urinalysis data were not reported. The captan residues on orchard foliage will be discussed under Section 2(a)(2).

(b) Home Gardeners

The Agency is also concerned about possible exposure of home gardeners and orchard owners during application of captan. The Agency will solicit further information on this exposure in a FIFRA Section 3(c)(2)(B) letter to registrants.

(2) Harvesters

Hansen et al. (1978) observed that captan residues on fruit diminish with time. The study found that the average captan residue on apples was 190 ppm at 4 hours following application, but then declined to 53 ppm after 14 days. Such information indicates residues of captan diminish following application, which shows that the period between

application and reentry for harvesters may be of concern, as there is no established preharvest interval.

b. Nonagricultural

No information is available to the Agency for evaluating the occupational exposure potential from nonagricultural uses of captan (Table 2). The Agency requests such data in order to evaluate the likelihood of captan exposure to applicators, mixers, loaders and bystanders as well as to those who handle the treated materials.

IV. Other Relevant Adverse Effects

40 CFR 162.11(a)(3)(ii)(B) states that "a rebuttable presumption [that a notice of intent to cancel registration shall be issued] if a pesticide's ingredient(s), metabolite(s), or degradation product(s) * * * produces any other [other than oncogenic or mutagenic effects] or delayed toxic effects in test animals at any dosage up to a level, as determined by the Administrator, which is substantially higher than that to which humans can reasonably be anticipated to be exposed, taking into account ample margins of safety."

Captan may produce other chronic or delayed toxic effects to organs and functions of the body including the lungs, central nervous system, hematopoietic system, metabolism, kidneys reproductive systems and others. Currently available data strongly suggest that captan may have teratogenic, fetotoxic and hypersensitivity effects. The Agency is currently seeking more information on these issues. If, upon further evaluation of all the toxicity and exposure data the Agency determines that other such adverse effects are produced by exposure to captan at any level up to a level exceeding possible human exposure (taking into account ample margins of safety), then the Agency will issue a supplemental notice or notices of rebuttable presumption against registration (RPAR)(s).

In addition, a supplemental RPAR may be issued on any of the uses of captan which result in an acute hazard to aquatic species of wildlife as defined in 40 CFR 162.1(a)(3)(i)(B)(3).

C. General Information: ABA Standards

ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD

36 CFR Part 1190

Minimum Guidelines and Requirements for Accessible Design

AGENCY: Architectural and Transportation Barriers Compliance Board.

ACTION: Proposed rule.

SUMMARY: The Architectural and Transportation Barriers Compliance Board hereby issues its proposed minimum guidelines and requirements (guidelines) for standards for accessibility and usability of Federal and federally funded buildings and facilities by physically handicapped persons. These proposed guidelines are issued pursuant to the Rehabilitation, Comprehensive Services, and Development Disabilities Amendments of 1978, amending Rehabilitation Act of 1973. The proposed guidelines provide a basis for the issuance of consistent and improved accessibility and usability standards issued by other agencies under the Architectural Barriers Act of 1968.

DATES: Comments must be received on or before October 17, 1980.

ADDRESS: Send comments to: Charles Goldman, General Counsel, Rulemaking Docket 80–G1, ATBCB, Room 1010, 330 C Street, SW., Washington, D.C. 20202. Comments received will be available for public inspection in Room 1014 from 9 a.m. to 5:30 p.m., Monday through Friday. Copies of the Notice of Proposed Rulemaking (NPRM) and the draft regulatory analysis are available on tape for those with visual impairments. These may be obtained at the above address.

FOR FURTHER INFORMATION CONTACT: Charles Goldman, General Counsel, or Irene Bowen, Attorney (202)245–1801 (Voice or TDD); John Weber, Architect (202)472–3237 (Voice) (202)245–1801 (TDD).

SUPPLEMENTARY INFORMATION:

A. Background

The Architectural Barriers Act of 1968 (Barriers Act or ABA) (Pub. L. 90–480), as amended (42 U.S.C. 4151 *et seq.),* directs four Federal agencies to "prescribe standards for the design, construction, and alteration of (certain Federal and federally-assisted) buildings * * * to insure whenever possible that physically handicapped persons will have ready access to, and use of, such buildings," The four agencies, the General Services Administration (GSA), the Department of Housing and Urban Development (HUD), the Department of Defense (DoD), and the United States Postal Service (USPS), have issued standards. (GSA: 41 CFR 101–19.6, effective September 2, 1969; HUD: 24 CFR Part 40, effective September 24, 1969; DoD; DoD 4270.1–M, "Construction Criteria," June 1, 1978, paragraphs 5–6: USPS: Postal Contracting Manual, Publication 41, § 18–518.4, 39 CFR 601.100, as amended by handbook RE–4, November 1979.)

Section 502 of the Rehabilitation Act of 1973, Pub. L. 93–112, 29 U.S.C. 792, established the Architectural and Transportation Barriers Compliance Board (ATBCB or Board), an independent agency charged with insuring compliance with the standards.

The Board consists of the heads of ten Federal agencies plus eleven members appointed by the President from the general public.[1]

In November 1978, Congress enacted the Rehabilitation, Comprehensive Services and Developmental Disabilities Amendments of 1978, Pub. L. 95–602. The 1978 Act directs the Board to "establish minimum guidelines and requirements (guidelines) for the standards issued pursuant to the * * * Architectural Barriers Act" by the four agencies listed above. Agencies setting those standards under the Architectural Barriers Act will ultimately publish new standards after the Board adopts the guidelines.

On February 22, 1980, the Board published in the **Federal Register**, at 45 FR 12167, a Notice of Intent to Issue Proposed Rules. The Notice raised thirty-one important issues on which the Board sought public comment before publishing a Notice of Proposed Rulemaking. This Notice is the second step in the rulemaking process toward establishing these guidelines.

The Notice of Intent to Issue Proposed Rules recited the Board's efforts to compile technical information to aid in setting design specifications. Comments were elicited for 45 days on the key issues expected to be addressed in the guidelines.

The Board received one hundred seventeen comments from a cross-section of the public. Disabled persons and their advocacy organizations, universities, building industry orgnizations, Federal and State agencies commented. The Board is using those comments as noted in the preamble and the regulatory analysis as part of the basis of the proposed guidelines. The comments were considered in drafting the proposed guidelines. The comments received in response to the Notice of Intent are available for inspection at 330 C Street, SW., Room 1014, Washington, D.C. 20202 from 9 a.m. to 5:30 p.m., Monday through Friday.

Several of the comments received also highlighted the need for greater research, particularly with respect to accessibility features for communication impaired and visually impaired persons. (Questions 19–28 and 30 of the Notice of Intent) Further research in these areas, as well as others, such as fire doors, will complement the ATBCB's plan to review the guidelines on a regular basis and to incorporate state-of-the-art developments in a timely manner.

The ATBCB has a Technical Standards Committee, comprised of four public members and four Federal members (ABA standard-setting agencies): General Services Administration, United States Postal Service, Department of Housing and Urban Development, and Department of Defense. The Technical Standards Committee met with ATBCB staff for two days on three occasions after the public comment period closed. At these meetings, staff provided the Committee with detailed analyses of various aspects of the Architectural Barriers Act, the administrative rulemaking process, and the nature of the ATBCB minimum guidelines. The meetings were a forum for dialogue between staff and the Committee whereby guidance was given to the staff on the development of the minimum guidelines, including, as well, the indentification of issues to be highlighted for public comment. A detailed briefing of the full Board was conducted on the Committee's and staff's work. Copies of the minutes of all these meetings are available for inspection at ATBCB offices, 330 C Street, SW., Room 1014, Washington, D.C. 20202 from 9 a.m. to 5:30 p.m., Monday through Friday.

These guidelines are the first to be issued by the ATBCB. They contain provisions for the generic (common) elements and features of buildings and facilities. By providing specificity in the guidelines, the ATBCB anticipates that the Architectural Barriers Act standards based on the guidelines will readily permit architects, designers, engineers, users, and public officials to provide maximum accessibility and usability in buildings and facilities. The ATBCB views these guidelines as being the common core for the accessibility and

[1] The agency members are the heads of the Departments of Education; Transportation; Housing and Urban Development; Labor; Interior; Justice; Defense; General Services Administration; Veterans Administration; United States Postal Service. The Act requires at least five of the members from the general public to be physically handicapped.

usability standards enforced under Section 502 of the Rehabilitation Act. This would provide a Government-wide basis for a common understanding of accessibility.

These guidelines themselves do not require accessibility where not otherwise required by the Architectural Barriers Act, *e.g.,* only those residential units required under the Architectural Barriers Act to be accessible must be accessible to disabled persons.

In this connection, it must be noted that in the Notice of Intent, the ATBCB inquired at question 31 whether it should adopt the technical specifications of the "ASNI Standard," the 1979 revision to the American National Standards Institute (ANSI) A117.1 standard, or portions of it, as the basis for its guidelines. Although a number of the commentors thought the ATBCB should adopt the ANSI Standard or use it as a basis for the minimum guidelines, the ATBCB's need to develop the scope and other essential components of guidelines, required to make these guidelines the basis for enforceable standards, was also recognized.

In May 1980, subsequent to the issuance of the ATBCB Notice of Intent, ANSI, a private institute in New York City not connected with the Federal government, published its technical accessibility standard. The standard was reviewed as a possible basis for technical specifications in these guidelines.

However, an effective guideline must also contain scope provisions. The ATBCB wishes to publish a single document containing both scoping and technical provisions. This will facilitate use of the guidelines by the public, including consumers, designers, architects, engineers, and by the ATBCB as it exercises its statutory responsibilities to issue and update the guidelines.

To facilitate comments on the proposed guidelines, the ATBCB has identified each technical provision in the NPRM that is the same as the provision contained in the ANSI A117.1(1980) standard. In addition, the ATBCB has noted those provisions contained in the NPRM that are different from those in the ANSI standard and those that are contained in the NPRM but that are not addressed in the ANSI standard. The technical materials in these guidelines have been drawn from information in the public domain and government publications, whether as a result of the HUD-Syracuse University contract or from other federally sponsored research or State developed standards.

The ATBCB recognizes the inherent right of each of the standard-setting agencies under the Architectural Barriers Act to establish a unique format for the standards based upon the guidelines. Accordingly, the ATBCB has indicated in the general information subpart, § 1190.4(d), that agencies are at liberty to vary the format and that the ATBCB's concern is that the agencies' standards meet the substantive requirements of ATBCB minimum guidelines, regardless of the format of those standards. The ATBCB hopes agencies will follow the format of these guidelines to facilitate consistent compliance efforts.

B. Components

The guidelines are divided into five major components. The initial subpart, General, sets out the purpose, applicability, definitions, relationship of the guidelines to the Architectural Barriers Act standards, other uses, and effect of State or local law on the guidelines. The second subpart relates to processed departures from the guidelines, *i.e.,* waivers and modifications. Other departures from the guidelines are permitted under specific design exceptions. The third subpart enumerates the provisions applicable to new construction, alterations and leased buildings. The fourth subpart contains the pertinent technical provisions. The fifth subpart is reserved but will address special technical provisions applicable to unique elements or types of buildings, *e.g.,* stacks in libraries, hospitals, penal institutions, and residential structures.

The guidelines do not address the ATBCB's authority to ensure the accessibility of public conveyances, including rolling stock. The ATBCB believes any guidelines it may wish to publish on this subject should be considered as it more fully develops its transportation policy.

The ATBCB considered but has decided against including administrative compliance mechanisms at this time in these guidelines. The public should be aware that the ATBCB published Guidance for Compliance System Development in 1978. 41 FR 27191. The ATBCB considers development of a regulatory compliance system a high priority and will be expeditiously moving toward fulfilling that objective after these guidelines are completed. Pending development of a complete regulatory compliance system, the ATBCB will utilize its enforcement process, as well as its general oversight role concerning architectural barriers, to monitor implementation of the guidelines.

C. General Information: ABA Standards; Definitions

Subpart A states that the purpose of the guidelines is to establish a minimum basis for standards under the Architectural Barriers Act so that buildings and facilities subject to the Act can be made readily accessible to persons with disabilities. Section 1190.1.

All buildings and facilities subject to the ABA requirements are open to the public or have potential for employment or residence therein of disabled persons. Possible exceptions to this scope would be hazardous areas of a buildings or facility such as elevator penthouses or pits, and other mechanical areas. Section 11909.2.

As provided in § 1190.2 the guidelines are applicable to all types of buildings, regardless of their use or occupancy. The same technical specifications for new buildings should also apply to existing buildings to be leased by the United States. This is also true for federally-assisted buildings (questions 2, 3, and 12 of the Notice of Intent).

The definitions in the guidelines at § 1190.3 are most important. Close attention should be given these terms. Several of them, such as "equivalent facilitation," "exception," "modification," and "waiver" have never been defined in a public rulemaking process relating to the Architectural Barriers Act. These terms generated considerable discussion in the meetings of the Technical Standards Committee of the ATBCB.

Other particularly vital terms are "alteration," "buildings," "construction," "extraordinary repair" and "structural impracticability." The term "building" in the ABA was the subject of a May 8, 1980, Opinion of the Office of Legal Counsel, U.S. Department of Justice (OLC Opinion). That OLC Opinion held that the Architectural Barriers Act covers those federally-assisted buildings for which standards are authorized, even if they have not actually been imposed. The Architectural Barriers Act does not extend to buildings leased by recipients of Federal grants or loans , where funds were not made available for building, design, construction, or alteration. The OLC Opinion is available as part of the rulemaking docket at the ATBCB offices, 330 C Street, SW., Room 1014, Washington, D.C. 20202, from 9 a.m. to 5:30 p.m., Monday through Friday.

The definitions in the guidelines are intended to be consistent with the terms in revised 36 CFR Part 1150, previously mentioned and the subject of another rulemaking proceeding.

The guidelines provide that, unless

requirements such as new construction — percent or more of the gross floor area in

modification is clearly necessary, 42

thought by designers, builders, and

The guidelines provide that, unless otherwise specified, each of a particular building or facility element or feature is required to comply with the guidelines. Section 1190.6(b).

Question 29 of the Notice of Intent raised the issue of numbers. The majority of the comments were that a reasonable or appropriate number, with a minimum specified, should be provided. The ATBCB is concerned that people could reasonably interpret general phrases like "appropriate number" differently. Accordingly, as a general principle, full accessibility of a feature, space, or element is required. There are specific provisions authorizing less than all of a feature, space or element to be accessible.

The guidelines are written in the imperative mood to indicate the mandatory nature of the provisions and avoid excess verbiage and monotony by having to repeat the word "shall." Use of "shall" or the imperative mood means the provision is mandatory. Section 1190.6(c).

The standards issued by the agencies under the Architectural Barriers Act will be enforced by the ATBCB under 36 CFR Part 1150, Compliance with Standards, Access to and Use of Buildings by Handicapped Persons: Practice and Procedures for Compliance Hearings. Revisions to that regulation were recently proposed. 45 FR 28969. The revised regulation should be issued this year.

The ATBCB intends to enforce these minimum guidelines if a standard under the Architectural Barriers Act, complying with ATBCB guidelines, within 120 days after publication of the final guidelines. Final standards must be issued 120 days after the proposed standards are issued.

The ATBCB hopes that Federal and non-Federal entities will follow the Board's leadership and utilize the provisions of the guidelines as a tool to facilitate accessibility in buildings and facilities to which the Architectural Barriers Act does not apply. Section 1190.5. The obligation to comply with the guidelines is not affected by any State or local law. Section 1190.7. Nor should site conditions, as a general rule, preclude accessibility. Section 1190.8.

D. Waivers and Modifications: Processed Departures From the Guidelines

The Architectural Barriers Act authorizes the head of the standard-setting agency to modify the standards on a case-by-case basis upon application by the head of a department, agency, or instrumentality affected and a determination that such a waiver or modification is clearly necessary. 42 U.S.C. 4156. The 1978 Act authorized the ATBCB to ensure that all waivers are based upon findings of fact and are consistent with the Architectural Barriers Act and Section 502 of the Rehabilitation Act. Pub. L. 95-602, § 118.

It is the view of the ATBCB that the Architectural Barriers Act mandates the standard setting agencies to issue standards to ensure "whenever possible," that physically handicapped persons will have ready access to and use of, buildings and facilities, is a qualified requirement of full access, recognizing some necessarily rare exceptions. Waivers and modifications were not intended to be a major loophole in the requirement for accessibility. S. Rep. No. 538, 90th Cong., 1st. Sess. 4 (1967). In re Compliance Social Security Administration, Birmingham, Alabama (ATBCB Decision of Administrative Law Judge Feb. 1, 1979). OLC Opinion.

Several questions in the Notice of Intent (numbers 15-18) related to the concept of processed departures. Public comment generally supported the concept of waivers and modifications. The comments on question 15 and 16 of the Notice supported cost, practical difficulties, and safety/security as bases for waivers/modifications. These comments are embodied in the provision in § 1190.21. The definitions in § 1190.3 of "structural impracticability" and "equivalent facilitation" become increasingly important here as they are fundamental considerations in granting waivers/modifications.

Public comment differed on the types of criteria to be employed to determine when cost should be considered in the waiver/modification process.

Undue hardship may be the basis of a waiver or modification, *e.g.*, where there is little likelihood accessibility could be achieved without endangering or seriously weakening an existing building or facility or portion of it, or substantially altering an existing building or facility or portion of it.

In response to question 17 of the Notice of Intent, the consensus was that the factors enumerated should not be considered when granting a waiver or modification: type of business in the facility, potential number of disabled people who may visit or be employed in the facility, or nature of the disabilities of persons who may be employed in or visit the facility. The proposed guidelines adhere to this. Section 1190.22.

In discussing future departures from the guidelines and standards based thereon, the ATBCB realized that certain circumstances may merit additional thought by designers, builders, and implementing agencies. These are set forth as additional considerations for modifications in § 1190.23. The ATBCB is attempting to foster creative design by encouraging architects to be innovative, and, at the same time, provide greater accessibility. However, because of the limited experiences in barrier free design it is prudent to monitor such creative thought through the modification process involving new construction to ensure that requisite access is provided by the new techniques. Also, alteration projects are particularly susceptible to the need for modification of accessibility standards. In both circumstances equivalent facilitation must be clearly provided. Structural impracticability also may be considered. Where the accessibility standard can be departed from to provide more or improved access for disabled persons, a modification of the standard may be appropriate. The public must bear in mind that a modification, as defined in proposed § 1190.3, has the effect of maintaining the basic accessibility requirement.

In response to question 18 relating to the process for departures, a wide array of techniques was suggested, ranging from local hearings, to ATBCB review, to peer type review. The proposed guidelines provide for notice and documentation of all requests for waivers and modifications to the Executive Director of the ATBCB. The Executive Director would, within the time stated, indicate his/her comments on the prospective processed departure from a standard based on the guidelines. *See* § 1190.20. This approach is somewhat similar to that proposed in section 307 of S. 2080, the Public Buildings Act of 1980.

The Executive Director may seek review of a waiver or modification that is inappropriate under the mandate to ensure compliance with the accessibility standards. The alleged improper waiver/modification may be challenged under 36 CFR Part 1150. Section 1190.20.

E. Scope: New Construction; Additions; Alterations; Leases

The next subpart enumerates the provisions applicable to new construction, additions, alterations, and leased buildings. Note these provisions are applicable to Federal and federally-assisted buildings to the extent that such structures are subject to the ABA.

For the convenience of designers, specifiers, and the general public, and to follow the pattern of building code type documents, the scoping provisions are set forth in a single provision, subpart C, with paragraphs devoted to particular

requirements such as new construction, § 1190.31; additions, § 1190.32; alterations, § 1190.33; and leased buildings, § 1190.34. These sections contain the quantification and scoping provisions for the technical materials which follow in the next subpart. The two subparts should be read together.

Section 1190.31 contains provisions applicable to new construction. This list is, quite naturally, most extensive since it is easiest to provide accessibility in new structures.

In § 1190.32, the general rule is that if an addition to an existing building is constructed:

(a) The addition itself must comply with new construction standards;

(b) An accessible route must be provided from outside the building through the addition (if necessary, through the existing building);

(c) At least one of each existing building feature, element, or space, *e.g.*, cafeteria, snack bar, library, lounge, must be made accessible, unless one of that feature is accessible in the addition; and

(d) common areas must be made accessible as in (c).

Section 1190.33 relates to the scope of what is required with respect to alterations. Note that all work to an existing building that presents the opportunity to provide increased accessibility, no matter how described, *e.g.*, rehabilitation, renovation, is considered to be an alteration and is subject to the accessibility requirement guidelines. This was strongly supported in public comment on question 5 of the Notice of Intent.

If an element of a building is altered, only that element must be made accessible. For example, if toilet room lavatories are altered, the new lavatories must be accessbile. However, if alternations of single elements, when considered together, became an alteration of a portion of a building, the entire portion must be made accessible. For example, if a number of water closets, lavatories, and toilet accessories in a toilet room are altered, then the toilet room as a whole must be made accessible; or on a larger scale, if all of the rooms of a wing of a building are altered, then the wing must be made accessible. These principles are responsive to public comment on questions 7, 8 and 9 of the Notice of Intent. Section 1190.33.

In certain instances what appears to be "alteration" may be so extensive that it will be classified as "new" construction, thereby necessitating the entire building to be accessible and usable. Section 1190.33. Compare § 1190.31. This occurs when (1) 50 percent or more of the gross floor area is altered or (2) the cost of alteration is 50 percent or more of the full and fair cash value of the building.

In new buildings, all entrances must be accessible. With alterations to existing buildings, the rules are slightly different. Where 50 percent or more of a building is altered, so that the alteration is classified as new construction; at least one entrance, as well as any entrance altered, must be accessible. In any event, whether or not 50 percent of the building is altered, an entrance must be made accessible if any alteration work is performed on that entrance. This is responsive to the comments on question 10 of the Notice of Intent.

Question 11 of the Notice of Intent addressed the issue of vertical access. In §§ 1190.32 and 1190.33 an accessible means of vertical access must be provided for alterations where

(a) Stairs are altered, installed or replaced; or

(b) Power-driven vertical access equipment, *e.g.*, and escalator, is altered, installed, or replaced; or

(c) A floor is added to a building.

In response to question 11 of the Notice of Intent, one-third of the comments favored an elevator being required in all instances cited in the Notice. The remaining two-thirds were mixed, defying simplistic classification.

The ATBCB is not prohibiting the installation of escalators. Rather, where escalators are installed, elevators must also be provided. *See* § 1190.31(f). Only passenger, not freight or service, elevators would be in compliance with the guidelines.

The provisions of the guidelines applicable to leased space are the same as those applicable to federally-owned buildings. In response to its inquiry about balancing the need for accessible space with the fact that accessible space may not be available (question 12 of the Notice of Intent), the ATBCB received comments which were divided on the adequacy of the current GSA approach, which permits awarding of a lease requiring certain enumerated accessibility features. 41 CFR 101-19.604(e), 43 FR 16478, 16480. Many commenters felt that the exception permitted in the leasing process had in essence become the rule, rather than full accessibility actually currently required for initial lease solicitation. The ATBCB recognizes that full accessibility may not always be available in leased buildings. However, the ATBCB believes that the waiver/modification process can address these instances. Section 1190.34. This is more than GSA currently requires in its regulation relating to review of leasing inaccessible sites.

Section 1190.34 requires, consistent with the public comment on question 13 of the Notice of Intent, that an accessible route be provided from the entrance to the leased portion and essential features of the building. This includes the essential building support functions such as the elevator, toilet rooms, and primary entrances, which are located in the leased portion of the building, even if not physically occupied by a Federal agency.

Question 14 of the Notice of Intent inquired about making the common areas of leased buildings accessible. Where such common areas may be justified under 41 CFR Chapter 101 as an essential, valid space requirement, such areas may be required to be accessible. There are, however, other statutes which limit the amount the Government may pay to improve a lessor's property. *See* 40 U.S.C. 278(a), which limits the amount of improvement to 25 percent of the rent for the first year of the lease. This may limit the amount of accessibility in leased space. Also, the lessor may have already leased the common area to another party, *e.g.*, concessionaire for store or cafeteria. Thus, while public comment supported making these areas accessible, there may be very practical problems in terms of justifying the Government's need for this space and/or necessitating a processed departure from the guidelines. These limitations are reflective of the requirement that the standards are applicable to ensure accessibility "whenever possible," *e.g.*, 42 U.S.C. 4152, 4154(a).

When the Government leases an entire building it may be said to require access to and, in fact, control the common areas. Leases of entire structures pose fewer problems in recognizing the need for access to common features as the Government controls the entire building. An example of a bona fide need for access to a common area in a building the Government did not lease completely would be the need for access to a cafeteria in a remotely located structure.

F. Accessibility Specifics

The detailed technical provisions of the guidelines are contained in the fourth subpart. Provisions are made under 21 separate major headings. The technical provisions are contained in Subpart D. Different technical provisions are assigned specific sections. This is for the convenience of designers, specifiers, and the general public and to follow the pattern or building code documents.

There are several issues on which comments were received which the

1190.180 Alarms

ATBCB wishes to address. These relate to provisions for communication impaired persons, questions 19–23 of the Notice, and visually-impaired persons, questions 24–28 of the Notice. The public comment on question 19 of the Notice of Intent supported flashing lights as the best way to inform deaf and hearing impaired persons in case of an emergency. This is embodied in § 1190.180, Alarms.

The public comment on question 23 of the Notice of Intent supported use of the latest technology to eliminate barriers. This will be an area of future research also identified by question 30 of the Notice. In these guidelines signage requirements are included. Section 1190.200.

In responding to questions 24–28, which raised issues relating to the provision of accessibility for visually impaired persons, public comment supported the provision of tactile signage and tactile door handles, as well as warnings at railings or walls surrounding openings. *See* § 1190.190.

The responses also seemed to support the use of contrasting colors as a directional cue for visually impaired persons. However, before mandating this, the ATBCB wants to research this subject further. *See* § 1190.200(b)(3).

In considering the issue of signage/identification there was also discussion concerning utilization of specific shapes to identify particular functions of a building, *e.g.*, triangles to identify ladies' restrooms. This may also be the subject of further research.

The subject of telephones and communication barriers elicited considerable comments. Public comment in response to question 20 of the Notice of Intent was overwhelmingly in favor of requiring TDDs. Concern was raised, however, that the ATBCB seek to ensure that such a requirement, if imposed, can be done practically and will not be frustrated by vandalism.

Public comment strongly supported the policy that telephones should be compatible with hearing aids (questions 20 and 22). This is within § 1190.210 and it is proposed that all public telephones will be so compatible. The ATBCB understands that the cost of such compatibility is minimal.

Comment on question 20 also supported requiring at least one public telephone per bank or that a stated percentage (but at least 1) be equipped with amplifiers. *See* § 1190.210(d).

Question 22 of the Notice of Intent elicited strong public support to require telephones receiving incoming calls from the public be equipped with TDDs. However, upon analysis of the Architectural Barriers Act, ATBCB staff concluded that such a requirement, while it may be an appropriate public policy, is not a component of the design, construction, or alteration of a building or facility. The ATBCB believes that under either Section 501 or 504 of the Rehabilitation Act, 29 U.S.C. 791, 794, such TDDs can be required.

G. Special Technical Provisions

The next subpart, "Special Buildings or Facility Elements," will be developed in future rulemaking. ATBCB expects to interact with the Federal agencies having expertise to develop more specific guidelines for the unique aspects of structures, *e.g.*, with the Department of the Interior on guidelines for accessible parks, the Department of Health and Human Services and Veterans Administration for hospitals, the Department of Housing and Urban Development for residential units.

H. Requests for Comments; Highlighted Issues

The ATBCB is interested in receiving comments on all aspects of the proposed guidelines from all interested parties. The ATBCB is concerned that the provisions are understandable and lead to clear and enforceable standards and accessible buildings in a most effective manner.

The ATBCB in inviting public comment on the proposed guidelines, wishes to highlight certain issues for comment. These issues are set forth below.

(1) Number. While § 1190.6(b) states the general principle that when a number of building elements is provided *each* must be accessible, the guidelines do make certain exceptions which should be examined. *See also* Subpart C.

(a) For example, should the guidelines require that in new buildings all or a lesser number, such as 2, of the entrances (including the principal entrance) should be accessible? Should the number be less when there is a replacement or renovation project involving existing entrances? Section 1190.120.

(b) Under § 1190.150 should all toilet facilities provided in a toilet room be required to be accessible or should the guidelines (and thus the Architectural Barriers Act standards) require only one toilet unit per toilet room be accessible?

(c) What number of parking spaces should be specified by the guidelines for disabled persons? *See* § 1190.60 specifying a percentage and minimum of one space.

(d) In § 1190.210, the guidelines provide that at least one telephone per bank must be equipped with telecommunications devices for the deaf (TDDs). Is that number reasonable?

(e) A related inquiry is how many telephones should be required to have amplifiers. Should the general rule be one per bank with additional requirements for special use buildings such as airports?

(f) and (g) Two other sections, 1190.220 and 1190.230, also contain deviations from the all of a building element rule. In § 1190.220 a percentage of seating spaces has been indicated. Under § 1190.230 a limited number of viewing positions are to be provided based on the capacity of assembly area. Public comment is invited on the reasonableness and adequacy of these provisions of the guidelines.

(2) Alterations. Section 1190.33.

(a) Public comment is invited on the "50 percent criteria"—floor space or full and fair cash value—for treating significant alterations as new construction and thus requiring full access throughout the entire structure.

(b) The ATBCB also highlights the question of whether it should, as a matter of policy, require an accessible means of vertical access where an escalator is contemplated to replace an existing escalator.

(3) Parking. A fundamental question for comment is whether the guidelines should require the standards based upon it to require parking for disabled persons when the Government builds, leases, or funds a building. *See* § 1190.31(b), § 1190.32, § 1190.33(c)(5), and § 1190.34.

(4) Tactile Warnings. Sections 1190.31(o)(2), 1190.70(e)(7), and 1190.190(c)(1) provide for tactile warnings at the edges of streets without curbs, guardrails, planted areas or similar boundary elements. Should this requirement include tactile warnings at curb ramps and vehicular ways? Is this practical or will it cause additional problems?

(5) Hospital Doors. In § 1190.130(c)(4)(i) alternate specifications for front entry doors in acute care hospital patient rooms are provided. These doors are not unattended so independent access is not the issue. The question is whether the latch side clearances should be 1'–6" inches or 2'–0".

(6) Toilet Facilities.

(a) The additional inquiry here is whether the standard should be the same for new and alteration work.

(b) The public should also comment on whether unisex toilets should be permitted (including any qualifications on where, such as at airports or other high use buildings where a disabled person might be accompanied). *See* § 1190.150(a).

(7) Signage/Identification. The public is invited to share its experience with contrasting colors and specific shapes to identify particualr functions. Should these provisions be mandatory in the final guidelines? *See* § 1190.200(b).

(8) Telephones.

(a) The public support for TDDs on public telephones was quite strong. The inquiry is, what is the most effective place for a TDD, an open or a controlled environment? The ATBCB is seeking to ensure that any requirement it may impose can be implemented in a practical manner.

(b) In developing the guidelines' provision relating to telephones, concern was expressed as to the maximum height of the top of the usable or operable part of the telephone. If the part, usually the coin slot, is too high, disabled persons are unable to reach it and thus unable to use the telephone. The guidelines provide that the top of the highest operable part of telephones shall be no higher than 4'–0". The ATBCB is particularly concerned that all of the public be afforded the opportunity to utilize public telephones. ATBCB highlights this provision and invites public comment specifically on the maximum height of the operable parts of telephones.

(9) Historic Buildings. Question 16(d) of the Notice of Intent raised the issue of historic features being a basis for special treatment. The public comment in general recognized the potential need for some (but not blanket) waivers/exceptions. The ATBCB plans to look more closely at this issue, working with the Department of Interior, and examining such concepts as "adaptive use" and "restoration" when evaluated in connection with accessibility. Public comment is invited on the ATBCB's general approach as well as how it plans to address historic buildings.

I. Draft Regulatory Analysis

A draft of a regulatory analysis has been prepared voluntarily. The draft is being published along with the proposed guidelines as Appendix A to this document. A final regulatory analysis will be will be issued at the time the final rule is published. Comments are invited on the draft regulatory analysis.

J. The National Environmental Policy Act

A negative environment declaration, prepared pursuant to the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4332) indicates that the issuance of the minimum guidelines will not have any significant adverse impact on the environment. This document is in the public docket for the guidelines and is available for examination by interested persons during the comment period.

In consideration of the foregoing, it is porposed to add Part 1190 to Title 36 of the code of Federal Regulations to read as set forth below:

The proposed Guidelines are issued under 29 U.S.C. 792 section 502 of the Rehabilitation Act of 1973, as amended.

By vote of the Board, July 18, 1980.

Dated: July 18, 1980.

Max Cleland,

Chairperson, Architectural and Transportation Barriers Compliance Board.

PART 1190—MINIMUM GUIDELINES AND REQUIREMENTS FOR ACCESSIBLE DESIGN

Subpart A—General

Sec.
1190.1 Purpose.
1190.2 Applicability: Buildings and facilities subject to guidelines and standards.
1190.3 Definitions.
1190.4 Issuance of Architectural Barriers Act standards by standard-setting agencies.
1190.5 Guidelines: Other uses.
1190.6 Interpretaion of guidelines.
1190.7 Effect of State or local law.
1190.8 Site conditions.
1190.9 Severability.

Subpart B—Waivers and Modifications: Processed Departures

1190.20 Procedures.
1190.21 Factors on which a waiver or modification may be based.
1190.22 Factors on which a waiver or modification may not be based.
1190.23 Modifications: additional requirement.

Subpart C—Scope

1190.30 Scope [Reserved]
1190.31 Accessible buildings and facilities: New construction.
1190.32 Accessible buildings and facilities: Additions.
1190.33 Accessible buildings and facilities: Alterations.
1190.34 Accessible buildings and facilities: Leased.

Subpart D—Technical Provisions

1190.40 Human data.
1190.50 Walks, floors, and accessible routes.
1190.60 Parking and passenger loading zones.
1190.70 Ramps and curb ramps.
1190.80 Stairs.
1190.90 Handrails.
1190.100 Elevators.
1190.110 Platform lifts.
1190.120 Entrances.
1190.130 Doors.
1190.140 Windows.
1190.150 Toilet and bathing facilities.
1190.160 Drinking fountains and water coolers.
1190.170 Controls and operating mechanisms.
1190.180 Alarms.
1190.190 Tactile warnings.
1190.200 Signage.
1190.210 Telephones.
1190.220 Seating, tables, and work surfaces.
1190.230 Assembly areas.
1190.240 Storage.

SUBPART E—Special Building or Facility Elements [Reserved]

Authority: Sec. 502(b)(7), Rehabilitation Act of 1973 (29 U.S.C. 792(b)(7), as amended by the Rehabilitation, Comprehensive Services, and Developmental Disabilities Amendments of 1978 (Pub. L. 95–602).

Subpart A—General

§ 1190.1 Purpose.

The purpose of this part is to implement section 502(b)(7) of the Rehabilitation Act of 1973 (29 U.S.C. 792(b)(7)), as amended, which requires the Architectural and Transportation Barriers Compliance Board to establish minimum guidelines and requirements for standards issued under the Architectural Barriers Act of 1968 (42 U.S.C. 4151 *et seq.*), as amended. This part and the standards to be based on it are intended to ensure that certain buildings and facilities financed with Federal funds are so designed, constructed, or altered as to be readily accessible to, and usable by, physically handicapped persons. (This section not in ANSI A117.1 (1980).)

§ 1190.2 Applicability: Buildings and facilities subject to guidelines and standards.

(a) *Definitions.* As used in this section, the term:

(1) "Constructed or altered on behalf of the United States" means acquired by the United States through lease-purchase arrangement, constructed or altered for purchase by the United States, or constructed or altered for the use of the United States.

(2) "Primarily for use by able-bodied military personnel" means expected to be occupied, used, or visited principally by military service personnel. Examples of buildings so intended are barracks, officers' quarters, and closed messes.

(3) "Privately owned residential structure" means a single or multi-family dwelling not owned by a unit or subunit of Federal, state, or local government.

(b) *Buildings and facilities covered.* Except as provided in paragraph (c) of this section, this guideline, and the standards to be issued by the standard-setting agencies to conform to it, apply to any building or facility—

(1) The intended use for which either—

(i) Will require that such building or facility be accessible to the public, or

(ii) May result in employment or residence therein of physically handicapped persons; and

(2) Which is—

(i) To be constructed or altered by or on behalf of the United States;

(ii) To be leased in whole or in part by the United States—

(A) After August 12, 1968, and before January 1, 1977, after construction or alteration in accordance with plans and specifications of the United States; or

(B) On or after January 1, 1977, including any renewal of a lease entered into before January 1, 1977, which renewal is on or after such date;

(iii) To be financed in whole or in part by a grant or loan made by the United States after August 12, 1968, if the building or facility may be subject to standards for design, construction, or alteration issued under the law authorizing the grant or loan; or

(iv) To be constructed under the authority of the National Capital Transportation Act of 1960, the National Capital Transportation Act of 1965, or Title III of the Washington Metropolitan Area Transit Regulation Compact.

(c) *Buildings and facilities not covered.* The guidelines and standards do not apply to—

(1) Any privately owned residential structure, unless it is leased by the Federal government on or after January 1, 1977, for subsidized housing programs; or

(2) Any building or facility on a military installation designed and constructed primarily for use by military personnel.

(d) Any covered building or facility, as provided in this section, which is designed, constructed, altered, or leased after the effective date of a standard issued under this guideline which is applicable to the building or facility, shall be designed, constructed, altered, or leased in accordance with the standard. For purposes of this section, any design, construction, alteration or lease for which bids or offers are received before the effective date of the applicable standards, in response to an invitation for bids or requests for proposals, is not subject to the standard. (This section is not in ANSI A117.1 (1980).)

§ 1190.3 Definitions.

As used in this part, the term:

"ATBCB" means the Architectural and Transportation Barriers Compliance Board. (This definition is not found in ANSI A117.1 (1980).)

"Access aisle" means a pedestrian space between elements such as parking spaces, seating, and desks. (This definition is different from the one found in ANSI A117.1 (1980).)

"Accessible" means complying with the specifications and requirements of this part and with any applicable standard issued by a standard-setting agency. (This definition is different from the one found in ANSI A117.1 (1980).)

"Accessible route" means a continuous unobstructed path connecting accessible elements and spaces in a building or facility and complying with the space and reach requirements of this part. (Interior-accessible routes may include but are not limited to corridors, floors, ramps, elevators, lifts, and clear floor space at fixtures. Exterior accessible routes may include but are not limited to parking access aisles, curb ramps, walks, ramps, and lifts.) (This definition is similar to the one in ANSI A117.1 (1980).)

"Accessible space" means a space that complies with this part. (This definition is not found in ANSI A117.1 (1980).)

"Addition" means an expansion, extension, or increase in the gross floor area of a building or facility. (This definition is not found in ANSI A117.1 (1980).)

"Agency" means a Federal department, agency or instrumentality, as defined in sections 551(1) and 701(b)(1) of Title 5, United States Code, or an official athorized to represent an agency. (This definition is not found in ANSI A117.1 (1980).)

"Alternation" means any change in a building or facility or its permanent fixtures or equipment. It includes, but is not limited to, remodeling, renovation, rehabilitation, reconstruction, changes or rearrangement in structural parts, and extraordinary repairs. It does not include normal maintenance, reroofing, interior decoration, or changes to mechanical systems. (This definition is not found in ANSI A117.1 (1980).)

"Architectural Barriers Act" means the Architectural Barriers Act of 1968, Pub. L. 90-480, as amended, 42 U.S.C. 4151 *et seq.* (This definition is not found in ANSI A117.1 (1980).)

"Automatic door" means a door—

(a) Used for human passage and

(b) Equipped with a power-operated mechanism and controls that open and close the door upon receipt of a momentary actuating signal. (This definition is similar to the one in ANSI A117.1 (1980).)

"Building or facility" means all or any portion of buildings, structures, equipment, roads, walks, parking lots, parks, sites, or other real property or interest in such property. (This definition is not found in ANSI A117.1 (1980).)

"Common areas" means those interior and exterior spaces available for use by all occupants and users of a building or facility, exclusive of any spaces that are made available for the use of a restricted group of people or the use of which is restricted to particular functions. (This definition is not found in ANSI A117.1 (1980).)

"Construction" means any erection of a new building or of an addition to an existing building. (This definition is not found in ANSI A117.1 (1980).)

"Cross slope" means the incline that is perpendicular to the direction of travel (see "running slope"). (This definition is similar to the one in ANSI A117.1 (1980).)

"Curb ramp" means a short ramp cutting through a curb or built up to it. (This definition is similar to the one in ANSI A117.1 (1980).)

"Disability" means any physiological disorder or condition, cosmetic disfigurement, or anatomical loss affecting one or more of the following bodily systems: Neurological; musculoskeletal; special sense organs; respiratory, including speech organs; cardiovascular; reproductive; digestive; genito-urinary; hemic and lymphatic; skin; and endocrine. (This definition is different from the one found in ANSI A117.1 (1980).)

"Egress" or "means of egress" means a continuous and unobstructed way of exit travel from any point in a building or facility to an exterior walk or out of a fire zone. It includes all intervening rooms, spaces, or elements. (This definition is similar to the one in ANSI A117.1 (1980).)

"Element" means an architectural or mechanical component of a building, facility, space, or site, *e.g.*, telephone, curb ramp, door, drinking fountain, seating, water closet. (This definition is not found in ANSI A117.1 (1980).)

"Equivalent facilitation" means access or use which is, in terms of performance, dignity, convenience, and independence, at least substantially equal to or better than that required under the guideline or a standard. (This definition is not found in ANSI A117.1 (1980).)

"Essential features" means those elements and spaces that make a building or facility usable by, or serve the needs of, its occupants or users. Essential features include but are not limited to entrances, toilet rooms, and accessible routes. Essential features do not include those spaces that house the major activities for which the building or facility is intended, such as classrooms and offices. (This definition is not found in ANSI A117.1 (1980).)

"Exception" means a special provision in this part or in a standard which indicates an acceptable alternative, under specified circumstances, to a requirement stated directly above the exception. (This definition is not found in ANSI A117.1 (1980).)

"Exectutive Director" means the Executive Director of the ATBCB. (This definition is not found in ANSI A117.1 (1980).)

"Extraordinary repair" means the replacement or renewal of any element of an existing building or facility for purposes other than normal maintenance. (This definition is not found in ANSI A117.1 (1980).)

"Full and fair cash value" means—

(a) The assessed valuation of a building or facility as recorded in the assessor's office of the municipality and as equalized at one hundred percent (100%) valuation; or

(b) If there is no assessed value—

(1) In the case of a building or facility constructed and/or owned by a unit of Federal, State, or local government, the replacement cost; or

(2) In the case of any other building or facility, the fair market value.

Note.—The one hundred percent (100%) equalized assessed value shall be based upon the State's most recent determination of the particular city's or town's assessment ratio. Example: Town X has an assessment ratio of forty percent (40%), and the particular building in question is assessed at $200,000.00. To determine the equalized assessed value of this building, divide $200,000.00 by .40, and the equalized assessed value equals $500,000.00.

(This definition is not found in ANSI A117.1 (1980).)

"Guidelines" means this part. (This definition is not found in ANSI A117.1 (1980).)

"Modification" means an official act in accordance with the provisions of the Architectural Barriers Act to permit design, construction, alteration, or lease of a building without strict compliance with a particular provision of a guideline or standard. (This definition is not found in ANSI A117.1 (1980).)

"Operable part" means a part of equipment or an appliance used to insert or withdraw objects, to activate or deactivate equipment, or to adjust the equipment (*e.g.*, coin slot, push button, handle). (This definition is similar to the one in ANSI A117.1 (1980).)

"Physically handicapped person" means any person who has a disability which substantially limits one or more major life activity, including but not limited to such functions as performing manual tasks, walking, seeing, hearing, speaking, breathing, learning, and working. (This definition is different from the one found in ANSI A117.1 (1980).)

"Power-assisted door" means a door—

(a) Used for human passage; and

(b) With a mechanism that helps to open the door, or relieve the opening resistance of a door, upon the activation of a switch or a continued force applied to the door itself. (This definition is different from the one found in ANSI A117.1 (1980).)

"Principal entrance" means a main entrance to a building or facility. (This definition is similar to the one in ANSI A117.1 (1980).)

"Ramp" means a walking surface that has a running slope greater than 1:20. (This definition is similar to the one in ANSI A117.1 (1980).)

"Running slope" means the slope that is parallel to the direction of travel (see "cross slope"). (This definition is similar to the one in ANSI A117.1 (1980).)

"Section 502 of the Rehabilitation Act" or "Section 502" means Section 502 of the Rehabilitation Act of 1973, Pub. L. 93-112, 29 U.S.C. 792, as amended. (This definition is not found in ANSI A117.1 (1980).)

"Shall" denotes a mandatory requirement. (This definition is similar to the one in ANSI A117.1 (1980).)

"Signage" means the display of written, symbolic, tactile, or pictorial information. (This definition is similar to the one in ANSI A117.1 (1980).)

"Site" means a parcel of land bounded by a property line or a designated portion of a public right-of-way. (This definition is similar to the one in ANSI A117.1 (1980).)

"Site improvements" means landscaping, paving for pedestrian and vehicular ways, outdoor lighting, recreational facilities, and similar site additions. (This definition is similar to the one in ANSI A117.1 (1980).)

"Space" means a definable area, *e.g.*, toilet room, hall, assembly area, parking area, entrance, storage room, alcove, courtyard, or lobby. (This definition is not found in ANSI A117.1 (1980).)

"Standard" means any standard for accessibility issued under the Architectural Barriers Act. (This definition is not found in ANSI A117.1 (1980).)

"Standard-setting agency" means one of the four agencies required to issue standards under the Architectural Barriers Act, *i.e.*, the General Services Administration, the Department of Housing and Urban Development, the Department of Defense, and the United States Postal Service. (This definition is not found in ANSI A117.1 (1980).)

"Structural impracticability" means having little likelihood of being accomplished without removing or altering a load-bearing structural member at an increased cost of 50 percent or more of the value of the element of the building or facility involved. (This definition is not found in ANSI A117.1 (1980).)

"Tactile" means perceptible through the sense of touch. (This definition is similar to the one in ANSI A117.1 (1980).)

"Tactile warning" means a surface texture applied to or built into walking surfaces or other elements to warn visually impaired persons of hazards in the path of travel. (This definition is similar to the one in ANSI A117.1 (1980).)

"Waiver" means an official act in accordance with the Architectural Barriers Act to—

(a) Exempt an entire building or facility from one or more requirements of a standard; or

(b) Exempt an entire building or facility, or any portion of a building or facility, from the requirements of a standard with respect to a specific element or space. (This definition is not found in ANSI A117.1 (1980).)

"Walk" means an exterior pathway or space with a prepared surface intended for pedestrian use and having a slope of 1:20 or less. It includes general pedestrian areas such as plazas and courts. (This definition is similar to the one in ANSI A117.1 (1980).)

§ 1190.4 Issuance of Architectural Barriers Act standards by standard-setting agencies.

(a) These guidelines are the minimum requirements for standards issued under the Architectural Barriers Act by the Administrator of General Services, Secretary of Housing and Urban Development, Secretary of Defense, and Postmaster General.

(b) Each standard-setting agency shall issue proposed standards under the Architectural Barriers Act for public comment within 120 days after the publication of this guideline. Each standard-setting agency shall issue final standards under the Architectural Barriers Act in compliance with these guidelines with 120 days after the publication of the proposed standards.

(c) Standards which conform to or exceed the provisions of the guidelines shall be deemed in compliance with the guidelines.

(d) Each standard-setting agency is encouraged to issue standards which follow the format of these guidelines. However, standards which differ in format from these guidelines but are

V 45 A G 18 80 UMI

otherwise consistent with the guidelines shall be deemed in compliance with these guidelines.

(e) If a standard-setting agency does not issue standards within 240 days after the publication of this guideline, or if any standard-setting agency issues standards which do not comply with the guidelines, the guidelines shall be enforced as that agency's standards, under 36 CFR Part 1150, Compliance with Standards for Access to and Use of Buildings by Handicapped Persons; Practice and Procedures for Compliance Hearings. (This section is not in ANSI A117.1 (1980).)

§ 1190.5 Guidelines: Other uses.

The guidelines may be used by other governmental and nongovernmental entities to make buildings and facilities accessible to, and usable by, physically handicapped persons. (ANSI A117.1 (1980) has a similar provision.)

§ 1190.6 Interpretation of guidelines.

(a) These guidelines shall be liberally construed to carry out the purposes and provisions of the Architectural Barriers Act and Section 502 of the Rehabilitation Act.

(b) Words importing the singular number may extend and be applied to the plural and vice versa. However, unless otherwise specified in the guidelines, each element or space of a particular building or facility shall comply with the guidelines.

(c) Use of the imperative mood, *e.g.*, "provide," means the provision is mandatory. This form is being used to avoid wordiness and monotony but means the same as if the word "shall" had been included. (This section is not in ANSI A117.1 (1980).)

§ 1190.7 Effect of State or local law.

The obligation to comply with this part is not affected by any State or local law. (This section is not in ANSI A117.1 (1980).)

§ 1190.8 Site conditions.

These guidelines are not intended to discourage development of buildings and facilities on sites with extreme conditions, *e.g.*, on slopes, and where full accessibility might be difficult. However, site conditions shall not be used as a justification for noncompliance with this guideline or a standard, except as provided in Subpart B. (This section is not in ANSI A117.1 (1980).)

§ 1190.9 Severability.

If any section, subsection, paragraph, sentence, clause, or phrase of these guidelines is declared invalid for any reason, the remaining portions of these guidelines that are severable from the invalid part shall remain in full force and effect. If a part of these guidelines is invalid in one or more of its applications, the part shall remain in effect in all valid applications that are severable from the invalid applications. (This section is not in ANSI A117.1 (1980).)

Subpart B—Waivers and modifications: Processed departures (This subpart is not in ANSI A117.1 (1980).)

§ 1190.20 Procedures.

(a) The head of a standard-setting agency may issue a waiver or modification on a case-by-case basis with respect to a standard issued by that standard-setting agency if—

(1) The head of the agency concerned applies in writing to the head of the standard-setting agency; and

(2) The head of the standard-setting agency—

(i) Provides complete documentation to the Executive Director concerning the application; and

(ii) Provides the Executive Director 20 calendar days from receipt of the documentation in which to comment in writing to the head of the standard-setting agency; and

(3) The head of the standard-setting agency makes a written finding of facts and a written determination that the modification or waiver is clearly necessary.

(b) Nothing in these guidelines shall preclude the Executive Director from instituting compliance procedures under 36 CFR Part 1150 alleging that a waiver or modification is not based upon findings of fact or is inconsistent with the Architectural Barriers Act and Section 502 of the Rehabilitation Act.

§ 1190.21 Factors on which a waiver or modification may be based.

Factors which may be the basis of determination that a waiver or modification is clearly necessary include, but are not limited to, the following:

(a) Safety or Security;

(b) Undue hardship (including such considerations as time, cost, and substantial compliance), where it is clearly evident that a method substituting for a method required by the standard will provide equivalent facilitation;

(c) Limitations imposed by legislation other than the Architectural Barriers Act and Section 502; or

(d) Structural impracticability.

§ 1190.22 Factors on which a waiver or modification may not be based.

A head of a standard-setting agency may not base a waiver or modification on any of the following factors:

(a) Type of occupancy, usage, or business conducted in the building or facility;

(b) Potential number of physically handicapped persons who may be employed in, reside in, or visit the building or facility;

(c) Nature of the disabilities of the persons who may be employed in, reside in, or visit the facility.

§ 1190.23 Modifications: Additional requirements.

A head of a standard-setting agency may grant a modification only if—

(a) Application of the standard would be structurally impracticable;

(b) Improved access or a greater degree of access is provided;

(c) With respect to alteration of an existing building or facility, it is clearly evident that equivalent facilitation is provided; or

(d) With respect to new construction, the head of the standard-setting agency finds that:

(1) An innovative method is proposed to be substituted for a method required by the standard; and

(2) The innovative method can reasonably be expected to provide equivalent facilitation.

Subpart C—Scope

§ 1190.30 Scope. [Reserved]

§ 1190.31 Accessible buildings and facilities: New construction.

Except as otherwise provided in § 1190.50, all new construction of buildings and facilities shall comply with the following minimum requirements:

(a) *Accessible route.* At least one accessible route shall comply with § 1190.50, Walks, Floors, and Accessible Routes, and shall connect an accessible building entrance with:

(1) Transportation facilities located within the property line of a given site, including passenger loading zones, public transportation facilities, taxi stands, and parking;

(2) Public streets and sidewalks;

(3) Other accessible buildings, facilities, elements, and spaces that are on the same site; and

(4) All accessible spaces, rooms, and elements within the building or facility. (ANSI A117.1 (1980) has a similar paragraph.)

(b) *Parking and passenger loading zones:* If any parking is provided, for employees or visitors, or both, each such parking area shall comply with § 1190.60, Parking and Passenger Loading Zones, and the following table:

Total parking in lot	Required minimum number of accessible spaces
1 to 25	1.
26 to 50	2.
51 to 75	3.
75 to 100	4.
76 to 150	5.
151 to 200	6.
201 to 300	7.
301 to 400	8.
401 to 500	9.
501 to 1,000	2 percent of total.
Over 1,000	20 plus 1 for each 100 over 1,000.

(This paragraph is different from the one in ANSI A117.1 (1980).)

If passenger loading zones are provided, at least one passenger loading zone shall comply with § 1190.60, Parking and Passenger Loading Zones. [This paragraph is similar to the one in ANSI A117.1 (1980).)]

(c) *Ramps and Curb Ramps.* If there is an abrupt level or grade change, if the slope is greater than 1:20, and if no other means of accessible vertical access is provided, a ramp or curb ramp shall be provided. If a ramp or curb ramp is provided, it shall comply with § 1190.70, Ramps and Curb Ramps. [This paragraph is similar to the one in ANSI A117.1 (1980).]

(d) *Stairs.* Except as provided in paragraph 1190.30(f)(1), stairs connecting levels that are not connected by an elevator shall comply with § 1190.80, *Stairs.* (This paragraph is similar to the one in ANSI A117.1 (1980).)

(e) *Handrails:* Handrails shall be provided at each ramp and staircase as required in § 1190.70, Ramps and Curb Ramps, and § 1190.80, Stairs, respectively, and shall comply with § 1190.90, Handrails. (This paragraph is similar to the one in ANSI A117.1 (1980).)

(e) *Elevators.* One passenger elevator complying with § 1190.100, Elevators, shall serve each level in all multi-story buildings and facilities. If more than one elevator is provided, each elevator shall comply with § 1190.100, Elevators. (This provision is different from ANSI A117.1 (1980).)

(1) *Exception.* Elevator pits, elevator penthouses, mechanical rooms, piping, or equipment catwalks are excepted from this requirement. (This provision is different from ANSI A117.1 (1980).)

(2) *Exception.* Ramps or platform lifts complying with § 1190.70, Ramps and Curb Ramps, and § 1190.110, Platform Lifts, respectively, may be used in lieu of an elevator. (This provision is not in ANSI A117.1 (1980).)

(g) *Platform lifts.* If the slope is greater than 1:20, and if no other means of accessible vertical access is provided, a platform lift may be provided if there is an abrupt level or grade change. If a platform lift is provided, it shall comply with § 1190.110, Platform Lifts. (This provision is different from ANSI A117.1 (1980).)

(h) *Entrances.* Each entrance to a building or facility shall comply with § 1190.120 Entrances. (This provision is different from ANSI A117.1 (1980).)

(i) *Doors.* Each door shall comply with § 1190.130, Doors. (This provision is different from ANSI A117.1 (1980).)

(j) *Windows.* If windows are intended for occupant operation, at least one window in each accessible space shall comply with § 1190.140, Windows. (This provision is different from ANSI A117.1 (1980).)

(k) *Toilet and bathing facilities.* Each toilet and bathroom facilty shall comply with § 1190.150, Toilet and Bathing Facilities, and shall provide at least one accessible fixture and accessory specified in Pararaph 1190.150(b). In toilet and bathr. om facilities providing multiple fixtures and accessories, at least 2 percent of each type of fixture or accessory shall comply with § 1190.150. (This provision is different from ANSI A117.1 (1980).)

(l) *Drinking fountains and water coolers.* If drinking fountains or water coolers are provided, each shall comply with § 1190.160, Drinking Fountains and Water Coolers. (This provision is different from ANSI A117.1 (1980).)

(m) *Controls and operating mechanisms.* If controls and operating mechanisms are provided, each shall comply with § 1190.170, Controls and Operating Mechanisms. (This provision is different from ANSI A117.1 (1980).)

(n) *Alarms.* If alarms are provided, each shall comply with § 1190.180, Alarms. (This provision is different from ANSI A117.1 (1980).)

(o) *Tactile warnings.* Tactile warnings shall comply with § 1190.190, Tactile Warnings, and shall be provided only at the following locations:

(1) Transit vehicle loading platforms;

(2) Edges of streets without curbs, guardrails, planted areas, or similar boundary elements;

(3) Edges of pools not protected by guardrails, walls, or curbs; and

(4) Doors that lead to hazardous areas.

Tactile warnings shall not be used at emergency exit doors. (This provision is different from ANSI A117.1 (1980).)

(p) *Signage.* (1) The international symbol of accessibility shall comply with paragraph 1190.200(e), Symbol of Accessibility, and shall be used at the following locations:

(i) Parking spaces designated as reserved for the physically handicapped;

(ii) Passenger loading zones;

(iii) Accessible entrances;

(iv) Accessible toilet and bathing facilities.

(2) Informational signing, if provided, shall comply with § 1190.200. (This provision is different from ANSI A117.1 (1980).)

(q) *Telephones.* At each location where public telephones are provided, each telephone shall comply with § 1190.210, Telephones. If banks of two or more telephones are provided, at least one telephone per bank shall have a volume control and at least one telephone per bank shall be equipped with a TDD or with signage directing a user to a TDD that is located in proximity to the bank. (This provision is different from ANSI A117.1 (1980).)

(r) *Seating, tables, and work surfaces.* If fixed seating, tables, and work surfaces are provided, at least 5 percent of each element shall comply with § 1190.220, Seating, Tables, and Work Surfaces. (This provision is different from ANSI A117.1 (1980).)

(s) *Assembly areas.* If assembly areas are provided, accessible viewing positions shall compy with § 1190.230, Assembly Areas, and the following table:

Capacity of assembly space	Number of viewing positions
1 to 25	1.
26 to 50	2.
51 to 75	3.
75 to 100	4.
76 to 150	5.
151 to 200	6.
201 to 300	7.
301 to 400	8.
401 to 500	9.
501 to 1,000	2% of total.
Over 1,000	20 plus 1 for each 100 over 1,000.

(This provision is different from ANSI A117.1 (1980).)

(t) *Storage.* If storage facilities are provided, each such facility shall comply with § 1190.240, Storage. (This provision is similar to ANSI A117.1 (1980).)

§ 1190.32 Accessible buildings and facilities: Additions.

(This provision is not in ANSI A117.1 (1980).)

Each addition to an existing building or facility shall compy with § 1190.31 except as follows:

(a) *Entrances.* If a new addition to a building or facility does not have an

entrance, then at least one entrance in

altered shall comply with the applicable

complying with § 1190.120 Entrances to

entrance, then at least one entrance in the existing building or facility shall comply with § 1190.120, Entrances.

(b) *Accessible route.* If the only accessible entrance to the addition is located in the existing building or facility, then at least one accessible route shall comply with § 1190.50, Walks, Floors, and Accessible Routes, and shall provide access through the existing building or facility to all rooms, elements, and spaces in the new addition.

(c) *Elements, essential features, and common areas.* (1) If an element or space is provided in the existing building or facility and if it is not provided in the addition, at least one of each element or space in the existing building or facility shall be made accessible and shall comply with the appropriate section.

(2) Common areas shall be made accessible if such areas are not provided in the addition, and shall comply with the appropriate Section.

§ 1190.33 Accessible buildings and facilities: Alterations.

(This provision is not in ANSI A117.1 (1980).)

(a) *General.* Alterations to existing buildings or facilities shall comply with the following:

(1) If existing elements, spaces, essential features, or common areas are altered, then each such altered element, space, feature, or area shall comply with the applicable provisions of § 1190.31, Accessible Buildings and Facilities: New Construction.

(2) If stairs or power-driven vertical access equipment (*e.g.*, escalators) are altered, installed, or replaced then a means of accessible vertical access shall be provided that complies with § 1190.70, Ramps and Curb Ramps; § 1190.100, Elevators; or § 1190.110, Platform Lifts.

(3) If alterations are conducted in phases, the total area or costs of the alterations shall be used to calculate the requirements of § 1190.33 (b) and (c) irrespective of the number of phases required to complete the alterations.

(4) If alterations of single elements, when considered together, amount to an alteration of a portion or space of a building or facility, the entire portion or space shall be made accessible.

(b) *Alterations involving less than 50% of the value and floor space.* If the alterations involve the expenditure of less than 50% of the full and fair cash value of the building or facility, *and* if the alterations involve less than 50% of the gross square footage of the building, then each element, feature, or space altered shall comply with the applicable provisions of the guidelines.

(c) *Alterations involving 50% or more of the value and floor space.* If the alterations involve either the expenditure of 50% or more of the full and fair cash value of the building or facility, *or* if the alterations involve 50% or more of the gross square footage of the building, then the entire building or facility shall be brought into compliance with applicable provisions of these guidelines to the following extent:

(1) At least one accessible route shall comply with § 1190.50, Walks, Floors, and Accessible Routes, and § 1190.33(a).

(2) At least one accessible entrance shall comply with § 1190.120, *Entrances.* Additional accessible entrances shall comply with § 1190.33(a)(1).

(3) Vertical access shall comply with §§ 1190.31 (c), (d), (f), and (g), and shall comply with § 1190.70, Ramps and Curb Ramps; § 1190.80, Stairs, § 1190.100, Elevators; and § 1190.110, Platform Lifts.

(4) If provided, at least one toilet facility and at least one bathing facility on each floor shall comply with § 1190.150, Toilet and Bathing Facilities, and shall provide fixtures and accessories in accordance with § 1190.31(k).

(5) If any of the following elements or spaces is provided, each such element or space shall comply with the appropriate requirements for that element or space:

(i) § 1190.60, Parking and Passenger Loading Zones;

(ii) § 1190.160, Drinking Fountains and Water Coolers;

(iii) § 1190.180, Alarms; and

(iv) § 1190.200, Signage. All inaccessible entrances, toilet and bathing rooms, drinking fountains, stairwells, escalators and telephones shall have informational signage directing the user to corresponding accessible facilities.

(v) § 1190.210: Telephones

(vi) § 1190.220: Seating, Tables and Work Surfaces

(vii) § 1190.230: Assembly Areas

(viii) § 1190.240: Storage

§ 1190.34 Accessible buildings and facilities: Leased.

(This provision is not in ANSI A117.1 (1980).)

Buildings or facilities or portions thereof leased by the Federal government shall comply with the requirements of § 1190.31, New Construction; § 1190.32, Additions, and § 1190.33, Alterations. If no fully accessible space is available, space may be leased only if the following conditions are met:

(a) At least one accessible route is provided from an accessible entrance complying with § 1190.120 Entrances to all leased portions of the building or facility and to each essential feature which serves that portion of the building or facility. The accessible route shall comply with the requirements of § 1190.50 Walks, floors, and accessible routes;

(b) Each essential feature of the portion of the building or facility to be leased is accessible and complies with the applicable Sections;

(c) Common areas that are approved space needs of the occupant agency serving the portions of the building or facility to be leased are accessible and comply with the applicable Section.

Subpart D—Technical Provisions

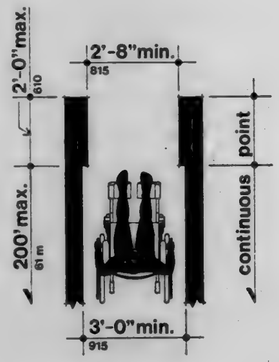
§ 1190.40 Human data.

(a) *General.* This section is the basis for clearances and equipment location required by other sections. (This provision is similar in ANSI A117.1 (1980).)

(b) *Moving wheelchair clearances.* Provide the clearances for a moving wheelchair, as follows:

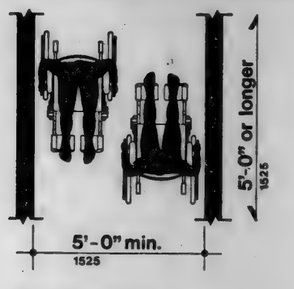
(1) Minimum clear width for point passage is 2'–8" (815 mm). Maximum length of point passage is 2'–0" (610 mm). (This provision is similar to ANSI A117.1 (1980).)

(2) Minimum clear width for continuous passage is 3'–0" (915 mm). (fig. 4.1). (This provision is similar to ANSI A117.1 (1980).)



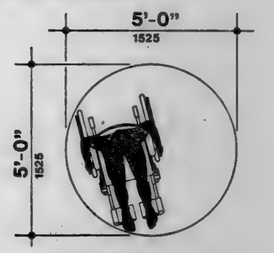
passage 4.1 — scale: 1/4"= 1'-0"

(3) Minimum clear width for two wheelchairs to pass is 5'–0" (1,525 mm). (fig. 4.2). (This provision is similar to ANSI A117.1 (1980).)

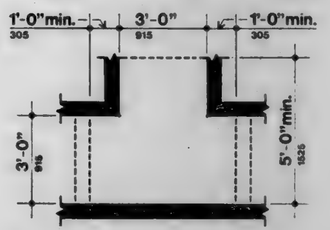


two-way 4.2 — scale: 1/4"= 1'-0"

(4) Minimum clear space to make a 180 degree turn is 5'–0" (1,525 mm) diameter (fig. 4.3) or a T-shaped space (fig. 4.4). (This provision is similar to ANSI A117.1 (1980).)



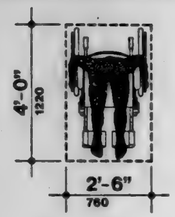
180°/360° 4.3 — scale: 1/4"= 1'-0"



t-turn 4.4 — scale: 1/4"= 1'-0"

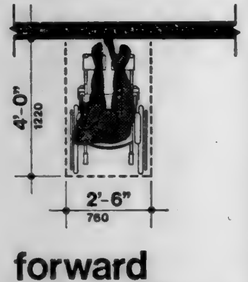
(c) *Clear access space.* Provide the following clear floor or ground access space to accommodate a single, stationary occupied wheelchair, where required by other sections:

(1) Clear access space shall be a minimum of 2'–6" by 4'–0" (760 mm by 1,220 mm) (fig. 4.5). (This provision is similar to ANSI A117.1 (1980).)

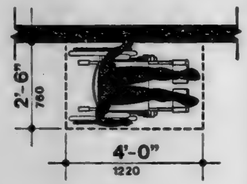


clear access space 4.5 — scale: 1/4"= 1'-0"

(2) Position clear access space for either forward or parallel approach to an object or element as required (figs. 4.6 and 4.7). (This provision is similar to ANSI A117.1 (1980).)



forward approach 4.6 — scale: 1/4"= 1'-0"

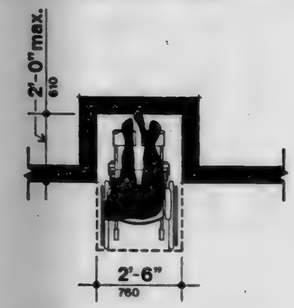


parallel approach 4.7 — scale: 1/4"= 1'-0"

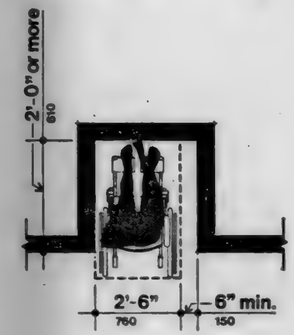
(3) Clear access space may overlap the clear space required under some objects. (This provision is similar to ANSI A117.1 (1980).)

(4) Clear access space shall adjoin or overlap an accessible route or another clear access space for at least one full, unobstructed side. (This provision is similar to ANSI A117.1 (1980).)

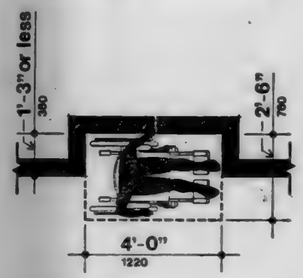
(5) If clear access space is confined or restricted on all or part of three sides, provide additional maneuvering space adjoining clear access space (figs. 4.8 and 4.9, 4.10 and 4.11). (This provision is similar to ANSI A117.1 (1980).)



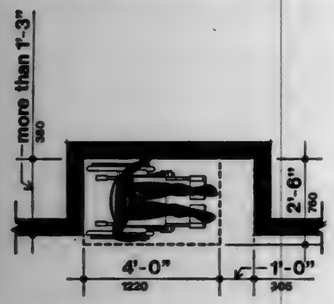
alcove 4.8 — scale: 1/4"= 1'-0"



alcove 4.9 — scale: 1/4"= 1'-0"



alcove 4.10 — scale: 1/4"= 1'-0"

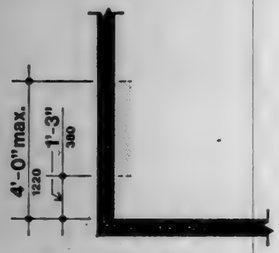


alcove 4. 11
scale: 1/4"= 1'-0"

(6) Clear access space surfaces shall comply with Paragraph 1190.50(i) Walks, floors, and accessible routes. (This provision is similar to ANSI A117.1 (1980).)

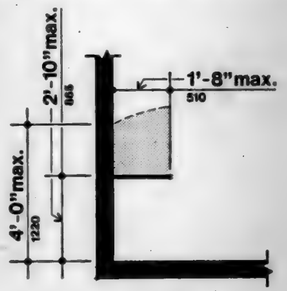
(d) *Reach limitations.* Reach limitations are a function of approach in the clear access space:

(1) *Forward reach:* (i) Maximum height of reach for a forward approach shall be 4'–0". (1,220 mm) (fig. 4.12).

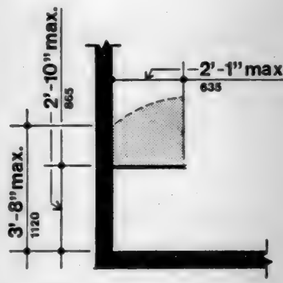


forward reach 4. 12
scale: 1/4"= 1'-0"

(ii) Maximum height of reach for a forward approach at obstructions shall conform with fig. 4.13 and 4.14.



reach over obstacle 4. 13
scale: 1/4"= 1'-0"

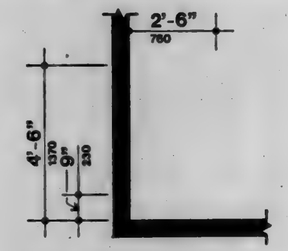


reach over obstacle 4. 14
scale: 1/4"= 1'-0"

(§ 1190.40(a)(1)(i) and (ii) are similar to ANSI A117.1 (1980).)

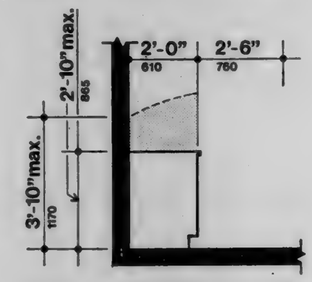
(2) *Side reach (parallel approach).* (i) Maximum height of reach for a side approach shall be 4'–6" (1,370 mm) (fig. 4.15).

(ii) Minimum height of reach for a side approach shall be 9 in. (230 mm) (fig. 4.12).



side reach 4. 15
scale: 1/4"= 1'-0"

(iii) Maximum height of reach for a side approach over an obstruction shall conform with fig. 4.16.



reach over obstruction 4. 16
scale: 1/4"= 1'-0"

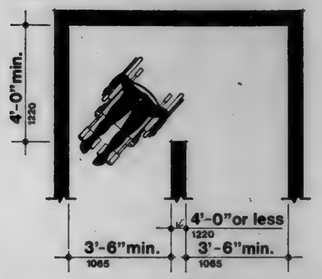
(§ 1190.40(a)(2)(i) and (ii) are similar to the ANSI A117.1 (1980).)

(3) To be accessible, special equipment may require measurements different from those provided above and these measurements should be dictated by equipment design. (This provision is similar to ANSI A117.1 (1980).)

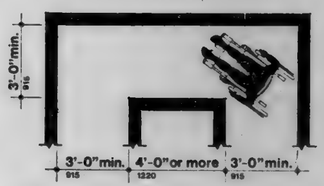
§ 1190.50 Walks, floors, and accessible routes.

(a) *General.* Accessible routes required by Subpart C, *Scope,* shall comply with this section. (This provision is similar to ANSI A117.1 (1980).)

(b) *Width.* Provide the minimum clear width for continuous passage and for point passage required by paragraphs 1190.40(b) (1) and (2), (fig. 4.1). Provide maneuvering clearances shown in figs. 5.1 & 5.2 if the accessible route requires a turn around the obstruction. (This provision is similar to ANSI A117.1 (1980).)

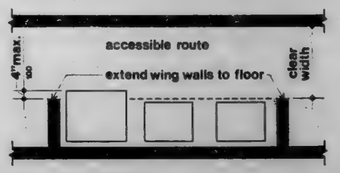


turn 5. 1
scale: 1/4"= 1'-0"



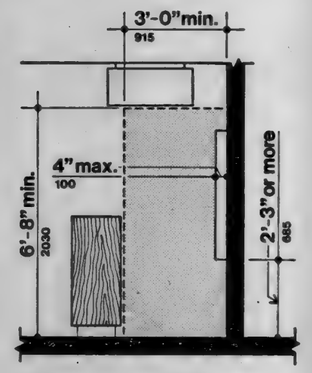
turn 5. 2
scale: 1/4"= 1'-0"

(c) *Protruding objects.* No protruding object shall reduce the minimum clear width for continuous passage of an accessible route or maneuvering space (fig. 5.3). (This provision is similar to ANSI A117.1 (1980).)

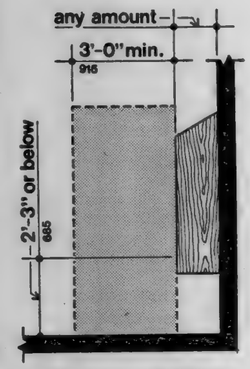


clear width 5. 3
scale: 1/4"= 1'-0"

(1) Objects fixed to wall surfaces shall not project into accessible routes more than 4 inches (100 mm) if mounted with their leading edges between 2'–3" and 6'–8" (685 mm and 2030 mm) above finish floor (figs. 5.4 & 5.5). (This provision is similar to ANSI A117.1 (1980).)

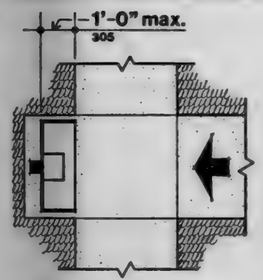


clear width 5. 4
scale: 1/4"= 1'-0"

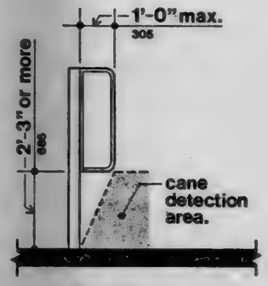


clear width 5. 5
scale: 1/4"= 1'-0"

(2) Free standing objects mounted on posts or pylons may overhang 1'–0" (305 mm) maximum from 2'–3" to 6'–8" (685 mm to 2030 mm) above ground or finished floor surface (figs. 5.6 and 5.7). (This provision is similar to ANSI A117.1 (1980).)

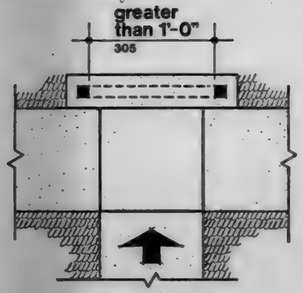


projecting object 5. 6
scale: 1/4"= 1'-0"

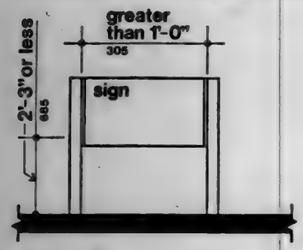


projecting object 5. 7
scale: 1/4"= 1'-0"

(3) Objects mounted below 2'–3" (685 mm) may protrude any distance (figs. 5.8 & 5.9). (This provision is similar to ANSI A117.1 (1980).)



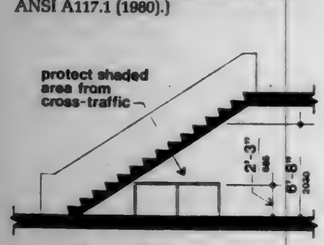
fixed obstruction 5. 8
scale: 1/4"= 1'-0"



fixed obstruction 5.9
scale: 1/4"=1'-0"

(d) *Passing space.* If an accessible route has less than a 5'–0" (1,525 mm) clear width, provide accessible passing spaces at intervals not exceeding 200 ft. (61 m) unobstructed view. *See* figs. 4.2 and 4.4 for examples of permissible passing spaces. (This provision is similar to ANSI A117.1 (1980).)

(e) *Vertical clearance.* Provide a minimum vertical clearance (headroom) of 6'–8" (2,030 mm) throughout accessible routes. (This provision is similar to ANSI A117.1 (1980).) If vertical clearance is reduced to less than 6'–8", provide a barrier or a tactile warning complying with § 1190.190, Tactile warnings, to warn blind or visually-impaired persons (figs. 5.4 and 5.9 and 5.15) (This provision is not in ANSI A117.1 (1980).)



overhead hazard 5.15
scale: 1/8"=1'-0"

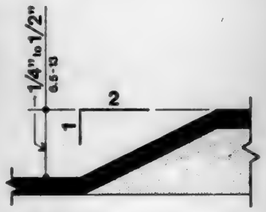
(f) *Slope.* Accessible routes with running slopes of 1:20 or greater shall be considered ramps and shall comply with § 1190.70, Ramps and curb ramps. (This provision is similar to ANSI A117.1 (1980).) No cross-slopes on an accessible route shall exceed 1:48. (This provision is different from ANSI A117.1 (1980).)

(g) *Level changes.* All changes in level or grade in accessible routes shall comply with the following:

(1) Up to ¼ inch (6 mm): Vertical without edge treatment (Fig. 5.10).

edge treatment 5.10
scale: full

(2) ¼ inch to ½ inch (6 mm to 13 mm): Beveled with slope not exceeding 1:2 (Fig. 5.11).



edge treatment 5.11
scale: full

(i) *Exception.* exterior sliding doors may be ¾" beveled and shall comply with § 1190.130(e)(i), *Thresholds.*

(3) Greater than ½ inch (13 mm): Comply with § 1190.70, Ramps and curb ramps; § 1190.100, Elevators; or § 1190.110, Platform Lifts.

(4) Stairs shall not be the sole means of vertical access along an accessible route.

(§ 1190.50(g) is similar to ANSI A117.1 (1980))

(h) *Egress.* Arrange egress so as to be readily accessible from all accessible rooms and spaces. Where fire code provisions require more than one means of egress from any space or room, such means of accessible egress shall also be provided to handicapped persons.

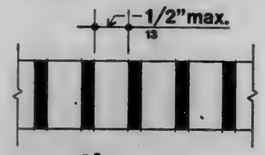
(1) *Exception.* In multiple story buildings and facilities where at-grade egress from each floor is impossible, either of the following is permitted: (i) The provision of approved fire and smoke partitions within each story creating horizontal exits; or

(ii) The provision of areas of refuge approved by agencies having authority for safety, within each floor.

(§ 1190.50(h) is similar to ANSI A117.1 (1980))

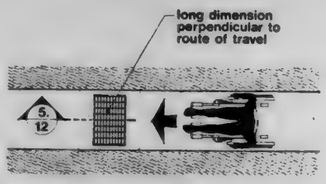
(i) *Ground and floor surfaces.* (1) Surface Condition: Surfaces of paving and floors shall be stable, firm, and slip-resistant. Irregular paving and flooring materials that may cause tripping or difficult wheelchair passage because of height differentials are not permitted on accessible routes. (This provision is similar to ANSI A117.1 (1980).)

(2) Drainage: Design accessible routes so that their surfaces will not collect water. Gratings located in accessible routes shall have openings no greater than ½ inch (13 mm) wide in one direction (fig. 5.12).



section: grating 5.12
scale: half

Gratings with elongated openings shall be so placed that the long dimension is perpendicular to the predominant route of travel (fig. 5.13). (This provision is similar to ANSI A117.1 (1980).)



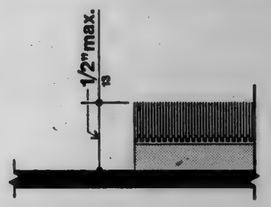
grating orientation 5.13
scale: not-to-scale

(3) Carpeting: If carpet or carpet tile is used on an accessible ground or floor surface, it shall: (i) Be securely attached; (This provision is similar to ANSI A117.1 (1980).)

(ii) Have a firm cushion or pad or no cushion or pad; (This provision is similar to ANSI A117.1 (1980).)

(iii) Have a construction of level loop, textured loop, level cut pile, or level cut/uncut pile; (This provision is similar to ANSI A117.1 (1980).)

(iv) Have a maximum combined thickness of pile, cushion, and backing height of ½ inch (13 mm) (Fig. 5.14); (This provision is different from ANSI A117.1 (1980.) and



carpet height 5.14
scale: full

(v) Have exposed fastened and edge trim complying with paragraph 1190.50(g), level changes, along the entire length of the exposed edge. (This provision is similar to ANSI A117.1 (1980).)

§ 1190.60 Parking and passenger loading zones.

(a) *General.* Parking and passenger loading zones required to be accessible by Subpart C—Scope shall comply with this section. (This provision is similar to ANSI A117.1 (1980).)

(b) *Location.* Accessible parking spaces and accessible passenger loading zones shall: (1) Be the spaces or zones located closest to the nearest accessible principal entrance on an accessible route; and

(2) If located in a separate building or facility, be on the shortest accessible route to an accessible entrance of the parking facility.

(§ 1190.60(b)(1) and (2) are different from ANSI A117.1 (1980).)

(c) *Accessible parking spaces.* Provide accessible parking spaces that: (1) Are at least 8'–0" (2,440 mm) wide,

(2) Have an adjacent access aisle at least 5'–0" (1,525 mm) wide, and that meets § 1190.50, Walks, floors, and accessible routes;

(3) May share a common access aisle between two parking spaces;

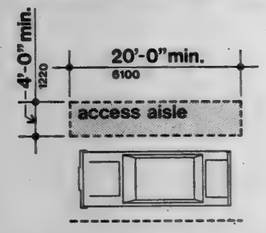
(4) Do not permit parked vehicle overhangs to reduce the clear width of accessible routes; and

(5) Have parking spaces and access aisles with surface slopes not exceeding 1:48 in all directions. (§ 1190.60 (c)(1), (2), (3), (4), (5), and (6) are similar to ANSI A117.1 (1980).)

(d) *Passenger loading zones.* Provide accessible passenger loading zones that: (1) Have an access aisle at least 4'–0" (1,220 mm) wide by 20'–0" (6 m) long adjacent, parallel, and level with the vehicle standing space,

(2) Have curb ramps conforming to § 1190.70, Ramps and curb ramps, if there are curbs between the access aisle and other portions of the accessible route; and

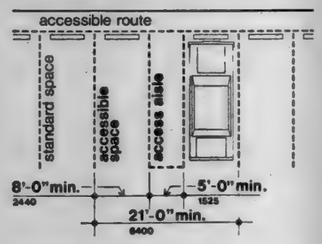
(3) have vehicle standing spaces and access aisles with surface slopes not exceeding 1:48 in all directions. *See* figure 6.2. (§ 1190.60 (d) (1), (2), and (3) are similar to ANSI A117.1 (1980).)



unloading zone 6.2
scale: 1/16"=1'-0"

(e) *Vertical clearance.* Provide minimum vertical clearances of 9'–6" (3.45 m) at accessible parking spaces, at accessible passenger loading zones, and along vehicle access routes to such areas from site entrances. (This provision is not in ANSI A117.1 (1980).)

(f) *Signage.* Signage reserving accessible parking spaces and identifying passenger loading zones and vehicle access routes shall comply with § 1190.200, Signage. Signage shall incorporate the International Symbol of Accessibility and shall not be obscured by a vehicle parked in the space. *See* figure 6.1. (This provision is similar to ANSI A117.1 (1980).)



accessible parking 6.1
scale: 1/16"=1'-0"

§ 1190.70 Ramps and curb ramps.

(a) *General.* Any part of an accessible route with a slope greater than 1:20 shall be considered a ramp and shall comply with this section. Provide an accessible ramp or curb ramp whenever an accessible route crosses a level change greater than ½ in. (13 mm), and at all legally established crosswalks. (This provision is different from ANSI A117.1 (1980).)

(b) *Slopes and rise.* Provide the least practical slope for any ramp or curb ramp subject to the following maximums: (1) New Construction requirements: (i) Maxiumum running slope shall not exceed 1:12 (8.3%).

(ii) Maximum rise for any run shall not exceed 2'–6" (760 mm).

(iii) Maximum slopes of adjoining gutters, road surface, or adjoining accessible route shall not exceed 1:20 (fig. 7.8).

(iv) *See* figs. 7.1 and 7.2.

(c) *Width.* Provide a minimum clear width of 3'-0" (915 mm). (This provision is similar to ANSI A117.1 (1980).)

(d) *Cross-slope and surface.* Cross-slope of ramp surfaces shall not exceed 1:48. Ramp surfaces shall conform to § 1190.50, Walks, floors, and accessible routes. (This provision is different from ANSI A117.1 (1980).)

(e) *Curb ramps.* In addition to the requirements of § 1190.70(a) and (b), comply with the following requirements for curb ramps: (1) Provide flared sides if ramps are located where pedestrians may walk across the ramp; flared slope shall not exceed 1:10 (fig. 7.4 and 7.5). Provide a minimum clear width of 4'0" (122 mm) exlcusive of edge protection of flared sides. Where pedestrians will not normally walk accross a ramp, returned curbs may be used (fig. 7.6). (This provision different from ANSI A117.1 (1980).)

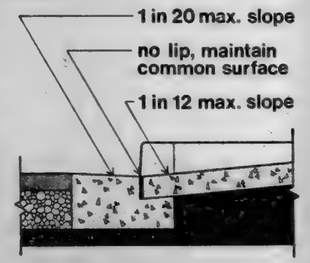
(8) Curb ramps do not require handrails. (This provision is not in ANSI A117.1 (1980).)

(9) Transitions from ramps to walks and ramps to gutters or streets shall be flush and free of abrupt changes (Fig. 7.). (This provision is not in ANSI A117.1 (1980).)



section
scale: 1/2" = 1'-0"
7.8

(f) *Ramps.* In addition to the requirements of paragraphs 1190.70(b) and

(e) Provide the following at all ramps: (1) Provide landings at the top, bottom, and at changes of direction. If ramp runs exceed lengths given in fig. 7.2, provide intermediate landings. (This provision is different from to ANSI A117.1 (1980).)

(i) Landing width shall be at least as wide as the widest ramp run approaching it.

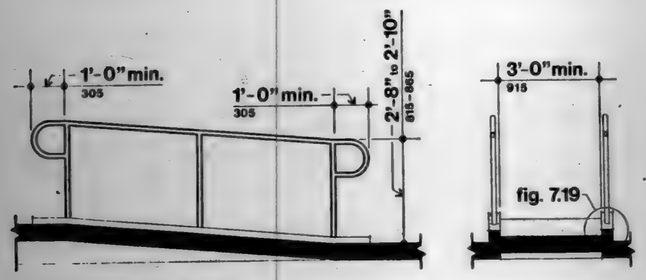
(ii) Minimum landing length shall be 5'-0" (1,535 mm).

(iii) Minimum landing size at direction changes shall be 5'–0" by 5'–0" (1,525 mm by 1,525 mm).

(iv) Landings with doors opening onto them shall comply with § 1190.130, Doors.

(§ 1190.70 (f)(1)(ii)(iii) and (iv) are similar to ANSI A117.1 (1980))

(2) Provide handrails that comply with § 1190.90, Handrails on both sides of any ramp run exceeding a 6–inch (250 mm) rise or a 6'–0" (1,830 mm) horizontal projection (figs. 7.15, 7.16, 7.17, and 7.18). (This provision is similar to ANSI A117.1 (1980).)



ramp with curb 7.15

scale: 1/4"= 1'-0"

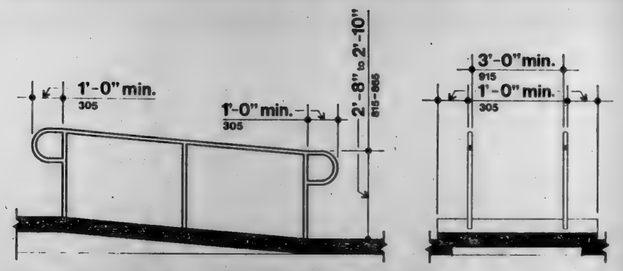
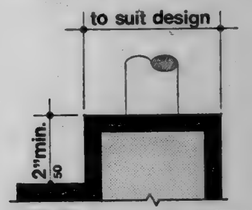
ramp with vertical guard 7.17
scale: 1/4"= 1'-0"



ramp with extended edge 7.18
scale: 1/4"= 1'-0"

(3) Provide curbs, walls, railings, or projecting surfaces at ramps and landings with drop-offs. Minimum curb height shall be 2 inches (50 mm), (fig. 7.19). (This provision is similar to ANSI A117.1 (1980).)



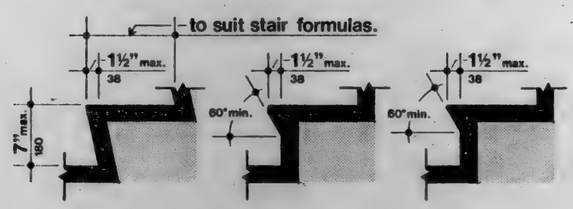
ramp curb 7.19
scale: 3"= 1'-0"

(g) *Exterior condition.* Curb ramps, ramp, and landing surfaces shall comply with paragraph 1190.50(i)(2), *Drainage.* (This provision is similar to ANSI A117.1 (1980).)

§ 1190.80 Stairs.

(a) *General.* Stairs that connect levels that are not connected by an elevator shall comply with this section. (This provision is similar to ANSI A117.1 (1980).)

(b) *Risers.* Provide risers that do not exceed 7 in. (178 mm) in height. Open risers are not permitted (fig. 8.1). (This provision is different from ANSI A117.1 (1980).)



stair risers & nosings 8.1
scale: 3/4"= 1'-0"

(c) *Nosings.* Nosings shall: (1) Not have abrupt undersides (Fig. 8.1);

(2) Project a maximum of 1½ in. (38 mm);

(3) Have a leading edge with a maximum radius of curvature of ½ in. (13 MM); and

(4) Be formed by risers that are sloped, or shall have undersides of the nosings which form an angle not less than 60 degrees from the horizontal (Fig. 8.1).

(§ 1190.80 (c)(1), (2), (3) and (4) are similar to ANSI A117.1 (1980))

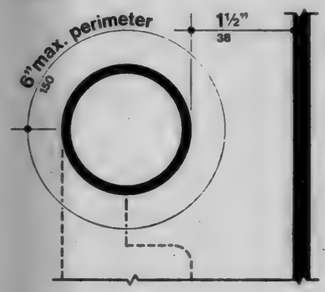
(d) *Handrails.* Provide continuous handrails at both sides of strairways. Handrails shall comply with § 1190.90. (This provision is similar to ANSI A117.1 (1980).)

(e) *Exterior condition.* Stair treads and landing surfaces shall comply with § 1190.50(i)(2) *Drainage.* (This provision is similar to ANSI A117.1 (1980).)

§ 1190.90 Handrails.

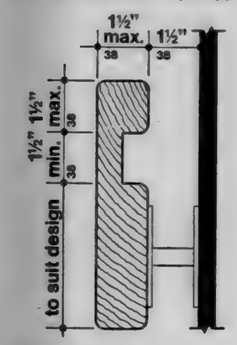
(a) *General.* Handrails for ramps or stairs required by § 1190.70, Ramps and curbs, and § 1190.80, Stairs, shall comply with this section. (This provision is similar to ANSI A117.1 (1980).)

(b) *Size and spacing.* Provide handrails meeting the following requirements: (1) The cross section for gripping of the handrail shall have a perimeter not greater than 6 inches (150 mm), with a ratio of maximum dimension to minimum dimension of not greater than 1:1.5 (*see* fig. 9.1). (This provision is similar to ANSI A117.1 (1980).)



handrail 9.1
scale: half

(2) If handrails are mounted adjacent to wall surfaces or to other surfaces, provide a 1½ inch (38 mm) (minimum/maximum) clear space between wall and handrail (*see* figs. 9.1, 9.2, 9.3, and 9.4). (This provision is similar to ANSI A117.1 (1980).) Freestanding rails located farther thatn 6" (150 mm) from wall or other vertical surfaces are not subject to this provision. (This provision is not in ANSI A117.1 (1980).)



handrail 9.2

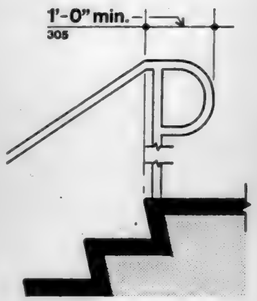
(3) Handrails may be mounted in recesses if the recesses comply with fig. 9.4. (This provision is similar to ANSI A117.1 (1980).)

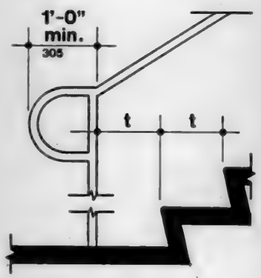
(4) On switchbacks or dogleg ramps or stairs, inside handrails shall be continuous. (This provision is similar to ANSI A117.1 (1980).)

(c) *Handrail projections.* (1) If outside handrails are not continuous, then: (i) at a ramp landing, project handrails parallel with ramp or landing surface for a length or 1'–0" (305 mm) beyond the top and bottom of ramp surfaces (fig. 7.14) (This provision is similar to ANSI A117.1 (1980)); and

(ii) At a stair landing, project handrails at least 1'–0" (305 mm) beyond the top riser and at least 1'–0" (305 mm) plus the depth of one tread beyond the bottom riser. The 1'–0" (305 mm) extension shall in each instance be parallel with the floor (figs. 8.3 and 8.4). (This provision is similar to ANSI A117.1 (1980).)



extension 8.3
scale: 1/2"=1'-0"

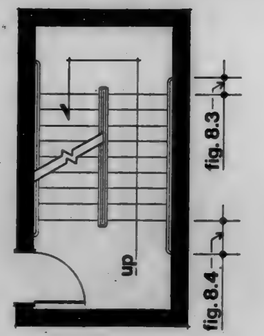


extension 8.4
scale: 1/4"=1'-0"

(iii) *Exception.* Full extension of handrails shall not be required in alterations where such extensions would be hazardous or impossible due to plan configuration. (This provision is not in ANSI A117.1 (1980).)

(2) Do not interrupt gripping surfaces with newel posts, balusters, or other obstructions. (This provision is similar to ANSI A117.1 (1980).)

(d) *Mounting height.* Mount handrails at accessible stairs and ramps at a height of 2'–8" to 2'–10" (813 mm to 864 mm) above stair nosing(s) or ramp surface as applicable (figs. 7.13, 7.14, 7.15, 7.16 and 8.2). (This provision is not in ANSI A117.1 (1980).)



stairway 8.2
scale: 1/8"=1'-0"

(e) *Structural strengths.* Handrails, as installed, shall support a minimum momentary concentrated load applied at the top edge of 200 pounds (900 N) horizontal and 30 percent of that load vertically downward. Where the railing system is installed in public assembly occupancies, the loading shall be increased 50 percent. Test criteria shall be in conformance with *Product Standard for Permanent Metal Railing Systems and Rails for Buildings,* American Society for Testing and Materials, (ASTM) E06.12. Handrails shall not rotate within their fittings. Handrails of material other than metal shall meet the same structural requirements. (This provision is different from ANSI A117.1 (1980).)

(f) *Hazards.* Ends of freestanding handrails shall be either rounded or returned smoothly to floor or post. (*see* paragraph 1190.50(c), *Protruding objects.*) (This provision is similar to ANSI A117.1 (1980).)

§ 1190.100 Elevators.

(a) *General.* (1) Elevators required by Subpart C—Scope shall comply with § 1190.100 and with the *American National Standard Safety Code for Elevators, Dumbwaiters, Escalators and Moving Walks, A17.1–1978, and National Elevator Industry, Inc. (NEII) Suggested Minimum Elevator Requirements for the Handicapped, May 1977.* (This provision is different from ANSI A117.1 (1980).)

(2) Freight elevators shall not be considered as meeting the requirements of this section. (This provision is not in ANSI A117.1 (1980).)

(b) *Operation and leveling.* Elevators shall be automatic and shall be provided with a self-leveling feature that will automatically bring the car to the floor landing within a tolerance of ½ inch (13 mm) under normal loading and unloading conditions. The self-leveling feature shall, within its zone, be entirely automatic and independent of the operating device and shall correct for overtravel or under-travel. Maintain car approximately level irrespective of loading conditions. (This provision is similar to ANSI A117.1 (1980).)

(c) *Elevator door operation.* Elevator doors shall be a minimum of 2'–8" wide and shall be automatic. (1) The minimum acceptable time from notification that a car is answering a hall call until the doors of that car start to close shall be as indicated in fig. 10.1. The travel distance shall be established from a point in the center of the corridor or lobby (maximum of 5'–0" (1,525 mm)) directly opposite the farthest hall button to the centerline of the farthest hoistway entrance (fig. 10.2). (This provision is different from ANSI A117.1 (1980).)

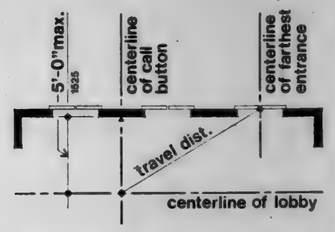
door timing 10.1
scale: none

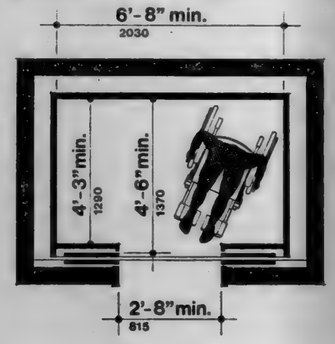


travel distance 10.2
scale: 1/8"=1'-0"

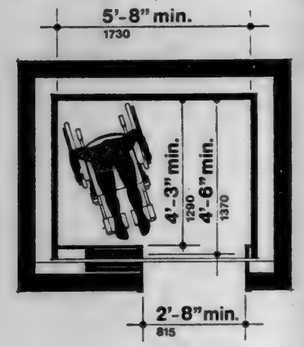
(2) Doors shall remain full open for a minimum of 5 seconds. (This provision is different from ANSI A117.1 (1980).)

(3) Provide doors with a reopening device which will function to stop and reopen the car door and adjacent hoistway door in case the car door is obstructed while the door is closing. This reopening device shall also be capable of sensing an object or person in the path of a closing door without requiring contact for activation at a nominal height of 5 inches and 2'–5" (125 mm and 735 mm) above finish floor. Such devices shall remain effective for a period of not less than 20 seconds. After this time, doors may close in accordance with the 1978 edition of ANSI A17.1. (This provision is similar to ANSI A117.1 (1980).)

(d) *Elevator cars.* (1) The minimum floor areas of elevator cars shall comply with figs. 10.3 and 10.4. (This provision is similar to ANSI A117.1 (1980).)



elevator car center opening 10.3
scale: 1/4"=1'-0"



elevator car side opening 10.4
scale: 1/4"=1'-0"

(2) Exception. Where existing shaft or structural elements prohibit strict compliance in alteration work, these dimensions may be reduced by the minimum amount necessary, but in no case shall they be less than 4'–0"x4'–0" (1,220 mm x 1,220 mm) clear minimum car size. (This provision is not in ANSI A117.1 (1980).)

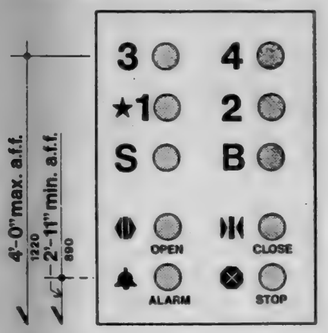
(3) Car floors shall comply with § 1190.50, Walks, floors and accessible route. (This provision is similar to ANSI A117.1 (1980).)

(4) Car controls shall be readily accessible from a wheelchair.

(i) Buttons, exclusive of border, shall be a minimum dimension of ¾in. (19 mm) and shall be raised or flush with the operating panel. (This provision is similar to ANSI A117.1 (1980).)

(ii) Provide a visual signal indicating when each call is registered and answered. (This provision is similar to ANSI A117.1 (1980).)

(iii) Mount the highest floor buttons at a maximum of 4'–0" (1,220 mm) above the floor and the lowest buttons at a minimum of 2'–11" (890 mm) above the floor (fig. 10.5). (This provision is different from ANSI A117.1 (1980).)

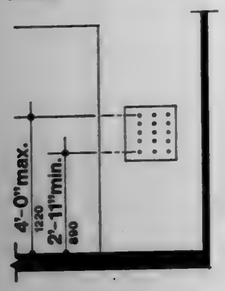


elevator control panel 10.5
scale: 3"=1'-0"

(iv) Group emergency buttons at the bottom of the panel with their centerlines no lower than 2'–11" (890 mm). (This provision is similar to ANSI A117.1 (1980).)

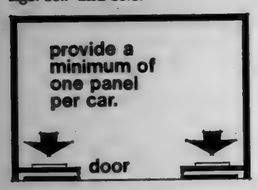
(v) Designate all control buttons by raised standard alphabet characters for letters, arabic characters for numerals, or standard symbols as shown in figs. 10.5 and 10.6 and as required by ANSI A17.1–1978 and NEII *Suggested Minimum Elevator Requirements for the Handicapped,* May 1977. Place raised designations to the immediate left of the

button to which they apply. Permanently attached, applied plates are acceptable. Locate the call button for the main entry floor in the left-most column and designate it with a raised star as shown. (This provision is similar to ANSI A117.1 (1980).)



control panel 10.6
scale: 1/4"=1'-0"

(vi) Locate control panels as shown in figs. 10.7 and 10.8.



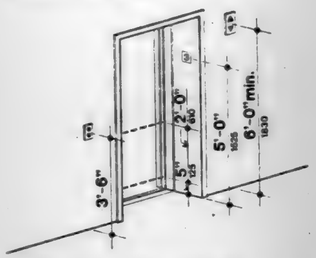
control locations 10.7
scale: 1/4"=1'-0"

control locations 10.8
scale: 1/4"=1'-0"

(e) *Door jamb markings.* Provide floor designation at each hoistway entrance on both jambs and comply with the following: (1) The centerlines of characters shall be located 5'–0" (1,525 mm) above finish floor; and

(2) Characters shall be a minimum of 2 inches (50 mm) high and shall comply with § 1190.200.

(3) Permanently applied plates are acceptable (fig. 10.9).



elevator entrance 10.9
scale: 1/4"=1'-0"

(§ 1190.100(e) (1), (2), and (3) are similar to ANSI A117.1 (1980))

(f) *Lobby call buttons.* (1) Call buttons shall: (i) Be mounted with centerlines at 3'–6" (1,065 mm) above finish floor (this provision is similar to ANSI A117.1 (1980));

(ii) Be a minimum of ¾ in. (19 mm) in diameter (this provision is similar to ANSI A117.1 (1980));

(iii) Have visual signals indicating when a call is registered and answered (this provision is similar to ANSI A117.1 (1980));

(iv) Be raised or flush (this provision is not in ANSI A117.1 (1980)); and

(v) Have the button designating "up" mounted on top. (This provision is similar to ANSI A117.1 (1980).)

(2) Objects mounted beneath lobby call buttons shall not project into the elevator lobby more than 4 inches (100 mm) (fig. 10.9). (This provision is not in ANSI A117.1 (1980).)

(g) *Hall lanterns.* Provide a visual and audible signal at each hoistway

entrance to indicate car arrival and its travel direction.

(1) Audible signals shall sound once for the up direction and twice for the down direction, or shall annunciate the words "up" or "down." (This provision is similar to ANSI A117.1 (1980).)

(2) Visual signals shall: (i) Be mounted with their centerlines a minimum of 6'–0" (1,830 mm) above finish floor;

(ii) Have a minimum dimension of 2½ in. (64 mm);

(iii) Distinguish between up and down travel directions; and

(iv) Be visible from the vicinity of call buttons.

(§ 1190.100 (g) (1) and (2) are similar to ANSI A117.1 (1980))

(3) In-car lanterns positioned on car door jambs that comply with § 1190.100 (e)(2) are acceptable. (This provision is similar to ANSI A117.1 (1980).)

(h) *Car position indicator & signal.* Provide a visual car position indicator above the car operating panel or over the car door to show the floor position of the car in the hoistway. As the car passes or stops at a landing, illuminate the floor number and sound an audible signal.

(1) Characters shall be a minimum of ½ in. (19 mm) high and shall comply with § 1190.200, Signage, except for § 1190.200(c)(2).

(2) Provide audible indication of floor position as follows: (i) Audible signals exceeding the ambient noise level by at least 20 decibels loud with a frequency below 1,500 Hz; or

(ii) Automatic verbal announcement.

(§ 1190.100(H) (1) and (2) are similar to ANSI A117.1 (1980))

(i) *Illumination levels.* Illuminate car controls, platform, car threshold, and landing sill to a minimum of 5 footcandles. (This provision is similar to ANSI A117.1 (1980).)

(j) *Intercommunication system.* If provided, emergency intercommunication systems shall comply with ANSI A117.1–1978, NEII *Suggested Minimum Elevator Requirements for the Handicapped,* May 1977, and the following: (1) Locate the highest operable part of the system no higher than 4'–0" (1,200 mm) above car floor (this provision is different from ANSI A117.1 (1980));

(2) Identify the system with raised lettering and symbols complying with § 1190.200 (this provision is similar to ANSI A117.1 (1980));

(3) If system employs a handset, provide a 3'–0" (915 mm) cord; (This provision is different from ANSI A117.1 (1980).)

(4) If system is located in a closed compartment, compartment door hardware shall conform to § 1190.170, Controls and operating mechanisms (this provision is not in ANSI A117.1 (1980)); and

(5) Provide a monetary contact button to allow hearing-impaired individuals to summon assistance. (This provision is not in ANSI A117.1 (1980).)

§ 1190.110 Platform lifts.

(a) *General.* Platform lifts required by Subpart C—Scope, shall comply with this section.

(b) *Requirements.* Platform lifts shall: (1) Accommodate an occupied wheelchair within the space provisions of § 1190.40, Human data;

(2) Facilitate unassisted entry and exit from the lift in accordance with the provisions of § 1190.50, Walks, floors, and accessible routes;

(3) Have accessible controls complying with § 1190.170, Controls and operating mechanisms; and

(4) Satisfy safety requirements of the agency having responsibility for safety of the facility.

(§ 1190.110(b)(1), (2), (3), and (4) are similar to ANSI A117.1 (1980))

§ 1190.120 Entrances.

(a) *General.* Entrances required to be accessible by Subpart C—Scope, shall comply with § 1190.50, Walks, Floors and Accessible Routes; § 1190.120, Entrances; and § 1190.130, Doors. (This provision is different from ANSI A117.1 (1980).)

(b) *Service entrances.* A service entrance is not to be used as the only accessible entrance unless it is the only entrance to the building or facility. (This provision is similar to ANSI A117.1 (1980).)

(c) *Access to elevators.* If elevators are provided, an accessible route shall be provided from the entrance to the elevators. (This provision is similar to ANSI A117.1 (1980).)

§ 1190.10 Doors.

(a) *General.* Doors required to be accessible by Subpart C—Scope, shall comply with this section.

(1) Gates, including ticket gates, shall comply with this section.

(2) In double-leaf doorways, at least one leaf shall comply with this Section and it shall be the active leaf. Automatic doors are excepted from the one leaf provision.

(3) Revolving doors or turnstiles are not accessible doors and shall not be the sole means of access at any accessible entrance or on any accessible route. However, the accessible door shall be immediately adjacent to the turnstile or revolving door.

V45 AG 1 8 80 UMI

(§ 1190.130(a)(1), (2), and (3) are similar to ANSI A117.1 (1980))

(b) *Clear width.* Provide doorways with clear opening of 2'–8" (815 mm) as measured with the door open 90 degrees between the face of the door and the latch side stop (see figs. 13.1, 13.2, and 13.3). Openings deeper than 2'–0" (610 mm) shall be a minimum of 3'–0" (915 mm) wide (see 4.2). (This provision is similar to ANSI A117.1 (1980).)

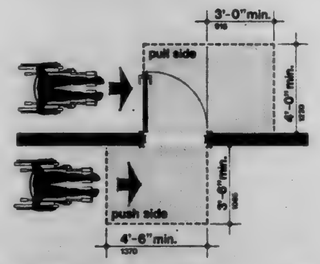
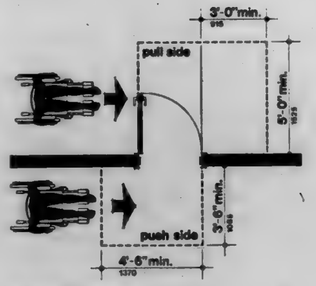
(2) At doors allowing hinge side approach only, maneuvering space shall be as shown in fig. 13.5. (This provision is similar to ANSI A117.1 (1980).)



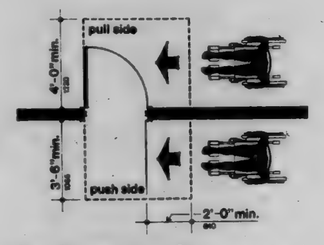
hinge approach
scale: 1/4"= 1'-0" 13. 5

or



hinge approach
scale: 1/4"= 1'-0" 13. 5

(3) At doors allowing latch side approach only, maneuvering space shall be as shown in fig. 13.6. (This provision is similar to ANSI A117.1 (1980).)



latch approach
scale: 1/4"= 1'-0" 13. 6

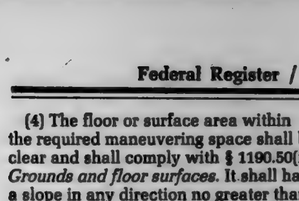
(4) The floor or surface area within the required maneuvering space shall be clear and shall comply with § 1190.50(i), *Grounds and floor surfaces.* It shall have a slope in any direction no greater than 1:48. (This provision is similar to ANSI A117.1 (1980).)

(i) *Exception.* (Comment is sought on two alternatives.)

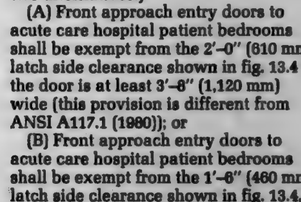
(A) Front approach entry doors to acute care hospital patient bedrooms shall be exempt from the 2'–0" (610 mm) latch side clearance shown in fig. 13.4 if the door is at least 3'–8" (1,120 mm) wide (this provision is different from ANSI A117.1 (1980)); or

(B) Front approach entry doors to acute care hospital patient bedrooms shall be exempt from the 1'–6" (460 mm) latch side clearance shown in fig. 13.4, if the door is at least 3'–8" (1,120 mm) wide. (This provision is different from ANSI A117.1 (1980).)

(d) *Doors in series.* Between any two hinged or pivoted doors in series, provide a minimum of 4'–0" (1,220 mm) plus the width of any door swinging into the space. Opposing doors shall not swing towards each other, into the intervening space (*see* figs. 13.7 and 13.8). (This provision is similar to ANSI A117.1 (1980).)



doors in series
scale: 1/4"= 1'-0" 13. 7



doors in series
scale: 1/4"= 1'-0" 13. 8

(e) *Thresholds.* Raised thresholds, if provided, shall be beveled with a slope not to exceed 1:2 and with heights not exceeding the following: (1) Exterior sliding doors: ¾ in. (19 mm) maximum.

(2) Other doors: ½ in. (13 mm) maximum.

(§ 1190.130(e)(1) and (2) are similar to ANSI A117.1 (1980))

(f) *Hardware.* Provide handles, pulls, latchs, locks and other operating hardware that are easy to grasp with one hand and that do not require twisting of the wrist, tight grasping, or tight pinching to operate. Acceptable designs include, but are not limited to, 1 ever-operated hardware, push-type hardware, and U-shaped handles. Operating hardware shall be exposed and usable from both sides when sliding doors are fully open. Mount no operating hardware higher than 4'–0" (1,220 mm) above finish floor. (This provision is different from ANSI A117.1 (1980).)

(g) *Doors to hazardous areas.* Provide a textured surface on any door handle, knob, pull, or other piece of operating hardware on doors that lead to areas that may prove hazardous to blind people. Such areas may include, but are not limited to, loading platforms, mechanical equipment rooms, stages, and similar spaces. Textured surfaces may be achieved by knurling, roughening, or applying materials on the hand contact surface. Do not texture surfaces on hardware leading to emergency egress or on any doors other than those leading to hazardous areas. (This provision is similar to ANSI A117.1 (1980).)

(h) *Closers and opening forces.* (1) Door closers, if provided, shall have a sweep period so adjusted that from a position of 70 degrees open it will take the door a minimum of 5 seconds to reach a point 3 inches (75 mm) from the door jamb, measured from the leading edge of the door. (This provision is different from ANSI A117.1 (1980).)

(2) Maximum pushing or pulling opening forces for doors shall be as follows: (i) Adjust fire doors for the minimum opening forces permitted by fire label rating requirements.

(ii) Exterior hinged doors: 8.5 1bf (37.8 N)

(iii) Interior hinged doors: 5 1bf (22.2 N)

(iv) Sliding or folding doors: 5 1bf (22.2 N)

(v) Power-assisted doors: comply with § 1190.130(g)(2)(i)(ii)(iii) and (iv) for opening force and Section 10 of ANSI A156.10–1979 for closing force. These forces do not apply to forces required to retract or disengage latch bolts or other door latching devices.

(§ 1190.130 (h)(2)(i), (ii), (iii), (iv) and (v) are similar to ANSI A117.1 (1980).)

(i) *Automatic doors.* If automatic personnel doors are provided;

(1) Comply with *American National Standard for Power-Operated Doors,* ANSI A156.10–1979 (this provision is similar to ANSI A117.1 (1980)); or

(2) Provide custom designed installations utilizing slow opening, low powered automatic doors as described in paragraph 1.1.1 of ANSI A156.10–1979, provided such doors do not open to back check in less than 5 seconds and do not require more than 15 1bf (66.6 N) to stop door movement. (This provision is different from ANSI A117.1 (1980).)

§ 1190.140 Windows.

(a) *General.* Windows required to be accessible by Subpart C—Scope, shall comply with this section. (This provision is different from ANSI A117.1 (1980).)

(b) *Hardware.* Windows shall require less than 5 1bf (22.2N) of pressure to operate. Locks, bolts, cranks, and other window hardware necessary for operation shall comply with § 1190.170, Controls and operating mechanisms. (This provision is similar to ANSI A117.1 (1980).)

§ 1190.150 Toilet and bathing facilities.

(a) *Toilet facilities.* (1) Toilet rooms and bathing facilities required to be accessible by Subpart C—Scope, shall comply with this section (This provision is similar to ANSI A117.1 (1980).)

(2) *Exception.* Where alterations to existing facilities make strict compliance with § 1190.150 structurally impracticable, the addition of one "unisex" toilet per floor complying with § 1190.150(b), *Toilet fixtures and accessories* located adjacent to existing facilities, will be acceptable, in lieu of making existing facilities for each sex accessible. (This provision is not in ANSI A117.1 (1980).)

(3) *Doors.* Doors to toilet facilities shall:

(i) Comply with § 1190.130; and

(ii) Not swing into clear floor space associated with fixtures.

(§ 1190.150 (3)(i) and (ii) are similar to ANSI A117.1 (1980).)

(4) *Clear floor space.* (i) Each accessible toilet room and bathing facility shall have an unobstructed turning space that: (A) Complies with § 1190.40 (b)(4);

(B) Adjoins an accessible route complying with § 1190.50, Walks, floors, and accessible routes; and

(C) May overlap the accessible route and clear floor space at fixture.

(§ 1190.150 (4)(i)(A), (B), and (C) are similar to ANSI A117.1 (1980).)

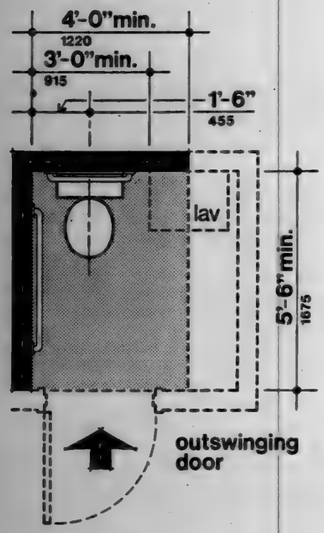
(ii) *Exception.* In toilet rooms with one water closet, doors in any position may reduce the clear turning space to 2'–8" by 5'–0" (815 mm by 1,220 mm), but shall not reduce any dimension by more than 3½ inches (90 mm) when fully open. (This provision is not in ANSI A117.1 (1980).)

V 45 AG 18 80 UMI

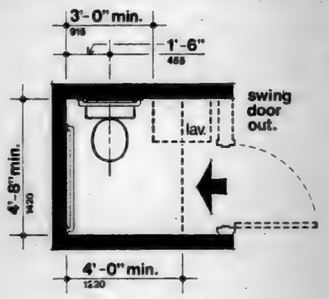
(5) *Signage.* Signage required by Subpart C—Scope, that identifies accessible toilet rooms and bathing facilities shall comply with § 1190.200, Signage. (This provision is not in ANSI A117.1 (1980).)

(b) *Toilet fixtures and accessories.*—(1) *General.* In accessible toilet rooms and bathing facilities, toilet fixtures and accessories shall have access spaces adjoining an accessible route. (This provision is similar to ANSI A117.1 (1980).)

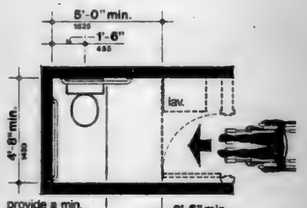
(2) *Water closets.* Accessible water closets shall: (i) be provided with clear access space complying with figures 15.1, 15.2, 15.3 and 15.4 for fixtures not mounted in stalls. Clear access space may be provided to allow either left-handed or right-handed approach. (This provision is similar to ANSI A117.1 (1980).)



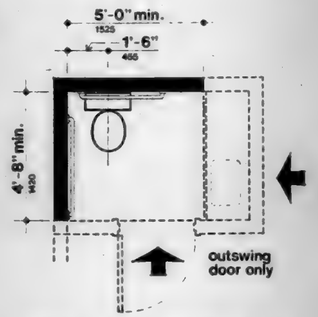
clear floor space 15.1
scale: 1/4"=1'-0"



clear floor space 15.2
scale: 1/4"=1'-0"

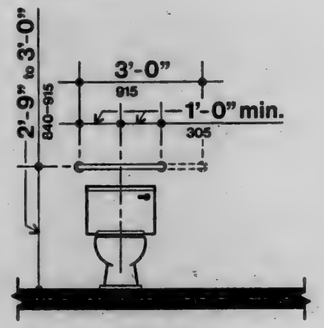


clear floor space 15.3
scale: 1/4"=1'-0"

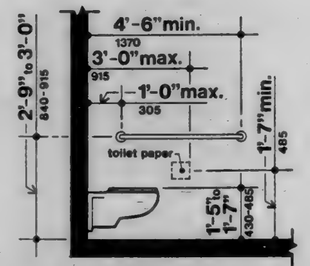


clear floor space 15.4
scale: 1/4"=1'-0"

(ii) Have top of seats mounted 1'–5" to 1'–7" (430 mm to 485 mm) above finish floor (*see* figs. 15.5 and 15.6). (This provision is similar to ANSI A117.1 (1980).) Seats shall not be sprung to return to a lifted position when not in use. (This provision is not in ANSI A117.1 (1980).)



rear wall elevation 15.5
scale: 1/4"=1'-0"



side wall 15.6
scale: 1/4"=1'-0"

(iii) Have automatic or hand-operated flush controls complying with § 1190.170, Controls and operating mechanisms. Mount controls for use from the wide side of access area no higher than 3'–6" (1,120 mm) above the finish floor. (This provision is similar to ANSI A117.1 (1980).)

(iv) Have toilet paper dispensers mounted as shown in fig. 15.6 Do not use dispensers that control delivery or that do not permit continuous paper flow. (This provision is different from ANSI A117.1 (1980).)

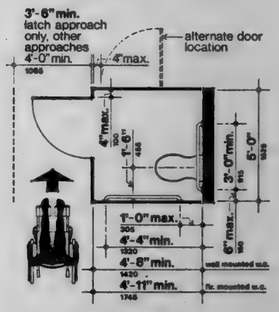
(v) Have grab bars mounted as shown in figs. 15.1, 15.2, 15.3, 15.4, 15.5, and 15.6. (This provision is similar to ANSI A117.1 (1980).)

(3) *Toilet stalls.* Accessible toilet stalls shall: (i) Have a water closet compying with § 1190.150 (b)(2). (This provision is similar to ANSI A117.1 (1980).)

(ii) Be of the size and arrangement as shown in fig. 15.7. Stall configuration may be reversed for right or left handed approach. (This provision is similar to ANSI A117.1 (1980).)

(A) *Exception.* Where alteration work makes provision of a fig. 15.7 stall structurally impractical or plumbing fixture code requirements prevent combining existing stalls to provide space, a fig. 15.8 stall may be provided in lieu of a fig. 15.7 stall. (This provision is not in ANSI A117.1 (1980).)

(B) [Reserved]



standard stall 15.7
scale: 1/4"=1'-0"

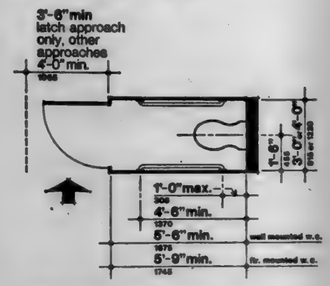
(iii) Have toe clearances at the front partition and at least one side partition of 9 inches (230 mm) above finish floor. If stall depth is greater than 5'–0" (1,525 mm), then toe clearance is optional. (This provision is similar to ANSI A117.1 (1980).)

(iv) Have doors complying with § 1190.130, Doors, and that are outswinging; and have the symbol of access affixed to the outside of door. (This provision is similar to ANSI A117.1 (1980).)

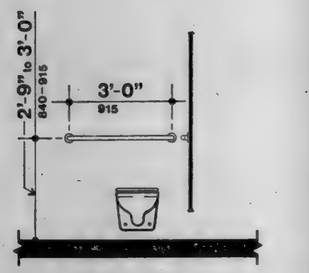
(A) *Exception.* If toilet stall approach is from the latch side of the stall door, clearance between the door side of the stall and any obstruction may be reduced to a minimum of 3'–6" (1,070 mm). (This provision is not in ANSI A117.1 (1980).)

(B) [Reserved]

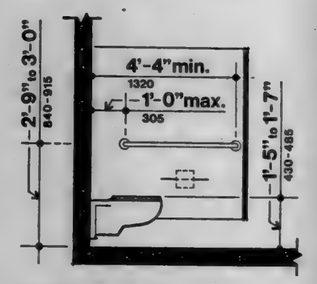
(v) Have grab bars mounted of the length and positioning shown in figs. 15.7, 15.8, 15.9, and 15.10.



alternate stall 15.8
scale: 1/4"=1'-0"

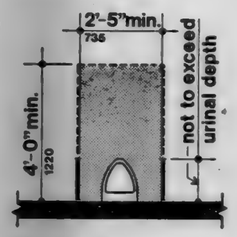


rear wall elevation 15.9
scale: 1/4"=1'-0"

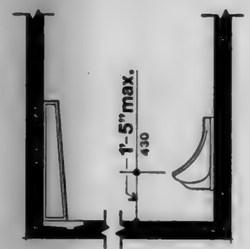


side wall 15.10
scale: 1/4"=1'-0"

(4) *Urinals.* Accessible urinals shall: (i) Be floor mounted stall type or wall-hung with an elongated rim mounted at 1'–5" (430 mm) maximum above finish floor (figs. 15.11 and 15.12) (This provision is similar to ANSI A117.1 (1980).)



urinal shields 15.11
scale: 1/4"=1'-0"



urinals 15.12
scale: 1/4"=1'-0"

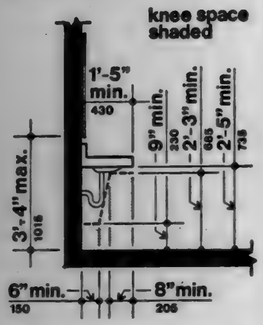
(ii) Have a clear access space as provided in fig. 15.11. (This provision is different from ANSI A117.1 (1980).); and

(A) *Exception.* Urinal shields that do not extend beyond the front edge of the urinal rim may be provided with 2'–5" (735 mm) clearance between them. (This provision is different from ANSI A117.1 (1980).)

(B) [Reserved]

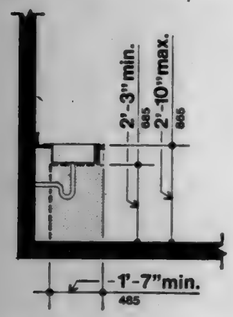
(iii) Have automatic or hand-operated controls complying with § 1190.17, Controls and operating mechanisms, and mounted no higher than 3'–6" (1,120 mm) above finish floor. (This provision is similar to ANSI A117.1 (1980).)

(5) *Lavatories and sinks.* Lavatories and sinks shall meet the following requirements: (i) Mount lavatories with the rim or counter height surface no higher than 2'–10" (865 mm) above finish floor. Provide knee clearance of a minimum of 2'–5" (735 mm) between bottom of apron and finish floor. Knee and toe clearance shall comply with figure 15.13. (This provision is different from ANSI A117.1 (1980).)



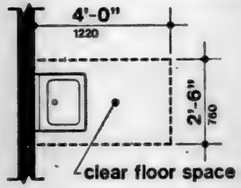
lavatory
scale: 1/4"=1'-0" 15. 13

(ii) Mount sinks with the counter or rim no higher than 2'–10" (865 mm) above finish floor. Provide knee clearance of a minimum of 2'–3" (685 mm) high, 2'–6" (760 mm) wide and 1'–7" (485 mm) deep under the sink. Sink bowls shall be a maximum of 6½ inches (165 mm) deep (fig. 15.14). (This provision is similar to ANSI A117.1 (1980).)



sink
scale: 1/4"=1'-0" 15. 14

(iii) Clear access space permitting front approach shall compy with § 1190.40, Human Data. Clear access space and knee space shall overlap 1'–7" (485 mm) maximum (fig. 15.15). (This provision is similar to ANSI A117.1 (1980).)



lavatory
scale: 1/4"=1'-0" 15. 15

(iv) Insulate or cover hot water and drain lines. Allow no sharp or abrasive surfaces to remain exposed under accessible lavatories or sinks. (This provision is similar to ANSI A117.1 (1980).)

(v) Acceptable faucet designs include lever-operated, push type, touch-type, and electronically controlled mechanisms that comply with § 1190.170, Controls and operating mechanisms. (This provision is similar to ANSI A117.1 (1980).)

(A) *Exception.* Self-closing valves are permitted at lavatories if the faucet remains open for at least 10 seconds. (This provision is similar to ANSI A117.1 (1980).)

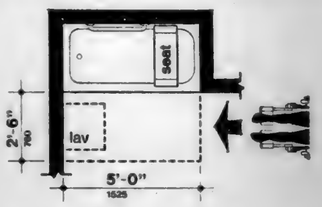
(B) [Reserved]

(6) *Mirrors.* Mount mirrors with the bottom edge of reflecting surface no higher than 3'–4" (1,015 mm) above finish floor (fig. 15.13). (This provision is similar to ANSI A117.1 (1980).)

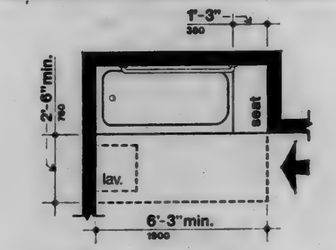
(7) *Controls, dispensers, receptacles, or other equipment* shall comply with § 1190.170, Controls and operating mechanisms. (This provision is similar to ANSI A117.1 (1980).)

(c) *Bathing facilities.*—(1) *Bathtubs and showers.* Bathtubs or showers shall:

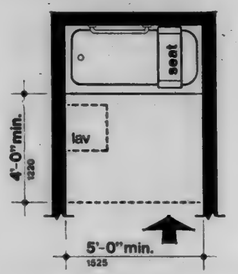
(i) Have clear access space as shown in figs. 15.16 to 15.18 and 15.24 and 15.25;



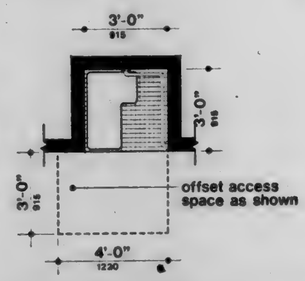
clear floor space
scale: 1/4"=1'-0" 15. 16



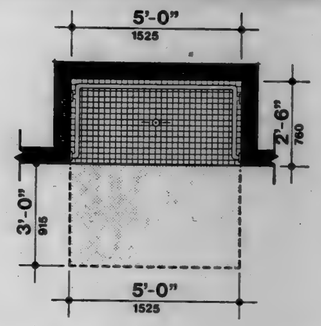
clear floor space
scale: 1/4"=1'-0". 15. 17



clear floor space
scale: 1/4"=1'-0" 15. 18

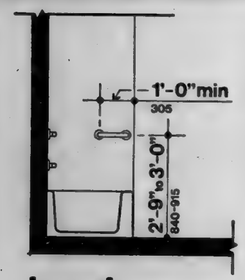


transfer stall
scale: 1/4"=1'-0" 15. 24

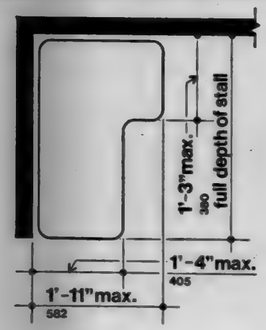


roll-in stall
scale: 1/4"=1'-0" 15. 25

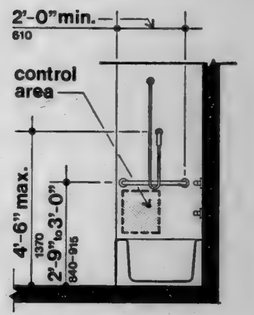
(ii) Have seats provided as shown in figs. 15.16, 15.17, 15.19, 15.20, 15.21, 15.22, 15.23, 15.24, 15.26, and 15.28. Seats and their attachments shall safely support a 250 pound continuous live load without sustaining permanent deflection. Seats shall not slip as mounted during use. In-tub seats may be portable;



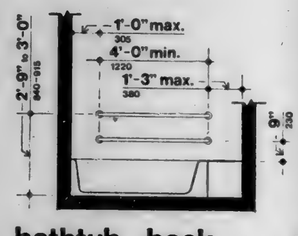
head
scale: 1/4"=1'-0". 15. 21



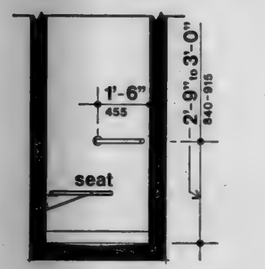
seat
scale: 1/2"=1'-0" 15. 26



foot
scale: 1/4"=1'-0" 15. 19

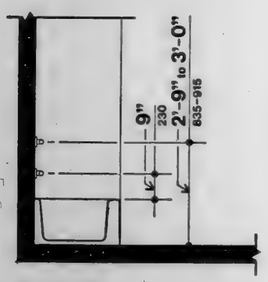


bathtub back
scale: 1/4"=1'-0" 15. 22

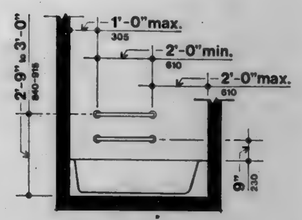


back
scale: 1/4"=1'-0" 15. 28

(iii) Have grab bars mounted of the length and positioning shown in figs. 15.16 to 15.23, and 15.24, 15.25, 15.28 to 15.32;

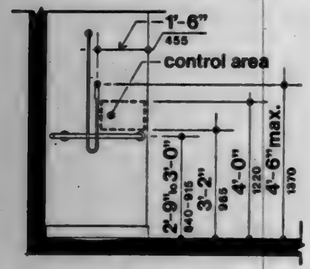


head
scale: 1/4"=1'-0" 15. 23

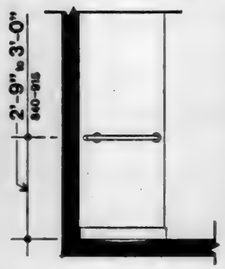


bathtub back
scale: 1/4"=1'-0" 15. 20

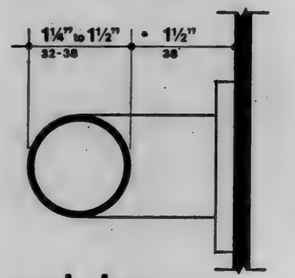
seat wall
scale: 1/4"=1'-0" 15. 27



control wall 15.29
scale: 1/4"= 1'-0"

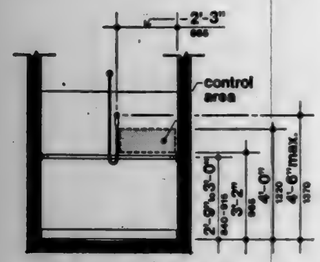


side 15.32
scale: 1/4"= 1'-0"



grab bar 15.33
scale: half

side 15.30
scale: 1/4"= 1'-0"



roll-in stall: back 15.31
scale: 1/4"= 1'-0"

(iv) Have faucets and controls complying with § 1190.170, Controls and Operating Mechanisms, located as shown in figs, 15.19, 15.29, and 15.31;

(v) Have a shower spray unit with a flexible hose a minimum of 5'–0" (1,525 mm) long for use as a fixed shower head or as a hand-held shower. (§ 1190.150(c) is similar to ANSI A117.1 (1980).)

(A) *Exception.* In unmonitored facilities where vandalism is a concern, a fixed shower head mounted at 4'–0" (1,200 mm) above the tub bottom may be used in lieu of the hand-held unit. (This provision is not in ANSI A117.1 (1980).)

(B) [Reserved]

(vi) Have enclosures, if provided, that do not obstract transfer from wheelchairs onto seats or into tubs or access to controls from clear access space. Bathtub enclosures shall not have tracks mounted on the bathtub rims. (This provision is similar to ANSI A117.1 (1980).)

(vii) Have no shower curbs or threshholds higher than ½ inch (13 mm) beveled. (This provision is different from ANSI A117.1 (1980).)

(d) *Grab bars.*—(1) *General.* Grab bars for accessible fixtures shall:

(i) Have a diameter or width of the gripping surfaces of a grab bar of 1¼ inches to 1½ inches (32 mm to 38 mm);

(ii) Be mounted adjacent to a wall or partition shall have a 1½ inch (38 mm) clearance between the bar and the mounting surface (fig. 15.33);

(iii) As installed, support a minimum concentrated load of 250 lbf (112N); and

(iv) Not rotate in their fittings.

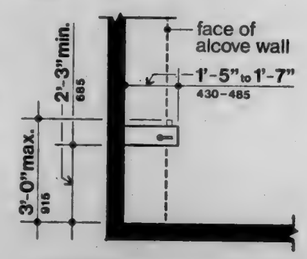
(§ 1190.150(d)(1) (i), (ii), (iii), and (iv) similar to ANSI A117.1 (1980).)

§ 1190.160 Drinking fountains and water coolers.

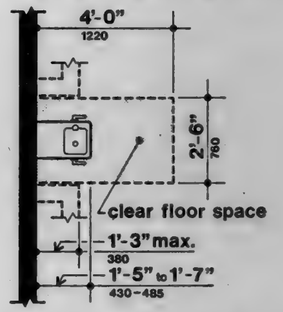
(a) *General.* Drinking fountains and coolers required by Subpart C—Scope, shall comply with this Section. (This provision is different from ANSI A117.1 (1980).)

(b) *Clearances.* Drinking fountains and water coolers shall have clear access spaces complying with § 1190.40, Human Data. (This provision is similar to ANSI A117.1 (1980).)

(1) Provide a wall- or post-mounted cantilevered unit with a forward approach access space and a knee space between the underside of the unit and the finish floor of at least 2'–3" (685 mm) high, 2'–6" (760 mm) wide, and 1'–7" (485 mm) deep. *See* figs. 16.1 and 16.2. (This provision is different from ANSI A117.1 (1980).)

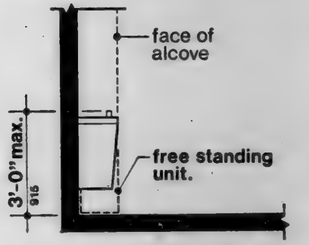


cantilevered 16.1
scale: 1/4"= 1'-0"

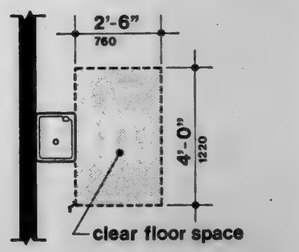


cantilevered 16.2
scale: 1/4"= 1'-0"

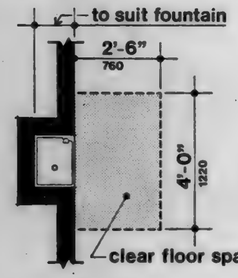
(2) Provide free-standing or built-in units not having knee-space with a clear access allowing a parallel approach (*see* figs. 16.3 and 16.4 and 16.5). (This provision is different from ANSI A117.1 (1980).)



free standing or wall hung 16.3
scale: 1/4"= 1'-0"



free standing or wall hung 16.4
scale: 1/4"= 1'-0"



built in 16.5
scale: 1/4"= 1'-0"

(c) Spouts of drinking fountains and water-coolers shall:

(1) Be mounted no higher than 3'–0" (915 mm) above the finish floor to the spout outlet;

(2) Be at the unit front and shall direct water flow trajectory parallel or nearly parallel the front of the unit; and

(3) Direct water flow at least 4 inches (100 mm) above the unit basin to facilitate cup or glass insertion.

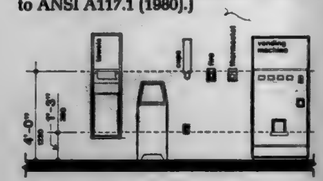
(§ 1190.160(c) (1), (2) and (3) are similar to ANSI A117.1 (1980))

(d) *Controls.* Unit controls shall be front mounted or side mounted near the front edge and shall comply with § 1190.170 Controls and Operating Mechanisms. (This provision is similar to 1ANSI A117.1 (1980).)

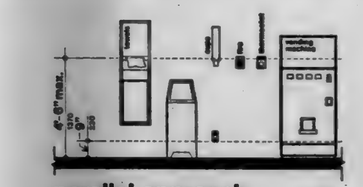
§ 1190.170 Controls and operating mechanisms.

(a) *General.* Controls and operating mechanisms required to be accessible by Subpart C—Scope, shall comply with this section. (This provision is similar to ANSI A117.1 (1980).1)

(b) *Location requirements.* Controls and operating mechanisms shall adjoin clear access space complying with § 1190.40, Human data. Mount controls and operating mechanisms in compliance with approach direction and reach limitations specified in §§ 1190.40(c), *Clear access space* and 1190.40(d) *Reach limitations. See* figures 17.1 and 17.2. (This provision is similar to ANSI A117.1 (1980).)



forward approach 17.1
scale: 1/4"= 1'-0"



parallel approach 17.2
scale: 1/4"= 1'-0"

(c) *Force.* Control activation shall require no more than 5 lbf (22.2 N) force. (This provision is similar to ANSI A117.1 (1980).)

(d) *Specialized equipment.* If specialized mechanical, electrical, or process equipment has inherent functional requirements which dictate location or force requirements other than those specified in this section, locate the equipment as dictated by its functional requirements. (This provision is not in ANSI A117.1 (1980).)

§ 1190.180 Alarms.

(a) *General.* If alarm systems are provided in the building or facility, they shall comply with this section. (This provision is similar to ANSI A117.1 (1980).)

(b) *Audible alarms.* Audible alarms shall produce a sound pressure level that exceeds ambient room or space noise by 15 decibels or any maximum noise level of 30 second duration by 5 decibels, whichever is greater. (This provision is similar to ANSI A117.1 (1980).)

(c) *Visual and other sensory alarms.* If audible alarms are provided, then provide, in addition, at least one of the following:

(1) A visual alarm device adjacent to each exist sign which flashes in conjunction with audible alarms. (This provision is similar to ANSI A117.1 (1980).)

(2) A flashing exist sign. (This provision is similar to ANSI A117.1 (1980).)

(3) Specialized systems utilizing advanced technology will be considered on a case-by-case basis under § 1190.180(c) (1) and (2). (This provision is not in ANSI A117.1 (1980).) Flash frequency of visual alarms shall not exceed 5 Hz. (This provision is similar to ANSI A117.1 (1980).)

(d) *Pull Stations.* Alarm pull stations shall comply with § 1190.170, controls and operating mechanisms. (This provision is not in ANSI A117.1 (1980).)

§ 1190.190 Tactile Warnings.

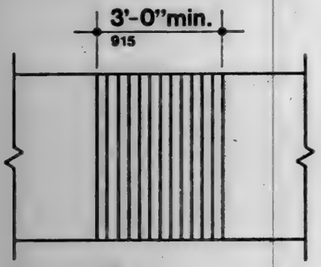
(a) *General.* Tactile warnings required by Subpart C—Scope, shall comply with

this section. Within any building, facility, or site textured surfaces used for tactile warnings shall be standardized. (This provision is different from ANSI A117.1 (1980).)

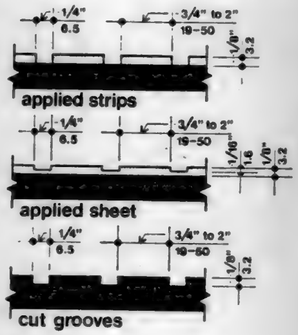
(b) *Ground and floor surfaces.* Tactile warnings on ground and floor surfaces shall:

(1) Contrast textures with surrounding surfaces;

(2) Comply with figure 19.1 when using raised strips or recessed groves;



tactile warnings 19.1
scale: 1/4"= 1'-0"



tactile warnings 19.2
scale: 3"= 1'-0"

(3) Not have grooves that are recessed below adjoining surfaces on exterior surfaces; and

(4) Have surfaces, raised strips, or grooves that be made of exposed concrete, rubber, or plastic cushioned materials.

(§ 1190.190 (b) (1), (2), (3) and (4) are similar to ANSI A117.1 (1980).)

(c) *Hazardous areas.* Warn users of a hazardous area by means of a tactile warning if:

(1) A walk crosses or adjoins a frequently used vehicular way if there are no curbs, railings, planted areas, or similar boundary elements to separate the walk and the vehicular way (fig. 19.2); or

(2) The edges of reflecting pools are not protected by railings, walls, or curbs.

(§ 1190.190(c) (1) and (2) are similar to ANSI A117.1 (1980))

(d) *Warnings at stairs.* (Reserved for future definition.) (This provision is different from ANSI A117.1 (1980).)

§ 1190.200 Signage.

(a) *General.* (1) Information and identification of elements and spaces as required by Subpart C—Scope shall comply with §§ 1190.200(b) *Character proportion and contrast* and 1190.200(e) *Symbol of accessibility.* Permanent signage identifying rooms and spaces shall also comply with paragraphs 1190.200(c) *Raised or incised characters* and 1190.200(d) *Mounting location and height.* (This provision is different from ANSI A117.1 (1980).)

(2) *Exception.* The provisions of § 1190.200 (c) and (d) are not mandatory for temporary information on room and space signage. (This provision is not in ANSI A117.1 (1980).)

(b) *Character proportion and contrast.* Letters and numbers on sign systems shall:

(1) Have a width-to-height ratio of between 3:5 and 1:1. (This provision is similar to ANSI A117.1 (1980).)

(2) Have a stroke width-to-height ratio of between 1:5 and 1:10. (This provision is similar to ANSI A117.1 (1980).)

(3) Contrast in value with their backgrounds, preferably light letters on a dark background. (This provision is different from ANSI A117.1 (1980).)

(4) Have a matte finish on a matte finish background. (This provision is not in ANSI A117.1 (1980).)

(c) *Raised or incised character.* Provide numbers and letters that are:

(1) Raised or incised from the background surface 1/32 in. (0.8 mm). Incise or raise symbols or pictographs in this manner;

(2) Between 5/8 in. (16 mm) and 2 in. (50 mm) high;

(3) Sans serif with sharply defined edges; and

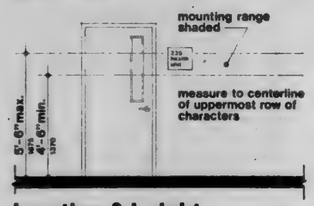
(4) If incised, provided with at least a 1/4 inch (6 mm) stroke width.

(§ 1190.220(c) (1), (2), (3), and (4) are similar to ANSI A117.1 (1980))

(d) *Mounting location and height.* Place interior signage in a standardized location througout a building or facility:

(1) Alongside of the door on the latch side, and

(2) Mounted at between 4'6" and 5'6" (1,370 mm and 1,675 mm) above finish floor (fig. 20.3).



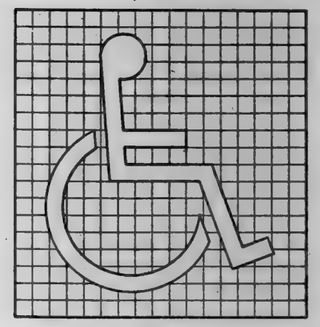
location & height 20.3
scale: 1/4"= 1'-0"

(3) Locate exterior signage at entrances and walks to direct individuals to accessible routes and entrances as required.

(§ 1190.200(d) (1), (2), and (3) are not in ANSI A117.1 (1980))

(e) *Symbol of accessibility.* Identify accessible facilities, as required by Subpart C—Scope, with the International Symbol of Accessiblity. Display as shown in fig. 20.1 and 20.2. Provide symbols of the following minimum dimensions:

Size	*Location*	*Viewing distance*
2½ in. (65 mm)	Interior	Up to 30 ft. (9 m).
4 in. (115 mm)	Interior	Greater than 30 ft. (9 m).
4 in. (115 mm)	Exterior	Up to 60 ft. (18 m).
8 in. (200 mm)	Exterior	Greater than 60 ft. (18 m).



international symbol 20.1
scale: to suit

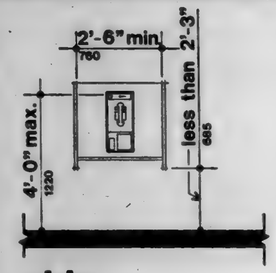
display condition 20.2
scale: to suit

(This provision is different from ANSI A117.1 (1980))

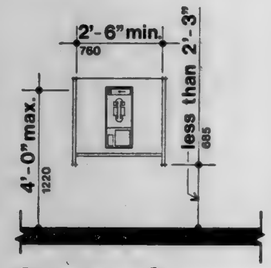
§ 1190.210 Telephones.

(a) *General.* Public telephones and related equipment required to be accessible by Subpart C—Scope, shall comply with this section. (This provision is similar to ANSI A117.1 (1980).)

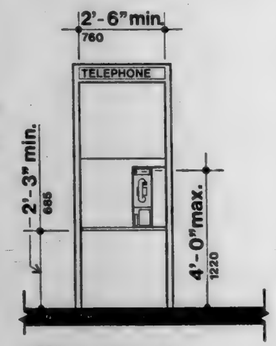
(b) *Clear access space.* A clear access space that complies with § 1190.40, Human data, shall be provided at each telephone (figs. 21.1, 21.2, and 21.3). Do not restrict clear access space by installation of bases, fixed seats, or enclosures. (This provision is similar to ANSI A117.1 (1980).)



side reach 21.1
scale: 1/4"= 1'-0"



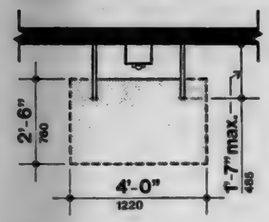
forward reach 21.2
scale: 1/4"= 1'-0"



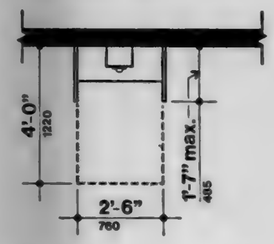
diagonal reach 21.3
scale: 1/4"= 1'-0"

(c) *Equipment characteristics.* Telephone equipment shall:

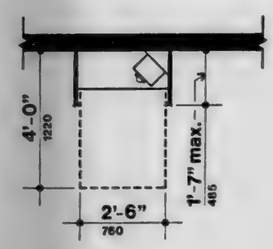
(1) Have the highest operable control, including, but not limited to dial and coin slot, located at a maximum of 4'-0" (1,220 mm) above the finish floor (figs. 21.4, 21.5, and 21.6). (This provision is different from ANSI A117.1 (1980).)



plan 21.4
scale: 1/4"= 1'-0"



plan 21.5
scale: 1/4"= 1'-0"



plan 21.6
scale: 1/4"= 1'-0"

(2) Have push button controls, where service to such equipment is available. (This provision is similar to ANSI A117.1 (1980).)

(3) Have a minimum handset cord length of 2'–5" (735 mm). (This provision is similar to ANSI A117.1 (1980).)

(4) Have telephone books, if provided, located in a position usable by a physically handicapped person. *See* § 1190.40, Human data. (This provision is similar to ANSI A117.1 (1980).)

(d) *Equipment for hearing impaired people.* Telephone receivers shall generate a magnetic field in the area of the receiver cap. (This provision is similar to ANSI A117.1 (1980).) Volume controls and TDDs shall be provided in accordance with Subpart C—Scope. (This provision is not in ANSI A117.1 (1980).)

§ 1190.220 Seating, tables, and work surfaces.

(a) *General.* Fixed seating spaces, tables, or work surfaces required to be accessible by Subpart C—Scope, shall comply with this section. (This provision is different from ANSI A117.1 (1980).)

(b) *Clearances.* Seating spaces for people in wheelchairs at tables, counters, or work surfaces shall:

(1) Have a clear access space complying with § 1190.40, Human Data;

(2) Have knee spaces at least 2'–3" (685 mm) high, 2'–6" (760 mm) wide, and 1'–7" (485 mm) deep. Clear access space and knee space may overlap 1'–7"; and

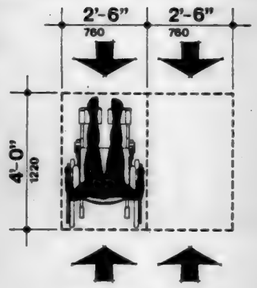
(3) Have table tops or work surfaces mounted between 2'–4" to 2'–10" (710 mm to 865 mm) above finish floor. (This provision is similar to ANSI A117.1 (1980).)

§ 1190.230 Assembly areas.

(a) *General.* Assembly areas required to be accessible by Subpart C—Scope, shall comply with this section. (This provision is different from ANSI A117.1 (1980).)

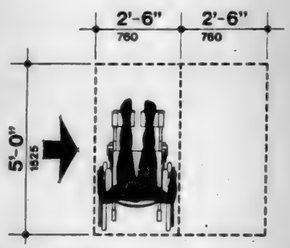
(b) *Size and location or viewing positions.* Accessible viewing positions shall:

(1) Provide minimum clear areas as shown in figs. 23.1 and 23.2. (This provision is similar to ANSI A117.1 (1980).)



viewing positions 23.1

scale: 1/4"=1'-0"



viewing positions 23.2

scale: 1/4"=1'-0"

(2) Accommodate one occupied wheelchair or one portable seat to accommodate persons with crutches or leg braces. (This provision is different from ANSI A117.1 (1980).)

(3) Be in an adjoining configuration if only two positions are provided. Additional positions may be in a single position configuration. (This provision is different from ANSI A117.1 (1980).)

(4) Be an integral part of the seating plan and shall be dispersed throughout the assembly area providing sight lines comparable to those for all seating. (This provision is similar to ANSI A117.1 (1980).)

(i) *Exception.* In alteration work where it is structurally impossible to alter seating locations to disperse seating throughout, seating may be located in collected areas as structurally feasible. Seating must adjoin an accessible route that also serves as a means of emergency egress. (This provision is not in ANSI A117.1 (1980).)

(5) Adjoin an accessible route of emergency egress as required by paragraph 1190.50(h) *Egress.* (This provision is similar to ANSI A117.1 (1980).)

(6) Have surfaces that comply with § 1190.50(i) *Ground and Floor surfaces.*

(c) *Performing areas.* Connect wheelchair viewing positions by an accessible route that complies with § 1190.50, Walks, floors, and accessible routes, to performing areas, including, but not limited to, stages, arena floors, dressing rooms, locker rooms, and other rooms and spaces required for use of the assembly area. (This provision is similar to ANSI A117.1 (1980).)

(i) *Exception.* In alteration work where it is structurally impracticable to alter all performing areas to be on an accessible route, at least one of each type shall be made accessible. (This provision is not in ANSI A117.1 (1980).)

(2) [Reserved]

(d) *Listening systems.* Provide assembly areas with a listening system to assist no fewer than two persons with severe hearing loss. (This provision is different from ANSI A117.1 (1980).)

(1) If the listening system serves individual seats, locate such seats within 50 feet (15 m) of the stage or arena. Such locations shall provide a complete view of the stage or arena. (This provision is similar to ANSI A117.1 (1980).)

(2) Acceptable types of listening systems include, but are not limited to, audio loops and radio frequency systems. (This provision is similar to ANSI A117.1 (1980).)

§ 1190.240 Storage.

(a) *General.* Storage facilities required to be accessible by Subpart C—Scope shall comply with this section.

(1) Provide a clear floor space complying with § 1190.40(d) *Reach limitations. (This provision is similar to ANSI A117.1 (1980).)*

(2) Provide storage space within the reach ranges specified in § 1190.40(d), *Reach limitations.* Mount clothes rods a maximum of 4'–6" (1,370 mm) above finish floor. (This provision is similar to ANSI A117.1 (1980).)

(3) Provide accessible hardware, in conformance with § 1190.170, Controls and operating mechanism.

Subpart E—Special Building or Facility Elements [Reserved]

Appendix A—Draft Regulatory Analysis Proposed ATBCB Minimum Guidelines and Requirements for Accessible Design; Architectural and Transportation Barriers Compliance Board

July 1980.

This analysis should be read in conjunction with the proposed rule and supplementary information as they provide specific details on the issues, explain many of the terms, and present background information on accessibility requirements. The draft analysis does not contain all of the supporting material used by the Board during the development of the rule. Requests for additional copies of the draft regulatory analysis or for an explanation of specific terms can be addressed to the Office of the General Counsel, Architectural and Transportation Barriers Compliance Board, 330 C Street, SW., Room 1010, Washington, D.C. 20202, ATTN: Charles D. Goldman, General Counsel, or Sally Free (202/245–1801 Voice or TDD).

Comments are welcome on all parts of this draft analysis. Based upon comments received and other information available to the Board, the analysis will be revised at the time of the final rulemaking.

Subpart A—General

I. Purpose and Scope of the Analysis

A. *Purpose.* Executive Order (E.O.) 12044, "Improving Government Regulations" (43 FR 12661, March 24, 1978), directs each Executive Agency to adopt procedures to improve existing and future government regulations. One of the provisions contained in that Order is that a "regulatory analysis" be prepared to examine and compare alternative approaches to regulating. The basic purpose of the analysis is to provide a decision-oriented document that explains and documents the bases of a regulatory decision through both descriptive and numerical comparisons. The draft regulatory analysis provides the basic background materials and alternatives necessary to allow the public a better opportunity to understand and participate in the selection of the most efficient and effective regulatory approach.

B. *Scope of the Analysis.* The draft regulatory analysis examines the statutory requirements, the alternatives available, and the scope of the guidelines. It specifically addresses the applicability of the guidelines to categories of buildings and facilities covered by the Act, the waiver and modification process, and the scoping requirements including those for new construction, additions, alterations, and leases. The regulatory analysis provides the background information for specific technical provisions of the guidelines including the scope, minimum requirements, and objective of each provision; summarizes relevent Board and public comments; highlights the unresolved and controversial issues; and presents the bases for the recommendations published in the Notice of Proposed Rulemaking (NPRM). Included in the draft analysis is an evaluation of the accessibility requirements for those building elements and site improvements typically contained in or around a public building or facility including horizontally and vertically accessible routes as well as emergency egress requirements; parking and passenger loading zones; ramps and curb ramps; stairs; handrails; elevators; lifts; entrances; doors; windows; toilet and bathing facilities; drinking fountains and water coolers; controls and operating mechanisms; alarms; tactile warnings ; signage; telephones; seating, tables, and working surfaces; assembly area; and storage. Dimensions and resource materials used in the development of the human data requirements are provided to give an understanding of the space and reach needs of the population requiring accessibility. Specific problems regarding those requirements are addressed under the relevant sections. The draft regulatory analysis also identifies the technical and scoping provisions that are similar to the *American National Standard Specification for Making Buildings and Facilities Accessible to and Usable by Physically Handicapped People,* ANSI A117.1–1980 (the ANSI Standard), that differ substantially from those provisions in the ANSI Standard, or that are found in the ATBCB guidelines but that are not contained in the ANSI Standard. The comparison was made in response to public comments on Question 31 of the Notice of Intent which asked if the ATBCB should adopt ANSI. Since a number of the commentors endorsed ANSI and found it a viable alternative to be considered in the regulatory process, the regulatory analysis highlights the similarities and differences so that the public can evaluate and compare the two approaches.

Based upon the criteria set forth in E.O. 12044 and from the information available to the Board at the time of publication of the NPRM, it does not appear that the proposed rule will result in any major economic consequences for the general economy, for individual industries, for geographic regions, or levels of government. Because the staff anticipates a number of questions concerning the costs of particular provisions, particularly on those paragraphs regarding the scope requirements, a number of questions have been prepared to request additional information from the standard-setting agencies on specific issues. For example, information is sought from the Department of Defense (DoD), the General Services Administration (GSA), the Department of Housing and Urban Development (HUD), and the United States Postal Service (USPS) to determine if the minimum guidelines will impose any additional costs on the Federal Government beyond those costs which currently exist as a result of agency, state, or private accessibility standards for new construction or alteration projects. Questions such as this one appear in the draft regulatory analysis under the heading "Additional Information Requested" for each section on which the additional information is sought. Responses to these questions from other Agencies and the public are welcomed and encouraged. So that the cost data is usable and comparable, please supply references to all background materials, source documents, and other information that provides the basis for the response. In addition, please refer to the section number, the title, and the question number in answering the questions.

An analysis of the economic consequences of a particular section will be provided in the final regulatory analysis if it appears that cost factors could significantly impact the economy, if it places a specific burden on a particular individual or section of the economy, or it it generates substantial controversy.

II. Applicability and Scope of the Guidelines

A. *Applicability: Buildings and facilities covered.* (1) Intended Use.

NPRM. The minimum guidelines apply to any building or facility (1) the intended use for which either (i) will required that such buildings or facility be accessible to the public, or (ii) may result in employment or residence therein of physically handicapped persons.

Legal Requirements. The Architectural Barriers Act (Public Law 90-480) of August 12, 1968, as amended (42 U.S.C. 4151 *et seq.*), defines "building" to include: any building or facility (other than (A) a privately owned residential structure not leased by the Government for subsidized housing programs and (B) any building or facility on a military installation designed and constructed primarily for use by able bodied military personnel) *the intended use for which either will require that such building or facility be accessible to the public, or may result in employment or residence therein of physically handicapped persons * * *. (Emphasis added.)*

(*Discussion.* Question 4 of the ATBCB Notice of Intent requested public comment concerning the criteria that should be used in determining if a building is one "intended for use * * * which * * * may result in employment or residence therein of physically handicapped persons." The majority of respondents to this issue believed that all buildings and facilities should be accessible with the possible exception of certain "special use" areas (*e.g.*, mechancial rooms, commercial kitchens). Board discussions reflected similar opinions.

(*Unresolved or Controversial Issues.* None.

Basis for Proposal. Based upon public and Board comments received, it is proposed that if there are buildings or facilities or portions thereof which by definition are not included under the Architectural Barriers Act's definition of building, the exception will be written into the guidelines under the appropriate section. In other cases, a determination will be made under the modification/waiver process.

(2)(i). "to be constructed or altered by or on behalf of the United States"

NPRM. The minimum guidelines define "constructed or altered on behalf of the United States" to mean "acquired by the United States through lease-purchase arrangements, constructed or altered for purchase by the United States, or constructed or altered for the use of the United States."

"Construction" is defined as "any erection of a new building or of an addition to an existing building."

Legal Requirements. A review of the legislative history of the Architectural Barriers Act (ABA), the relevant case law and the common meaning of the word "behalf," and the Federal Government's construction and alteration authority under other statutes indicates that Congress intended to include buildings and facilities constructed or altered by the United States (*i.e.*, with its own work force or through contractors) as well as those buildings and facilities constructed or altered "on behalf of" the United States.

Discussion.—Legislative history of the Architectural Barriers Act. The original Senate bill, S. 222, and the House bill, H.R. 6589, were identical and covered only buildings (A) "constructed *by* the Federal Government, or any department or agency thereof" or (B) "financed * * * with funds provided *by* a grant or loan made by the Federal Government or any department or agency thereof * * *." (Emphasis added.) During the conference on the bills, the legislation was changed to broaden the coverage of the Act to include "constructed or altered *by or on behalf of* the United States" (Architectural Barriers Act of 1968, 42 U.S.C. 4151). (Emphasis added.) This language implies coverage of buildings constructed through contracts to which the United States is not a party.

During the House hearings on the Act, Representative Gray asked Senator Barlett, the author and sponsor of S. 222, whether the language concerning buildings constructed by or on behalf of the Federal Government was "broad enough to take in the wide range of leasing arrangements that the Federal Government has with respect to Federal Government buildings." *Hearings on H.R. 6589 and S. 222 Before the Subcomm. on Public Buildings and Grounds of the House Comm. on Public Works*, 90th Cong., 2d Sess. 6 (1968). Senator Bartlett replied, "I should hope that the regulations of the General Services Administrator would make that abundantly clear. But if there is any doubt, sir, I would favor writing it into the language of the act." The final language of the Act included buildings "to be leased in whole or in part by the United States."

The evolution of the final version of the Act suggests that Congress intended (1) to include not only buildings constructed "by" the United States, but also a second category of buildings built by or on behalf of the United States, and (2) certain leased buildings (a category within the category of buildings constructed or altered by or on behalf of the United States but significant enough to merit clarification). Therefore, "on behalf of" means something other than "by," and it is a concept which includes leases as well as other arrangements.

Government Construction and Alteration Authority. The Public Buildings Act provides that, "No public building shall be constructed except by the (GSA) Administrator * * *" (40 U.S.C. 601). In addition, the Administrator is authorized to alter any building (40 U.S.C. 603). The Administrator's responsibilites under the Act, except for the alteration responsibility, are to be delegated to other agencies when the cost of the project does not exceed $100,000, and may be delegated in other instances (40 U.S.C. 614). The Administrator is authorized to carry out any construction or alteration by contract (40 U.S.C. 609). It is submitted that construction and alteration performed pursuant to these sections clearly would be construction and alteration "by the United States." The Department of Defense and the U.S. Postal Service have similar authority to construct and alter buildings (10 U.S.C. 2661, 2674, 2682; 39 U.S.C. 101, 401, 403, 404; H.R. Rep. No. 1787, 90th Cong., 2d Sess. 4 (1968)).

Furthermore, construction on behalf of the United States should include buildings constructed through purchase contracts. (For instances, a contractor erects a building "for the use of" the United States or to be purchased by the United States (*see* 40 U.S.C. 602a(e) and 356).) This form of acquisition was in existence in 1968 under 40 U.S.C. 356. The purchase contract authority under 40 U.S.C. 602a expired in 1975; it is unclear whether it otherwise continues to exist.

Unresolved or Controversial Issues. As used in § 1190.2 Applicability, how should the term "constructed or altered by * * * the United States" be defined?

Additional Information requested. 1. Each fiscal year, how many buildings and facilities subject to the minimum guidelines are purchased but not altered by the U.S. Government?

DoD————
GSA————
HUD————
USPS————

2. If these buildings and facilities were required to be altered by the U.S. Government to meet the minimum guidelines prior to occupany, what is the estimated annual costs that would be incurred by the Federal Government?

DoD————
GSA————
HUD————
USPS————

3. Each fiscal year, how many buildings and facilities are (a) acquired by the United States through lease-purchase arrangements?; (b) constructed or altered for purchase by the United States?; or (c) constructed or altered for the use of the United States?

DoD (a)————; (b)————
(c)————
GSA (a)————; (b)————
(c)————
HUD (a)————; (b)————
(c)————
USPS (a)————; (b)————
(c)————

4. Based on the annual work plan, the scope provisions of § 1190.33 ALTERATIONS of the NPRM, and the costs presently incurred by the Federal Government to make buildings and facilities accessible, what is the estimated *annual* costs that will be incurred by the U.S. Government to bring

(a) Buildings or facilities acquired by the United States through lease-purchase arrangements into compliance with:

(i) Existing standards?

(ii) The proposed minimum guidelines?

(b) Buildings or facilities constructed or altered for purchase by the United States into compliance with:

(i) Existing standards?

(ii) The proposed minimum guidelines?

(c) Buildings or facilities for the use of the United States in compliance with:

(i) Existing standards?

(ii) The proposed minimum guidelines?

DoD (a)(i)——; (a)(ii)—— (b)(i)——; (b)(ii)——; (c)(i)——; (c)(ii)——
GSA (a)(i)——; (a)(ii)—— (b)(i)——; (b)(ii)——; (c)(i)——; (c)(ii)——
HUD (a)(i)——; (a)(ii)—— (b)(i)——; (b)(ii)——; (c)(i)——; (c)(ii)——
USPS (a)(i)——; (a)(ii)—— (b)(i)——; (b)(ii)——; (c)(i)——; (c)(ii)——

For each of the above questions, please supply any background material, source documents, and any other information that provided the basis for the response.

(2)(ii) To be leased in whole or in part by the United States.

NPRM

The minimum guidelines apply to buildings to be leased in whole or in part by the U.S. (i) after August 12, 1968, and before January 1, 1977, after construction or alteration in accordance with plans and specifications of the U.S., or (ii) on or after January 1, 1977, including any renewal of a lease entered into before January 1, 1977, which renewal is on or after such date. The guidelines do not apply to leases by recipients of Federal assistance. (*See* Memorandum for Drew S. Days, III, Assistant Attorney General, Civil Rights Division, Department of Justice, from the Office of Legal Counsel, May 8, 1980, Re: Architectural Barriers Act § 1, 42 U.S.C. 4151.)

Legal Requirements

The authority for leasing space for Federal Agencies is vested in the General Services Administration (GSA). Applicable GSA policies and procedures are found in the "Assignment and Utilization of Space in the Federal Property Management Regulations" (41 CFR 101-17). Under 41 CFR 101-17.102-1(a)(3), GSA performs all functions with respect to assignment and reassignment of space acquired by the Agencies through the leasing process. In specific cases, however, the Administrator of GSA may authorize other Agencies to perform these designated functions (41 CFR, 101-17.102-1).

Under the Economy Act (40 U.S.C. 278(a)), monies may be expended only for those premises occupied by the Government. Where the Government leases only a portion of a building, only that portion may be required to be accessible. The Government has the authority to require that the essential features be accessible and that an accessible route from the entrance to the leased portion of the building and to the essential features be provided. However, the U.S. Government is given no general authority to require an accessible route to other areas open to the public which are not otherwise occupied by a Federal entity, *e.g.*, common areas. Where the U.S. Government leases the entire structure, the Government may require such common areas to be accessible.

The only exception to this regulation is that where such access to common areas has been determined to be a valid space need for the agency (*e.g.*, a cafeteria in an otherwise remote location), then access to that common area can be provided (41 CFR Part 101, Chapter 12 and 18). It should be noted that the practical problem GSA encounters is that the lessor has often (especially in an existing building) leased the common area to another party, such as a shopkeeper or cafeteria operator.

Discussion

Because GSA leases the vast majority of Federal space, discussion by the Board centered on current GSA practices. Under the present GSA policy, the same specifications apply to building and facilities leased by the Federal Government as to those owned by the Government. This policy was supported by the public responses to Question 2 of the ATBCB Notice of Intent in which 22 of 40 respondents stated that the same standards should apply to leased buildings as apply to new construction. Only seven commentors felt that the standards for leased space should be less stringent; most of these cited cost considerations as the reason.

According to GSA, most of its leases are for a portion of a building or facility and do not involve the leasing of the entire building or facility. It is currently GSA's practice to attempt to lease an accessible route to those portions of the existing building it leases. However, GSA's leasing powers are limited, and the agency's leases do not always address such elements as entrances, elevators, and toilet rooms. GSA leases do not provide for access to privately owned spaces such as common areas (e.g., cafeterias) that are open to the public. GSA requires modifications or waivers only in cases where a lease is awarded to a firm other than the one offering the space that most nearly complies with the ANSI A117.1-1961 (R1971) standards; the modification/waiver is required for those leased elements or spaces that are not accessible but would have met the standards if the other space had been chosen (41 CFR 101-19.604(5)). Waivers are not required if accessible space is not available. All waivers must be approved by the Administrator. Public comments in response to Question 12 of the Notice of Intent were divided on GSA's general approach to the leasing of accessible space which permits that only selected requirements be met. Groups and organizations associated with the interests of handicapped persons felt that the Federal Government should foster accessibility and this can most effectively be accomplished by the Government requiring that leased space be accessible. Other groups, including a building code congress, a university, and a municipality, thought the GSA approach was reasonable. Most commentors also believed that the portion of the buildings leased should be made accessible, that an accessible route should be provided, and that common areas should be accessible.

According to GSA, it is not the accessibility requirements that increase cost to the Government in the leasing of a building; it is, instead, the multitude of other Federal requirements, such as those required by the *Occupational Safety and Health Agency* (OSHA), that increase the leasing costs to the Federal Government. As a result of these and

other factors not related to accessibility, GSA, as of January 1980, had a backlog in acquiring space of 10 million square feet. (*See Public Buildings Act of 1979, Hearings before the Senate Committee on Environment and Public Works*, 96th Cong., 2d Sess. 10 (1980).)

Unresolved or Controversial Issues

None.

Additional Information Requested

1. Each fiscal year, (a) how many new leases are entered into by the Federal Government in which the entire building or facility is leased? (b) Please indicate the gross number of square feet involved.

6. In general, is accessible space available for leasing?

DoD———
GSA———
HUD———
USPS———

For each of the above questions, please supply any background material, source documents, and any other information that provided the basis for the response.

(2)(iii) To be financed in whole or in part by a grant or loan made by the United States, if * * *

NPRM

The minimum guidelines apply to those buildings or facilities financed by Federal grants or loans if the law authorizing the grant or loan also authorizes the issuance of standards for design, construction, or alteration, even if, in its discretion, the Agency chooses not to issue or apply such standard.

Legal Requirements

Although the legislative history and the ABA clearly include buildings and facilities to be purchased and to be leased by the Federal Government if such buildings are constructed or altered in accordance with the plans and specifications of the U.S. Congress included no language in the Act that would cover buildings purchased or leased with grant or loan money if that money was not to be used to finance the construction or alteration of the building or facility. Therefore, the guidelines cannot legally require buildings or facilities to be accessible if that money was not to be used to finance construction or alteration of the building or facility.

The Department of Justice has agreed with the Board's opinion that the ABA covers those buildings for which standards are authorized even if they have not actually been imposed; however, Justice found that the Act does not extend to buildings leased by recipients of Federal grants or loans where the funds were not made available for building construction or alteration. (*See* Memorandum for Drew S. Days, III, Assistant Attorney General, Civil Rights Division, Department of Justice, from the Office of the Legal Counsel, May 8, 1980, Re: Architectural Barriers Act §1, 42 U.S.C. 4151.)

The ATBCB Office of the General Counsel has determined that buildings designed, constructed, or altered under the State and Local Assistance Act of 1972, Pub. L. 95–512, 31 U.S.C. 1221 *et seq.* (Revenue Sharing Act), are not to be considered covered by the Architectural Barriers Act. The opinion is based on the uniqueness of the Revenue Sharing Act and is concurred in by the Office of Revenue Sharing of the Office of the Treasury.

Discussion

The phrase "to be financed" is interpreted to include design, construction and alteration. The term "financed" can also encompass non-monetary considerations such as services of Federal personnel, guarantees, and insurance. (*See e.g.*, 29 U.S.C. 1701(a), 29 U.S.C. 276(c), and 29 U.S.C. 3.2(d).)

Unresolved or Controversial Issues

None.

Additional Information Requested

1. Each fiscal year, (a) how many buildings and facilities are financed by Federal grants and loans that are required to meet the accessibility requirements of the minimum guidelines. (b) Please indicate the gross number of square feet involved.

source documents, and any other information that provided the basis for the response.

Subpart B—Waivers and Modifications: Processed Departures

NPRM

Waivers and modifications may be issued on a case-by-case basis by the head of each standard-setting agency if the conditions are met which are set forth in Subpart B of the Minimum Guidelines.

Legal Requirements

The Architectural Barriers Act directs the standard-setting agencies "to insure *whenever possible* that physically handicapped persons * * * have ready access to * * * buildings." (Emphasis added.) (42 U.S.C. 4152.) Section 6 of the Act, in addition, authorizes the head of each of the four standard-setting agencies to modify or waive their respective standards if:

1. The application for a waiver and/or modification is made by the head of the concerned department, agency, or instrumentality of the United States;

2. The application is made on a case-by-case basis; and

3. The Administrator or Secretary makes a determination that such a modification or waiver is necessary.

(*See* Architectural Barriers Act, Pub. L. 90–480, of August 12, 1968, as amended, 42 U.S.C., 4151 *et seq.*)

The 1978 amendments to the Rehabilitation Act of 1973 provide the ATBCB with express responsibilities for waivers and modifications:

Section 502(b). It shall be the function of the Board to: (1) insure compliance with the standards prescribed pursuant to the Act * * * including * * * insuring that all waivers and modifications of standards are based upon findings of fact and are not inconsistent with the provisions of such Act and this section * * *.

Discussion

Because the 1976 Act was amended to include the wording "whenever possible," this phrase should be read in the context of waivers and modifications, standards of access, the purpose of the Act, and other 1976 amendments to the Act. Although the phrase does not have a precise legal definition and has been interpreted by the courts to have a variety of meanings, the phrase, "whenever possible," when read in context with the other amendments to the Act and in light of the Congress' clear intent to strengthen the Act by limiting agency discretion, can only be interpreted to limit the agencies' discretion and to imply narrow grounds for exceptions.

Consultation by the ATBCB staff with representatives from the four Federal standard-setting agencies confirmed that in practice a "waiver to the standard" and "a modification to the standard" have distinct requirements, although the process used to approve waivers and modifications are the same. The following definitions were written based on the four agencies' interpretation of "waiver" and "modifications":

"Modification" means an official act in accordance with the provisions of the Architectural Barriers Act to permit design, construction, alteration, or lease of a building without strict compliance with a particular provision of a guideline or standard.

"Waiver" means an official act in accordance with the Architectural Barriers Act to: (1) Exempt an entire building or facility from all requirements of a standard; or (2) Exempt an entire building or facility, or portion of a building or facility, from the requirements of a standard with respect to a specific element or space.

Defining the term "modification" required the Board to address the concept of "equivalent facilitation." This term had already been addressed to a certain extent by ANSI A117.1 (1961), GSA, and some state codes which permitted modifications where a substitute method achieved equivalent access. In legal briefs filed in connection with various administrative proceedings, it has been the ATBCB's position that the law and the standard require more than mere access for disabled persons. The law mandates that access and use be provided that is substantially equivalent to that afforded able-bodied persons in such respects as ease, convenience, dignity and independence. This interpretation is supported by the legislative history of the Architectural Barriers Act and principles of statutory interpretation. (*See* Memorandum of Points and Authority in Support of Executive Director's Motion for Judgment On The Record, In re Compliance, Union Station, Washington, D.C. 3–77–1, Memorandum of Points and Authorities In Support of the Executive Director's Motion for Partial Summary Judgment, In re Compliance Southeastern Program Center, Birmingham, Alabama, 6–77–2.)

A definition of equivalent facilitation was, therefore, developed to build on this legal interpretation:

"Equivalent facilitation" means access or use which is, in terms of performance, dignity, convenience, and independence, at least substantially equal to or better than that required under the guideline or a standard.

Equivalent facilitation was also addressed in the ANSI A117.1961 (R1971):

In cases of practical difficulty, unnecessary hardship, or extreme differences, administrative authorities may grant exceptions from the literal requirements of this standard or permit the use of other methods or materials, but only when it is clearly evident that equivalent facilitation and protection are thereby secured. (Emphasis added.)

The ANSI A117.1–1980 does not define or make reference to equivalent facilitation nor does it address the issue of waivers and modifications.

Unresolved or Controversial Issues

None.

Basis for Proposal

The specific situations for a waiver or modification were developed from public comments in response to Questions 15, 16, 17, and 18 of the Notice of Intent, from existing policies regarding waivers and modifications, and from Board discussions. In general, there was consensus that the need for a waiver or modification may arise in the following situations: (1) Safety or security; (2) undue hardships; (3) limitations imposed by legislation other than the Architectural Barriers Act; and (4) structural impracticability. The ATBCB also recognized the need to provide a modification process which would allow designers, builders, and implementing agencies an opportunity to present the Board with alternative methods of providing accessibility that are not specifically contained in the gudelines. It was further recognized that some alteration projects may require special consideration because the application of the standard would be structurally impracticable. As a result of discussions, the Board developed additional requirements for modifications (*See* § 1190.23 and the supplementary information discussion of this topic.)

Subpart C—Scope

§ 1190.31 Accessible Buildings and Facilities: New Construction

NPRM

All new buildings and facilities shall comply with the minimum requirements set forth in § 1190.31

Legal Requirements

The Architectural Barriers Act (Pub. L. 90–480), as amended, directs the standard-setting agencies to "prescribe standards for the design, construction and alterations of buildings * * * to insure whenever possible that

physically handicapped persons will

recommendation to require that all new

vertical access is provided. ANSI simply

Standards Committee, Tuesday, April

GSA (a)———; (b)———

buildings under the category of buildings

physically handicapped persons will have ready access to, and use of, such buildings."

The ABA requires four agencies—the General Services Administration; the Department of Housing and Urban Development; the Department of Defense; and the United States Postal Service—to establish standards for accessibility. Buildings subject to the Act must conform to those standards (42 U.S.C. 4251–4256).

The ATBCB was established by Section 502 of the Rehabilitation Act of 1973, Pub. L. 93–112, to ensure compliance with standards issued under the Architectural Barriers Act.

The Rehabilitation Act Amendments of 1978, Pub. L. 95–602, amended Section 502 of the Rehabilitation Act of 1973, 29 U.S.C. 792, to read:

(b) It shall be the function of the Board to * * * (7) establish minimum guidelines and requirements for the standards pursuant to * * * the Architectural Barriers Act of 1968 (ABA).

Discussion

It is clear from the legislative history of the Architectural Barriers Act of 1968 (Pub. L. 90–480) that the intent of Congress was to make public buildings meet a high standard of accessibility. The operative language of the Act (42 U.S.C. 4156) requires that certain buildings be designed, constructed, or altered in accordance with the standards set by the three agencies. (The 1978 amendments to the Act added a fourth standard-setting agency: the United States Postal Service.) The sections relating to the establishment of standards (42 U.S.C. 4152–54) *authorized* the three agencies to "prescribe such standards for the design, construction, and alteration of buildings * * * *as may be necessary* to ensure that physically handicapped persons will have ready access to, and use of, such buildings." (Emphasis added.)

In response to a GAO report, *Further Action Needed to Make Buildings Accessible to Handicapped Persons* (July 1975), the Act was amended in 1976 to require agencies to issue standards "to ensure whenever possible that physically handicapped persons will have ready access * * *" (Pub. L. 95–541). This amendment, therefore, eliminated the agencies' discretion to choose not to issue standards. Congress provided the standard-setting agencies and the ATBCB with wide discretion in establishing standards to implement the purpose of the Act.

Public comments, in response to the Board discussions, the 1975 GAO report, ATBCB Notice of Intent Question 4, and research supports the NPRM recommendation to require that all new buildings and facilities be fully accessible. The HUD research report, "The Estimated Cost of Accessible Buildings," found that the cost for designing for accessibility from the beginning, "amounts to less than 1% of the total construction cost." The cost study examples provided in the report underscored the importance of accessibility and found that if a building or facility is designed for accessibility it generally provides improved pedestrian circulation routes for everyone, not just the handicapped, and does not necessarily increase the overall square footage of the building.

Alternatives Considered

The following alternatives were considered by the Board in their discussions concerning the number of particular elements that should be required:

Alternative 1: A number or percentage should be specified;

Alternative 2: The standard should require a "reasonable number" or "appropriate number"; or

Alternative 3: The standard should require a reasonable number or appropriate number and specify a minimum number.

Discussion

The ANSI A117.1–1980 specifications require that if a particular element is required, then at least one accessible element of that particular type is to be provided. It is recommended by the ANSI A117.1 Committee that the administrative authority adopting this standard should specify reasonable numbers or should establish procedures for determining them. Factors which ANSI recommends using to determine the actual number of elements to be provided include:

(1) Population to be served;

(2) Availability to occupants;

(3) Distances and times required to use the accessible elements; and

(4) Provisions of equal opportunity and treatment under law.

The ATBCB guidelines as published in the NPRM and the ANSI specifications are similar except for the following:

(1) Parking spaces: The ATBCB proposes that if parking is provided, the number of accessible parking spaces shall comply with the table provided; ANSI recommends a reasonable number, but always at least one accessible space comply with the appropriate section if parking is provided.

(2) Elevators: The ATBCB proposes to require a pasenger elevator for multi-story buildings unless another means of vertical access is provided. ANSI simply requires that if passenger elevators are provided, each shall comply with the appropriate section. The ATBCB also excepts elevator pits, elevator penthouses, mechanical rooms, and piping or equipment catwalks from the guidelines. Each elevator is required to be accessible in a bank because the typical call or summons technique used in bank operation generally does not discriminate as to which elevator is summoned. In general, it summons the closest elevator traveling in the desired direction. If there were only one elevator per bank that was accessible and this summons technique was employed, it could conceivably result in a situation whereby a handicapped person might have to wait a considerable length of time before the accessible elevator arrived.

(3) Platform Lifts: The ATBCB proposes to permit the use of platform lifts as a means o vertical access; ANSI permits them only if other alternatives are not feasible.

(4) Entrances: The ATBCB proposes that each entrance shall be accessible; ANSI recommends a reasonable number but always at least one of the principal entrances be accessible.

(5) Toilet and Bathing Facilities: The ATBCB proposes that each be accessible; ANSI recommends a reasonable number, but always at least one.

(6) Assembly Areas: The ATBCB proposes that if assembly areas are provided, the number of accessible viewing positions shall comply with the table provided; ANSI recommends only that a reasonable number but no less than two shall comply with the appropriate section if assembly areas are provided. The ATBCB also proposes to require listening systems to assist no fewer than two persons with a severe hearing loss. Listening systems are not mandatory in the ANSI Standard.

(7) Dwelling Units: The ATBCB proposes to reserve this section for future rulemaking; ANSI now recommends specific criteria.

Comments to the ATBCB Notice of Intent Question 29 were divided on the issue of requiring either a "specific number" or a "reasonable number." Consumers generally believed that the "reasonable number" approach would be appropriate. The enforcement organizations, on the other hand, felt that the "reasonable number" approach would be impossible to enforce and it would eventually be the courts that would decide the definition of a "reasonable number." (For additional information on the deliberation of this issue, *see* the Minutes of the Technical Standards Committee, Tuesday, April 29, 1980. pp. 8–9.)

Unresolved or Controversial Issues

a. Should parking facilities be required at all new buildings and facilities?

b. Should each door at each entrance be required to comply with § 1190.130 Doors?

Additional Information Requested

1. Parking and Passenger Loading Zones:

a. Each fiscal year, how many buildings or facilities are constructed by or on behalf of the U.S. Government that do not provide any parking facilities?

b. If parking facilities were required at newly constructed buildings or facilities that would not otherwise provide these spaces, what would be the additional cost per space as proposed by § 1190.60 Parking and Passenger Loading Zones in the NPRM?

DOD (a) ——; (b) ——
GSA (a) ——; (b) ——
HUD (a) ——; (b) ——
USPS (a) ——; (b) ——

2. Elevators:

a. Each fiscal year, how many multi-story buildings or facilities are constructed by or on behalf of the U.S. Government that would require the installation of elevators under the accessibility requirements of the NRPM that would otherwise not be provided?

b. If these elevators are required, what will be the total annual cost by fiscal year to provide these additional elevators?

DoD (a) ——; (b) ——
GSA (a) ——; (b) ——
HUD (a) ——; (b) ——
USPS (a) ——; (b) ——

3. Entrances:

a. Estimate the number of additional entrances that will be required to be accessible as a result of the proposed paragraph § 1190.31(h) Entrances that otherwise would not be made accessible.

b. If these "extra" entrances are required to be accessible, what will be the additional cost per fiscal year to make these entrances accessible?

DoD (a) ——; (b) ——
GSA (a) ——; (b) ——
HUD (a) ——; (b) ——
USPS (a) ——; (b) ——

4. Doors:

a. If each door at each entrance is required to comply with § 1190.130 rather than only one door at each entrance being required to comply, what will be the total cost per fiscal year to make these additional doors accessible?

DoD (a) ——; (b) ——
GSA (a) ——; (b) ——
HUD (a) ——; (b) ——
USPS (a) ——; (b) ——

5. Toilet and Bathing Facilities:

a. What will be the total cost per fiscal year to require that each toilet and bathing facility in a newly constructed building or facility comply with § 1190.150 Toilet and Bathing Facilities?

b. What is the total cost per fiscal year to require that one toilet and bathing facility for each sex per floor in a newly constructed building or facility comply with § 1190.150 Toilet and Bathing Facilities?

DoD (a) ——; (b) ——
GSA (a) ——; (b) ——
HUD (a) ——; (b) ——
USPS (a) ——; (b) ——

Basis for Proposal

It was decided that architects and designers need to be given precise requirements so that they can better anticipate the design requirements of the building. It was also determined that unless specific numbers were incorporated into the standard, enforcement of the standard would be difficult if not impossible. Moreover, without specific numbers, the minimum numbers would be determined on a case-by-case basis, hence destroying any semblance of uniform requirements. the Board considered each element before establishing specific numbers. Building code requirements, costs and existing State and Federal accessibility requirements were relied upon in making the proposal for the NPRM. For information on a specific number or minimum number proposed by the Board, *see* the relevant section of the regulatory analysis.

§ 1190..32 Accessible Buildings and Facilities: Additions

NPRM

Each addition to an existing building or facility shall comply with § 1190.31 New Construction except for the requirements regarding entrances; accessible routes; and elements, essential features, and common areas. These provisions shall comply with § 1190.32 Additions of the minimum guidelines.

Legal Requirements

See § 1190.31 Accessible Buildings and Facilities: New Construction and § 1190.2 Applicability, paragraph (2)(i) "To be Constructed or Altered By or on Behalf of the United States."

Discussion

Based on the expressed intent of Congress to include a wide range of buildings under the category of buildings constructed or altered "on behalf of the United States," the term "building" or "facility" is defined as:

All or any portion of buildings, structures, equipment; roads, walks, parking lots, parks, sites, or other real property or interest in such property.

The definition is further refined by defining "construction" to mean:

Any erection of a new building or *of an addition to* an existing building. [Emphasis added.]

The intent of the Architectural Barriers Act is that as a building or a portion of a building is constructed, the new construction is to be completed in compliance with the applicable standards. The Architectural Barriers Act and its legislative history do not provide any clear guidance as to what extent an existing building or facility must be made accessible when an addition is made to that structure. At one point, Representative Gray, a co-manager of the legislation, suggested that in the case of an addition of an annex to a postal facility, the entire facility should be made accessible. (*House Hearings on H.R. 8589 and S. 222,* Subcomm. on Public Buildings and Grounds of the House Comm. on Public Works), 90th Cong., 1st Sess. 6 (1968). In light of these remarks, the Act may be interpreted to require that the addition must be accessible and comply with the requirements for new construction. Moreover, if elements and spaces are not provided in the addition, essential features such as entrances, accessible routes, and toilet and bathing facilities, and the like must be made accessible in the existing building. However, the Act and the legislative history do not provide any rationale for an interpretation that would require the entire existing building to be made accessible. Public comments to question 7 of the Notice of Intent support this interpretation. The overwhelming majority of respondents believed that the addition should be made accessible in accordance with the minimum guidelines and that common areas and essential features of the existing building should be accessible if these elements and spaces were not also located in the addition.

Unresolved Issues

None.

Basis for Proposal

The legal requirements and legislative history provided the bases for the NPRM. Public comments and Board deliberations were also considered.

§ 1190.33 Accessible Buildings and Facilities: Alterations

NPRM

Alterations to existing buildings and facilities shall comply with § 1190.33 Alterations of the minimum guidelines.

Legal Requirements

The Architectural Barriers Act requires that buildings and facilities altered by the Federal Government or with Federal financial assistance must be altered in accordance with the standards prescribed under the Act. 42 U.S.C. 4151 and 4155. *See also* Regulatory Analysis, § 1190.2: Applicability, paragraph (2)(i) "To Be Constructed or Altered By or On Behalf of the United States."

Discussion

The Architectural Barriers Act and its legislative history clearly demonstrate that the Congress intended the Act to cover alterations to existing buildings and facilities and that is is the Federal Government's responsibility to ensure that alterations to these buildings be barrier free and completed in compliance with the applicable standards. The Act and its legislative history do not provide clear guidance as to the extent other parts of an existing building must be brought into compliance when alterations are made to a portion of the building or facility. The Act also does not provide a definition of what is included or not included under the term "alteration."

It was, therefore, necessary for the Board to define the extent of coverage included within the meaning of alteration. In order to make this determination, the ATBCB examined the scope requirements and definitions of "alteration" used by state and Federal agencies. It was found that compliance for alteration was mandated in one of three ways:

Alternative 1: By definition. That is, specific elements and spaces, if altered, would be required to be brough into compliance.

Alternative 2: By the percentage of the construction cost of the alteration to the building's value. That is, the full and fair cash value of the building or facility would be determined before work commenced and the cost of the alteration would be expressed as a percentage of that value.

Alternative 3: By percentage of the gross square footage of the portion of the building to be altered to the gross square footage of the entire building. That is, it would be similar to alternative 2 except that square footage rather than cost would be the determining factor for compliance.

Each of the alternatives has inherent strengths and weaknesses. Alternative 1, the definition approach, has the weakness that it does not provide a coordinated approach to the accessibility requirements of the building or facility as a whole. Since only the particular element or space being worked on would be corrected during the alteration project, linking features may be omitted and thus even basic accessibility may not be achieved. Its advantages are ease of application and low cost.

Alternatives 2 and 3 are similar in that they provide a coordinated accessibility approach for the entire building or facility. The difficulty with Alternative 2 is that a building's value may be determined prior to design, however, accurate construction costs are available only at the bid opening—this may be too late to change the scope of a particular project.

In addition to defining the extent of coverage for work involving alterations, it was also necessary for the Board to define the term "alteration." To develop this definition, the Board compared the definitions used by a number of Federal and state agencies. Most definitions of alteration included the words, "remodeling," "renovation," "retrofitting," and "rehabilitation." Several included "repairs and maintenance." The concepts of "addition" and "historic preservation" were not included in the definitions because these terms have vastly different implications than alteration. For example, an addition to a building or facility involves new construction as opposed to work taking place within an existing building; historic preservation, on the other hand, includes the constraints of "visual authenticity" as well as structural difficulties that are not usually present in routine alteration work. (*See* the definitions used by New Jersey, Massachusetts, Rhode Island, Illinois, Washington, DoD, HUD, GSA, and USPS.)

Unresolved or Controversial Issues

a. Public comment is invited on the "50 percent criteria"—floor space or full and fair cash value—for treating significant alterations as new construction and thus requiring full access throughout the entire structure.

b. The ATBCB also highlights the question of whether it should, as a matter of policy, require an accessible means of vertical access where an escalator is contemplated to replace an existing excalator.

Alternatives

Based upon a review of the legislative history and the requirements of the Act, the Board determined that the following alternatives or combinations thereof were available in proposing a policy for alteration work:

Alternative 1. All alteration work must comply with the standards.

Alternative 2. The space or area in which the alteration work is completed must be altered to comply with the standards.

Alternative 3. The altered element, space or area, and a path to it must be altered to comply with the standards.

Alternative 4. The entire building must be altered to comply with the standards.

The first alternative would require that if a toilet stall in a toilet facility is remodeled, the stall would have to meet the standards. Using the same example, the second alternative would require that other stalls and possibly the entire toilet facility would have to meet the standards. Under the third alternative, there would have to be an accessible route from an accessible entrance to the stall. The fourth alternative would require the entire building to comply with the standards. The rationale for alternatives 2–4 is that there would be little purpose in having the stall accessible to the physically handicapped if the building itself is not accessible.

Costs

The HUD study "Estimated Cost of Accessible Buildings" found that alteration costs for existing buildings ranged from .1% to over 16% above original construction costs. The cost-estimating procedure and the resulting estimates of this study did not take into account that there would be costs incurred by the alteration even if barriers were not removed. It assumed instead that the alteration work was being undertaken to eliminate architectural barriers and not for any other purpose. In general, the ABA does not require that alterations be made exclusively for the purpose of gaining accessibility; instead, the ACT requires that when alterations are made, then these alterations should be accessible. As a result, the figures in the HUD study may not be realistic. Other studies that were reviewed suffered from similar deficiencies.

Additional Information Requested

1. Based on the annual work plan, the scope provisions of § 1190.33 Alterations and costs presently incurred by the Federal Government, state and local governments, and the private sector to make buildings and facilities accessible, what is the estimated annual cost for accessibility that will be incurred by the U.S. Government, state and local governments, and the private sector if:

(a) Only those elements, spaces, essential features, or common areas altered are brough into compliance with the minimum guidelines?

(b) In addition to (a) above, the space or area in which the alteration work is located must be brough into compliance with the minimum guidelines.

(c) In addition to (a) and (b) above, and accessible path from the entrance to the altered space must be brough into compliance with the minimum guidelines.

(d) In addition to (a), (b), and (c) above, the entire building must be brought into compliance with the minimum guidelines.

DoD (a)———; (b)———; (c)———; (d)———
GSA (a)———; (b)———; (c)———; (d)———
HUD (a)———; (b)———; (c)———; (d)———
USPS (a)———; (b)———; (c)———; (d)———
State and local governments (a)———; (b)———; (c)———; (d)———
Private sector (a)———; (b)———; (c)———; (d)———

For each of the above questions, please supply any background material and documentation that provides the basis for the response. Cost estimates should not include the cost of work that would be required for the alteration if there were not requirements for accessibility.

Basis for Proposal. There was general agreement among those who commented on question 6 of the Notice of Intent that there should be a point at which extensive alterations should trigger a requirement that the entire building be brought into compliance with the standards. It also was recommended by a majority of the public commentors in their responses to question 5 that if alteration work, including work related to maintenance or repair, presents an opportunity to provide accessibility, that work should comply with the standards. In response to question 7 of the Notice of Intent, commentors answered that the altered portion of the building should be accessible and that an accessible route should be provided to the essential features and to the altered portion of the building.

It was also determined, based on the legislative history and the law, that it was legally permissible to set a point at which the extent of alteration is such that it amounted to new construction; defining that point is a policy matter. It is also legally permissible to exclude maintenance work such as cosmetic work from the definition of alteration.

A review of building codes and other accessibility requirements found that both 50% of the floor space and 50% of the full and fair market value are used to require building owners to bring a building into compliance with a standard. (*See* the Uniform Building Code, Southern Building Code, and the New Jersey, Massachusetts, Rhode Island, and Illinois state codes.)

As a result of the above findings, the Board recommends that a policy which combines the various requirements discussed above be used. The proposal in the NPRM uses a combination of the definition and percentage of floor space and costs alternatives to determine the elements and spaces required to be altered to comply with the minimum requirements.

§ 1190.34 Accessible Buildings and Facilities: Leased

NPRM. Buildings or facilities or portions thereof leased by the Federal Government shall comply with the requirements of § 1190.31 New Construction, § 1190.32 Additions, and § 1190.33 Alterations, and with § 1190.34 Leased.

Legal Requirements. See paragraph (2)(ii) "To Be Leased in Whole or in Part by the United States."

Discussion. See paragraph (2)(ii) "To Be Leased in Whole or in Part by the United States."

Basis for Proposal. See paragraph (2)(ii) "To Be Leased in Whole or in Part by the United States."

Subpart D—Technical Revisions

§ 1190.40 Human Data

(a) *General.—Scope.* The space and reach requirements for the physically handicapped specified in § 1190.40 Human Data are based upon the space requirements and reach ranges of an adult seated in a manually operated wheelchair. Because available data indicates a wide variation in physical attributes and abilities among the handicapped population, it is recognized that many persons, particularly those who lack trunk control and those who have severe reach restrictions, may not be able to accomplish all movements and tasks within these ranges. Disabilities which are considered beyond the scope of the minimum guidelines are those of non-physical nature (*e.g.*, learning disabilities and mental retardation). The space and reach ranges of children were not constructed for these guidelines.

Objective. To provide the minimum space and reach requirements necessary for adults who use wheelchairs or walking aids to negotiate a path of travel and to operate controls and equipment located within accessible spaces.

Unresolved or Controversial Issues. Should the minimum guidelines accommodate the manipulation and maneuvering skills of *all* physically handicapped persons living outside of institutions or should the guidelines be limited to the accommodation of specific categories of disabilities?

Basis for Proposal. The technical specifications reflect those used in state codes as well as the research conducted by Dr. Edward Steinfeld while under contract to the Department of Housing and Urban Development (HUD). The provisions of § 1190.40 Human Data are similar to the ANSI A117.1–1980 edition except for § 1190.40(d)(3) of the NPRM which recognizes that some equipment may be required to be placed in a certain location in order for it to function properly and, as a result, may be located outside of the measurement requirements for this section.

(b) *Moving Wheelchair Clearances.* The FHWA report, "Provisions for Elderly and Handicapped Pedestrians: Volume I" (Report No. FHWA–RD—79—1), provides the following static space requirements for a wheelchair:

Length: 83% of all wheelchair models are less than 3'–11" long (1193.8 mm); 55% of all wheelchair models are less than 3'–10" long (1168.4 mm); 33% of all wheelchair models are less than 3'–9" long (1143 mm);

Width: 89% of all wheelchair models are less than 2'–4" wide (711.2 mm); 76% of all wheelchair models are less than 2'–3" wide (685.8 mm); 49% of all wheelchair models are less than 2'–2" wide (660.4 mm).

Because the space requirements for a wheelchair must also take into account dynamic as well as static data, tolerances are needed between the chair's drive rims, the wheelchairs user's hands, and any obstructions adjacent to the path of travel. Although 2'–6" will allow the passage of most wheelchairs, it must also be recognized that wheelchair users cannot travel in a precisely straight line because of such factors as different arm strengths or the need to use one's feet to propel the chair. As a result, most research studies and standards recommend a minimum width of 3'–0" for maneuvering space. Additional information on the characteristics of wheelchairs will be available upon the completion of the Canadian Standards Association (CSA)

V 45 A G 18 80 0 UMI

code on performance, design, and operation of self-powered, folding, multi-purpose wheelchairs (CSA Z–323.1.1). The CSA's Subcommittee on Mobility Aids anticipates the publication of the Standard in the Spring of 1981.

Dr. Edward Steinfeld conducted a number of tests under the HUD contract to determine the wheelchair clearances needed for turning. The tests indicated that the following dimensions were needed:

180° turn: A space 5'0" wide by 6'–6" deep accommodated 91% of the subjects tested.

K-turn: The space required for a K-turn ranged from an area 3'–8" by 4'–0", to an area 5'–0" by 6'–0".

U-turn: The space required for a U-turn around a wall ranged from a 2'–6" by 2'–6" by 2'–6" space (for people who could use their feet for turning movements) to 3'–0" (at the start of the turning movement) by 4'–0" (head of wall) by 3'–6" (at the finish of the turning movement).

L-turn: A minimum corridor width of 3'–0" and a 3'–0" doorway width are needed to accommodate most users.

The "Accessibility Standards" for the State of Illinois, and other research studies illustrate comparable findings. Space requirements for those using walking aids such as crutches, canes, and walkers are similar to those of wheelchairs users.

(c) *Clear Access Space. See* paragraph 1190.40(b), *Moving Wheelchair Clearances* of the draft Regulatory Analysis.

(d) *Reach Limitations.* Dr. Steinfeld tested wheelchairs users, ambulant, and semiambulant people to determine maximum vertical (side) and forward reach. Results of those tests, as reported in the HUD research report, are as follows:

Maximum vertical or side reach: Wheelchair users: 3'–0" to 6'–0"; 89% of those tested could reach 4'–6"; 96% of those tested could reach 4'–0".

Semiambulant and ambulant (standing): < 5'–0" to > 7'–6". Maximum forward reach:

Wheelchair users: 1'–6" to > 3'–6"—88% of those tested could reach a maximum of 3'–3".

Test results for seated semiambulant and ambulant individuals were similar to those of wheelchair users. The lack of trunk balance, restricted head movements, and disabilities of the upper torso severely restrict the reaching capabilities of many persons. Toes hitting a wall prevent maximum forward reach from being achieved. *See also* § 1190.210 Telephones.

§ 1190.50 *Walks, Floors, and Accessible Routes*

(a) *General.—Scope.* Accessible routes are unobstructed, continuous paths and areas that provide clearly marked passageways between elements, spaces, and levels in and around a building or facility. Accessible routes provide adequate passageways between and within interior and exterior accessible elements and spaces, and may include walks and corridors, ramps and curb ramps, stairs, elevators, platform lifts, entrances, doors, means of egress, and access aisles. Escalators do not qualify as an acceptable means of access.

Minimum Number. At least one accessible route shall be provided as required by Subpart C.

Objective. To facilitate the independent and safe movement of pedestrians and wheelchair users around and through buildings and facilities.

Unresolved or Controversial Issues. None.

Basis for Proposal. § 1190.50 Walks, Floors, Accessible Routes, as presented in the NPRM, reflects research conducted by Dr. John Templer at Georgia Institute of Technology while under contract with the Department of Transportation; research conducted by Dr. Edward Steinfeld of Syracuse University while under contract with the Department of Housing and Urban Development; existing state and Federal codes and policies; ANSI A–117.1–1980; public comments in response to questions in the ATBCB Notice of Intent; and Board discussions. One minor difference between the ATBCB NPRM and the ANSI A–117.1–1980 standard concerns cross-slopes: The cross-slope in the guidelines is 1:48 as opposed to 1:50 in ANSI. The ATBCB used 1:48 in order to accommodate typical measurements found elsewhere in the construction industry.

(b) *Width. See* § 1190.40(a), (b), and (c).

(c) *Protruding Objects.* Protruding objects will be detected by a blind or visually impaired person using the cane technique only if they fall within the range detectable by the cane. By the use of the touch technique and the diagonal technique, cane users can identify the location of potentially hazardous objects that have their leading edge mounted no higher than 2'–3" from the ground. *See* HUD, "Accessible Buildings for People with Severe Visual Impairments" (HUD–PDR–404).

(d) *Passing Space. See* § 1190.40(a), (b), and (c).

(e) *Vertical Clearance.* Overhangs cannot be detected by the blind; therefore, a vertical clearance of at least 6'–8" is required. *See* HUD, "Accessible Buildings for People with Severe Visual Impairments."

(f) *Slope.* See § 1190.70 Ramps and Curb Ramps.

(g) *Level Changes.* A number of issues arose concerning the question of vertical access requirements for changes in levels or grades: (1) Must vertical access to various levels in a building or facility be provided by interior means only? There appears to be no reason for disallowing exterior vertical access other than the problems caused by severe climates (*e.g.,* snow, sleet, ice) and by the inconvenience of increased travel times for handicapped users. (*See* § 1190.60(b) of the Regulatory Analysis.) It offers the advantages of being less costly and of providing an alternative to interior vertical access.

(2) Should vertical access between stories be provided by elevator only or are other means permissible? Research is currently underway by the Department of Transportation to determine the safety and usability of ramps and lifts to provide vertical access for level changes of up to one story. Although ramp access is considerably more difficult and time consuming than elevator travel, ramps do appear to be a promising alternative for fire egress requirements. For additional information, *see* § 1190.70 Ramps and Curb Ramps; § 1190.80 Stairs; § 1190.100 Elevators; and § 1190.110 Platform Lifts of the Regulatory Analysis.

(3) If a program is located at grade level, must other levels be accessible? To meet the requirements for program accessibility specified under Section 504 of the Rehabilitation Act, the Federal Government and recipients of Federal financial assistance have located those programs required to be accessible at grade level. This policy decision, however, is not permissible under the Architectural Barriers Act.

(h) *Egress.* Public comments in response to questions in the Notice of Intent and Board discussions focused on two fundamental assumptions: 1. Buildings and facilities that are accessible to handicapped persons should also provide safety facilities that are accessible and usable during an emergency.

2. The level of safety provided handicapped persons should be equivalent to that provided able-bodied persons.

To gain a better understanding of the handicapped person's needs during emergencies and the problems

experienced, the Board relied on the National Bureau of Standards (NBS) Report, NBSIR 80–1965, "Fire and Life Safety for the Handicapped," conference and preparatory workshops reports (February 1980). The NBS Panel on Egress for this study found that research results on fire safety for the handicapped were not readily available; however, the Panel emphasized that this lack of data should not impede the implementation of safety features known to be effective.

The NBS report concludes: 1. People in fire emergencies tend to use routes with which they are familiar.

2. Because the majority of time spent between the sounding of the alarm and escape is spent on evaluting the situation and deciding what to do, it is extremely important to provide effective, unambiguous fire alarms and a readily accessible means of egress.

(3) People with handicaps can evacuate, in some instances, up and down stairs.

Specific barriers identified included: (1) Fire doors and hardware: There is a need for fire doors and hardware with opening and closing characteristics that will enable people in a weakened condition or those with limited coordination to use doors easily and at the same time ensure that closing characteristics and door construction do not compromise the safety of the protected area.

(2) Openings: A minimum of 2'–8" should be provided at door openings.

(3) Dead end corridors: Dead end corridors should be identified and wide enough to allow a wheelchair user turning space.

(4) Floor surfaces: Tripping hazard and surface traction should be minimized.

It is reported that the Life Safety Code, NFPA No. 101–1976, will be revised to cover specific provisions for accessible means of egress for the handicapped including requirements for two areas of refuge located on floors other than those at grade level and that are contiguous with an elevator or stairway. Approval of the Code is expected this year.

A review of the state-of-the art materials and alternatives concerning emergency egress to the handicapped indicates that further research needs to be completed prior to the development of a definitive standard. Specific items identified for additional research include: (1) Criterion for fire safe elevators.

(2) Travel times necessary for handicapped persons to evacuate buildings or facilities or to get to areas of refuge.

(3) Identifying alternative methods of protection during fire emergencies.

(4) Criteria for retrofitting existing buildings.

Until such time as the Life Safety Code, NFPA 101–1976, is revised to include specific egress requirements that are accessible to the handicapped or until such time as additional research is completed, the Board proposes only that: (1) A means of egress be readily accessible from all accessible rooms and spaces;

(2) Egress requirements for the handicapped shall comply with applicable fire code provisions; and

(3) Fire and smoke partitions and/or areas of refuge complying with applicable fire code and safety provisions are permitted in multi-story buildings where at-grade egress for each floor is impossible.

(i) *Ground and Floor Surfaces.* The walking surface is critical to the safe passage of wheelchair users, persons with walking difficulties, and people with visual impairments. Tripping hazards are presented by uneven surfaces, small thresholds, and joints. Slippery surfaces and carpets present similarly hazardous situations. For example, the backing of the carpet, the carpet pad, or the pile can prevent a wheelchair user from traversing a carpeted surface. A textured loop carpet presents another problem; the wheelchair tends to "track" the cut of the carpet making a direct route difficult or impossible. Moreover, the uneven or rough surfaces can cause serious accidents by jolting the wheelchair and causing the person in the chair to be thrown to the ground. Jolting can also result in severe head pain and can aggravate pressure sores.

The majority of the provisions in this section incur no cost penalty and reflect state accessibility code requirements as well as construction industry capabilities. Grating specifications may increase costs slightly due to the closer bar spacing; however, this increase should not be significant in terms of overall cost.

§§ *1190.60 Parking and Passenger Loading Zones*

(a) *General.—Scope.* Parking facilities subject to the minimum guidelines include both interior and exterior parking lots, garages, spaces, and passenger loading zones for both the general public and employees. Street parking is subject to the guidelines only if it is designated as reserved for official use by the Federal Government or if it is the only parking provided. Parking facilities must be accessible for the wheelchair van as well as passenger automobiles.

Minimum Requirements. All parking provided for employees and visitors shall comply with §§ 1190.60.

Objective. To provide parking facilities that are usable by, accessible to, and safe for handicapped persons.

Unresolved or Controversial Issues. Should parking facilities complying with Section 6 be required at all buildings and facilities constructed, altered, or leased by the Federal Government?

Basis for Proposal. § 1190.60 *Parking and Passenger Loading Zones,* as presented in the NPRM, reflects the existing requirements of a number of state and Federal agencies. It is similar to the ANSI A117.1–1980 requirements except for cross slope and vertical clearance. The maximum cross slope for parking facilities in the NPRM is 1:48, a measurement which will accommodate current practices of the construction industry. ANSI provides for a cross slope of 1:50. The vertical clearance for specially adapted vans used by handicapped persons was also included in the ATBCB specifications. Based on the height specifications for high top vans currently in use, the figure 9'–7" was chosen.

(b) *Location.* Because many handicapped persons have limited stamina, move very slowly, or find it too demanding to traverse even a few hundred feet, it is necessary to locate parking spaces as close to an accessible entrance of a building or facility as possible. Controlled experiments with people having walking limitations determined that slow moving people can be expected to travel at a rate of 1 foot/second and that 100 feet is the maximum distance of travel between rest stops for many people with limited stamina. A 300 foot distance, for example, could require a travel time of 5 minutes excluding any time required for resting. For this reason, some standards set a maximum allowable travel distance to an accessible entrance (*e.g.,* U.S. Department of the Army: 100 feet; USPS: 200 feet).

(c) *Accessible Parking Spaces.* Individuals using walking aids and wheelchairs require a greater than normal access aisle in order to fully open the car door and to manipulate ancillary devices such as wheelchairs, crutches and walkers. Excessively sloped spaces and aisles can make it very difficult to open and close a door or to transfer to a wheelchair. However, if the surface is perfectly level, water may not drain and may result in an additional hazard. Furthermore, it is important to provide a clear and accessible aisle in front of the vehicle to

V 45 AG 18 80 UMI

allow a wheelchair user to pass safely; it is difficult for a driver to see wheelchair users travelling behind parked vehicles.

(d) *Passenger Loading Zones.* This paragraph is based on other codes and agency requirements. It is similar to ANSI A117.1–1980.

(e) *Vertical Clearance.* Specially adapted vans for handicapped persons are often too high for parking garages and entrances to facilities. For example, the approximate height of an unmodified van is 6'–9"; if it is modified to accommodate a person seated in a wheelchair, the height is approximately 8'–2".

(f) *Signage. See* § 1190.200 Signage of the Regulatory Analysis.

§ 1190.70 Ramps and Curb Ramps

(a) *General.—Scope.* Ramps and curb ramps include all walks and corridors with slopes greater than 1:20.

Minimum Requirements. Provide a ramp or curb ramp whenever an accessible route crosses a level change greater than ½ inch (13mm) and at all legally established crosswalks.

Objective. To provide safe, continuous vertical access at changes in level or grade on an accessible route for handicapped persons.

Unresolved or Controversial Issues. None.

Basis for Proposal. § 1190.70 Ramps and Curb Ramps, as presented in the NPRM, reflects much of the research conducted by Dr. John Templer of the Georgia Institute of Technology while under contract with the Department of Transportation and that of Dr. Edward Steinfeld of Syracuse University while under contract with the Department of Housing and Urban Development. Many of the requirements specified in § 1190.70 are similar to existing state codes and Federal policies and those forwarded by ANSI. Board discussions and public comments were also considered in the recommendation. The proposed NPRM does not differ significantly from ANSI A–117.1–1980.

(b) *Slopes and Rise.* In order for a ramp or curb ramp to be usable by those confined to wheelchairs and by semi-ambulant and ambulant people, the slope and length of a ramp must be controlled. Research results confirm that wheelchair users, including quadriplegics, are usually able to negotiate a ramp with a slope of 1:20 and a length of less than 40 feet. The HUD research study demonstrated, however, that a number of the wheelchair users tested were unable to manage either the slope or the length of ramps steeper than 1:20 and longer than 40 feet. In fact, almost half of the wheelchair users tested were unable to negotiate a 40 foot ramp sloped at 1:20. Test results also indicated that people with poor stamina or walking difficulties may also have problems with longer or steeper ramps. In addition to the stamina difficulties involved with people using steeper ramps, wheelchair users tend to tip over backwards while ascending steep slopes (especially those greater than 1:10) or to lose control during descent.

The angle between the ramp and the gutter or adjoining surface can also create a considerable problem for a wheelchair user because it can cause the chair to come to an abrupt halt throwing the person out of the wheelchair; therefore, these transitions must be gradual.

(c) *Width. See* § 1190.40 Human Data of the Regulatory Analysis.

(d) *Cross Slope.* The cross slope of the ramp must allow all four wheels of the wheelchair to contact the ramp surface; otherwise a wheelchair may go out of control. Flared sides of curb ramps can also make it difficult for individuals with walking difficulties to negotiate a ramp.

(e) *Curb Ramps.* Some individuals with limited mobility and most wheelchair users cannot negotiate the 6 inch curb located at pedestrian crossings; therefore a curb ramp is necessary. The preferred and recommended locations for curb ramps are the center of the crosswalk of each street corner and at other legal crosswalks. If they are located elsewhere, they may cause conflict and could direct ramp users into moving traffic. A 4'–0" width is necessary to accommodate the path of the wheelchair user in a power-driven chair.

So that blind persons can sense the demarcation between sidewalk and street surfaces, a distinct change in texture between the surface of the sidewalk and the curb ramp is necessary. Continuous curb ramps around corners disorient blind persons and should be avoided.

(f) *Ramps.* Handrails are necessary on all ramps (with the exception of curb ramps) because they are used not only for support but also as a means to propel wheelchairs. However, concern was expressed that the edges of free-standing handrails should be turned down so as not to present a hazard.

(g) *Exterior Conditions. See* § 1190.50 Accessible Route.

§ 1190.80 Stairs

(a) *General.—Scope.* This section includes stairs that connect levels and grades that are not connected by an elevator.

Minimum Number. All stairs that connect levels and grades not connected by an elevator shall comply with this section.

Objective. To design, construct, and alter stairs so that they provide a safe and convenient means of vertical access for people with limited stamina, for individuals with limited leg movements such as those with braces or crutches, and for people with visual impairments and for the blind.

Unresolved or Controversial Issues. Tactile Warnings at the Top of Stairs. One of the major findings of the HUD study "Accessible Buildings for People with Severe Visual Impairments" was that stairs located in the path of travel, especially those leading in a downward direction, present a hazard to those who are blind or have visual impairments. The study strongly recommends that a tactile warning signal be placed at the top of the stairs if they are located directly in the path of travel. Representatives from the State of Illinois, however, reported problems with some warning strips coming loose and becoming tripping hazards. The Board concluded that additional information was needed in this area.

Basis for Proposal. NBS Building Science Series 120, *Guidelines for Stair Safety,* May 1979, summarizes information and research on stair use and safety. § 1190.80 Stairs reflects the conclusions in this report and contains requirements similar to those contained in the more recently developed state and international codes. § 1190.80 Stairs differs from ANSI A–117.1–1980 in that the NPRM prohibits the use of open risers.

(b) *Risers.* It was recognized that many semi-ambulatory people find ramps difficult or impossible to use and, therefore, prefer that stairs be provided in lieu of ramps. It was also recognized that fire stairs do not present many of the problems inherent in stair design because the path of travel on fire stairs is generally in a downward direction. For example, nosings will not cause tripping in the downward direction.

In 1974, Dr. Templer used a laboratory stair treadmill to record and analyze gait rhythms generated by a range of stair conditions. He found that people made the fewest missteps when the risers were between 6.3 inches to 8.9 inches apart and when treads were 7.7 inches to 14.2 inches. Stairs with longer treads were not studied. The NBS study "Guidelines for Stair Safety" further reported that the desirable riser height for interior steps is 7 inches; however, 6 inches was preferable if the stairs were to be used mainly by older or handicapped persons. It was further recommended that the height of exterior steps should be limited to 5 or 6 inches. E. Grandjean, in his 1973 study noted that less energy is expended by people using a stair slope of between 25° and 30°.

The NBS study points out that open risers can divert a user's attention to activity, interesting scenes, or objects behind the stairs. In addition, light patterns resulting from the open risers may also distract a user. The study concludes that "although there appears to be only anecdotal data which relate accident rates to open risers, extrapolation from the data on the rate of visual distraction in stair use suggest that open risers could contribute to stair accidents."

(c) *Nosings.* NBS reports that a common type of accident on stairs involves tripping on the top of the riser during ascent and then falling forward. According to the study, the typical reflex response to such a fall is to thrust the hand forward to brace oneself by grabbing the nearest tread or nosing. Because this maneuver is not always successful, it is extremely important that the edges of each nosing distribute the impact as widely as possible to minimize injury. Extensive observations by Gowings (1961) and Fruin (1971) of pedestrian behavior lead to two conclusions: (1) the nosing should be an integral part of the tread so that it does not separate after prolonged use; and (2) the curvature of the edge should not be too great so that the user's foot will more likely bear on a level surface rather than a sloping surface.

(d) *Handrails.* There was some question as to whether handrails are necessary on both sides of a stair if stairs are wider than 3'–8" because these widths prohibit simultaneous use of both railings. It was noted that some persons may be able to use only one hand or the other, thus railings should be provided on both sides. *See also* § 1190.90 Handrails.

(e) *Stair and Landing Surfaces.* Ambulent and semi-ambulant people who have difficulty maintaining balance, lack coordination, or have restricted gaits are particularly susceptible to slipping and tripping hazards. Slip resistant, stable, and regular surfaces are especially important on stairs. *See also* § 1190.50(i) Ground and Floor Surfaces.

§ 1190.90 Handrails

(a) *General.—Scope.* This section includes handrails provided at stairs and ramps.

Minimum Number. Handrails shall be provided on each side of each interior and exterior ramp and stairway.

Objective. To facilitate independent and safe movement of handicapped persons on stairs and ramps by providing additional stability for the user, support for elderly and physically handicapped persons, a pivot point at corners and doglegs, and a grab bar for support in case of an accident.

Unresolved or Controversial Issues. Should a perimeter formula be used to determine the maximum handrail width or should a width measurement be used?

Basis for Proposal. The NBS Building Science Series 120, Guidelines for Stair Safety, May 1979, provided much of the background information and research used by the ATBCB in developing § 1190.90 *Handrails.* The NPRM differs from ANSI A117.1–1980 on the maximum width of handrails permitted. (For an explanation of this difference, *see* § 1190.90(b)(1) of this section.)

(b) *Size and Spacing. See unresolved or controversial issues* above.

(1) *Cross Section.* The NBS study, *Guidelines for Stair Safety,* reviews a number of research studies that recommend a handrail diameter of 1¾ inches to 2 inches as the most appropriate for easy gripping by an adult population. ANSI, however, chose to use a 1¼ inch to 1½ inch diameter for the gripping surface of the handrail. It was felt by the ANSI Committee that a 2 inch wide handrail did not allow as good a grip as the 1½ inch width for many people. As a result of the specification contained in the ANSI A117.1–1980 standard, a number of letters were submitted by the EO6.12 Subcommittee of the American society of Testing Materials (ASTM) and Dr. George Stein of the Virginia Polytechnic Institute and State University, which indicated that the ANSI sizes were in conflict with industry standards. Based on the NBS research and the desire to coordinate with current industry standards on handrails, the ATBCB decided to propose a handrail standard based on a maximum perimeter of 6 inches which would allow a 2 inch wide handrail.

(2) *Mounting of Handrails.* NBS reports that J. H. Sheldon suggested that the handrail should be sufficiently away from the wall to permit the "grasp reflex" in case of emergency. Teledyne-Brown Engineering in "A Design Guide for Home Safety" recommends that this distance be a minimum of 2½ inches.

(3) *Continuous Handrails.* NBS found that interruptions in the continuity of handrails could be linked to stairway accidents. Although it was also noted that users may exercise greater caution when a handrail is absent, the likelihood of a severe accident increases.

(c) *Handrail Projections.* It is recommended by the NBS study to extend or replace the end portion of the railing so that it terminates in a position on or near the flight but outside of the user's path of travel. The free swinging hand, the wrist, and the pelvic area are the most vulnerable areas to hit on handrail projections for adults whereas the shoulders and face are the most vulnerable for children. ATBCB therefore proposes to require that the ends of freestanding handrails be either rounded or returned smoothly to the floor or the post.

§ 1190.100 Elevators

(a) *General.—Scope.* This section includes passenger elevators serving multi-story buildings and facilities.

Minimum Number. At least one passenger elevator complying with § 1190.100 *Elevators* shall be provided in all new multi-level buildings and facilities and in all additions to existing buildings and facilities having more than one story unless another means of vertical access complying with § 1190.31 New Construction is provided. If an existing building has more than one story, at least one passenger elevator meeting the requirements of the guidelines is required under conditions set forth in § 1190.33 Alterations.

Objective. To insure that people with walking limitations, lack of stamina, difficulties with balance and coordination, reaching difficulties, or a loss of hearing and sight, or who use wheelchairs, can use elevators conveniently and safely and have access to all levels of a multi-story building or facility.

Unresolved or Controversial Issues. See § 1190.31 New Construction, Additional Information Requested and § 11909.33 Alterations, Additional Information Requested.

Basis for Proposal. § 1190.100 Elevators, as presented in the NPRM, reflects research conducted by Dr. Edward Steinfeld of Syracuse University while under contract with the Department of Housing and Urban Development; the National Elevator Industry, Inc. (NEII), "Suggested Minimum Passenger Elevator Requirements for the Handicapped," July (R1977); ANSI A117.1–1978, and other existing standards and codes. The ANSI A117.1–1980 reflects, to a large degree, the NEII publication, and, in addition, duplicates some of the requirements in ANSI A17.1–1978, "Safety Code for Elevators."

(b) *Operation and Leveling.* The HUD study identifies problems associated with leveling (*i.e.,* and elevator floor which is not flush with the building

floor), as a severe problem for people having visual impairments or blind, having poor balance and lacking coordination, having difficulty with moving their heads, or for those using walking aids and wheelchairs. The NPRM is similar to the requirements of NEII and ANSI A117.1–1980.

(c) *Elevator Door Operation.* Dr. Steinfeld measured the rates of travel for different people with disabilities and found that nearly two thirds of those who tested travel at 1.5 feet per second. Over one third of those who used wheelchairs or walking aids traveled at rates of 1 foot per second or less. In order for a handicapped person to travel from the lobby call button to the car answering the hall call, it is necessary for the doors to remain open for several seconds. NEII recommends the following minimum acceptable time from notification that a car is answering a call until the doors of that car start to close:

0 to 5' : 4 seconds.
5 to 10' : 7 seconds.
10 to 15' : 10 seconds.
15 to 20' : 13 seconds.

In addition, the HUD research identified elevators lacking automatic features for reopening the elevator doors without contacting the individual as a severe problem for many handicapped individuals, especially for those who are blind. The NEII minimum requirements suggest that wheelchair and walker manufacturers be required to provide some solid material at 5" and at 2'–5" to ensure door reversal before contact of a door closing in the path of a wheelchair or walker.

(d) *Elevators Cars.* As a result of the research tests conducted under HUD contract, it was determined that wheelchair users are able to use an elevator car with dimensions of 4'–3" by 5'–8" with a clear door opening of 2'–8". In order to provide a clear space within an accessible elevator to allow wheelchair users to make a 180 degree turn, a space 4'–6" wide by 6'–0" deep accommodates most subjects. An ambulance stretcher is 2'–0" by 6'–0". These dimensions are similar to those recommended by NEII.

It was also found as a result of the research that a number of those tested could not reach a control panel higher than 4'–4". The report recommends that the highest control button be placed at 4'–0"; however, it is noted that it may not be possible to locate the highest button at this point in cases where such placement of long panels would put the lowest button below the comfortable reach of ambulant users. In addition, it is recommended in the study that control panels be mounted in the front wall adjacent to the entry. The HUD report suggests that people who have severe reaching limitations may have to use aids such as pointers, extenders, and the like to activitate call and floor buttons if those controls are not within their reach.

Dr. Steinfeld found in his "problem identification matrix" that those persons with severe visual impairments or who are blind found it extremely difficult or impossible to use elevators that did not have controls and features similar to other elevators or that did not identify the direction of the elevator by a signal.

(e) *Door Jamb Markings.* This requirement is similar to that contained in the NEII minimum requirements except that the ATBCB proposes that the characters designating the floor be 2" high as (§ 1190.200(c)(2)) rather than the 2⅛" required by the NEII.

(f) *Lobby Call Buttons.* In addition to the specifications contained in the NEII requirements, recessed buttons are disallowed in the ATBCB proposal and objects mounted beneath the call button may not protrude more than 4" (100 mm). The requirements were added because objects that extended more than 4" prevented access to the buttons for wheelchair users. Recessed buttons were disallowed because persons with upper limb amputations cannot use them.

(g) *Hall Lanterns.* The requirements of this paragraph are similar to those of the NEII.

(h) *Car Position Indicator and Signal.* The requirements of this paragraph are similar to those of the NEII.

(i) *Illumination Levels.* The requirements of this paragraph are similar to those of NEII and ANSI A17.1.

(j) *Intercommunication System:* The requirements of this paragraph are similar to NEII except that the ATBCB proposes to identify the intercommunication system with raised lettering and symbols for usage by the visually impaired and blind; to provide a momentary contact button to enable hearing impaired individuals to summon assistance; and to require door hardware that is accessible for people with strength and coordination limitation.

§ 1190.110 Platform Lifts

(a) *General.*

Scope. Platform lifts, including but not limited to standing lifts, attendant/wheelchair lifts, and wheelchair lifts, which meet the requirements of the minimum guidelines and are an acceptable means of vertical access.

Minimum Number. Provide as required by Subpart C.

Objective. To provide people who have walking limitations, lack stamina, or who use wheelchairs a method of accessibility at changes in level or grade.

Unresolved or Controversial Issues. To date, there are no accepted standards for platform lifts, wheelchair lifts or other mechanical lifting devices. However, the Canadian Standards Association and ANSI A 17 Committee plan to issue separate consensus standards in the near future. The CSA Steering Committee of Lifting, Hoisting, and Related Devices (CSA B–44) plans to publish a safety code for elevating devices for the handicapped in the near future. The scope for the code includes the minimum safety requirements that relate to design, construction, operation, inspection and testing of devices which can be used by the handicapped for vertical access. Platform lifts, stair-chair lifts, and stair platform lifts will be covered by the code.

Basis for Proposal. Significant cost reductions can be achieved, especially during alteration work if a platform lift is allowed. The ATBCB therefore is proposing to permit its use but stresses the need for adequate safety precautions.

(b) *Requirements.* Lifts provide an alternative to ramps and elevators and offer the advantages of reduced space requirements and significant cost reductions. Because these devices are relatively new and not widely used, care should be taken in selecting and installing lifts to insure that the device is safe for users, operators, and those in the vicinity during the time the lift is in use.

§ 1190.120 Entrances

(a) *General.*

Scope. This section includes all entrances to a building or facility.

Minimum Number. Each entrance to a new building or facility shall comply with § 1190.120 Entrances; each entrance in an addition to an existing building shall comply with § 1190.120 Entrances; each entrance that is altered in an existing building shall comply with § 1190.120 Entrances; if no entrances are provided in the addition, then at least one entrance in the existing building or facility shall comply with § 1190.120 Entrances; if additional entrances are required to be accessible by § 1190.33 alterations, they shall comply with § 1190.120 Entrances.

Objective. To provide entrances to a building or facility that are convenient and usable by handicapped persons.

Unresolved or Controversial Issues. See § 1190.31 New Construction.

Basis For Proposal. Dr. Steinfeld identified a number of severe problems concerning entrances: Narrow door openings, high thresholds, stairs, lack of maneuvering space, severe cross slope, and revolving doors or turnstiles. Public comments and Board discussions verified the necessity to provide accessible entrances whenever possible. Although most State codes and Federal requirements require only one accessible entrance, the Board decided for reasons of safety and convenience, that all entrances should comply with this section.

(b) *Service Entrances.* The only accessible entrance cannot be a service entrance because it does not provide dignified and convenient access.

(c) *Access to Elevators. See* § 1190.50 Walks, Floors, and Accessible Routes.

§ 1190.130 Doors

(a) *General.*

Scope. This section includes doors, doorways, gates, thresholds, and hardware.

Minimum Number. Each door shall comply with § 1190.130.

Objective. To provide doors at entrances and exits and within the building or facility that are accessible and usable by handicapped individuals.

Unresolved or Controversial Issues

(1) Doors to hospital patient bedrooms. Should front approach entry doors to acute care hospital patient bedrooms be exempt from the latch side clearance width of 2'–0" or 1'–6" if the door is 3'–8" wide?

(2) Fire Doors. The opening force requirements are particularly important for fire doors. The higher opening forces for fire doors provide the safety requirements necessary to insure adequate pressure to engage latches when necessary (*i.e.,* to prevent fire doors from swinging open under the wind-load factors found in a fire situation). The higher opening forces that provide safety on the one hand also serve as a dangerous barrier for the handicapped. Research conducted by Dr. Steinfeld indicates that a number of handicapped people cannot exert 5 lbf (pound force) to open a door and a majority cannot exert 8 lbf either with one hand or the other to open a door.

Questions have been raised by door and hardware manufacturers as to the benefits and costs of a requirement that would allow only the 5 lbf or 8.5 lbf opening force. Closer manufacturers claim that they are unable to control all conditions affecting the opening force of a door (*e.g.,* orientation, wind speed, inside air pressure) and that the lower opening force requirements would not be effective in closing doors under difficult conditions.

The National Bureau of Standards plans to study this issue and the additional research should supply data on the minimum forces necessary to provide safety performance in the case of a fire and also permit the door to be opened by handicapped persons. Until research on this topic is completed, the Board proposes deleting the door pressure requirements for fire doors from the minimum guidelines. *See* § 1190.31 New Construction, Additional Information.

3. *See also* § 1190.31 New Construction, *Additional Information Requested,* question 4.

Basis for Proposal

The NPRM is based on Dr. Steinfeld's research, published in the HUD series: "Accessible Buildings for People with Walking and Reaching Limitation," "Accessibility for People with Severe Visual Impairments," and "Access to the Built Environment: A Review of Literature." A number of State access codes and building codes were also reviewed by the Board along with research completed by Dr. John Templer.

(b) *Clear Width. See* § 1190.40 Human Data and § 1190.50 Walks, Floors, and Accessible Routes.

(c) *Maneuvering Space.* Dr. Steinfeld reported in the HUD study that the clearances in front and at the latch sides of doors should be based on the approach pattern and direction of the door swing. He recommends in cases where doors swing out into the direction of travel, toward the user, wider corridors are needed and larger spaces at the latch side should be provided. Tests showed that a 2'–0" clearance at the latch side of the door accommodated about 83 percent of those sampled. A 5'–0" clearance in front of the door provided accessibility for 92 percent of the subjects. If the space at the latch side of the door is reduced to 1'–6", only 60 percent of those tested could use the doors. The ANSI A117.1–1980 also uses a 2'–0" clearance at the latch side of the door; however, several State codes use a 1'–6" dimension. *See,* for example, Illinois, New Jersey, Utah, Massachusetts, and Washington. S. O. Brattgard at the University of Goteborg, Sweden, and F. Walter at the Disabled Living Foundation in London, England, have also studied the maneuvering requirements for wheelchair users through doorways. Dr. Steinfeld compared the research recommendations of these studies with his own and found that more than half of the HUD sample population could not use the latch side clearances recommended by Walter. *See* also § 1190.31 New Construction, *Additional Information Requested.*

In cases where doors swing away from the user, narrower corridors can be used. The HUD research reported that if a door is approached from the hinge side or latch side, a corridor width of 3'–6" is required. Space at the latch side is not required. These spaces are based on the requirements for an "L"-turn. *See* § 1190.40 Human Data. If a direct forward approach is used, 5'–0" is required in front of the door with a 1'–0" clearance at the latch side.

(d) *Doors in a Series.* Vestibules between two doors are frequently too small for handicapped person to use, particularly those in wheelchairs. Dr. Templer recommends in the Department of Transportation study, "Development of Priority Accessible Networks," that 4'–0" be used to accommodate the space requirements for a wheelchair. ANSI A117.1–1980 provides similar requirements.

(e) *Thresholds.* The HUD researched recommends that thresholds not be used at interior doorways. At exterior locations, the report states they should not exceed ½ inch in height and that the edges should be beveled. Dr. Templer reports similar findings in his research for the DoT. In the case of exterior sliding doors, a ¾ inch maximum threshold is allowed in order to accommodate the door hardware. ANSI A117.1–1980 provides similar requirements.

(f) *Hardware.* Dr. Templer reports that some elderly and handicapped people find it difficult or impossible to use round doorknobs. The knobs are difficult to grasp and twist especially for those who are upper-limb amputees, quadriplegics or arthritics. ANSI A117.1–1980 provides similar requirements.

(g) *Doors to Hazardous Areas.* The HUD report, "Accessible Buildings for People with Severe Visual Impairments," strongly recommends that standardized tactile warning signals be placed on door openers or doors to hazardous areas. Such hardware should never be placed on emergency exits.

(h) *Closure and Opening Forces. See* § 1190.130(a) *Unresolved or Controversial Issues,* 2, Fire Doors, of this section, and § 1190.31 New Construction, *Additional Information Requested.*

Maximum pushing or pulling opening forces for doors provided in this paragraph are based on tests conducted by Dr. Steinfeld to determine the abilities of people with limitations of strength. Research results demonstrated that fewer than 30% of the wheelchair users tested could exert a maximum

V 45 AG 18 80 UMI

force of up to 10 lbf in all directions. As a result, the report recommends that operating forces for opening doors and windows be as low as technology allows, preferably below 5 lbf.

(i) *Automatic Doors.* The "open" times provided in this section are based on the rates of travel for handicapped persons provided in the HUD research. *See also* § 1190.100(c) *Elevator Door Operation* of the draft analysis.

§ 1190.140 Windows

(a) *General.*

Scope. Windows intended for occupant operation are covered by this section.

Minimum Number. At least one window intended for occupant operation in each accessible space shall comply with this section.

Objective. To provide windows that are usable by handicapped individuals.

Unresolved or Controversial Issues. None.

Basis for Proposal. The pressure requirements are based on the research completed by Dr. Edward Steinfeld, while under contract to HUD. The technical requirements are similar to the ANSI A117.1–1980 edition. State accessibility codes have not yet addressed the subject of accessible windows.

(b) *Hardware. See* § 1190.130(f) *Hardware* and (h) *Closure and Operating Forces* of the Regulatory Analysis.

§ 1190.150 Toilet and Bathing Facilities

(a) *General.*

Scope. Toilet and bathing facilities include, but are not limited to, water closets, urinals, lavatories and sinks, bathtubs and showers, mirrors, grab bars, stalls, and other plumbing fixtures and accessories.

Minimum number. Each toilet and bathing facility provided in newly constructed buildings and facilities shall comply with § 1190.150 if an addition is made to an existing building and it does not provide toilet and bathing facilities in the addition, but they are provided in the existing building, then at least one of those facilities serving the addition shall comply with § 1190.150; and if toilet and bathing facilities are altered in an existing building, then each altered facility shall comply with § 1190.150; or if 50% or more of the value or if 50% or more of the gross floor space of a building or facility is altered then each toilet and bathing facility in the existing building or facility shall comply with § 1190.150.

Exception: Unisex facilities may be provided under the conditions set forth in § 1190.150(a) of the minimum guidelines.

Objective. To provide personal hygiene facilities that have the same privacy and conditions available for the handicapped user as for the able-bodied user and that are located so that the facilities are readily accessible, convenient and usable.

Unresolved or Controversial Issues. None.

Basis for Proposal. § 1190.150 Toilet and Bathing Facilities was based on research by Dr. Steinfeld, state codes, OSHA requirements, and research by Alexander Kira published in his book, *The Bathroom.*

(b) *Toilet Fixtures and Accessories*

(1) *General. See* § 1190.40 Human Data and § 1190.50 Walks, Floors and Accessible Space.

(2) *Water Closets.* People who have difficulty bending or kneeling or who rely on walking aids identify low water closets as a severe problem. On the other hand, water closets that are too high can prevent a wheelchair user from making a transfer. The majority of wheelchair users (75 percent) and walking-aid users (72 percent) participating in the HUD research found that toilet heights (measured to the top of the seat) were most comfortable at 1′–5″ to 1′–7″. These heights reflect the requirements of ANSI A117.1–1980 and most state codes.

Flushing devices are often mounted too low to operate for people who have difficulty bending, or the devices require too much effort to operate. Floor operated flushing devices are extremely difficult for wheelchair users to use. The HUD study recommends that flush controls be located on the wide side of the stall. ANSI A117.1–1980 has a similar requirement.

Board discussions disclosed that handicapped people who have problems with balance and dexterity have a great deal of difficulty with toilet seats that are sprung to return to the upright position and with toilet paper dispensers that do not permit continuous paper flow. The HUD research report recommends that toilet paper dispensers be mounted on the walk closest to the water closet no more than 3′–0″ from the back wall, and between 2′–6″ and 3′–0″ high.

(3) *Toilet Stalls.* Toilet stall dimensions listed in the various codes vary from widths of 3′–0″ to 5′–6″ and include designs for front transfer, side transfer, and diagonal front transfer.

Front Transfer. Dimensions for a front transfer stall are based on ANSI A117.1–1961 (R1971) which required the 3′–0″ stall. The Michigan and BOCA codes require a 3′–6″ for the front transfer. Available information indicates that there is no advantage to the 6″ of added space, and it may, in fact, be detrimental. Reach restrictions may make the 3′–0″ more desirable and safer. In addition, the 3′–6″ represents additional costs. Approximately 40 percent to 50 percent of those who can transfer unassisted, can use a front-transfer stall. Because of its limited use, this width should be restricted to alteration projects. ANSI A117.1–1980 allows the 3′–0″ stall as an alternative.

Side Transfer. The 5′–0″ stall is the standard design for a "side transfer" stall. This stall width can be used by anyone who is able to transfer. ANSI A117.1–1980 uses this dimension, Washington State uses a 4′–6″ width for the side-transfer, and the U.S. Department of the Army uses 5′–6″.

Diagonal Front Transfer. The 4′–0″ stall was developed during the research that was completed under HUD contract. At the present time, it is the Board's understanding that the 4′–0″ width stall is not specified in any code; it is, however, the recommended minimum width provided by the HUD research. All wheelchair users able to complete toilet transfers that participated in the HUD study were able to use the 4′–0″ stall.

(4) *Urinals.* The paragraph, as drafted, reflects the majority of state-developed codes. ANSI A117.1 has similar provisions. The mounting height reflects the requirements of § 1190.40 Human Data in order for it to be convenient for a wheelchair user. The exception clarifying the use of urinal shields was provided in the A&TBCB proposal to allow urinals to be placed on standard mounting centerlines.

(5) *Lavatories and Sinks.* Because toilet room space is often confined, it is difficult to maneuver a wheelchair if lavatories and sinks are mounted so that they protrude into the path of travel. Mounting heights reflect requirements for knee space clearances for wheelchair users. Because wheelchair dimensions vary, it is difficult to specify a lower limit that will accommodate the chair height of all persons. As a result of a survey taken of those wheelchair users participating in the HUD research, it was found that 80 percent of the subjects tested preferred lavatory heights of 2′–8″. *See* also Regulatory Analysis § 11909.40 Human Data; § 1190.50 Walks, Floors, and Accessible Route; and § 1190.170 Controls and Operating Mechanisms. It is also necessary to place drains, traps, and water supply lines as far back and as high as possible so that they do not present an obstruction. Because many wheelchair users have no sensation in their legs, they can receive serious burns from hot water supply lines without being aware of it. It therefore is necessary to insulate the pipes.

(6) *Mirrors.* This section reflects the requirements of § 1190.40 Human Data and most state accessibility codes. It is also similar to ANSI A117.1–1980.

(7) *Controls, Dispensers, Receptacles, or Other Equipment. See* § 1190.170 Controls and Operating Mechanisms and § 1190.40 Human Data.

(c) *Bathing Facilities.*

(1) *Bathtubs and Showers.* (i) *Bathtubs.* According to Alexander Kira, the author of the *Bathroom,* the tub bath is one of the most difficult and hazardous activities for the elderly and the handicapped. He recommends that bathtubs not be fitted with the conventional shower door assemblies because it makes the transfer from the wheelchair to the tub extremely difficult. He also examines the access problems and finds that the most basic issue is how to minimize movements. He finds that it is desirable to arrange the tub so that only one direct horizontal transfer is necessary. The HUD research recommends the use of horizontal grab bars on the three tub walls, an unobstructed floor space of 2′–6″ for parallel access and 4′–0″ for perpendicular access. Controls are recommended to be placed at the foot of the tub.

(ii) *Showers.* Alexander Kira believes that the shower provides a simpler, easier, and safer method than the tub for body cleaning. He recommends a shower stall 3′–0″ by 5′–0″ that has one of the long sides completely open and provides a seat 1′–6″ high by 1′–3″ deep. To provide easy and safe access, he recommends that the entrance curb be eliminated and drainage accommodated by a recessed entrance drain or by recessing the entire floor of the enclosure by providing a slanted floor flush with the room floor. Dr. Steinfeld found that a 2′–10″ wide entry space was sufficient for all users, that a curb in the shower was a definite obstacle, and that grab bars were needed. If an "L" turn is required, the clear space required is 5′–0″ wide by 3′–0″ deep.

(d) *Grab Bars.* The requirements of this section are based on OSHA handrail standards, state codes, and uniformity. Although a 250 lb. figure is used in the guideline, most manufacturers guarantee their products to support 1000 lbs. Research by Dr. Steinfeld and Alexander Kira demonstrated that grab bars are necessary for pulling oneself into position and for sitting and standing up while using toilet and bathing facilities.

§ 1190.160 Drinking Fountains and Water Coolers

(a) *General.—Scope.* This section includes drinking fountains and water coolers.

Minimum Number. All drinking fountains and water coolers provided shall comply with this section.

Objective. To provide accessible, usuable water fountains for handicapped people so that they are able to obtain their required daily fluid intake.

Unresolved or Controversial Issues. None.

Basis for Proposal. Because people in wheelchairs are more likely to have bladder and kidney stones, urinary tract infections, and other problems associated with the kidneys, it is extremely important for wheelchair users to take large quantities of fluid throughout the day to dilute their urine. It is imperative that drinking fountains and water coolers be available. The requirements of this section are based upon § 1190.40 Human Data; § 1190.50 Walks, Floors, and Accessible Route; § 1190.150 Toilet and Bathing Facilities; and § 1190.170 Controls and Operating Mechanisms.

(b) *Clearances.* This section is based on paragraph 5.3: *Protruding Objects.*

(c) *Spouts.* The Board understands that the measurement provided are the most convenient for wheelchair users.

(d) *Controls.* See § 1190.170 Controls and Operating Devices.

§ 1190.170 Controls and Operating Mechanisms

(a) *General.—Scope.* This section includes controls and operating mechanisms such as thermostats, alarm pull stations, window operating devices, light switches, electrical outlets, and the like.

Minimum Number. All controls and operating mechanisms provided shall comply with § 1190.170.

Objective. To provide controls and operating mechanisms that are easily usable and safe for handicappped people.

Unresolved or Controversial Issues. None.

Basis For Proposal. This section is based on § 1190.40 Human Data and § 1190.130(h) *Closers and Opening Forces.* ANSI A117.1–1980 provides similar requirements.

(b) *Location Requirements. See* § 1190.40 Human Data.

(c) *Force. See* paragraph 1190.130(h) *Closers and Operating Forces.* The Illinois standard requires that the force needed to activate controls not exceed 3 lbf. ANSI A117.1–1980 requires 5 lbf.

(d) *Specialized Equipment.* This section permits the installation of controls that require a special location to function properly. It does not permit the use of an inaccessible location because equipment controls require fine manipulation which may be difficult for handicapped persons to use.

§ 1190.180 Alarms

(a) *General.—Scope.* Alarms include audible, visual and sensory emergency signalling systems and devices.

Minimum Number. All alarms provided shall comply with this section.

Objective. To provide prompt warning of fire and other emergencies.

Unresolved or controversial Issues. None.

Basis for proposal. Public comments, Board discussions, current standards, and research by the NBS Panel on Alarm Systems regarding Fire Safety for the Handicapped, by Wheelock Signal, Inc., and by J. K. Penry, M.D., were used in the development of this section.

(b) *Audible Alarms.* Audible alarms must have an intensity and frequency that can attract the attention of individuals who have a partial hearing loss.

(c) *Visual and other Sensory Alarms.* Public comments on visual alarm systems were mixed. The National Association of the Deaf, as well as several state and local organizations and consumers felt that flashing exit signs were an acceptable alternative for warning the hearing imparied of emergencies.

Flashing exit signs, however, were not considered appropriate by the Washington Area Group for the Hard of Hearing because this alternative assumes that exit signs are always visible. Access Design Consultants noted that flashing exit signs will alert only those people in public areas and that these flashing signs are apt to go unnoticed. The Epilephy Foundation stated that flashing exit signs, as well as strobe lights, would have an effect on significant numbers of persons with epilepsy whose seizures are triggered by flashing lights. The detrimental effect of flash rates on epileptics was also confirmed by research performed by Wheelock Signals. Inc. The firm reports:

> Of the total U.S. population, approximately 1%, or 2 million persons, suffer from epilepsy. Approximately 4% of the of the 1%, or 80,000 people, have a form called "Photosensitive" epilepsy in which seizures are triggered by flashing lights.
>
> To date, the findings indicate that the 16 flashes per second range will most likely trigger a seizure in "photosensitive" epileptics. The probability of a seizure reduces as the flash rate decreases. All

available research places the lower limit around 3 to 4 flashes per second. In very rare cases, a seizure may be triggered at a slower flash rate (below 3) but that patient will be extremely disabled and require very special care.

Dr. J. K. Penry, M.D., Chief of the Epilepsy Branch of Neurological Disorders Program, National Institute of Health, confirms that "the peak range of photosensitivity among patients suffering from epilepsy is between 4 and 16 flashes per second." He recommends that flashes or stimuli be paired and have 100 milliseconds between flashes, or in other words, they would be paired flash at 60 times per minute (Electroancephalogr Cl in Neurophysical 39:479489, 1975). It is the opinion of both Dr. Penry and of Wheelock Signals that a flash rate of 1 flash per second is high enough to command attention but below the limit where photosensitive epileptic seizure will result. Gallaudet College, for example, uses high intensity lights which flash once per second for four minutes.

Prior to permitting, or a regular basis, other types of sensory alarms, such as vibrators and variable intensity fans, the Board wishes to have additional research in order to better evaluate their effectiveness.

(d) *Pull Stations. See* § 1190.170 Controls and Operating Mechanisms of the Regulatory Analysis.

§ 1190.190 Tactile Warnings

(a) *General.—Scope.* Tactile warnings used on floor and ground surfaces including surface textures, raised strips, and recessed grooves shall comply with § 1190.190 Tactile Warnings. Informational cueing aids are not inlcuded within the scope of tactile warnings. Tactile warnings used on door hardware are included under § 1190.130 Doors.

Minimum Number. Tactile Warnings shall be provided *only* at those locations specified in paragraph 1190.31(o).

Objective. To provide a standardized system of tactile warnings on walking surfaces that can be immediately perceived by the blind or visually impaired when using the long cane technique and/or by feeling the difference in texture when walking over these surfaces.

Unresolved or Controversial Issues. (i) Tactile warnings at the top of stairs. One of the major findings of the HUD research was that tactile floor warnings of upcoming hazards were very useful for the visually impaired and blind. One of the principal applications recommended in the HUD report for tactile floor warnings was at the top of stairways located directly in a path of travel. Illinois reported however, that tactile warnings at the top of stairs have become tripping hazards in some instances. Until the Board has additional information on this subject, it proposes to reserve this paragraph for future definition.

(ii) Paragraphs 1190.31(o), 1190.70(e)(7), and 1190.190(c)(1) require tactile warnings at the edges of streets without curbs, guardrails, planted areas or similar boundary elements. Dr. Steinfeld recommends that tactile warnings be used at the intersection of pedestrain and vehicular circulation paths if the intersections of walks with streets or other boundaries between pedestrian and vehicular circulation areas are level and flush. He goes on to say that

> in the absence of a formalized use of tactile warning signals, curbs and curb ramps can be used to warn of vehicular traffic hazards in the path of travel. The problem in this case, however, is complicated by the fact that curb ramp installations have been inconsistent and, therefore, have become a hazard in and of themselves.

Should the requirement for tactile warnings include tactile warnings at curb ramps and vehicular ways; or will it cause additional problems?

Basis for Proposal. Dr. Templer's studies, research by Dr. Steinfeld, and Board discussions formed the basis for this section.

(b) *Ground and Floor Surfaces.* Dr. John Templer in his study, "Provisions for Elderly and Handicapped Pedestrians," emphasized that surfaces and textures selected for tactile warning must be easily detected and located where they provide visually impaired people immediate warning of a hazard. The HUD research studies report similar findings. Grooves must be used with caution so as not to present tripping or freezing hazards.

(c) *Hazardous Areas.* Dr. Templer's and Dr. Steinfeld's research studies report that tactile warnings on ground and floor surfaces should be used at the following locations:

(1) Transit vehicle loading platforms,

(2) Edges of streets without curbs, guardrails, planted areas, or similar boundary elements,

(3) Edges of pools not protected by guardrails, walls or curbs.

Both researchers repeatedly emphasize that tactile warnings should never be used at emergency exits.

(d) *Warnings at Stairs. See* Paragraph 1190.190(a) *General*: Unresolved and Controversial Issues, (i).

§ 1190.200 Signage

(a) *General.—Scope.* This section includes requirements for the International Symbol of Access and for informational signing. Written, symbolic, tactile, and pictorial information are within the scope of this section.

Minimum Number. The International Symbol of Accessibility as required by paragraph 1190.200(e) shall be used at all parking spaces designated as reserved for physically handicapped persons; at all passenger loading zones complying with § 1190.60; at all entrances complying with § 1190.120; and at all toilet and bathing facilities complying with § 1190.150 Entrances, toilet and bathing facilities, drinking fountains, stairs, escalators and telephones which do not comply with the minimum guidelines shall have information signing complying with § 1190.200 directing the user to accessible facilities.

Objectives. To identify readily those elements and spaces accessible to the handicapped and to provide informational signing that is easily discernable for the physically handicapped, including the blind, and the able-bodied.

Unresolved or Controversial Issues. The public is invited to share its experience with contrasting colors and specific shapes to identify particular elements and spaces. Should these provisions be mandatory in the final guidelines? *See* paragraph 1190.200(b) *Character Proportion and Contrast.*

Basis for Proposal. The decisions for this section are based on public comments to the ATBCB's Notice of Intent, Questions 25, 26, 27, and 28, and research by Dr. Steinfeld while under contract to HUD.

(b) *Character Proportion and Contrast.* This provision is similar to the ANSI A117.1–1980. Public comments in response to Questions 24–28 of the Notice of Intent supported the use of contrasting colors as a directional cue for the visually impaired. In addition to contrasting colors, the Board considered the utilization of specific shapes to identify particular elements or spaces. The research and available supporting data in this area was insufficient to mandate specific requirements at this time.

(c) *Raised or Incised Characters.* Dr. Steinfeld reports that raised characters are easier to feel than the small sizes and are not as susceptible to maintenance problems as are indented characters which can fill or be filled with dirt, gum, cleaning compounds, and the like. Because only 10 to 15 percent of the blind use braille functionally, Roman and Arabic characters are recommended so that the raised characters can be easily read. The HUD research concludes that a character be raised to 1/32 inch. Braille is raised 0.001 inch; however, a large number of blind individuals also suffer from a loss of the sense of touch (*i.e.*, the diabetic blind and the elderly) and the extra height will provide more definition of the character.

(d) *Mounting Location and Height.* By providing a standardized location for informational signing, a visually impaired or blind person will readily be able to find the information source.

(e) *Symbol of Accessibility.* The International Symbol of Accessibility is used for the purpose of uniformity.

§ 1190.210 Telephones

(a) *General.—Scope.* § 1190.210 Telephones includes all public telephones and related equipment provided at buildings and facilities subject to the minimum guidelines and standards (*see* § 1190.2 *Applicability*).

Minimum Number. All public telephones provided shall comply with the requirements of Subpart C—Scope and § 1190.210 *Telephones.* When a bank (*i.e.*, two or more) of public telephones is provided at a single location at a building or facility, at least one telephone per bank shall have a volume control and at least one telephone per bank shall be equipped with a TDD or with signage directing a user to a TDD that is located in proximity to the bank of telephones.

Objective. To insure public telephones are usable by the physically handicapped including people who are confined to wheelchairs, have reaching limitations, use walking aids, have dexterity or coordination difficulties, are deaf, or are hearing-impaired.

Unresolved or Controversial Issues: (1) How many telephones should be required to have amplifiers? Should the general rule be one per bank with additional requirements for special use buildings such as airports?

(ii) How many telephones should be required to be equipped with telecommunication devices for the deaf (TDD)? What is the most effective location for the TDD, an open or a controlled environment?

(iii) Should public telephones have raised or incised characters so that the blind and the visually-impaired can be provided the location and number of telephones?

(iv) Should the maximum height for the telephone be 4'–0" or 4'–6"?

Basis for Proposal. Prior to 1975, almost all standards, codes, and legislation required the highest operable part of a coin telephone to be a maximum of 4'–0" from the floor. This measurement was based on the measurement for the maximum diagonal or forward reach of a wheelchair user (*i.e.* the reach across the lap) to the telephone coin slot as specified in ANSI A117.1–1961 (R1971). Since 1975, however, the American Telephone and Telegraph Company (AT&T) has promoted the use of a maximum vertical measurement of 4'6" as the highest vertical measurement for any operable part of a telephone. AT&T based this measurement on the ANSI A117.1–1961 specification for the maximum vertical or side reach needed to operate a telephone for a wheelchair user using the side approach to the telephone. As a result of the AT&T recommendation, a number of building codes (*e.g.*, Uniform Building Code, BOCA) and several states have changed their requirements to reflect the 4'–6" measurement. The ANSI A117.1 Committee has also changed their requirement of 4'–0" that was in the 1961 standard to 4'–6" in their 1980 standard.

The 4'–6" measurement, however, does not accommodate those telephone users that have severely restricted reach ranges. The board recognizes that many persons are not able to reach higher than the 4'–0" because of the lack of truck control, spasticity, arthritis, limb amputation, and other reach limitations. The Board furthermore recognizes the critical importance of the telephone as a communication device for the handicapped as well as for others and believes that the 4'–0" measure allows more people to use the telephone. Also taken into consideration by the Board in proposing the 4'–0" requirement was the use of the telephone by children and by people with height restrictions.

The basis for the other paragraphs in this section includes the public comment to the Notice of Intent, Board discussions, and other states' standards and codes. It also reflects the specifications for telephone equipment currently available. This section is similar to the ANSI A117.1–1980 except for the paragraph on maximum height of equipment and the requirement for TDDs. ANSI does not address the latter topic.

(b) *Clear Access Space. See* § 1190.40 Human Data of the Regulatory Analysis. This paragraph is similar to the one contained in ANSI A117.1–1980.

(c) *Equipment Characteristics.* The minimum requirements of this section are based on the requirements specified in other state codes and on problems that have been identified by the handicapped user regarding the operation of telephone equipment. Requirements of this section are similar to the ANSI A117.1–1980 edition except for the requirement regarding maximum height. *See* the above paragraph, *Basis for Proposal*, for a discussion of this issue.

(d) *Equipment for the Hearing Impaired.* According to the 1972 national Census of the Deaf Population, there are 13,400,000 deaf and hearing-impaired persons in the U.S. Of these, 1,767,000 are functionally deaf and can neither hear nor unerstand speech with or without the use of hearing aids. The minimum guidelines address three types of public telephone equipment designed to eliminate communication barriers: (1) Telephone receivers which are compatible with hearing aids; (2) adjustable volume controls; and (3) telecommunication devices for the deaf (TDD).

AT&T, in response to Questions 20 and 22 of the Notice of Intent, reported that the Bell System already provides public telephones compatible with hearing aids. AT&T anticipates that, by the end of 1980, all coin telephones will be compatible with those hearing aids employing induction coils.

The National Center for the Law and the Deaf strongly urged in their comments (Notice of Intent, Question 20) that all public telephones be equipped with adjustable volume controls. The Center said that having a number or percentage of pay phones with volume controls seriously reduces their availability and accessibility to hearing-impaired persons. The Center also noted that an adjustable volume control is a minor alteration to a telephone and that this control can benefit all individuals especially when public phones are located in noisy areas.

The public support in response to Questions 20 and 21 of the Notice of Intent for TDD's to be required on public telephones was quite strong. The National Center for the Law and the Deaf observed that public telephones which are amplified or are compatible with hearing aids remain useless to those with severe or profound hearing loss; only the TDD's can benefit them. The Center reports that TDDs installed in Washington, D.C. and Indianapolis have worked well for the deaf. California legislation requires the Public Utilities Commission to provide TDDs to deaf consumers free of charge. It is also the Board's understanding that the Social Security Administration is instituting a toll fee central number for deaf consumers and that the U.S. Postal Service has installed TDDs in several of its post offices.

The AT&T expressed "great concern" over any requirement for public phones to have TDDs. The Corporation's concern was threefold:

(1) There is no available teletypewriter device durable enough for "a true public environment."

(2) There is no available TDD that can be used with both BAUDOT and ASCII codes to make the TDD useful either commercially, industrially, or domestically; and

(3) There is no available evidence to show that enough deaf persons would use the TDD to justify its expense.

§ 1190.220 Seating, Tables, and Work Surfaces

(a) *General.—Scope.* § 1190.220 Seating, Tables, and Work Surfaces includes all fixed or built-in seating, tables, or work surface.

Minimum Number. Five percent of each element provided shall comply with § 1190.220 Seating, Tables, and Work Surfaces.

Objective. To insure that wheelchair users and people with walking aids have access to the elements provided.

Unresolved or Controversial Issues. Is 5 percent of the total fixed or built-in seating, tables, and work surfaces a reasonable and adequate percentage of these elements to be required?

Basis for Proposal. The majority of public comments received in response to Question 9 of the Notice of Intent replied that the minimum guidelines should require a reasonable number or appropriate number and specify the minimum number. The state codes use various requirements in setting a minimum number including: "at least one," "2 percent," "5 percent," and "all." In light of the Board discussions, the 5 percent figure was chosen.

(b) *Clearances. See* § 1190.40 Human Data, § 1190.150(b)(5) Lavatories and Sinks, § 1190.160 Drinking Fountains and Water Coolers. This paragraph is similar to the one contained in ANSI A117.1–1980.

§ 1190.230 Assembly Areas

(a) *General.—Scope.* § 1190.230 Assembly Areas includes all places of assembly with fixed type seating and all other elements and spaces required for the use of the assembly area including, but not limited to, stages and backstage areas, lobbies, ticket offices, seating, dressing rooms, toilet rooms, and bathing facilities.

Minimum Number. All assembly areas provided shall comply with the requirements of Subpart C—Scope and § 1190.230 Assembly Areas.

Objective. To insure that a minimum number of spaces in assembly areas are accessible and convenient to use by people who are confined to wheelchairs, use walking aids, or have a severe loss of hearing.

Unresolved or Controversial Issues. Under § 1190.31(S) a limited number of viewing positions are to be provided based on the capacity of the assembly area. Public comment is sought on the reasonableness and adequacy of this provision.

Basis for Proposal. In most auditoria or assembly areas, no provision is made for wheelchair users. Generally the only available space for the wheelchair is the aisle which is usually sloped and viewing is not always optimal. Frequently, wheelchair users are denied entrance because the only available location for the wheelchair to occupy blocks fire exits. The minimum number of viewing positions is based on a review of various codes. BOCA, SBCC, Rhode Island, and New Jersey provide a similar table to the one listed in Subpart C—Scope. The Board also recognizes that many handicapped persons attend performances with able-bodied friends and relatives as well as disabled ones; therefore, provisions should be made so that seating can be together.

(b) *Size and Location of Viewing Positions. See* § 1190.40 Human Data. So that the handicapped viewer can have a choice as to his or her viewing position and/or price of ticket, if applicable, the Board proposes that viewing positions be dispersed. This requirement is similar to that of ANSI A117.1–1980.

(c) *Performing Areas.* This section is similar to the provisions of ANSI A117.1–1980 except that the Board recognizes that existing performing areas may be structurally impracticable to alter and therefore the guidelines provide an exception.

(d) *Listening Systems.* In response to Question 23 of the Notice of Intent, a number of people suggested the use of the audio loops and interpreters. The consensus was that technology to meet the communication needs of the hearing impaired was available; however, it is not widely used.

§ 1190.240 Storage

(a) *General.—Scope.* Includes all storage features provided in a building or facility. Cabinets, shelves, closets, and drawers are included within the scope of this section.

Minimum Requirements. All storage facilities provided except those specifically exempted from this requirement by Subpart E—Special Technical Provisions, shall comply with this section.

Objective. To provide storage facilities that can be safely and conveniently used by people confined to wheelchairs, who have reaching limitations, who use walking aids, or who lack stamina or coordination.

Unresolved or Controversial Issues. None.

Basis for Proposal. Requirements are based on § 1190.40 Human Data, § 1190.50: Walks, Floors, Accessible Routes, and § 1190.170 Controls and Operating Mechanisms. This paragraph is similar to the provisions contained in ANSI A117.1–1980.

Part IV

Environmental Protection Agency

Carbon Monoxide; Proposed Revisions to the National Ambient Air Quality Standards and Announcement of Public Meetings

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 50

[FRL 1448-6 Docket No. OAQPS 79-7]

Carbon Monoxide; Proposed Revisions to the National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: In accordance with Sections 108 and 109 of the Clean Air Act as amended, EPA has reviewed and revised the criteria upon which the existing primary and secondary carbon monoxide standards are based. The revised criteria are being published simultaneously with this notice of proposed rulemaking. The existing primary and secondary standards for carbon monoxide are both currently set at 9 parts per million (ppm), averaged over a period of 8 hours, and 35 ppm averaged over 1-hour, not to be exceeded more than once per year. As a result of the review and revision of the health criteria, EPA proposes to retain the existing primary 8-hour standard at 9 ppm and to lower the primary 1-hour standard to 25 ppm. The change in the 1-hour standard is being proposed because of the more rapid accumulation of blood carboxyhemoglobin in moderately exercising sensitive persons compared to resting individuals. The impact of exercise, which is greater for short-duration exposures, was not considered in the original standard. A secondary or welfare effects standard is not deemed appropriate for this pollutant because environmental effects have only been observed at relatively high carbon monoxide concentrations. Because CO concentrations of such magnitude rarely if ever occur in the ambient air, this notice proposes to rescind the existing secondary standard. Also proposed is a change to a statistical standard rather than the current deterministic standard; i.e., allowable exceedances will be stated as an expected value, not an explicit value. Furthermore, EPA proposes to use a daily interpretation for exceedance of the CO standard, so that exceedances will be determined on the basis of the number of days on which 1- or 8-hour average concentrations are above the standard levels.

During the period between this proposal and final promulgation of the standard, EPA will continue its examination of health and welfare effects information contained in the criteria document and will continue to seek to involve the the public, particularly the most directly affected parties, in the process of reaching a final decision on the air quality standard. One or more public meetings on this proposal will be held between proposal and promulgation and will be announced in a subsequent **Federal Register** notice.

DATE: Comments must be received by November 10,1980.

ADDRESSES: Submit Comments (duplicate copies are preferred) to: Central Docket Section (A–130), Environmental Protection Agency, Attn: Docket No. OAQPS 79–7, 401 M Street, SW., Washington, D.C. 20460.

Docket No. OAQPS 79–7, containing material relevant to this propsoed rulemaking, is located in the Central Docket Section of the U.S. Environmental Protection Agency, West Tower Lobby Gallery I, 401 M St., SW., Washington, D.C. The docket may be inspected between 8 A.M. and 4 P.M. on weekdays, and reasonable fee may be charged for copying.

Availability of Related Information

Documents generated as a part of this standard review such as the Control Techniques Document, Regulatory Analyses, Exposure Analysis, Environmental Impact Statement and Community Impact Statement can be obtained from: U.S. Environmental Protection Agency Library (MD–35), Research Triangle Park, N.C. 27711, Telephone (919) 541–2777 (FTS 629–2777).

The criteria document is available from: Environmental Criteria and Assessment Office (MD–52), U.S. Environmental Protection Agency, Research Triangle Park, N.C. 27711 (Attn: Dr. David McKee).

The criteria document may be requested by calling (919) 541–3746 (FTS 629–3746).

FOR FURTHER INFORMATION CONTACT: Mr. Michael Jones, Strategies and Air Standards Division (MD–12), Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, N.C. 27711, Telephone (919) 541–5231 (FTS 629–5231).

SUPPLEMENTARY INFORMATION:

Background

On April 30, 1971, the Environmental Protection Agency promulgated in the **Federal Register** (36 FR 8186) National Ambient Air Quality Standards for carbon monoxide. The scientific, technical, and medical basis for these standards is contained in the air quality criteria document for carbon monoxide published by the U.S. Department of Health, Education, and Welfare in March 1970. Both the primary and secondary standards were set at levels of 9 ppm, 8-hour average, and 35 ppm, 1-hour average, neither to be exceeded more than once per year. The preamble to the regulation stated:

> The national primary standard for carbon monoxide, proposed on January 30, 1971, was based on evidence that low levels of carboxyhemoglobin in human blood may be associated with impairment of ability to discriminate time intervals. In the comments, serious questions were raised about the soundness of this evidence. Extensive consideration was given to this matter. The conclusions reached were that the evidence regarding impaired time-interval discrimination had not been refuted and that a less restrictive national standard for carbon monoxide would therefore not provide the margin of safety which may be needed to protect the health of persons especially sensitive to the effects of elevated carboxyhemoglobin levels above 2 percent. It is the Administrator's judgment that attainment of the national standards for carbon monoxide will provide an adequate safety margin for protection of public health and will protect against known and anticipated adverse effects on public welfare.

The evidence cited above concerning impairment of ability to discriminate time intervals is based on work by Beard and Wertheim. As a result of the failure of several researchers to replicate the Beard and Wertheim results, the implications of this evidence for standard setting have changed since the original standard was promulgated. EPA's interpretation of this evidence is discussed elsewhere in this proposed regulation.

Carbon monoxide (CO) is a colorless, odorless, tasteless gas that is generally unreactive with other pollutants or constitutents found in the urban atmosphere. The primary sources of CO emissions are mobile sources, such as automobile, truck, and bus exhausts. Other sources of CO include stationary sources such as primary metal, carbon black, and maleic anhydride industrial facilities.

The reductions in CO emissions required by EPA standards are achieved through Federal and State programs which have been formalized in regulations promulgated under the Clean Air Act. The federal programs provide for reductions in emissions nationwide through the Federal Motor Vehicle Control Program, which involves controls for automobile, truck, bus, motorcycle, and aircraft emissions, and the development of New Source Performance Standards. The state programs provide for additional control

measures through State Implementation Plans in those areas of the country where the federal programs alone do not assure the attainment of air quality standards.

Legislative Requirements Affecting This Proposal

Two sections of the Clean Air Act govern the development of a National Ambient Air Quality Standard. Section 108 (42 U.S.C. 7408) instructs EPA to document the scientific basis (criteria) for the standard, and Section 109 (42 U.S.C. 7409) provides instructions on reviewing criteria and establishing standards.

Air quality criteria are required by Section 108(a)(2) to reflect accurately, upon issuance, the latest scientific information useful in indicating the kind and extent of all identifiable effects on public health or welfare that may be expected from the presence of the pollutant in the ambient air. If in the Administrator's judgment, revised criteria make appropriate the proposal of new or revised standards, such proposal is to occur simultaneously with issuance of the final criteria document.

The primary standard is defined in Section 109(b)(1) as that ambient air quality standard the attainment and maintenance of which in the judgment of the Administrator, based on the published criteria and allowing an adequate margin of safety, is requisite to protect the public health. The secondary standard, as defined in Section 109(b)(2), must specify a level of air quality the attainment and maintenance of which in the judgment of the Administrator, based on the published criteria, is requisite to protect the public welfare from any known or anticipated adverse effects associated with the presence of the pollutant in the ambient air. These adverse welfare effects which are defined in Section 302(h) of the Act include effects on soils, water, crops, vegetation, man-made materials, animals, weather, visibility, hazards to transportation, economic values, personal comfort and well-being, and other factors.

Section 109(b) of the Act specifies that National Ambient Air Quality Standards are to be based on scientific criteria relating to the level that should be attained to adequately protect public health and welfare. Considerations of cost of achieving those standards or the existence of technology to bring about needed reductions of emissions are not germane to such a determination, as the words of the Act and its legislative history clearly indicate. Section 109(d) directs the Administrator to complete a review of all existing standards and criteria before the end of 1980 and at 5-year intervals thereafter and to revise them in whatever manner that review determines is necessary.

Assuring attainment and maintenance of ambient air quality standards is the responsibility of the states. Under Section 110 of the Act, the States are to submit to EPA for approval State Implementation Plans (SIP's) that provide for the necessary legal requirements for sources of the relevant pollutant so as to demonstrate attainment and maintenance of the standards by certain deadlines. In the case of carbon monoxide, numerous urban areas have failed to attain the present standards. In 1977, Congress amended the Clean Air Act by inserting several sections, mostly found in Part D of Title I of the Act as amended, to intensify the effort to attain the CO standard. New deadlines were established, and the states were required to submit revised State Implementation Plans by January 1, 1979, for all "non-attainment areas."

If promulgated, the proposed changes to the CO standard will not modify the attainment dates specified in Section 172 of the Clean Air Act. As explained elsewhere in this preamble, both the 1-hour and 8-hour standards will be restated so that compliance with them will be determined statistically on the basis of a daily interpretation for exceedances. In addition, the numerical value of the 1-hour standard will be decreased.

An analysis of data available from the States indicates that, with regard to State Implementation Plan development under Part 51, the proposed CO standards should have little or no impact on the present attainment status designation of any area. Only 6 designated nonattainment areas in the country now exceed the 1-hour (35 ppm) standard, and all of these are included in the 146 designated nonattainment areas that now exceed the 8-hour (9 ppm) standard. There are no sites that currently exceed the proposed 1-hour (25 ppm) standard that do not also exceed the 8-hour (9 ppm) standard. Therefore, although EPA proposes to decrease the numerical value of the 1-hour standard, this action should not cause the designation of additional nonattainment areas. Since the proposed 1-hour standard (25 ppm) is not effectively as stringent as the 8-hour standard, the 8-hour existing standard, which has been the controlling standard in the past, will remain so, and the decrease of the 1-hour standard will not cause the designation of additional nonattainment areas. If a state already has an adequate plan to meet the existing CO standards, such a plan should be sufficient to meet the proposed standards. The proposed standards will not substantially affect New Source Review Requirements. For these reasons, the states will not be required to file revisions to their implementation plans.

Development of Air Quality Criteria and Summary of General Findings From Review of Air Quality Criteria for Carbon Monoxide

On December 1, 1978 (43 FR 56250), EPA announced that it was in the process of reviewing and updating the 1970 criteria document for carbon monoxide in accordance with provisions of Section 109(d)(1) of the Clean Air Act as amended. In the process of developing the revised criteria document, EPA has provided a number of opportunities for review and comment by organizations and individuals outside the Agency. Two drafts of the criteria document have been made available for external review, and EPA has received a total of approximately 30 written comments on these first and second drafts. Each draft was also the subject of a meeting of the Clean Air Scientific Advisory Committee (CASAC) of EPA's Science Advisory Board and the CASAC CO Subcommittee. Each of these meetings was open to the public, and a number of organizations and individuals have presented both critical review and new information for EPA's consideration.

On the basis of a careful review of scientific information contained in the criteria document[2], EPA prepared a staff paper[3] in which several key areas were identified as major factors to be considered in the possible revision of the CO standards; the Agency presented this paper at a public meeting of the CASAC. These findings, favorably reviewed by the CASAC, are summarized in the following paragraphs.

1. Carbon monoxide is a colorless, odorless gas that is toxic to mammals because of its strong tendency to combine with hemoglobin to form carboxyhemoglobin (COHb). Thus, the oxygen-carrying capacity of the blood is reduced since hemoglobin that has combined with CO in this manner is not available to transport oxygen; furthermore, the presence of COHb inhibits the release of oxygen from the remaining hemoglobin. The resultant hypoxemia (deficient oxygenation of the blood) can have detrimental affects on the cardiovascular, central nervous, pulmonary, and other body systems. The relatively small reductions in the ability of the blood to deliver oxygen to these systems at 5 to 10 percent COHb may be

Description of Adverse Effects

to occlusive arterial disease were caution in interpreting this study

quite critical for persons suffering from cardiovascular diseases or chronic obstructive lung disease.

2. The COHb in an individual's bloostream reflects input from two sources: Endogenous (produced by the metabolic breakdown of hemoglobin and other heme-containing materials) and exogenous (derived from the external environment). The physiologic norm for endogenous COHb levels has been estimated to be rougly in the range of 0.3 to 0.7 percent,[4] but endogenous production may be significantly increased for persons with hemolytic anemias, in women during pregnancy and during menstrual cycle, and in persons taking certain types of drugs. With these exceptions, however, increments significantly above the physiologic norm (i.e., above 1 percent) are assumed to have resulted from exogenous sources such as cigarette smoking (which can produce COHb levels ranging from 2 or 3 percent up to as high as 15 to 17 percent) or community air pollution.

3. Low-level CO exposures (producing group mean COHb levels in the range of 2.7 to 2.9 percent) have been shown to cause aggravation of cardiovascular disease. This aggravation consists of decreased time to onset of pain, both in persons with angina, and in persons with intermittent claudication (lameness) as a result of peripheral vascular disease,[5-7] and is considered to be an adverse effect. The criteria document states that the limited studies on patients having cardiovascular disease suggests that the critical level of COHb is 2.5 to 3.0 percent and the CASAC CO Subcommittee cited 2.7 to 3.0 percent COHb as the critical level at which adverse health effects do occur.[8] Both the critical range suggested by CASAC and that stated in the criteria document are in close agreement with the group mean values reported in the human studies (2.7 and 2.9) that show effects at the lowest COHb concentrations.[5-7]

4. Conflicting results have been obtained in community studies examining the relationship between CO exposure and mortality from myocardial infarction (heart attack) and sudden death due to arteriosclerotic heart disease. Consequently, the possibility of such an association remains in question, and more research is needed to clarify this issue.

5. Relatively low-level CO exposures have been reported to produce effects on the central nervous system such as decrements in vigilance (ability to detect small changes in one's environment that occur at unpredictable times). Effects of CO on vigilance are in considerable dispute, but some evidence suggests that, if relevant variables are controlled, CO exposures at a threshold level of about 4 to 6 percent COHb may produce decrements in vigilance. Decrements in visual function and sensitivity have been reported at COHb levels as low as 4 to 5 percent.

6. Another central nervous system effect, impairment in discrimination of time intervals, has been reported by Beard and Wertheim [1] to result from low-level CO exposures (estimated COHb levels of 2 to 3 percent). Their study provided the basis for the 1971 air quality standard for CO; however, the revised criteria documents states that considerable questions have been raised as to the validity of these observations, with several attempts to replicate these findings having been unsuccessful.

7. CO exposures above 5 percent COHb have been reported to produce an approximately linear decline in the maximal oxygen uptake of healthy individuals undergoing maximal exercise protocols of several minutes' duration. Persons with chronic obstructive pulmonary disease have been reported to exhibit decreased exercise performance following CO exposures producing a group mean COHb level of 4.1 percent.

8. In long-term exposures of pregnant animals to CO, fetal COHb levels have been shown to exceed maternal COHb levels significantly after an uptake lag of a few hours, and fetal elimination of CO upon cessation of exposure was slower than maternal elimination. In several experimental animal studies, pregnant females were exposed to CO; deleterious effects were in general reported in the offspring (e.g., reduced birthweight, increased newborn mortality, and lower behavioral activity levels) even when the mothers were not affected. In human studies, similar effects have been reported in children of mothers who smoked cigarettes during pregnancy. This evidence is discussed in greater detail in a subsequent section of this notice.

9. The only significant effect on vegetation reported for CO levels that approach those that might occur in the ambient air is an inhibition of nitrogen fixation by micro-organisms in the root nodules of legumes. Since the threshold reported for this effect (100 ppm for 3 to 34 days), is well above those CO levels occurring in the ambient environment, it is very unlikely that any damage will occur to vegetation as a result of CO air pollution. Furthermore, compliance with any primary standard likely to result from this rulemaking would insure protection against such damage.

Reported Human Health Effects Levels

Mechanism of CO Toxicity

EPA interpets the existing health effects evidence presented in the criteria document to indicate that the principal mechanism of CO toxicity is through hypoxemia (deficient oxygenation of the blood). This mechanism suggests that adverse effects on the body result from the strong affinity of blood hemoglobin for CO (over 200 times greater than for oxygen), which results in the formation of carboxyhemoglobin (COHb). Thus, the oxygen-carrying capacity of the blood is reduced since hemoglobin that has combined with CO in this manner is not available to transport oxygen; furthermore, the presence of COHb inhibits the release of oxygen from the remaining hemoglobin. Effects on the cardiovascular, central nervous, and pulmonary, and other systems are directly related to this reduction in the ability of the blood to deliver oxygen to these systems.

Some researchers have suggested an alternative mechanism for carbon monoxide toxicity that results from a blocking of the energy flow at the cellular level through the cytochrome system.[2] In discussing some of these studies, members of the CO Subcommittee of the Clean Air Scientific Advisory Committee (CASAC) [8] raised the possibility that the results found by these researchers could be more readily explained on the basis of the test protocols than as an alternative mechanism of toxicity. In several of these studies, animals were exposed to very high CO concentrations (greater than 100,000 ppm) for short periods of time, with the result that the animals died at a total-body COHb level lower than that which would be required if the CO dose had been administered as a lower concentration given over a longer period of time. The CASAC indicated that the hypoxemia mechanism probably provides an adequate explanation of this phenomenon as a manifestation of the "bolus effect", wherein a high concentration inhaled over a short period of time results in a portion of the blood supply that is essentially devoid of oxygen reaching the heart, with life-threatening consequences. Since the CASAC questioned the sufficiency of the information base on which the cytochrome system toxicity mechansim was proposed, EPA has decided to focus this NAAQS review on the hypoxemia mechanism and related COHb levels associated with observed adverse health effects.

Description of Adverse Effects

Cardiovascular System Effects. Angina pectoris is a cardiovascular disease in which mild exercise or excitement produces symptoms of pressure and pain in the chest because of insufficient oxygen supply to the heart muscle. Angina patients who have been exposed to low levels of CO while resting have subsequently exhibited, during exercise, reduced time to onset of angina. Increased duration of the angina attacks has also been reported.

EPA considers such aggravation of angina to be an adverse health effect for several reasons. First, it may result in cardiovascular damage, which is unquantifiable using present technology. Second, aggravation of angina may be the first in a series of progressively more serious symptoms that accompany cardiovascular disease. At low levels of oxygen deprivation, angina patients experience symptoms of chest pain described above. Coronary insufficiency is a more serious symptom that occurs at greater levels of oxygen deprivation. This symptom is sometimes accompanied by changes in enzyme levels and electrocardiographic irregularities. The most serious symptom in this continuum of effects is myocardial infarction. In addition to longer and more intense pain, myocardial infarction is accompanied by irreversible heart damage (death of myocardial cells) as indicated by enzyme level changes and electrocardiographic alterations. Finally, because aggravation of angina may be the first in a series of symptoms that may lead to permanent heart damage, EPA considers aggravation of angina an adverse effect and an indicator that more serious effects may occur in some individuals at the same COHb levels.

Aggravation of angina has been convincingly demonstrated by Anderson et al.[5] and Aronow and Isbell [6] at group mean COHb levels of 2.7 to 2.9 percent, which are lower than those associated with any other measurable adverse effect of CO exposure. In a 1978 study,[10] Aronow reported angina aggravation at COHb levels in the range of about 1.8 to 2.3 percent, but these COHb levels were obtained through a passive smoking exposure regime, with possible confounding factors. The appropriate utilization of this study in the standard-setting process will be discussed in a subsequent section of this notice.

Patients having peripheral vascular disease may also have this condition aggravated by CO exposure. In the one clinical study [7] in which such an effect was examined, 10 persons with intermittent claudication (lameness) due to occlusive arterial disease were exposed to 50 ppm of CO for 2 hours, with subsequent exercise until leg pain occurred. The COHb levels produced by this exposure (group mean of 2.8 percent) significantly decreased the time to onset of pain and cessation of activity.

Another cardiovascular system effect of concern is the possible detrimental effect of increased blood flow that occurs as a compensatory response to CO exposures. This response could result in coronary damage or other vascular effects due to the cardiovascular system being pushed beyond its capabilities. Cardiovascular damage and electrocardiogram abnormalities have been reported in persons who have experienced acute non-fatal CO poisoning (20 percent COHb) or who have been chronically exposed to CO in the workplace. Chronic exposure to average CO levels of 70 ppm, with peak levels of about 300 ppm (no COHb levels reported), has been associated with increased mortality from heart failure in a Japanese population.[11] Some epidemiological studies in Los Angeles [12-14] have suggested that increased mortality from myocardial infarction (death of heart tissue) may be associated with high ambient air concentrations of CO (estimated COHb levels in the range of 8 to 17 percent), but in a similar study Kuller et al.[15] failed to find such a correlation with considerably lower ambient CO levels. Radford [16] evaluated patients admitted to the myocardial infarction research unit at the Johns Hopkins University. While the investigator's diagnoses were consistent with both acute and chronic effects on the myocardium of long-term exposure to CO, the effects observed could not be clearly related to that factor. Therefore, the possibility of an association between CO levels in the ambient air and incidence of myocardial infarction or sudden deaths due to arteriosclerotic heart disease remains in question; more research is needed to clarify this issue.

In a recent epidemiology study, Kurt et al.[17] reported an increase in the number of cardio-respiratory complaints by patients at the emergency room of a Denver hospital on days when the 24-hour mean and maximum 1-hour mean ambient CO concentrations at a nearby monitoring site equalled or exceeded 5 and 11 ppm respectively, as compared to days when the corresponding concentrations were below those levels. In commenting on an early report of this study, however, the CASAC CO Subcommittee [4, 9] expressed the need for caution in interpreting this study because (1) the cardio-respiratory complaints evaluated in the study are inadequate indicators of cardiovascular disease aggravation, (2) the authors did not report any COHb levels for the patients evaluated and (3) the reported single monitoring site near the hospital is inadequate to determine the exposures sustained by the patients.

Central Nervous System Effects. Some studies [18-21] have reported that CO exposures resulting in COHb levels of 1.8–7.6 percent have produced decrements in vigilance (the ability to detect small changes in one's environment that take place at unpredictable times). The effects of CO on vigilance are in considerable dispute, however, since similar studies [22-27] have failed to observe similar effects. EPA's judgment of the evidence is that, if relevant variables are controlled, CO exposures at a threshold level of about 4–6 percent COHb may produce decrements in vigilance. Decrements in visual function and sensitivity have been reported at COHb levels as low as 4 to 5 percent.[28, 29]

EPA considers vigilance and visual function effects to be important since these functions are components of more complex tasks, such as driving, and reduced alertness or visual sensitivity could lead to increased accidents. Several studies discussed in the criteria document [2] suggested that elevated COHb levels adversely affect the performance of complex tasks, and suggestive (but not conclusive) evidence has been reported [30] indicating that a greater proportion of drivers in fatal accidents have COHb levels above 5 percent. Accordingly, the possibility of an interactive effect between alcohol and CO that has been suggested by some experimentation is of particular concern.

Pulmonary Function and Exercise Effects. In its discussion of several studies using sub-maximal exercise for short periods (5 to 60 minutes), the criteria document [2] states that oxygen uptake during work does not appear to be affected even when COHb levels are as high as 15 to 20 percent, although several of these studies have shown that these COHb levels produce increased heart rates. In maximal exercise protocols of several minutes' duration, COHb levels in the range of 5–33 percent have been demonstrated to produce a linear decline in maximal oxygen uptake (and hence work capacity).[2] MacMillan[31] reported that competitive swimmers have impaired performance after travelling to meets along a prescribed 2-hour route in

congested traffic, with average CO levels in expired air reaching 30 ppm (estimated COHb of about 6 percent). These results may, however, reflect interaction with other pollutants since ambient air exposures were examined in this study rather than systematic, controlled exposures to CO.

Although only a few studies have been conducted to examine the effects of CO exposure on persons with chronic obstructive pulmonary disease (e.g., asthma, emphysema, and chronic bronchitis), this group is presumably at high risk to CO exposures. A reduction in oxygen supply due to increased COHb levels could exacerbate existing effects of low oxygen levels caused by impaired respiratory system functioning. Aronow et al.[33] exposed 10 persons with chronic obstructive pulmonary disease (emphysema) to 100 ppm CO for 1 hour, producing a group mean of 4.1 percent COHb. Time to onset of marked dyspnea (difficulty in breathing) was reduced 33 percent during expercise as compared to COHb levels of 1.5 percent. The investigators concluded that the limited exercise performance after CO exposure was probably a cardiovascular limitation rather than a respiratory one.

Fetal Development. In several experimental animal studies that are discussed in the criteria document,[2] pregnant females were exposed to CO, and in general the offspring showed deleterious effects even when the mothers were not affected. For example, Astrup et al.[33] exposed pregnant rabbits to 90 ppm CO continuously for 30 days, with resultant maternal COHb levels of 9 to 10 percent. Birth weights decreased 11 percent and the newborn mortality rate increased to 10 percent from a control value of 4.5 percent. In another study,[34] the offspring of rats exposed to 150 ppm CO throughout gestation (maternal COHb levels of 15 percent) weighed slightly (3 percent) less at birth and failed to gain weight as rapidly after birth. Reduced brain protein levels at birth and lower behavioral activity levels through the preweaning period were observed. In many cases, the deleterious effects have been shown to disappear by adulthood, but the inference that such effects may occur in humans during maturation is of concern with respect to possible impacts on learning and social behavior development.

In the criteria document,[2] there is discussion of some experimental animal studies in which short-term maternal CO exposure resulted in lower COHb levels in the fetus than in the mother; however, in these studies, the fetus was still adversely affected. Longo and Hill[35] examined long-term maternal CO exposures and found that fetal COHb levels exceeded maternal values after an uptake lag of a few hours following initiation of exposure. At equilibrium, fetal COHb levels significantly exceeded maternal values, and fetal elimination of CO after cessation of exposure was slower than maternal elimination. The COHb concentration in human fetal blood has been reported[36] to vary from 0.7 to 2.5 percent (for non-smoking mothers), with the ratio of fetal to maternal COHb levels varying from 0.6 to 1.6.

The biologic effects of CO exposure on fetal tissues during intrauterine development require clarification. The ability of CO to decreased the oxygen transport capacity of maternal and fetal hemoglobin may result in interference in fetal tissue oxygenation during important developmental stages. Whereas a normal adult has reserve capacity and compensatory responses that enable him to handle moderately high COHb levels without irreversible consequences, the fetus may under normal conditions be operating close to critical levels in terms of tissue oxygen supply. Thus, even moderate CO exposures may have a deleterious effect on fetal development.

Some verification of this hypothesis has been suggested in studies examining the impact of maternal smoking on the unborn child, as well as by studies of the impact of altitude on the unborn child. Several studies of have demonstrated that babies born to smoking mothers have reduced birth weight, as do children born at higher altitudes. Some question remains as to the relationship of fetal deaths to maternal smoking, but, in several studies in which data from large population samples were used, investigators concluded that perinatal deaths of infants of mothers who smoke do increase when these data are corrected for other factors affecting perinatal death rates (e.g., maternal age, the number of children previously borne, race, and social status). The causes of this increased perinatal mortality have not been adequately identified.

The effect on surviving children of CO derived from maternal smoking is not well understood. Fedrick et al.[37] reported almost a twofold increase in the incidence of congenital heart disease in the infants of mothers who smoke. British studies[38,39] of large population groups have found highly significant differences in the attainment of reading skills at 7 years of age between the children of mothers who smoked and those who did not. In a follow-up study[40] of these children at 11 years of age, investigators found several months' retardation in general ability, reading, and mathematics in a comparison between the children of mothers who smoked (0.5 pack of cigarettes or more per day; average COHb levels, though not reported, may have been 3 to 4 percent or more) and children of those who did not. While the fact that cigarette smoke contains substances other than CO prevents a direct application of the results of these studies in setting the CO standard, the studies do suggest the need for caution in protecting unborn children from such potentially deleterious effects of CO exposures.

Population Groups Sensitive to Low Levels of CO

On the basis of the criteria document discussion of the principal adverse effects associated with low levels of CO exposure, EPA has concluded that the following groups may be particulary sensitive to exposures of CO: Angina patients, individuals with other types of cardiovascular disease, persons with chronic obstructive pulmonary disease, anemic individuals, fetuses, and pregnant women. While no evidence is presented in the criteria document that healthy children are particularly sensitive to CO, concern exists that they also may be at increased risk to CO exposure because of the increased oxygen requirements that result from their higher metabolism rates.

In EPA's judgment, the available health effects data identify persons with angina and those with other types of cardiovascular disease as the groups at greatest risk from low-level, ambient exposures to CO. The low threshold for persons with angina results from the fact that the angina condition is due to an insufficient oxygen supply to cardiac tissue, so that persons with this condition have an inadequate reserve capacity and an impaired ability to compensate for the effects of CO.

The second group of prime concern consists of individuals suffering from other cardiovascular diseases, such as peripheral vascular disease. While much less information is available concerning the effects of CO on this group, one clinical study by Aronow [7] showed significantly decreased exercise time to onset of leg pain at group mean COHb levels of 2.8 percent for persons with peripheral vascular disease. The two major types of peripheral vascular disease are arteriosclerosis and atherosclerosis. A 1972 National Health Interview Survey [41] estimates that 700,000 persons, or 0.34 percent of the total U.S. population, have

arteriosclerosis. Estimates for atherosclerosis and other types of peripheral vascular disease are not available.

The number of persons who had angina and other types of cardiovascular diseases was estimated by the U.S. National Health Examination Survey (NHES),[42] which during the period 1960 through 1962 examined a sample of the civilian non-institutionalized population of age 18 to 79 years; the purpose of the survey was to obtain information on the prevalence of cardiovascular and other diseases. This survey estimated that 4.5 million persons (4.0 percent of the adult population) had definite or suspected angina pectoris, either with or without myocardial infarction. Thus, angina patients represented a large fraction of the 5.5 million persons (5.0 percent of the adult population) estimated to have definite or suspected coronary heart disease; this category consisted almost entirely of angina and myocardial infarction. The survey also estimated the prevalence rates of definite or suspected coronary heart disease as a function of age; among persons over 55 years old, prevalence rates ranged between 10 and 17 percent for various 5-year age groupings.

In addition, a group of persons probably not identified in this survey would also seem to have cardiovascular problems that place them at risk to CO exposure. Approximately 400,000 persons die each year from sudden cardiac death; of these, nearly 25 percent have had no prior recognized symptoms of heart disease.[43] The results of one survey[44] indicated that nearly 40 percent of the victims of sudden cardiac death had consulted a physician during the month prior to death but had reported symptoms "so vague and inexplicit that coronary heart disease would have been difficult to infer." Therefore, the above NHES estimates may be somewhat low, since most of these persons without any evident symptoms of heart disease would probably not have been detected by the survey examinations.

On the basis of the available effects data, EPA is focusing on angina patients and those with other types of cardiovascular disease as the most sensitive groups. Other groups such as fetuses, anemics, and persons with chronic obstructive pulmonary disease can reasonably be projected to be affected at CO levels possible in ambient air exposures. Individuals with dietary or pathological anemia are probably at greater risk due to reduced oxygen-carrying capacity of their blood. A 1973 National Health Interview Survey [45] estimates that nearly 3.0 million persons (1.4 percent of the U.S. population) suffer from anemia. Persons with hemolytic anemia (who have increased hemoglobin destruction rates) would be particularly at risk because of their increased endogenous production of COHb. The Survey estimates of specific anemias having a hemolytic component range from 90,000 to 230,000 persons (0.04 to 0.11 percent of the U.S. population). Similarly, there are approximately 3.1 million live births per year in the United States or 1.5 percent of the population.[46] About 1 million pregnancies per year occur among women living in the central cities of metropolitan counties, where CO ambient levels tend to be greatest.[47] This latter group, therefore, would be at increased risk to CO exposure. Because of the lack of human data for non-cardiovascular disease groups, however, the potential effects on such persons will be considered in determining the margin of safety for the CO standard.

CO Exposure and Resulting COHb Levels

In developing the proposed standards, it is necessary to make judgments concerning the relationship between ambient carbon monoxide exposure and resulting COHb blood level. The primary factors determining the final level of COHb in individuals are the following: concentration of CO inhaled and duration of exposure, alveolar ventilation rates (which depend on the level of activity), initial COHb level, endogenous CO production, blood volume, hemoglobin concentration, relative affinity constant of hemoglobin for CO and oxygen (O_2), barometric pressure, and relative diffusive capability of the lungs.[48] EPA has chosen to exclude consideration of smokers from the following discussion since the primary source of CO and resulting COHb levels for these individuals is from the intake of tobacco smoke. The contribution of ambient CO exposures to the final COHb level of smokers is relatively insignificant.

When individuals inhale air containing a constant concentration of CO, several hours are required for them to reach a state of equilibrium, at which point the COHb level in the body no longer increases. For a given CO level, the time required to reach equilibrium is influenced by a number of factors, the most important for normal individuals being the level of activity as measured by the alveolar ventilation rate (V_A). At low levels of activity (rest/intermittent light activity, V_A=5–10 L/min), approximately 8–12 hours are needed for equilibrium to be achieved. For moderate walking (3 miles per hour, V_A=20 L/min), the equilibrium level of COHb may be reached in half that time, or around 4–6 hours.

Individuals are generally not, however, exposed to constant concentrations for long periods of time. The non-equilibrium levels of COHb must be determined in order to evaluate the COHb levels associated with alternative 1- and 8-hour average standard levels for CO. Thus, EPA must rely on a model or equation to obtain information on COHb levels resulting from short-term CO exposures.

A model known as the Coburn equation [49] has been developed which permits the calculation of COHb concentration as a function of time, with the physiological factors previously mentioned considered. Peterson and Stewart [49,50] have reported excellent correlation between COHb values measured in both male and female subjects and those predicted by the Coburn equation. In addition, at levels of activity sufficient to increase alveolar ventilation up to 2.5 times above resting levels, they measured COHb levels that were consistent with the theoretical values obtained by use of the Coburn equation. While further experimental verification is needed to demonstrate that the Coburn equation accurately predicts uptake and excretion of CO under a variety of conditions, EPA believes it is the best tool available for estimating the COHb levels that will result from short-term (1- to 8-hour) exposures to ambient CO concentrations. Furthermore, the CASAC agreed that for a given set of physiological factors, the Codburn model predicts with reasonable accuracy the typical COHb levels resulting from specified CO exposures for non-equilibrium situations.[51]

Table 1 presents baseline or nominal estimates of the Coburn model as to the COHb levels expected to be achieved by non-smokers exposed to various constant concentrations of CO for either 1 or 8 hours. This table does not take into account the impact of fluctuating CO concentrations on CO uptake; this impact will be discussed in a subsequent section. A moderate lung ventilation rate, equivalent to a 3 mile-per-hour walk, has been selected as a reasonable estimate of the mean ventilation achieved by individuals with angina or coronary heart disease while exercising. The impact of activity level on rates of COHb accumulation is most apparent for shorter duration exposures. As illustrated in the table, very little difference exists in the COHb levels for

of each study. While the table includes

V 4 5 A G 1 8 8 0 UMI

resting and moderately exercising persons for 8-hour exposures to CO concentrations near the current standard level. Consequently, assumptions regarding exercise levels at the 8-hour averaging time are not as critical in estimating COHb levels as for the 1-hour averaging time.

Table 1.—*Predicted COHb Response to Exposure to Constant CO Concentrations*

[Percent COHb based on Coburn Equation [1]]

CO (ppm)	Exposure time (hours)			
	1		8	
	Intermittent rest/light activity	Moderate exercise	Intermittent rest/light activity	Moderate exercise
7.0	0.7	0.7	1.2	1.2
9.0	.7	.8	1.4	1.5
12.0	.8	1.0	1.8	1.9
15.0	1.0	1.1	2.2	2.4
20.0	1.1	1.4	2.9	3.1
25.0	1.3	1.8	3.6	3.8
35.0	1.8	2.1	4.9	5.2
50.0	2.2	2.8	7.0	7.6

[1] Assumed parameters: $\dot{V}_E$ (Alveolar ventilation rates): intermittent rest/light activity=10/min, moderate activity=20 L/min (equivalent to 3 mph walk on level ground or light industry or housework); Hb (hemoglobin)=15 g/dl. (normal male); altitude=sea level; initial COHb level=0.5 percent (normal level due to endogenous CO production); $\dot{V}_{CO}$ (endogenous CO production rate)=0.007 ml./min (normal); V_b (blood volume)=5500 ml. (normal male); M (relative affinity constant of hemoglobin for CO and O_2)=210; D_L (lung diffusivity for CO)=30 mL/(min-mm Hg) (nominal).

Increased exodgenous CO accumulation rates or endogenous CO production, or both, could result in COHb levels higher than inticated in Table 1 for individuals with anemia, pregnant women, and individuals taking certain tyupes of medication or drugs. For example, because of their reduced hemoglobin (Hb) levels, anemic individuals approach equilibrium levels of COHb more rapidly than those with normal Hb levels, and consequently attain a higher COHb level for a given exposure to CO. Such considerations in selecting a standard with an adequate margin of safety will be discussed below.

Selecting the Level of the Primary Standard

Section 109(b)(1) of the Clean Air Act requires EPA to set primary standards, based on the air quality criteria and allowing an adequate margin of safety, which in the Administrator's judgment are requisite to protect the public health. The legislative history of the Act makes quite clear the Congressional intent to protect sensitive persons who in the normal course of daily activity are exposed to the ambient environment. Air quality standards are to be established with reference to protecting the health of a representative, statistically related, sample of persons comprising the sensitive group rather than a single person in such a group.

EPA's objective in setting the standard levels for the carbon monoxide primary standard is, therefore, to select levels that will reflect an accurate consideration of the existing medical evidence, an adequate assessment of the uncertainties in this evidence, and a reasonable provision for scientific and medical knowledge yet to be acquired, so as to protect sensitive population groups with an adequate margin of safety. The criteria document supports the conclusion that a clear threshold of adverse health effects cannot be identified with certainty for CO or even for COHb levels, which are more directly related to health effects than ambient concentations of CO. Focusing on COHb levels, there is rather a continuum consisting of COHb at which health effects are certain through levels at which scientists can generally agree that health effects have been convincingly shown, and down to levels at which the indications of health effects are less certain and harder to identify. (This does not necessarily mean that there is no threshold, other than zero, for CO; it simply means that no clear threshold can be identified with certainty based on existing medical evidence.) Thus, selecting a standard that takes into account the known continuum of effects is a judgment of prudent public health practice, and does not imply some discrete or exact margin of safety appended to a known threshold.

The uncertainties associated with such a judgment relate to several factors. First, human susceptibility to health effects varies considerably among individuals in the population and EPA cannot be certain that experimental evidence has accounted for the full range of susceptibility. Second, EPA cannot be certain that all effects occurring at low CO levels have been identified or demonstrated. Third, there is variability and uncertainty about the relationship between ambient CO concentrations and elevated COHb levels for different segments of the population and for varying exposure conditions. These and similar sources of uncertainty are discussed more fully below.

The Clean Air Act, as the Administrator interprets it, does not permit him to take factors such as cost of attainment or attainability into account in setting the level of the standard; the standard is to be one that will adequately protect public health. Actual implementation of the standards is reserved primarily to the States under Section 110 of the Act, and therefore a certain degree of flexibility is accorded individual States in determining how to attain the standards in the most economical and practical matter. The Administrator recognizes, however, that controlling CO to very low levels is a task that can have significant impact on economic and social activity.

This recognition causes the Administrator to reject as an option the setting of a zero-level standard as an expedient way of protecting public health without having to decide among uncertainties. Whether or not that option is available under the law, EPA believes that Congress did not intend the Administrator to "take the easy way out" simply because the health evidence supporting a standard above zero is beset with uncertainties. Rather, the uncertainties must be confronted and taken into account. Thus, the decision as to what standard protects public health with an adequate margin of safety must be based on a consideration of the uncertainty that any given level is low enough to prevent adverse health effects and on the relative acceptability of various degrees of uncertainty, given the seriousness of the effects.

In selecting the proper levels for the standard, EPA must make assessments and judgments in the following areas:

1. Identification of the lowest COHb level that medical research to date has convincingly linked to adverse health effects in sensitive persons.
2. Description of the nature and severity of effects against which the standard is to protect.
3. Characterization of the uncertainties in the medical evidence concerning the lowest COHb levels at which sensitive individuals would be affected.
4. Characterization of the sensitive population.
5. Selection of a CO standard level that provides an adequate margin of safety, based on COHb values that could be achieved by sensitive population groups and taking into account the various uncertainties involved.

Reported Effect Levels and Severity of Effects

Table 2 provides a summary of key health effects studies reporting effects due to elevated blood COHb levels. The table is included only as an aid for the following discussion and should be used only in conjunction with qualifying statements made in the criteria document regarding the technical merits of each study. While the table includes studies reporting effects in two of the basic categories described earlier, the selection of a standard will be based primarily on the cardiovascular effect category, as discussed previously.

Table 2.—*Key Studies (Compilation of Effects Reported in Selected Human Studies Examining Carbon Monoxide Exposures)*

CO concentration, ppm	Exposure duration, hours	Percent carboxyhemoglobin, group mean (and range)	Reported effect(s) [1]	Reference(s)
Not reported (passive smoking).	2	1.8 and 2.3	Duration of exercise until onset of angina decreased 22 and 38 percent.	9. Aronow, 1978.
50	2	2.7 (2.5 to 3.0)	Duration of exercise until onset of angina decreased 16 percent.	Aronow and Isbell, 1973.
50	2	2.8 (2.4 to 3.1)	Duration of exercise until onset of leg pain (intermittent claudication) in persons with peripheral vascular disease decreased 17 percent..	7. Aronow et al., 1974.
50	¾	2.9 (1.3 to 3.8)	Duration of exercise until onset of angina decreased 15 percent.	5. Anderson et al., 1973.
150	(a)	3.9 (3.4 to 4.4)	Impairment of ventricular (heart) functioning in anginal patients with coronary heart disease.	51. Aronow et al., 1974.
100	1	4.0 (3.0 to 4.9)	Duration of maximal exercise in 10 healthy nonsmokers decreased 5 percent, with 1 subject exhibiting an electrocardiographic abnormality following CO and exercise.	52. Aronow and Cassidy, 1975.
100	1	4.1	Duration of exercise until marked difficulty in breathing (dyspnea) in persons with emphysema decreased 33 percent.	31. Aronow et al., 1977.
100	¾	4.5 (2.8 to 5.4)	Duration of exercise until onset of angina decreased 15 percent and duration of pain increased 31 percent.	5. Anderson et al., 1973.
42 to 63 (mean 53)	[4]1.5	5.1 (3.8 to 8.0)	Duration of exercise until onset of angina decreased 30 percent after freeway exposure and was still decreased 15 percent 2 hours later.	53. Aronow et al., 1972.
2	[5]2	2.9 (0.6 to 3.9)

[2] Intermittent.
[3] Not reported.
[4] Freeway.
[5] After return from freeway.

The present NAAQS for CO is not based on the cardiovascular effect category but, rather, on central nervous system effects. The **Federal Register** notice (36 FR 8186) promulgating the existing standard identified 2 percent as the critical COHb level on the basis of a study by Beard and Wertheim [1] which reported an impairment in discrimination of time intervals in subjects having estimated COHb levels of 2 to 3 percent. The revised criteria document states that considerable questions have been raised as to the validity of these observations and points out that attempts to replicate these findings have been less than satisfactory. As stated previously, EPA has concluded that other central nervous system effects, such as vigilance and visual function decrements, may occur in the range of 4 to 6 percent COHb.

EPA proposes to base its selection of the standard on the evidence regarding the aggravation of angina and other cardiovasular diseases by CO exposures. As discussed previously, EPA considers such aggravation to be an adverse health effect. This effect appears to be more serious than the time discrimination effect on which the present standard is based. Such cardiovascular effects, as exhibited by reduced exercise time to onset of chest pain (angina) or leg pain (peripheral vascular disease), have been reported in three studies at 2- to 4-hour CO exposures that result in group mean COHb levels in the range of 2.7 to 2.9 percent.[5-7] The CASAC CO Subcommittee [8] also suggested that the medical evidence to date best supports the 2.7 to 3.0 percent COHb range as the lowest group mean level convincingly linked to adverse health effects in sensitive persons.

In all three studies, individuals were affected at COHb levels below 2.7 percent, as low as 2.4 percent in one study.[7] In the study by Anderson et al.[5], one individual showed a slight (3 percent) reduction in time to onset of angina at a final COHb level of 1.3 percent. This individual's reported initial COHb value of 0.0 percent, which seems unrealistically low and probably reflects the uncertainty involved in measuring very low COHb levels, raises some question about the validity of this data point.

In 1978, Aronow [10] reported that a lower range (1.8 to 2.3 percent) of group mean COHb resulted in angina aggravation, but these COHb levels were obtained through a passive smoking exposure regime, with possible confounding factors. The criteria document states that "it is possible that in addition to carbon monoxide and nicotine, other components of tobacco smoke, including oxides of nitrogen and hydrogen cyanide, and possibly psychological factors, may have contributed to the decrease in exercise performance." The CO Subcommittee of the CASAC [8] agreed and cautioned EPA not to use this study as the basis for identifying the lowest COHb level that medical research to date has convincingly linked to adverse health effects in sensitive persons. On the basis of these comments, EPA is considering the 1978 Aronow study only as a factor in selecting an adequate margin of safety. In a subsequent section of this preamble, a new human CO exposure study conducted by Dr. Aronow, not available at the time of criteria document publication, is discussed.

Uncertainty Concerning Lowest Effect Levels

While the lowest group mean COHb level convincingly linked to adverse health effects is in the range of 2.7 to 2.9 percent, a clear threshold for adverse health effects has not been established. Several factors make it difficult, if not impossible, to identify the minimum level of COHb associated with adverse health effects. As indicated above, human susceptibility to health effects varies considerably among individuals, and EPA cannot be certain that experimental evidence has accounted for the full range of susceptibility. Indeed, for ethical reasons, clinical investigators have generally excluded from study individuals who may be very sensitive to CO exposures, such as those with myocardial infarction or multiple disease states (e.g., angina and hemolytic anemia). Another factor is that there is an absence of negative clinical CO studies at lower COHb levels; in fact, no clinical studies have been reported for COHb levels lower than those reported in Table 2. In this regard, EPA has funded additional research that will examine aggravation of angina at lower COHb levels than previously tested. Finally, EPA cannot be certain that it has identified all adverse health effects that are related to lower level CO exposures.

V 45 AG 1980 UMI

Potentially Sensitive Populations

Convincing experimental evidence indicates that persons with angina and other cardiovascular diseases are sensitive to low-level CO exposures. In addition, theoretical considerations, animal studies, and evidence from studies of cigarette smokers provide reason to believe that other groups in the population (e.g., fetuses, anemics and visitors to high altitudes) may be sensitive to CO exposure. However, since no human experimental evidence exists that identifies CO effect levels for these other groups, EPA is considering the possible effects of CO on these groups only in its determination of an adequate margin of safety.

1. *Fetuses.* One important area in which animal studies provide information and in which no human data exist is in the effects of CO on the fetus. Studies have shown that, for long-term CO exposures, the animal fetus develops higher COHb concentrations than their pregnant mothers. Detrimental effects on fetal development (reduced birth weight, increased newborn mortality, and behavioral effects) have been observed in experimental animal CO exposure studies and in studies of the effects of maternal smoking on human fetuses. These findings denote a need for caution in assessing possible human fetal effects from CO exposures and in evaluating the margin of safety provided by the CO standard.

2. *Anemic Individuals.* Because of their reduced hemoglobin levels, persons with anemia are expected to attain higher COHb levels than a normal person for a given short-term CO exposure, or attain equilibrium COHb levels more quickly. In addition, certain types of anemia (hemolytic anemia) result in an increased endogenous production of CO, so that increased COHb levels would be expected for a given exogenous CO exposure. Consequently, anemic individuals who also suffer from angina or who are pregnant would seem to represent particularly high-risk categories. Since, however, very little data are available regarding the effects of CO exposure on anemic individuals, EPA is considering such persons only in its determination of an adequate margin of safety.

3. *Visitors to High Altitude Locations.* Hypoxemia can occur at higher altitudes as a result of reduced oxygen pressure in the atmosphere; in addition, an increase in altitude can increase the rate of COHb accumulation in the blood. Normal residents of high-altitude locations appear to have adjusted to the elevation and do not seem to exhibit an interaction between the effects of altitude and CO exposures [55] although the possibility of adverse effects on residents is a factor in setting a standard with an adequate margin of safety. Of greater concern to EPA are those persons with impaired cardiovascular systems who visit high altitude locations and may be adversely affected by the combination of altitude and CO hypoxemia.

CO Uptake Uncertainty

1. *Individual Variation and Dynamic Considerations.* Table 1 presents baseline estimates of the Coburn model as to the COHb levels expected to be achieved by non-smokers exposed to constant CO concentrations for 1 or 8 hours. Uncertainties exist, however, in using these estimates to decide which standard provides an adequate margin of safety. First, even among normal persons variations exist in the physiological parameters used in the Coburn model. These variations are sufficient to produce noticeable deviations from the COHb levels in Table 1 that were predicted using baseline or nominal parameters. Even more substantial variations in these parameters are observed in population groups (such as anemics) that may, for this reason, be more sensitive to CO exposure. Second, predictions based on exposure to constant CO concentrations inadequately represent the response of individuals exposed to widely fluctuating concentrations of CO that typically occur in ambient exposure situations. Ott and Mage [56] investigated this point using an empirically derived CO uptake model to estimate COHb responses as a function of time for actual 1-hour average CO air quality data measured over a 12-month period in San Jose, California. Their calculations indicated that the assumption of a constant CO concentration for an 8-hour averaging time tends to underestimate the COHb response to CO concentrations that are actually fluctuating on a much shorter time scale.

EPA has attempted to represent these uncertainties by preparing a sensitivity analysis using the Coburn model to predict the COHb responses to specific patterns of fluctuating CO concentrations for individuals with physiological parameters different from the baseline values. As explained in a staff analysis paper that has been placed in the docket (OAQPS 79–7, II–A–1), twenty different sets of actual 1-hour average CO air quality data were adjusted to simulate attainment of alternative 8-hour standards. For each of these air quality patterns, the COHb response was evaluated on an hour-by-hour basis by using the Coburn model prediction of the COHb resulting from one hour's exposure as the initial COHb level for the next hour.

Table 3 presents the results of this dynamic simulation of COHb responses to a range of realistic patterns of fluctuating CO concentrations. The baseline case is included for comparison with the estimates given in Table 1 for exposure to constant CO concentrations. In Case 2, the physiological parameters of the individuals all differ from baseline values in the direction that increases the COHb response to CO exposures. The parameters used for this case do not seem unreasonable, since the value of each parameter lies within the range reported in the literature as normal. The choice of these parameters is explained in the staff paper mentioned above (OAQPS 79–7, II–A–1). Case 3 is an individual with hemolytic anemia; the physiological parameters chosen for this case are average values reported for 12 hemolytic anemia patients evaluated by Coburn et al. [48]

Table 3.—*Coburn Model Estimates of COHb Levels Associated With Attainment of Alternative 8-Hour CO Standard Levels* [1] [2]

Standard level, ppm	Maximum COHb levels (percent) predicted on day when annual maximum 8-hour CO concentration occurs, for a range of actual air quality patterns adjusted to simulate attainment of the specified standard		
	Case 1 [3]	Case 2 [4]	Case 3 [5]
7	1.2–1.5	1.6–2.0	1.8–2.2
9	1.4–1.9	2.0–2.6	2.2–2.8
12	1.8–2.4	2.5–3.3	2.8–3.6
15	2.3–3.0	3.0–4.1	3.3–4.4

[1] COHb responses to fluctuating CO concentrations were dynamically evaluated using the Coburn model prediction of the COHb resulting from one hour's exposure as the initial COHb level for the next hour.
[2] Coburn model parameters:
Case 1: As given in table 1, except only $V_A = 10$ L/min.
Case 2: $V_A = 10$ L/min; Hb = 13 g/dL; altitude = sea level; initial COHb = 0.7 percent; $V_{co} = 0.014$ mL/min; $V_b = 3500$ mL; $D_{L_{co}} = 40$ mL/(min-mm Hg); M = 246.
Case 3: $V_A = 10$ L/min; Hb = 9 g/dL; altitude = sea level; initial COHb level = 1.8 percent; 0.030 mL/min; $V_b = 4800$ ml; $D_{L_{co}} = 25$ mL/(min-mm Hg); M = 246.
[3] Baseline or nominal physiological parameters.
[4] High rate of physiological parameters for normal persons (sea level).
[5] Typical hemolytic anemic individual.

It would be desirable to conduct a sensitivity analysis similar to that reported in Table 3 for alternative 1-hour average standards. Since, however, EPA does not have CO air quality data for periods of less than 1-hour, it is not possible to perform a dynamic simulation of COHb responses to CO concentrations that are fluctuating on a time scale less than 1 hour. Consequently, EPA has conducted a sensitivity analysis that simply depicts the variation in estimated COHb responses to the maximum 1-hour CO concentrations permitted by alternative standards for individuals with physiological parameters different from the baseline values. Table 4 presents the results of this analysis for each of the three cases illustrated in Table 3 and the case where an individual has an initial elevated COHb level due to exogenous sources (e.g., passive smoking).

While the upper end of the range of COHb estimates in Tables 3 and 4 indicates the potential that some individuals might achieve COHb levels in the vicinity of the reported effects levels, these tables do not provide information on the possible number of individuals at various COHb levels due to variations in physiological parameters. EPA undertook an analysis to obtain such information, and the results are described in the above mentioned analysis paper (OAQPS 79–7, II–A–1). The analysis assumes that all of the physiological parameters used in the Coburn equation are normally distributed in the sensitive population, with the exception of the alveolar ventilation rate (exercise level). The analysis of alternative 8-hour standards is based on an alveolar ventilation rate of 10 liters per minute (rest/intermittent light activity). For the analysis of alternative 1-hour standards, the alveolar ventilation rate was set at 20 liters per minute (moderate exercise).

With respect to Case 3, EPA estimates the number of cardiovascular and peripheral vascular disease patients who also have hemolytic anemia probably is less than 1,000, compared with an estimated 7,700,000 cardiovascular and peripheral vascular disease patients (based on 1979 population data). This estimate is based on the fact that most cardiovascular patients are over age 40 and on the fact that the vast majority of hemolytic anemic individuals are under 40. Because the group of individuals with cardiovascular or peripheral vascular disease who also have hemolytic anemia is so small, EPA is focusing its decision on protecting the 7,700,000 sensitive individuals with cardiovascular heart or peripheral vascular disease. This reflects EPA's response to the legislative history which calls for the Administrator to use his judgment in identifying and protecting the most sensitive group of citizens but not necessarily the most sensitive individuals in that group.

Table 4.—*Coburn Model Estimates of COHb Levels Associated With Alternative 1-Hour CO Standard Levels*

Standard level	COHb levels (percent) predicted for a range of ventilation rates for exposure to the maximum 1-hour average CO concentration permitted by the specified standard [1]			
	Case 1 [2]	Case 2 [3]	Case 3 [4]	Case 4 [5]
20	1.1–1.4	1.8–2.2	2.7–2.9	2.3–2.6
25	1.3–1.6	2.1–2.6	3.0–3.3	2.6–3.0
35	1.6–2.1	2.7–3.5	3.6–4.1	3.2–3.9

[1] Coburn model parameters are as presented for Table 3, except a range of alveolar ventilation rates is presented. The lower value represents rest/intermittent light activity (V_A=10 L/min) and the higher value represents moderate exercise (V_A = 20 L/min).
[2] Baseline or nominal physiological parameters.
[3] High range of physiological parameters for normal persons (sea level).
[4] Typical hemolytic anemic.
[5] Same as case 2, except assumes initial elevated COHb (1.5%) from external sources.

Case 2 is based on individuals with physiological parameters whose values are in the high range for normal persons, but does not provide information on the number of individuals in the sensitive population that would attain those levels. Table 5 shows the estimated percentage of the sensitive population with COHb greater than, or equal to, the specified final COHb value. It was assumed that the sensitive population was exposed to air quality levels associated with alternative standards shown in the table. In the analysis, twenty different sets of actual 1-hour average CO air quality data were adjusted to simulate attainment of alternative 8-hour standards. The estimates in Table 5 are based on a representative pattern from the group of twenty air quality data sets. The sensitive population considered is that segment of the population having cardiovascular heart disease (CHD) or peripheral vascular disease. The total estimated population in this sensitive group in 1979 was 7,700,000 people. One point to keep in mind is that the estimates shown in Table 5 are based on the assumptions that the entire sensitive population is exposed to air quality levels just meeting the standard and to the representative pattern of 1-hour average CO concentrations. In actuality, only a fraction of the population would be exposed under these conditions and, thus, the number of individuals at high COHb levels would probably be smaller than the estimates given in Table 5.

Table 5.—*Cumulative Percent of Sensitive Persons With COHb > Specified Final COHb Value, When Exposed to Air Quality Associated With Alternative Standards*

[Cardiovascular heart and peripheral vascular disease] [1]

	Dynamic calculation [2]			Static calculation [3]		
	7 ppm, 8 hr	9 ppm, 8 hr	12 ppm, 8 hr	20 ppm, 1 hr	25 ppm, 1 hr	30 ppm, 1 hr
Final COHb (percent): [4]						
2.9			0.01			<0.01
2.7			.2			.01
2.5			6		<0.01	.2
2.3		<0.01	43		.01	4
2.1		.2	89	<0.01	.6	29
1.9	<0.01	13	99	.1	13	73
1.7	.2	73	100	5	61	95
1.5	20	99	100	44	95	100
1.3	89	100	100	91	100	100

[1] Estimated total cardiovascular heart disease and peripheral vascular disease population is 7,700,000.
[2] Assumes all physiological inputs to Coburn equation are normally distributed in the sensitive population.
[3] COHb responses to fluctuating CO concentrations were dynamically evaluated using the Coburn model prediction of the COHb resulting from 1 hour's exposure as the initial COHb level for the next hour. The series of 1-hour CO concentrations used was a representative pattern selected from 20 sets of actual air quality data that just reached the level of the specified 8-hour standard. These results are based on alveolar ventilation rate of 10 L/min (intermittent rest/light activity).
[4] COHb levels calculated on the basis of constant level exposure and an alveolar ventilation rate of 20 L/min (moderate activity).

The results of the analysis indicate that more than 99 percent of the sensitive group (i.e., those individuals with cardiovascular heart or peripheral vascular disease) would not be expected to reach, or exceed, 2.1 percent COHb upon exposure to air quality associated with the proposed standard of 9 ppm, averaged over 8 hours. Approximately 13 percent of the sensitive group could be expected to reach or exceed 1.9 percent COHb if they were exposed to CO levels associated with the proposed 9 ppm, 8-hour standard. The proposed standard of 25 ppm, averaged over 1 hour, provides an approximately equivalent degree of protection.

Case 4 in Table 4 shows that quite high COHb levels are theoretically possible, given a high initial COHb from external sources. As in the above analysis, EPA has estimated how many people are expected to reach such final

COHb levels. The estimates are presented in Table 5. In the analysis, it was assumed that the entire population was given the previous exposure and that the entire population was exposed to alternative 1-hour air quality standard levels. While it is theoretically possible to reach a final COHb of 3.0 percent (see Table 4) for a 25 ppm standard, we have estimated (Docket Reference OAQPS 79–7, II–A–1) that only a very small fraction of the sensitive group (less than .001 percent) would ever experience such an outcome even if these worst-case assumptions are used.

2. *Bolus Effect.* Another factor to be considered in selcting a standard with an adequate margin of safety is the uncertainty relating to adverse health impacts from very short-duration (5 to 10 minutes or less) high-level CO exposures. While the data base is incomplete regarding the mechanism or effect of the peak short-term exposures, the criteria document and the CASAC CO Subcommittee have emphasized the potential seriousness of CO delivered to the body in this manner. The consequence may well be adverse effects separate and, perhaps, more intense than those associated with elevated COHb concentrations, a phenomenon referred to as the bolus effect. While this factor should be considered in establishing an adequate margin of safety for the standard, existing air quality data do indicate that attainment of a longer averaging time standard should limit the magnitude of short-term peak concentrations, as discussed in a subsequent section of this notice. Consequently, the bolus effect, while of concern in selecting a margin of safety, does not appear to be an overriding consideration in this standard selection process.

Pollutant Interactions and Smokers

Few studies have examined the interactions of carbon monoxide with other pollutants. One investigation [57] examining simultaneous exposures of normal and reactive subjects to 0.25 ppm ozone, 0.3 ppm nitrogen dioxide, and 30 ppm CO for 2 hours on 2 successive days detected no consistent lung function changes attributable to exposure. The angina aggravation observed in Aronow's passive smoking study [18] may have been due to interactions between carbon monoxide and other pollutants (e.g., nicotine, hydrogen cyanide, particulates, and nitrogen oxides) contained in the tobacco smoke. The possible interactions between CO and smoke-related pollutants should be considered in determining a margin of safety for the CO standard since persons may, in addition to ambient CO exposures, be exposed in passive smoking situations.

On the other hand, EPA does not propose to consider active smokers in determining the need for a margin of safety for the CO ambient air standard. Little or no evidence exists that would suggest the need for more restrictive national ambient air quality standards to protect smokers from a possible incremental COHb burden from the air. In fact, even in a pristine environment, smokers will have COHb levels ranging from 2 to 17 percent. Furthermore, existing evidence suggests that cigarette smokers, exposed to an environment where CO is at the ambient standard level, are generally exhaling more CO into the air than they are inhaling from that environment. While these individuals are at a definite risk from accelerated incidence of heart and related disease, these risks are principally associated with cigarette smoking, which is generally voluntary, and not with incremental CO levels at or near the standard level.

Choice of the Standard Levels

As discussed above, in EPA's determination of an air quality standard with an adequate margin of safety, the Agency must consider uncertainties regarding the lowest effect levels for aggravation of angina and other cardiovascular diseases and peripheral vascular disease, as well as uncertainties in the uptake of CO by sensitive population groups in its determination of an air quality standard with an adequate margin of safety. Several studies [4–6] have reported aggravation of angina and intermittent claudication by CO exposures producing group mean COHb levels in the range of 2.7 to 2.9 percent, with some individuals exhibiting aggravation as low as 2.4 to 2.5 percent. The sensitivity analysis conducted by EPA indicates that more than 99 percent of the sensitive population (those who suffer from cardiovascular heart or peripheral vascular disease) would be kept below 2.1 percent COHb upon exposure to air quality associated with the standard of 9 ppm, averaged over 8 hours. On the basis of these considerations, EPA proposes to set the 8-hour average National Ambient Air Quality Standard for carbon monoxide at 9 ppm. This standard will be attained when the expected number of days per calendar year with maximum 8-hour average concentrations above 9 ppm is equal to or less than 1, as explained in a subsequent section of this notice.

With regard to the 1-hour average CO standard, EPA has previously recognized that, in setting the existing 35 ppm standard, the Agency failed to consider the influence of light exercise on the aggravation of angina patients' condition when exposed to CO.[58] Tables 1 and 4 illustrate the impact of moderate exercise (walking 3 miles per hour) on uptake of various constant CO concentrations. The CASAC CO Subcommittee indicated that this exercise level represented a reasonable estimate of the mean ventilation rate achieved by individuals with angina and other cardiovascular diseases while exercising.[51]

Comparison of the COHb values in the moderate exercise column of Table 1 for 1-hour CO exposures to the values given for exposure to 9 ppm for 8 hours indicates that a 25 ppm 1-hour average standard would be comparable to the proposed 8-hour standard in terms of COHb protection. The results of the sensitivity analysis shown in Table 5 also indicate that a 25 ppm 1-hour standard would prevent more than 99 percent of the sensitive population from attaining 2.1 percent COHb upon exposure to 25 ppm, averaged over 1 hour. This protection is approximately the same as that provided by the proposed standard of 9 ppm, averaged over 8 hours. The National Academy of Sciences has recommended a 1-hour CO standard approximately 30 percent more stringent than the present (35 ppm) standard.[59] On the basis of the preceding analyses and considerations, EPA proposes to revise the 1-hour standard from 35 to 25 ppm.

Given the various uncertainties referred to above, the COHb levels associated with the 9 ppm, 8-hour and 25 ppm, 1-hour standards do not afford a large degree of protection for sensitive persons exposed at these ambient concentrations. EPA is therefore soliciting comments from the public as to whether the 1-hour and 8-hour standards provide an adequate margin of safety.

In determining the appropriate margin of safety, the Agency has considered the following factors, all of which have been discussed previously and are briefly restated below in no particular order of significance:

(1) The Aronow passsive smoking study,[18] which may indicate a lower threshold of adverse health effects from COHb in spite of the possibly confounding presence of other components of tobacco smoke.

(2) Various uncertainties regarding the lowest adverse health effect levels from CO, including those related to (a) variations in individual susceptibilities; (b) the lack of clinical studies, because of ethical considerations, on very sensitive groups such as those who have

suffered myocardial infarctions, and multiple diseased patients such as those with both angina and hemolytic anemia; (c) the absence of negative clinical studies in the range of lower CO levels; and (d) whether EPA has in fact identified all adverse health effects that are related to low-level CO exposures.

(3) Uncertainties regarding additional potentially sensitive groups, who may have elevated COHb levels because of increased exogenous accumulation rates or endogenous production. These potentially more sensitive groups include (a) fetuses, (b) pregnant women (particularly in the central cities), (c) anemics, (d) visitors to high altitude locations, and (e) persons on certain medications.

(4) Uncertainties regarding the uptake of CO, including those related to (a) the accuracy of the Coburn equation in assessing variations in the population, (b) whether predictions based on exposures to constant levels of CO adequately reflect the widely fluctuating concentrations that occur in ambient exposure situations, and (c) the expected number of sensitive individuals at various COHb levels after exposure to air quality levels associated with alternative standards.

(5) Uncertainty regarding adverse health effects that may result from very short duration high-level CO exposures (the bolus effect).

(6) Possible interactions between CO and other pollutants, especially those encountered in passive smoking situations.

Other Aspects of the Primary Standard

Averaging Time

Selection of the averaging time, form of the standard, and allowed number of exceedances are all key elements in the process of reaching a decision on the CO standard and have a direct effect on the required level of control. The NAAQS's for CO are presently 9 ppm and 35 ppm for 8-hour and 1-hour averaging times, respectively, not to be exceeded more than once per year.

The original 8-hour averaging time was selected primarily because most individuals achieve equilibrium or near-equilibrium levels of COHb after 8 hours of exposure. As mentioned previously, approximately 4–12 hours are required to achieve an equilibrium level of COHb upon continuous exposure to CO. The time to reach equilibrium is influenced primarily by the exercise level of the individual, with shorter times required for greater exercise. Another basis for the 8-hour averaging time is that most people are exposed in approximately 8-hour blocks of time (e.g., work, sleep). With respect to the 1-hour averaging time, the health effects rationale is now stronger than in 1971. Aronow and his coworkers have conducted several studies in which health effects have been reported for persons with cardiovascular disease or chronic obstructive pulmonary disease after 1- to 2-hour exposures. In light of the above considerations, EPA does not propose to change the current 1-hour and 8-hour averaging times for the CO NAAQS. EPA is, however, soliciting public comment as to the necessity of maintaining two separate averaging times for the CO standard.

While the majority of health effects evidence is linked to 1 hour or longer exposures, there is also concern for shorter CO exposure durations. Exposure to much higher CO concentrations (200–2000 ppm) for very short periods of time (a few minutes) may result in significant localized COHb blood levels (bolus effect). Analyses of existing air quality data suggest, however, that attainment of a longer averaging-time standard will limit the magnitude of short-term peak concentrations in the ambient air. For example, air quality data obtained in 1974–1976 at a site in Los Angeles that is 6 meters (m) high and 3 m from the curb of a highway bearing an average traffic load of 25,000 vehicles per day were analyzed to determine, for various averaging times, the peak concentrations that would be expected if the present NAAQS's were just attained. The maximum values actually observed were 46 and 30 ppm for 1- and 8-hour averaging times. Using a two-parameter averaging time model,[60] EPA calculated that attainment of the 8-hour standard would result in peak 5- and 10-minute concentrations of 36 and 29 ppm, respectively. Although this site might not represent the worst possible situation, the analysis does seem to indicate that attainment of longer averaging time standards would tend to limit short-term peaks to levels that would not present a concern with regard to a bolus effect.

Form of the Standard

The current CO standards specify that the hourly average CO concentration must not exceed 40 mg/m^3 (approximately 35 ppm) more than once per year and that the 8-hour average CO concentration must not exceed 10 mg/m^3 (approximately 9 ppm) more than once per year. The limitations of this deterministic (once-per-year) approach were discussed in connection with the proposal of a revised ozone standard (43 FR 26967). A main concern with the present "once-per-year" form of the CO standards is that to maintain such a standard year after year necessitates a zero probability that the second high value will ever exceed the level of the standard. On a practical basis, however, permitting a single exceedance in a year means that there is some possibility of occasionally having two or more exceedances in a particular year. To resolve this logical conflict and to adjust for the effect of missing data, the ozone standard was proposed and promulgated in terms of the expected number of exceedances per calendar year (43 FR 26970, 44 FR 8220). EPA proposes to use this expected exceedances format for the CO standards.

EPA also proposes to use a daily interpretation for exceedances of the CO standard. This approach is consistent with the interpretation of exceedances for the ozone standard (44 FR 8220) and means that exceedances would be counted on the basis of the number of days on which the standard level was exceeded. As in the case of the ozone standards, the use of a daily interpretation is not predicated on the interpretation of the health data. At the same time, the health data do not argue against use of a daily interpretation. Use of such an interpretation, however, constitutes a data reduction step that simplifies daily reporting and reduces the possible impact of a single unusual meteorological event. Thus, exceedances of the 1-hour CO standard will be based upon the number of days with maximum hourly CO averages above the level of the 1-hour standard. The 8-hour standard will also be interpreted in terms of the number of days with 8-hour averages above the level of the 8-hour standard. This topic is treated in more detail in the following discussion of running averages.

Running Averages

The 8-hour CO standard warrants a more detailed discussion because of the complications associated with running averages. Because individual hourly values are available, it is possible to compute an 8-hour average beginning (or ending) with each hour of the year. This fact means that successive 8-hour averages will have 7 hourly values in common. The current CO standard was not explicit on how exceedances of the 8-hour standard level should be counted (36 FR 8187), although the subject of interpreting air quality data was subsequently discussed by EPA.[61]

To avoid any ambiguity in counting exceedances for the 8-hour CO standard and to clarify the computational procedures, EPA proposes that the CO standard include a specific method for

use with the 8-hour standard. For each

- hour through the early morning hours

production of significant health effects, (2)

adequately. EPA interprets the act as

reduce fuel consumption by reducing

ambient carbon monoxide

use with the 8-hour standard. For each hour of the day, there is an 8-hour average that ends at that hour (e.g., for 4:00 p.m. there is an 8-hour average covering the time period 8:01 a.m.–4:00 p.m.). For each day, the highest of these twenty-four 8-hour averages would be considered the daily maximum 8-hour average. If this value exceeds the level of the standard, then an exceedance has occurred on that day. It should be noted that with this method, there is the possibility that two daily exceedances could have common hourly values. For example, the 8-hour average covering 4:01 p.m.–midnight would be assigned to 1 day while the next 8-hour average, from 5:01 p.m.–1:00 a.m., would be assigned to the following day. A third daily exceedance, however, would always be on a third day and, thus, could not overlap either of the other 8-hour averages. In view of the expected exceedances format, this method appears to be a simple and adequate one for handling running averages.

Other alternatives were considered and should be briefly mentioned. One approach is to use all possible 8-hour averages for the year and an hourly interpretation so that more than one exceedance could be counted per day. This approach may be viewed as more consistent with the dosage received by a receptor, but is more stringent than the current form in that exceedances would not have to be non-overlapping. At the extreme, this interpretation could result in eight consecutive exceedances being counted from 8-hour averages that all overlap; therefore, this option was not chosen.

EPA also considered alternatives that would eliminate the possibility of overlapping exceedances by restricting the number of 8-hour averages to only three non-overlapping time periods in a day (e.g., 0:01 a.m.–8:00 a.m., 8:01 a.m.–4:00 p.m., and 4:01 p.m.–midnight). There is no assurance, however, that the maximum 8-hour average will occur during these time periods rather than one of the other twenty-one 8-hour periods that are not used. Another possible option is to select the daily maximum 8-hour average only from those 8-hour periods that are entirely contained within that calendar day. There are seventeen such 8-hour time periods covering the successive intervals: 9:01 a.m.–8:00 a.m., 1:01 a.m.–9:00 a.m., * * *, 4:01 p.m.–midnight. This particular scheme can miss peak 8-hour averages that occur late in the evening (e.g., 5:01 p.m.–1:00 a.m.).

Because of meteorological factors, high 8-hour averages can occur in time periods extending from the evening rush hour through the early morning hours (e.g., 5:01 p.m.–1:00 a.m., 6:01 p.m.–2:00 a.m.). This problem can be alleviated by offsetting the time periods considered so that the daily maximum is selected from the following seventeen 8-hour periods: 3:01 a.m.–11:00 a.m., 4:01 a.m.–noon, * * *, 7:01 p.m.–3:00 a.m. In this approach, the majority of the hours in each 8-hour time period all come from the same day. With this offset, 8-hour time periods from the evening rush hour through the early morning hours are covered. It should be noted that in each of the alternative approaches that would result in non-overlapping exceedances, every hour of the day is included in at least one 8-hour average that is used but there are certain 8-hour periods that are not covered. Comments are invited on the form of the standard and the method for handling running 8-hour averages.

Definition of When the Standard is Attained

EPA proposes to add Appendix I to 40 CFR Part 50 to interpret the standard and to explain how to determine when the standard is or is not being attained. Although this appendix is conceptually identical to Appendix H of the ozone standard (44 FR 8220), there are certain computational differences. In particular, no allowance is made for seasonal monitoring for carbon monoxide and no exclusion of missing values is allowed on the basis of adjacent daily values. The basic adjustment for missing data for CO is to assume that the fraction of missing daily values that would have exceeded the standard level is the same as the fraction of measured values that exceeded the standard level. While ambient CO levels are generally seasonal, the nature of CO emissions makes it possible to exceed the standard level at any time of the year, and therefore EPA does not intend to allow seasonal exclusions for the CO attainment computations.

Significant Harm

Section 303 of the Clean Air Act authorizes the Administrator of EPA to identify, for ambient air populations, exposure levels that constitute "an imminent and substantial endangerment to the health of persons." This language provides the basis for the "significant harm level" referred to in the following discussion.

In commenting on the authority provided in Section 303, the Senate Committee on Public Works [62] stated that

> "emergency authority is necessary to provide for immediate, effective action whenever air pollution agents reach levels of concentration that are associated with (1) the production of significant health effects, (2) incapacitating body damage, or (3) irreversible body damage in any significant portion of the general population. The term 'significant portion' (was) not intended to exclude sensitive elements of society such as asthmatics, but only those groups of particularly susceptible persons for whom other precautionary measures should be taken. Secondly, the emergency situation exists whenever there is any perceptible increase in the mortality rate."

EPA's regulations (40 CFR 51.16) require the adoption by States of contingency plans to prevent ambient pollutant concentrations from reaching specified significant harm levels. The existing significant harm levels for CO were established in 1971 (36 FR 24002) at the following levels and averaging times:

50 ppm—8-hour average
75 ppm—4-hour average
125 ppm—1-hour average

These designations were associated with a 5 to 10 percent blood COHb concentration as the critical range to be avoided. On the basis of EPA's reassessment of the earlier data and assessment of more recent medical evidence, no modifications are being proposed to the existing significant harm designations. EPA has assessed the medical evidence on exposure to higher CO concentrations that could lead to significant harm and has placed this assessment in the docket (OAQPS 79–7) for this proposed rulemaking.

Welfare Effects and the Secondary Standard

Carbon monoxide is a normal constituent of the plant environment; plants can both metabolize and produce CO. This fact may explain the relatively high levels of CO necessary to produce detrimental effects to vegetation. The lowest threshold for significant effects in vegetation has been reported at 100 ppm for 3 to 34 days for an inhibition of nitrogen fixation in legumes. Since CO concentrations of this magnitude are rarely if ever observed in the ambient air, it is very unlikely that any damage to the environment will occur from CO air pollution. Because no standard appears to be requisite to protect the public welfare from any known or anticipated adverse effects from ambient CO exposures, EPA is proposing to rescind the existing secondary standard.

Regulatory, Environmental, and Exposure Impacts

As has been noted, the Clean Air Act specifically requires that National Ambient Air Quality Standards be based on scientific criteria relating to the level that should be attained to protect public health and welfare adequately. EPA interprets the act as excluding any consideration of the cost or feasibility of achieving such a standard in determining the level of the ambient standards. However, in compliance with the requirements of Executive Orders 11821 and 11949 and Office of Management and Budget Circular A–107 and with the provisions of the recently issued Executive Order 12044, EPA has analyzed economic impacts associated with efforts to attain these standards.

Carbon monoxide air pollution is a problem afflicting most urban areas. Mobile sources are the primary cause of the problem; motor vehicles account for nearly 75 percent of the nationwide CO emissions and most high CO monitor readings occur in areas with heavy traffic concentration. Thus, control strategies for attaining the CO ambient air quality standard will have to focus on reducing the emissions from motor vehicles.

Many areas will not be able to attain the CO standard by 1982 and will, therefore, have to institute control strategies for mobile sources. Foremost among these control strategies will be inspection/maintenance (I/M) programs, which will be required in areas that cannot demonstrate attainment by 1982. Transportation control measures (TCM's) which reduce vehicle miles travelled and improve traffic flow to alleviate "hot spot" problems, will also be required in several areas with the most severe problems.

The number of areas in which the proposed standards will not be attained by 1987 depends on a number of factors, including the effectiveness of emission control systems, the effectiveness of I/M programs, growth of vehicle miles travelled (VMT) in urban areas, traffic patterns, and actual air quality values once all monitors meet EPA's siting, instrumentation, and quality assurance criteria. Taking into account all these factors, the number of non-attainment areas in 1987 (assuming no change in the standards in the interim) could range from 2 areas with the most severe problems up to possibly 20 areas. The net cost of implementing I/M programs and TCM's for CO control in response to the proposed standards will amount to approximately $400 million per year, which is in addition to about $2.4 billion required for the CO portion of the Federal Motor Vehicle Control Program.

The CO control measures should have a favorable impact on energy consumption, the savings from which are reflected in the cost given above. I/M programs will possibly have an appreciable impact on fuel economy of repaired vehicles, while TCM's will reduce fuel consumption by reducing miles-travelled and improving traffic flow.

Environmental impacts associated with control of CO emissions have been examined in a document available in docket number OAQPS 79–7. This environmental impact analysis indicates that control strategies required to attain the standard will have minimal adverse impacts on other environmental media.

Finally, EPA has prepared an exposure impact analysis document, which has been placed in docket number OAQPS 79–7. This document provides estimates of the number of person-hours of exposure to CO concentrations in excess of specified values for alternative levels of the standard; these estimates are furnished on a nationwide basis and for specific cities.

Copies of the documents presenting EPA's regulatory analyses in support of the CO standard, the environmental impact statement, and the exposure analysis are available from the U.S. EPA Library at the address given earlier in the Dates and Addresses section of this notice.

Revisions to Part 50 Regulations

In proposing to revise the CO standard, it is necessary for EPA to add Part 50 Appendix I, "Interpretation of the National Ambient Air Quality Standard for Carbon Monoxide"; the reason is that additional guidance is necessary to understand the statistical nature of the revised standard.

Part 51 Regulations and SIP Development

This proposed rule will not result in modification to the existing Part 51 regulations. With regard to SIP development under Part 51, the proposed CO standards should have little impact on the attainment status designation of most areas. However, where sufficient data is available to support a change in designation, either the State or EPA may initiate such a change under the terms of Section 107 of the Clean Air Act after the standard is promulgated. While unlikely, the proposed standard may impact the control strategies needed in some areas. These impacts will need to be analyzed on a case-by-case basis and EPA will provide guidance on this matter when the standards are promulgated. The standards will not substantially affect New Source Review Requirements.

Federal Reference Method

The measurement principle and calibration procedure applicable to reference methods for measuring ambient carbon monoxide concentrations to determine compliance with the standard are not affected by this rulemaking. The measurement principle and the current calibration procedure are set forth in Appendix C of 40 CFR Part 50. Reference methods—as well as equivalent methods—for monitoring carbon monoxide are designated in accordance with 40 CFR Part 53. A list of all methods designated by EPA as reference or equivalent methods for measuring carbon monoxide is available from any EPA Regional Office, or from EPA, Department E (MD–76), Research Triangle Park, N.C. 27711.

Relationship to Existing Monitoring Regulations

The specific requirements for carbon monoxide (CO) monitoring are established in 40 CFR Part 58. These regulations were promulgated on May 10, 1979 (44 FR 27558), and represent significant improvements over the November 1971 SIP monitoring regulations. In particular, the monitoring deficiencies that Part 58 is designed to correct are: untimely or incomplete reporting of monitoring data, collected data of unknown or questionable quality, lack of uniformity in station location, probe siting and related sampling and analysis methods, and the absence of quality assurance programs. The old regulations provided for fixed sites only, and the number of sites was based on population and degree of pollution. Under the new provisions, fixed and movable sites are allowed, but the number and location of stations are determined only after a detailed and comprehensive analysis of air monitoring objectives. Other specific changes made to improve the regulations require the adherence to specified network design and siting criteria and the development and implementation of a quality assurance program.

Under the regulations promulgated on May 10, 1979, each State is required to design a network to measure ambient concentrations of all pollutants for which standards have been established under 40 CFR Part 50. Within each State, the stations making up such networks are to be designated as the State and Local Air Monitoring Stations (SLAMS). The States are responsible for consulting with the Regional Administrator during the network design process to ensure that the design criteria for SLAMS contained in Appendix D to Part 58 are met. At the present time, drafts of these network descriptions are undergoing review by the Regional Offices. The final network design for each State will

V 45 A G 1 8 8 0 UMI

be subject to the approval of the Regional Administrator.

A critical subset of the SLAMS network will be designated as National Air Monitoring Stations (NAMS). For CO, the stations designated as NAMS are needed to assess the overall air quality progress resulting from the emission controls required by the Federal Motor Vehicle Control Program (FMVCP). Two CO NAMS will be required in each urbanized area greater than 500,000 population, with one of these stations located in a peak concentration area such as near major traffic arteries or near heavily travelled streets in downtown areas (microscale). The second CO NAMS will be a neighborhood station and should be located in areas with a stable, high population density and having a high traffic density. Micro-scale stations will generally characterize the peak concentrations usually found near heavily travelled downtown streets (street canyons) and should be representative of several similar source configurations in the urban area. Neighborhood stations should represent the concentration levels which exist over a significant portion of the urban area.

As a part of its assessment of the impact of revising the 1-hour standard, EPA examined the ambient air quality monitoring, data reporting and surveillance provisions promulgated on May 10, 1979 (44 FR 27558) to determine if changes were needed. Based on data available from the States, no revisions to these regulations are warranted. If future ambient data, new sources, changes in emission patterns or other factors should indicate the need for more intensive monitoring in selected areas, the need for revision of the State networks can be identified during the annual review of the SLAMS network required by 40 CFR Part 58, § 58.20.

For additional details on network design and siting, see Appendices D and E of Part 58.

Public Participation

EPA has solicited public comment and critique on draft revisions to the criteria document as well as comments on a draft staff paper [3] that contained a preliminary assessment of the health effects evidence. Comments on the two draft revisions of the criteria document have been considered in the final document, published simultaneously with this proposal. An explanation of how EPA addressed these comments has been placed in docket number OAQPS 79–7.

On May 29, 1979, EPA announced in the **Federal Register** (44 FR 30760) a public meeting of the Science Advisory Board's Clean Air Scientific Advisory Committee (CASAC) to discuss the second draft of the revised criteria document and a draft staff paper [3] describing the major factos that EPA staff recommended be considered in the possible revision of the primary standards. In that notice, EPA also announced the availability of the CO staff paper. The staff paper: (1) Evaluated the critical health effects evidence; (2) described the most sensitive population groups; (3) described the relationship between CO exposure and resulting COHb levels; (4) recommended redefining the standard in a statistical, rather than deterministic, form; and (5) identified either 2.5–3.0 percent COHb or 1.8 percent COHb as the lowest convincingly demonstrated effects level, the lower level being dependent on use of the 1978 Aronow passive smoking study. The CASAC public meeting was held June 14–June 16, 1979; a transcript of the meeting is available in docket number OAQPS 79–7. During the meeting and afterwards, comments were received on the aforementioned issues as well as other topics related to the standard. These comments are summarized below and have been considered in the development of this proposed rulemaking. Because of possible confounding factors such as nicotine and particulates found in cigarette smoke, the CASAC [4] and some industrial groups have strongly advised EPA not use the 1978 Aronow study in selecting the lowest convincingly demonstrated effects level. The CO Subcommittee and CASAC as a whole, with one dissenting opinion, agreed that decreased time to onset of angina was an adverse health effect that had been shown to occur at group mean COHb levels in the range of 2.7 percent to 3.0 percent.[5]

The area of greatest controversy raised during the public review process concerns the significance of the effects reported at COHb levels below 3.0 percent to 4.0 percent. Several automobile manufacturers have maintained that decreased time to onset of pain for angina patients does not necessarily represent an adverse health effect. These groups argue that low-level CO studies have failed to show statistically significant changes in other clinical measures of cardiac function such as systolic time internals. The automotive groups have also stated that other factors such as cold weather, eating a heavy meal, or sitting next to a cigarette smoker may have a greater effect on an individual with angina than ambient CO exposures. As discussed elsewhere in this premable, EPA and the CASAC CO Subcommittee [6] do not agree with this judgment about the significance of the effects demonstrated for individuals with angina or other coronary artery or peripheral vascular disease conditions.

Several industrial groups have noted that effects reported in short-term, high-level exposures may not be the same as effects resulting from long-term, low-level exposures, even if the final COHb levels are identical. While EPA agrees that the manner in which dose is delivered may have an impact on the effects experienced, the Agency does believe that there is currently insufficient evidence to support an alternative mechanism of toxicity for standard-setting purposes.

The exclusion of smokers in selecting a standard with an adequate margin of safety was supprted by CASAC.[6] The CASAC also agreed that, on the basis of available health effects evidence, persons with angina, coronary artery, and peripheral vascular disease were the population groups at greatest risk to low-level ambient CO exposures.[6] Concern was expressed by CASAC that some sensitive population groups might be adversely affected as a result of the combined effects of hypoxemia due to high-altitude exposure and CO exposures. The CASAC stated that this factor should be considered in selecting a CO standard with an adequate margin of safety.[6]

The use of the Coburn model to determine COHb levels resulting from various CO exposures received little criticism during the public review process. CASAC indicated that the Coburn model was the best available tool for predicting COHb levels resulting from CO exposures.[6] The CASAC and other groups have generally supported redefining the standard in a statistical, rather than deterministic, form. The CASAC endorsed EPA's proposal to retain the 1-hour and 8-hour averaging times for the standard.[6] Some industrial groups have commented that the 1-hour standard could be dropped since the 8-hour standard was the controlling one in terms of stringency.

A recent study brought to EPA's attention (Case et al., 1979) [63] suggests that nitrogen oxides may impair oxygen transport through formation of nitrosyl hemoglobin (NOHb) and methemoglobin (MetHb), a form of hemoglobin that is incapable of combining with oxygen. The authors suggest that this mechanism operates in conjunction with both ambient and clinical exposures to CO and, thus, puts into question the findings of studies described in the criteria document. The Case study also questios the validity of COHb measurements made with instruments used in these studies.

On the basis of careful review of the Case article and consultation with the principal author, EPA does not concur with the written views of the author. There is no sound evidence available to document: (1) The extent of nitrosyl hemoglobin (NOHb) or methemoglobin (MetHb) formation either directly or indirectly from nitrogen oxides, (2) the relative accumulation of NOHb and MetHb from various media inputs, (3) the combined impact of COHb and MetHb or NOHb, and (4) the reversibility of MetHb formation relative to COHb. Furthermore, several prominent investigators in the field have expressed their view to EPA that the levels of MetHb and NOHb are negligible in persons exposed to ambient air and to atmospheres in clinical test chambers. EPA does, however, plan additional research in this area and encourages further comment on this topic during the development of this rule.

With regard to the validity of the COHb measurement technique, the statements made in the Case article were apparently based on analysis of an earlier spectrophotometric instrument. In the clinical studies cited in support of the proposed standard, however, the more recently developed CO-Oximeter instrument, which is reported to be accurate to within approximately ±0.1–0.2 percent, was used. Consequently, the above criticism appears to be inapplicable with regard to the accuracy of the reported COHb values.

EPA has recently received an unpublished draft copy of a new carbon monoxide human exposure study conducted by Dr. Wilbert Aronow. In this EPA sponsored study, Dr. Aronow reports a statistically significant decrease in the time to onset of angina for subjects exposed to 50 ppm CO for 1 hour compared to subjects exposed to compressed air. On a group mean basis the final COHb was 2.0 percent after exposure to 50 ppm CO for 1 hour compared with an initial mean COHb value of 1.1 percent prior to CO exposure.

The draft Aronow study has been submitted for publication in a peer-reviewed journal. EPA's current view is that the study should not be considered in this rulemaking, except perhaps as a factor in establishing a margin of safety, unless it has first been peer reviewed within the scientific community and also judged significant to warrant supplementation of the criteria document. EPA is therefore placing the study in the docket (OAQPS–79–7 II–A–2), submitting a copy to CASAC for its review, and is soliciting comments from the general public on the study and the role, if any, it should play in the final rulemaking.

Dated: July 31, 1980.

Douglas M. Costle,

Administrator.

EPA proposes to amend Part 50 of Chapter I, Title 40, of the *Code of Federal Regulations* as follows:

§ 50.8 [Revised]

1. Section 50.8 is revised to read as follows:

The levels of the national primary ambient air quality standards for carbon monoxide, measured by a reference method based on Appendix C to this part and designated in accordance with Part 53 of this chapter, or by an equivalent method, are 25 parts per million (28.63 mg/m³) for a 1-hour average concentration and 9 parts per million (10.31 mg/m³) for an 8-hour average concentration. The standards are attained when the expected number of days per calendar year as determined by Appendix I to this part:

(a) With maximum 1-hour average concentrations above 25 parts per million (28.63 mg/m³) is equal to or less than 1, and

(b) With maximum 8-hour average concentrations above 9 parts per million (10.31 mg/m³) is equal to or less than 1.

Appendix I—Interpretation of the Nation Ambient Air Quality Standard for Carbon Monoxide

I. General

This appendix explains the necessary computations for analyzing carbon monoxide (CO) data with respect to the 1-hour and 8-hour standards. The term "exceedance" is used throughout this appendix to describe a daily maximum value above the level of the standard. For the 1-hour standard, an exceedance refers to a daily maximum hourly value above the level of the 1-hour CO standard. For the 8-hour standard, an exceedance refers to a daily maximum 8-hour average above the level of the 8-hour CO standard. A CO value is said to be an exceedance if, after being rounded to the nearest ppm, it is greater than the level of the standard (fractional parts equal to 0.5 should be rounded up).

In general, the average number of exceedances per year must be less than or equal to 1 for each standard. In its simplest form, the number of exceedances at a monitoring site would be recorded for each calendar year and, then, average over the previous calendar years to determine if this average is less than or equal to 1. If data are missing, however, it is necessary first to compute the estimated number of exceedances for each calendar year on the basis of the observed number of exceedances plus an adjustment to account for missing values. The expected number of exceedances is then determined on the basis of the average of these annual estimates.

II. Data Handling Conventions

In order to compute the expected number of exceedances, it is necessary to define what is meant by a valid daily maximum value. It is assumed that hourly average carbon monoxide (CO) measurements are available on a clock-hour basis. The end point of the time period determines the day to which the value is assigned. Time periods ending at midnight are the last time periods of the day. For example, an 8-hour average from 4:01 p.m. to midnight is the last 8-hour average from 5:01 p.m. to 1:00 a.m. is the first 8-hour average of one day, while the 8-hour average of the next day. By this convention, the value is assigned to a day on the basis of when the receptor has accumulated the exposure.

A daily maximum hourly value is the highest of the 24 possible hourly averages for the day. This daily mixmum hourly value is termed "valid" if at least 75 percent of the possible hourly averages were available or if at least one hourly average in the day exceeded the level of the 1-hour standard.

An 8-hour average is considered to be valid if at least 75 percent of the hourly averages for the 8-hour period were available. In the event that only six (or seven) hourly averages were available, the 8-hour average is computed on the basis of the hours available using six (or seven) as the divisor. Hourly values less than the minimum detectable limit should be replaced by one-half the minimum detectable limit for these computations. To ensure that potentially high 8-hour averages are not ignored, an 8-hour average with less than six hourly values will also be considered valid if substitution of one-half the minimum detectable limit for the missing values (and with 8 used as the divisor) results in an average above the level of the 8-hour standard. A daily maximum 8-hour average is the highest of the 24 possible 8-hour averages ending in that day. This daily maximum 8-hour average is considered to be valid if at least 75 percent of the 8-hour averages were valid or if there is at least one valid 8-hour average above the level of the 8-hour standard.

As a final convention, hourly values from the end of 1 year need not be carried over to compute 8-hour averages at the start of the next year. This convention should eliminate potential data processing problems with archived data.

III. Estimating the Number of Exceedances Expected in a Year

Because of practical considerations, a valid daily maximum hourly or 8-hour average may not exist for each day of the year. To account for the possible effect of missing data, an adjustment must be made to the number of exceedances in a calendar year. In this adjustment, the assumption is made that the fraction of mission values that would have exceeded the standard level is identical to the fraction of measured values above this level. This computation is to be made for all National Air Monitoring Stations (NAMS), State and Local Air Monitoring Stations (SLAMS), and all other sites that are scheduled to monitor for an entire year. Because of possible seasonal imbalance, this computation does not apply to Special Purpose Monitors (SPM). The expected number of exceedances for the year is equal to the observed number of exceedances plus the increment associated with the missing data. The following formula must be used for these computations:

$$e = v + [(v/n)*(N-n)] \quad (1)$$

where

e = the estimated number of exceedances for the year
N = the number of days in the year (365 or 366)
v = the observed number of exceedances
n = the number of valid daily values

* Indicates multiplication.

This expected number of exceedances must be rounded to one decimal place (fractional parts equal to 0.05 should be rounded up).

This same formula is applicable for both 1-hour and 8-hour computations. It basically assumes that the fraction of missing values above the standard level is the same as the fraction of measured values above this level. For 1-hour computations, the observed number of exceedances refers to the hourly standard and the number of valid daily values is the number of valid daily maximum 1-hour averages. For computations for the 8-hour standard, exceedances refer to the 8-hour standard and the number of valid daily values is the number of valid daily maximum 8-hour averages.

Proposed Revision of The National Ambient Air Quality Standard for Carbon Monoxide; Public Meeting Schedule

AGENCY: Environmental Protection Agency.

ACTION: To announce public meetings.

SUMMARY: In this issue of the **Federal Register** EPA has proposed revisions to the National Ambient Air Quality Standard for Carbon Monoxide. This notice is to announce public hearings to be held in Washington, D.C., and Denver, Colorado, to receive public comments on the proposed revisions to the standard. All hearings begin at 9:00 a.m.

DATES: Public comments on the proposed revisions must be received by November 10, 1980.

Hearings will be held on October 2, 1980 in Washington, D.C., and on October 10, 1980 in Denver, Colorado.

ADDRESSES: Public comments must be submitted (duplicate copies are preferred) to: Central Docket Section (A–130), Environmental Protection Agency, Attn: Docket No. OAQPS 79–7, 401 M Street, SW, Washington, D.C. 20460.

The hearings will be held in the following locations: Washington Hearing: Environmental Protection Agency, 401 M Street, SW., Room 3906 and 3908, Washington, D.C. Denver Hearing: U.S. Post Office Auditorium, 1823 Stout Street, (Denver, Colorado). For further details contact Mr. Charles

Stevens, telephone (303) 837–5927 (FTS 327–5927).

Individuals making prepared statements at the hearing are encouraged to send written copies of their statements seven days prior to the day of the hearing to the address given below.

FOR FURTHER INFORMATION CONTACT: Mr. Michael Jones, Strategies and Air Standards Division, Office of Air Quality Planning and Standards, U.S. Environmental Protection Agency, Research Triangle Park, N.C. 27711, Telephone (919) 541–5231 (FTS 629–5231).

Dated: July 16, 1980.

David G. Hawkins,

Assistant Administrator for Air, Noise, and Radiation.

OFFICE OF MANAGEMENT AND BUDGET

Circular A-102; Uniform Requirements for Grants to State and Local Governments

AGENCY: Office of Management and Budget.

ACTION: Final notice.

SUMMARY: This notice transmits a supplement called for by Circular A-102, "Uniform requirements for grants to State and local governments." The supplement summarizes information previously available only in many thousands of pages of law and regulation.

The supplement is part of the Administration's Financial Priorities Program, and adds to OMB's system of guidance for federally assisted programs. It is intended to further streamline the management of Federal aid.

In October 1979, Circular A-102 was revised to add a new Attachment P. The Attachment called upon Federal agencies to move away from the grant-by-grant audits of the past, and called instead for organization-wide audits of financial operations, using the single audit guide. It provided for tests of compliance with major provisions of Federal law and regulation.

This supplement contains those major compliance features. For the first time, it gives auditors at all three levels of government, a manageable list of compliance matters that they are responsible for checking.

OMB developed the supplement in cooperation with the General Accounting Office, grantmaking agencies, and State and local governments. It is intended to meet the needs of all levels of government for tests of compliance with Federal requirements.

EFFECTIVE DATE: This supplement is effective immediately.

FOR INFORMATION RELATED TO SPECIFIC PROGRAMS:

Call the agency contacts listed in the Appendix.

FOR FURTHER INFORMATION CONTACT:

James R. Doyle, Financial Management Branch, Office of Management and Budget, Washington, D.C. 20503, (202) 395-3993.

John J. Lordan,
Chief, Financial Management Branch.

Major Compliance Features of Programs Administered by State and Local Governments

Executive Office of the President, Office of Management and Budget

August 1980.

Foreword

This document supplements the audit provisions of Office of Management and Budget Circular A-102, "Uniform requirements for grants to State and local governments," and the General Accounting Office publication, "Guidelines For Financial And Compliance Audits Of Federally Assisted Programs."

The supplement presents information on the major compliance features of 60 programs that make up over 90% of Federal aid to State and local governments. It summarizes information previously available only in many thousands of pages of agency regulations. It was developed from information provided by Federal grantmaking agencies, and relies on their interpretations of the significant features of their programs.

The use of this document in conjunction with the standard audit guide will make possible a "single audit" of a unit of government that should meet the needs of all users for reliable financial data. It is expected that this will result in a more appropriate sharing of audit responsibilities among the levels of government, and further streamline the intergovernmental audit system.

Most grantees will be receiving assistance through only a few of the programs presented here. Accordingly, the auditor need only select from this document the features applicable to the programs being carried out by the grantee.

When making audits of organizations carrying out programs not included here, the auditor should obtain major compliance information, such as eligibility and matching share, from the grant or loan agreement, the *Catalog of Federal Domestic Assistance*, program regulations, or other available sources.

James T. McIntyre, Jr.,
Director, Office of Management and Budget.

Elmer B. Staats,
Comptroller General of the United States.

Introduction

Background Materials Necessary for the Audit

Since this document supplements the GAO Audit Guidelines,[1] the auditor should be thoroughly familiar with them. Of major importance are the preliminary steps auditors must take, and key reference materials auditors must have at their disposal before starting the audit. Principal among these are copies of the agency regulations, approved budgets and financial reports for the programs. The auditor should also obtain a copy of the governmentwide cost allocation plan and executed copies of grant or loan agreements for the programs.

It is implied in each of the program tests included here that the auditor will have reviewed this background material before making the individual audit tests. The auditor is referred to Chapter 3 of the GAO Audit Guidelines entitled "Planning the Audit", for more details.

Review of Systems and Procedures

Though the compliance features outlined in this document have been kept purposely brief, in some cases they may require detailed, specific tests. There are some observations of a general nature that the auditor should attempt before making any specific tests.

Auditors should first make a review of the systems and procedures the recipient has in place. A suggested approach for doing so is covered in greater depth in *Study of Internal Control* outlined in the GAO Audit Guidelines. In some cases, this early review may disclose inadequacies in the recipient's monitoring and control

[1] Guidelines for Financial and Compliance Audits of Federally Assisted Programs. U.S. General Accounting Office, February 1980.

functions. In this case, it may be more appropriate *how* they satisfy the major compliance features before attempting further detailed steps. In all cases, the auditor should rely on professional judgment.

Part I—General Features

Each Federal aid program carries a number of very important statutory and regulatory requirements to be followed by recipients. Attaching these requirements to Federal programs ensures adherence to broad national policies. Among these are environmental regulations, regulations relating to the rights of individuals and a number of others.

While of major importance, compliance or noncompliance with many of these requirements does not materially affect the grantee's financial status. For this reason, most of these requirements are not included in this document.

Included in this part are compliance features which are generally applicable, but which could have a material affect on financial status.

Not all of these provisions apply to all programs. The auditor should ascertain which ones do apply at the time the audit work plan is developed.

General Compliance Features That Apply to a Number of Federal Assistance Programs—I. Political Activity (Hatch Act (5 U.S.C. 1501–1508) and Intergovernmental Personnel Act of 1970 as Amended by Title VI of Civil Service Reform Act (Pub. L. 95–454 Section 4728))

Federal funds cannot be used for political activity of any kind by any person or organization involved in the administration of federally assisted programs. This general prohibition applies to all Federal programs covered here.

No specific audit steps are provided here. Rather, the auditor should be alert to possible violation of this requirement throughout all phases of the audit.

II. Davis Bacon Act (40 Stat 1494, Mar. 3, 1921, Chap. 411, 40 U.S.C. 276a–276a–5)

a. *General.* All *construction* programs dealt with in this document must follow the provisions of the Davis-Bacon Act. In general, the act requires that all laborers and mechanics employed by contractors or sub-contractors be paid wages not less than those established for the locality of the project by the Secretary of Labor in accordance with the Act. The agency making the award generally incorporates the requirements in its standard terms and conditions. Auditors needing more background on the Davis-Bacon Act will usually find that the recipient has on hand Federal agency publications that give further background. For example, many documents published by the Department of Labor or the Economic Development Administration's *Engineering and Construction Guidelines for the Local Public Works Capital Development and Investment Program*, are good sources of background information.

b. *Suggested Approach.* 1. Determine whether construction contracts and subconstracts contain appropriate provisions that "Davis-Bacon" wages shall be paid.

2. Determine whether the recipient has developed a system to monitor applicable contractors and sub-contractors with respect to payment of "Davis-Bacon" wages. Test grantee's practices and records to evaluate adequacy of its system to assure compliance.

3. If the recipient has not developed such a system, or if the system developed for this purpose has not operated effectively then, on a sampling basis,

(a) Obtain the applicable "local" DOL wage determination from the recipient, the Architect/Engineer (A/E) who is managing the project or the agency Headquarters or Regional Office.

(b) Obtain payroll listings submitted by contractors.

(c) On the basis of the above information, sample compliance by contractors or subcontractors.

For any contractors or sub-contractors that did not comply with the "Davis-Bacon" requirements, estimate the amount of funds involved and provide details in the audit report.

III. Relocation Assistance and Real Property Acquisition Act (Pub. L. 91–646)

a. *General.* A number of Federal aid programs require the physical movement of persons, homes or businesses and/or the acquisition of property. The majority of these programs are administered by DOT and HUD. Some other agencies are involved to a lesser extent.

Recipients are required to follow the provisions of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970 when families, individuals, or business concerns are displaced by the acquisition of real property for a federally assisted program. Implementing regulations differ somewhat from agency to agency. Recipients are required to carry out certain actions when acquiring property (appraise property, allow owner to accompany appraiser, review appraisals and set price, attempt to negotiate a settlement, etc.) and when relocating occupants of acquired properties (provide assistance in finding replacement housing, assure that replacement housing meets acceptable standards, assure that displacees receive their full benefits, etc.). Recipients are also required to maintain records on each property acquisition and each displacement of an occupant of an acquired property.

b. *Suggested Approach.* 1. Determine whether the recipient has developed a system to comply with the requirements of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970.

2. Review a sample of individual land acquisition and relocation payment records to determine whether the recipient has followed the requirements of the act.

IV. Citizen Participation

a. *General.* A number of programs require input by local citizens in the planning process leading up to the formal application.

The recipient is required to prepare and follow a written citizen participation plan which provides an opportunity for citizens to participate in the development of the application, provides citizens with adequate information concerning program funding and requirements, provides for public hearings to obtain the views of citizens on the substance of the program, and provides an opportunity to submit comments.

b. *Suggested Approach.* 1. Determine whether the recipient has prepared and carried out a citizen participation plan.

2. Review notices and minutes of public hearings and determine whether public hearings were held prior to submission of the application.

3. Review minutes of public hearings and other documentation (letters, reports, newspaper articles, etc.) and note whether citizens articulated their opinions and needs on proposed activities.

4. Review the application file and supporting documentation, such as task force reports or citizen study group reports, and note whether citizens participated in the deliberations leading up to preparation of the application.

Note.—The State and Local Fiscal Assistance Act of 1972 (General Revenue Sharing) levies specific requirements for notifying the public of hearings and budget proposals. This program differs from others in that it does not involve an application. Its citizen participation requirements involve an application. Its citizen participation

requirements involve the entire budget of the recipient, not just a single program. Further, there are statutory requirements for public notices following budget adoption.

If the audit will cover General Revenue Sharing funds, the tests used for that program's citizen participation requirements should be used in lieu of the approach outlined here.

V. Flood Disaster Protection (National Flood Insurance Act of 1968, as amended by Flood Disaster Protection Act of 1973 Pub. L. 93–234)

Some Federal programs cannot fund in areas having flood hazards, unless covered by the National Flood Insurance Program.

Suggested Approach. If located in such an area, the auditor should check whether the recipient has insurance in force. Further, check whether the recipient has some procedures for avoiding routing construction in such areas and procedures for adherence to building codes in these areas as well.

VI. Civil Rights

For those programs which require an audit of compliance with Civil Rights, the auditor should use the tests found under program 21.000 Revenue Sharing at the end of this document.

Part II—Individual Program Features—Department of Agriculture

* * * **10.418 Water and Waste Disposal Systems for Rural Communities**

Authorization: Consolidated Farm and Rural Development Act, Section 306; Pub. L. 92–419; 7 U.S.C. 1926.

Objectives: Grants for water systems, waste systems and combination of both are made under Pub. L. 92–419; to serve rural residents, usually in conjunction with loans to municipalities, cooperatives and community associations. The purpose is to make the cost reasonable for users. Grants are awarded only when it appears that debt service for the eventual system will cost average users too large a percentage of their disposable income.

Other departments, agencies, and State Governments may participate and provide financial and technical assistance jointly to any applicant. Grant funds complement loan funds and are used for construction of water and waste systems.

Major Compliance Features

Uses and Use Restrictions: Installation, repair, improvement, or expansion of rural water and/or waste facilities.

Applicant Eligibility: Municipalities, counties, and other political subdivisions of a State: Districts and authorities; associations, cooperatives, and corporations operated on a not-for-profit basis; Indian tribes on Federal and State reservations and other federally recognized Indian tribes, serving rural areas and cities or towns up to 10,000 population.

Beneficiary Eligibility: Farmers, ranchers, rural residents and other small users in eligible applicant areas as set out above.

Formula and Matching: Grants may not exceed 75% of eligible project costs.

Other Tests: The compliance features apply to both loan and grant funds.

1. In order to evaluate interim financing agreements with local banks: (a) Review specific documentation supporting disbursements and determine if they are legitimate project expenses. (b) if multiple advances are used for grant funds, determine that these advances were disbursed for legitimate project expenses.

2. Evaluate the change orders made to contracts issued by the recipient to see if they were approved by FmHA officials.

3. Examine contractual agreements with consulting engineers, architects, local attorneys and bond counsel. Verify that payments made to such persons are in accordance with agreements and applicable fee schedules.

4. Determine if the file contains statements from contractors, engineers, local counsel and bond counsel showing payments to date, and evidence that all major suppliers and sub-contractors have been paid.

Note.—The Food and Nutrition programs which follow involve functions for State agencies that are different from those of the local agency. For instance, the local agency is usually involved heavily with individual recipients, whereas the State agency usually is not. For this reason, the tests at the State level differ from those at the local level.

The auditor should be especially alert in the Food and Nutrition programs for dual funding, i.e. evidence that the organization operating the program may have billed more than one aid program or grantor organization separately for a single service.

* * * **10.550 Food Distribution (Food Donation Program)**

Authorization: Section 32 of Pub. L. 320, 74th Congress, as amended, 7 U.S.C. 612c; Pub. L. 165, 75th Congress, 15 U.S.C. 713c; Sections 6, 9, and 17 of the National School Lunch Act, as amended, 42 U.S.C. 1755, 1758, 1766; Section 416 of the Agricultural Act of 1949, as amended, 7 U.S.C. 1431; Section 402 of the Mutual Security Act of 1954, as amended, 22 U.S.C. 1922; Section 210 of the Agricultural Act of 1956, 7 U.S.C. 1859; Section 9 of the Act of September 6, 1958, as amended 7 U.S.C. 1431b; Act of September 13, 1960, as amended, 7 U.S.C. 1431 note; Section 709 of the Food and Agriculture Act of 1965, as amended, 7 U.S.C. 1446a–1; Section 13 of the National School Lunch Act, as amended, 42 U.S.C. 1761; Section 8 of the Child Nutrition Act of 1966, 42 U.S.C. 1777; Section 311 of the Older Americans Act of 1965, as amended, 42 U.S.C. 3045f; Section 4 and 5(a) of the Agriculture and Consumer Protection Act of 1973 as amended, 7 U.S.C. 612c note; and 7 U.S.C. 613 note Section 14 of the National School Lunch Act as amended, 42 U.S.C. 1762a; Section 409 and 410(6) of Pub. L. 93–288, 42 U.S.C. 5179–5180.

Objectives: To improve the diets of school children and needy persons in households, on Indian Reservations not participating in the Food Stamp Program, and charitable institutions, the elderly, and other individuals in need of food assistance, and to increase the market for domestically produced foods acquired under surplus removal or price support operations.

Major Compliance Features

Uses and Use Restrictions: Food is made available for distribution to qualifying households, individuals, child feeding programs, schools, charitable institutions, nutrition programs for the elderly, and nonprofit summer camps for children. Households and individuals may not be charged. Donated foods may not be sold, exchanged, or otherwise disposed of without prior, specific approval of the Department. FNS administrative funds must be expended to assist in meeting operating expenses incurred in administering food distribution programs for needy persons in households. These funds may not be used to purchase real property (land or buildings).

Applicant Eligibility: Such State, Trust Territory of the Pacific Islands and Federal agencies that are designated as distributing agencies by the Governor, legislature, or other authority may receive and distribute donated foods. (See below for expansion.)

Formula and Matching Requirements: States and localities are expected to bear the cost of program administration aside from the contribution made by the grant.

Other Tests: A. Local Level.—1. Sample accounts to verify that proceeds from the sale of food containers are used solely for program purposes.

2. Test to insure that eligible participants are not required to make payments in money, materials or services for the receipt of commodities.

3. Compare their food expenditures with the value of commodities received. Check that expenditures do not drop as commodities increase. Compare two years.

4. Test that cash provided to recipients of grants under Title III Older American Act, is used only to purchase US agricultural commodities and other foods of US origin.

5. Test that cash is used only to purchase US agricultural commodities and other foods of US origin. The auditor is advised that the State of Kansas elects to receive only cash (in lieu of commodities).

6. Verify, on a sampling basis, that recipients of donated food do not participate in *both* the Food Stamp and Food Distribution Programs.

7. Test that charges in excess of program needs are used to reduce charges or are returned to contributors.

B. *State Level.* 1. Review accounts to verify that donated foods are distributed only to the following eligible agencies and recipients: (a) Schools participating in the National School Lunch (or Breakfast) Programs (NSLP, SBP) and commodity only schools; (b) charitable institutions, both public and private; (c) nonprofit summer camps for children; (d) Title III Elderly Feeding Programs; (e) Needy Family Programs administered by welfare agencies and Indian Tribal Organizations; (f) state correctional institutions; (g) service institutions which participate in the Summer Food Service Program (SFSP); (h) nonresidential child care institutions; (i) disaster organization; and (j) Commodity Supplemental Food Program.

2. Test that distribution of foods to charitable institutions is made on the basis of the number of needy persons served.

3. Verify that the State agency (SA) on aging, receiving cash in lieu of commodities for elderly feeding programs under Title III, Older American Act, disburses such cash promptly and equitably to subrecipients.

4. In determining whether to request cash in lieu of commodities for the Child Care Food Program (CCFP), verify that the SA considers preference of individual institutions.

5. Review procedures established to ensure that recipients of donated food do not participate in *both* the Food Stamp and Food Distribution Programs.

*** **10.551 Food Stamps**

Authorization: The Food Stamp Act of 1964; Pub. L. 88–525; 78 Stat. 703, 7 U.S.C. 2011–2026 (1964) as amended, Pub. L. 90–91; 81 Stat. 228; Pub. L. 90–552; 82 Stat. 958; Pub. L. 91–116; 83 Stat. 191; Pub. L. 91–671; 84 Stat. 2048; Pub. L. 92–603; 86 Stat. 1329; Pub. L. 93–86; 87 Stat. 247; Pub. L. 93–233; 87 Stat. 947; Pub. L. 93–335; 88 Stat. 291; Pub. L. 93–347; 88 Stat. 340; Pub. L. 93–563; 88 Stat. 1841; Pub. L. 94–44, 89 Stat. 235; Pub. L. 94–182, 89 Stat. 1056; Pub. L. 94–339, 90 Stat. 799; Pub. L. 94–365, 90 Stat. 990; Pub. L. 94–379, 90 Stat. 1111; Pub. L. 94–585, 90 Stat. 2901; Pub. L. 95–59, 91 Stat. 255; Pub. L. 95–97, 91 Stat. 825; Pub. L. 95–113, 91 Stat. 958; Pub. L. 95–348, 92 Stat. 487; Pub. L. 95–400, 92 Stat. 856; Pub. L. 95–458, 92 Stat. 1255; Pub. L. 96–58, 93 Stat. 389; Pub. L. 96–249, 94 Stat. 357.

Objectives: To improve diets of low-income households by supplementing their food purchasing ability. Households receive a free coupon allotment which varies according to household size and income.

Major Compliance Features

Applicant Eligibility: The State or U.S. Territory agency responsible for federally aided public assistance programs.

Beneficiary Eligibility: Households may participate if they are found by local welfare officials to be in need of food assistance. Examples include households that are receiving some form of welfare assistance, or are unemployed, part-time employed, working for low wages, or living on limited pensions. Eligibility is based on family size and income, and their level of resources. Able-bodied adults with certain exceptions, must meet a work registration requirement. College students who are tax dependents of ineligible households are ineligible to participate in the program.

Other Tests: Quality Control: The 1977 Food Stamp Act (the Act) requires State agencies to implement a state-wide Quality Control program to determine if participating households are eligible and receiving the correct coupon allotment. States whose cumulative allotment error rate is less than 5 percent are entitled to increased administrative funding under the Act. Additionally, the 1980 amendments to the Act implement an error rate sanction system under which State agencies will be liable for high error rates. The Quality Control system is designed to determine the error rate in each State. Procedures for implementing the Quality Control system are included in 7 CFR 275.10–275.14, and in FNS Handbooks 310, 311, and 315. Also, each State must have its plan for implementation of the Quality Control system approved by FNS.

For Audits at the State Agency

1. Determine if the State agency has implemented a Quality Control system as directed and approved by FNS.

2. Does the State organizational structure allow Quality Control to function independently of program operations?

3. Using statistical sampling procedures, select a number of cases included in the State agency's most recently completed six-month Quality Control sample. Review the cases and determine if the State agency's conclusions regarding the selected cases were correct. As a result of this review, determine if the State agency's projected error rates for the six-month sample period are correct.

Food Stamp Claims Activity and Security for Audits at the State Agency and/or Project Area

4. Review the status of FNS semi-annual billings to State agencies reflecting food stamp shortages reported on the FNS–250 report. Determine if the State paid FNS for the value of the shortages.

5. Review the status of the State's claims collection activity and determine if claims collected are submitted to FNS.

6. Review the adequacy of security over food stamps and Authorization to Participate (ATP) cards.

7. Review the controls established over and the disposition of food stamps or ATPs returned as undeliverable by the Postal Service.

8. Reconcile the most recently completed FNS–250 report. If the State agency or project area maintains a central coupon storage area, make a physical inventory of the food stamps and reconcile to the FNS–250 report.

* * * **10.553 School Breakfast Program**

Authorization: Section 4 of the Child Nutrition Act of 1966 as amended; Pub. L. 89–642; 80 Stat. 886; 42 U.S.C. 1773; Pub. L. 91–248, 84 Stat. 214, 42 U.S.C. 1773; Pub. L. 91–248, 84 Stat. 214, 42 U.S.C. 1773; Pub. L. 92–32; 85 Stat. 85; 42 U.S.C. 1773; Pub. L. 92–433; 86 Stat. 724; Pub. L. 94–105; 89 Stat. 511; Pub. L. 95–166, 91 Stat. 1337; Pub. L. 95–627, 92 Stat. 3620.

Objectives: To assist states in providing nutritious breakfasts for school children, through cash grants and food donations.

Major Compliance Features

Uses and Use Restrictions: Funds are available to public and nonprofit private schools, of high school grade or under, for breakfasts. Participating schools are reimbursed. The rates of reimbursement are adjusted on a semiannual basis to

reflect changes in the "food away from home" series of the Consumer Price Index. All participating schools must agree to supply free and/or reduced price meals to eligible children on a nonprofit basis.

Applicant Eligibility: State and U.S. Territory agencies or private schools which are exempt from income tax under the Internal Revenue Code.

Beneficiary Eligibility: All children attending schools in which the breakfast program is operating may participate.

Other Tests: A. Local Level.— 1. Test to ensure that procedures used to obtain meal counts yield reliable counts by category. (free, reduced price or paid).

2. Sample accounts to determine that meals counted as free, or at a reduced price, are supported by a properly approved application on file.

3. Review accounts to determine that programs are not subsidizing nonreimbursable activities. (adult meal, a la carte, etc.).

4. Determine, on a fiscal year basis, that reimbursement paid to a School Food Authority does not exceed the lesser of (a) costs or (b) the number of meals times the maximum rate.

B. *State Level.*—The State agency documents the meals served in schools within the State on a form entitled *Report of Child Nutrition Programs* (FNS–10).

Test whether the SA has a system that reserves up to 1% of its funds for special developmental projects (Sections 4 and 11 of National School Lunch Act).

* * * *10.555 National School Lunch Program (School Lunch Program)*

Authorization: National School Lunch Act of 1946 as amended; Pub. L. 79–396; 60 Stat. 230; 42 U.S.C. 1751; Pub. L. 87–823, 76 Stat. 944; 42 U.S.C. 1752; Pub. L. 91–248, 84 Stat. 208, 42 U.S.C. 1752; Pub. L. 92–153; 85 Stat. 419, 420; 42 U.S.C. 1753; Pub. L. 92–433, 86 Stat. 726; Pub. L. 93–150; 87 Stat. 560–564; Pub. L. 93–326; 88 Stat. 286–287; Pub. L. 94–105; 89 Stat. 512–515; Pub. L. 95–166, 91 Stat. 1325–1346; Pub. L. 95–627 92 Stat. 3603–3626.

Objectives: To assist states, through cash grants and food donations, to make the school lunch program available to all school children.

Major Compliance Features

Uses and Use Restrictions: To reimburse participating public and nonprofit private schools, of high school grade or under, including residential child care institutions, for lunches. Participating schools are reimbursed at rates prescribed by States for free and reduced price meals to eligible children.

Applicant Eligibility: State and U.S. Territory agencies, private schools, residential child care centers, and settlement houses which are exempt from income tax. Schools must operate a nonprofit lunch program.

Beneficiary Eligibility: Children of high school grade and under in attendance at participating schools and child care institutions.

Formula and Matching Requirements: Must be matched by $3 for each $1 of Federal funds except that states having income of less than the national average per capita income are allowed to match at a lesser rate. Funds from within the State may include funds derived from State and local tax revenues which are used for food service programs and funds received from children for lunch payments. For the fiscal years beginning October 1, 1977, and following, State revenue (other than revenues derived from the program) appropriated or specifically reserved and used for program purposes (other than salaries and administrative expenses at the State as distinguished from the local level), shall constitute at least 10 percent of the 3 to 1 matching requirement funds for the general cash for food assistance funds for the preceding fiscal year.

The matching requirement is complex. The auditor should check with USDA if necessary. The basic 3 to 1 match relates to Section 4 dollars reimbursed for meals paid. The 10% State match is actually 10% of the 3 to 1 match computed on the total. The 10% can make up part of the 3 to 1 match.

Other Tests: The features are the same as those for the School Breakfast Program.

* * * 10.557 Special Supplemental Food Program for Women, Infants, and Children (WIC Program)

Authorization: Child Nutrition Act of 1966, as amended, 42 U.S.C. 1771 et seq; Pub. L. 92–433; Section 17 of Child Nutrition Act of 1966, as amended; 86 Stat. 729; Pub. L. 94–105; Section 17 of the Child Nutrition Act of 1966, as amended; 89 Stat. 518; Pub. L. 95–627, 92 Stat 3603.

Objectives: To supply supplemental nutritious food and nutrition education, as an adjunct to good health care, to participants identified to be nutritional risks.

Major Compliance Features

Uses and Use Restrictions: State health or comparable agencies, Indian tribes, bands, or intertribal councils, or groups recognized by the Departments of the Interior, or HEW in order to make supplemental foods available to pregnant, postpartum and breastfeeding women, infants, and children up to five years of age through local public or nonprofit private health or welfare agencies. Funds must be expended to purchase supplemental foods for participants or to redeem vouchers issued for that purpose. Twenty percent may be used for State and local agency administrative costs. Only local agencies qualifying under State agency applications may operate WIC programs.

Applicant Eligibility: A local agency is eligible provided: (a) It gives health services free or at reduced cost to residents of low-income areas; (b) it serves a population of women, infants, and children who are a nutritional risk; (c) it has the personnel, expertise, and equipment to perform measurements, tests, and data collection specified for the WIC program; (d) it maintains or is able to maintain adequate medical records; and (e) it is a public or private nonprofit health or welfare agency. All applicants must apply through the responsible State or U.S. Territory agency.

Beneficiary Eligibility: Pregnant, postpartum or breastfeeding women, infants, and children shall be eligible if they are determined by a competent professional on the staff of the local agency to be in need of the special supplemental foods supplied by the program, and they have a family income of less than the State provided or approved income standard.

Formula and Matching Requirements: States and local agencies bear the administrative costs in excess of their administrative funds allocation.

Other Tests: A. *Local Level.*— Determine if the local agency has and is carrying out procedures which effectively verify that:

1. Unissued and issued food vouchers are adequately accounted for and safeguarded.

2. Redeemed food vouchers are being monitored to ensure that costs claimed by vendors are not excessive.

3. Cases of vendor and participant abuse are followed up on, and actions are taken, both to recover missused program funds and to prevent recurrence.

B. *State Level.* Determine if SA has established effective procedures for:

1. Verifying local agency claims for reimbursement.

2. Substantiating that issued food vouchers are reconciled against redeemed food vouchers and that only actual reasonable costs are claimed (one to one reconciliation).

3. Handling cases of theft, loss or embezzlement of food vouchers.

* * * 10.558 Child Care Food Program

Authorization: Section 17 of the National School Lunch Act as amended by Pub. L. 94–105; 89 Stat. 522–525; Pub. L. 95–627, 92 Stat. 3603–3626.

Objectives: To assist states to initiate, maintain or expand nonprofit food service programs for children in non-residential institutions providing child care.

Major Compliance Features

Uses and Use Restrictions: Funds are made available for disbursement to eligible public and nonprofit private organizations including day care centers, settlement houses, recreation centers, family and group day care programs, Headstart Centers, and institutions providing day care services for handicapped children. Disbursement is made on the basis of the number of lunches, suppers, breakfasts and snacks served, using reimbursement rates.

Applicant Eligibility: The State and U.S. Territory Educational Agency or other agency within the State and U.S. Territory. Where that agency is not permitted to disburse funds, the institution may receive funds directly.

Beneficiary Eligibility: Public and nonprofit private organizations including day care centers, settlement houses, recreation centers, family day care programs, Headstart programs, Homestart programs and institutions providing day care services for handicapped children, which are licensed or approved by State, local or Federal authority, or can satisfy Federal interagency day care requirements.

Other Tests: A. *Local Level.*—1. Test to ensure that procedures used to obtain meal counts yield accurate counts by category. (Free, reduced price, or paid.)

2. Sample accounts to determine that meals claimed as free, or at a reduced price, are supported by a properly approved application on file.

3. Sample accounts to determine that meals counted as served to ineligible persons are not claimed for reimbursement.

4. Verify that total reimbursement for meals counted as served to any institution do not exceed the actual cost of meals to the institution, less income to the program.

B. *State Level.*—1. If equipment is acquired with Federal non-food assistance funds, check that the State pays at least 25% of the cost. Some facilities, which are especially needy, may not have to provide any funds at all.

2. Verify that the total reimbursement for meals counted as served to any institution or independent child care center does not exceed the actual cost of meals less income to the program.

3. Determine that start-up funds are provided to finance the administrative expenses only for preprogram operations.

4. Determine that an adequate inventory is maintained for USDA donated commodities.

* * * 10.561 State Administrative Matching Grants for Food Stamp Program

Authorization: Food Stamp Act of 1964, Pub. L. 88–525, 78 Stat. 703, Part 275 of the Food Stamp Program Regulations; Pub. L. 95–113, 91 Stat. 958.

Objectives: To provide aid to State and local governmental agencies for administrative costs incurred to operate the Food Stamp Program.

Major Compliance Features

Uses and Use Restrictions: Administrative costs to operate the Food Stamp Program.

Applicant Eligibility: State welfare agency.

* * * 10.415 Rural Rental Housing Loans

Authorization: Housing Act of 1949 as amended, sections 515 and 521; Pub. L. 89–117; 42 U.S.C. 1485, 1490A.

Objectives: Loans to provide economically designed and constructed rental and cooperative housing and related facilities suited for independent living by rural residents. Loan funds may be used to provide essential related service facilities appropriate for use in connection with the housing, and to buy and improve the land on which the buildings are to be located.

Major Compliance Features

Uses and Use Restrictions: Loans can be used to construct, purchase, improve, or repair rental or cooperative housing. Generally, housing will consist of two or more family units. Loans may not be made for nursing, special care, or institutional-type homes.

Applicant Eligibility: Applicants, which also may receive Federal grants, will be State or local public agencies. Applicants must be able to assume the obligations of the loan, furnish adequate security, and have sufficient income for repayment. They must also have the ability and intention of maintaining and operating the housing for purposes for which the loan is made. Loans may be made in communities up to 10,000 persons and places up to 20,000 persons under certain conditions.

Beneficiary Eligibility: Occupants must be low to moderate income families including senior citizens and handicapped persons.

Other Tests: See the "Other Tests" outlined for program No. 10.418 Water and Waste Disposal Systems (above). The auditor should make the same tests here.

* * * 10.422 Business and Industrial Loans

Authorization: Consolidated Farm and Rural Development Act, as amended, Section 310B, Pub. L. 92–419; 7 U.S.C. 1932.

Objectives: FmHA makes loans to individuals, partnerships, corporations, Indian tribes, and other legal entities which also could receive Federal grants from other bodies and agencies to improve, develop or finance business, industry and employment to improve the economic and environmental climate in rural communities. This could include pollution abatement and control, and the conservation, development, and utilization of water for aquacultural purposes.

Major Compliance Features

Uses and Use Restrictions: This is administered as a guarantee program. However, direct loans may be made at five percent interest to public bodies and Indian tribes to finance community facilities, if not eligible under the Community Facilities Loan Program. Loans to public bodies will be used only to acquire or prepare land for industrial sites, access streets and roads, parking areas, transportation serving the sites, and utility extension; and to construct and equip industrial plants for lease to private businesses. The "credit elsewhere" provision applies, i.e. the recipient has exhausted all other possible sources of credit.

Applicant Eligibility: Applicants for direct loans must be located in cities or rural areas having a population of fewer than 50,000 and adjacent urbanized areas or urbanizing areas with a population density of more than 100 persons per square mile.

Formula and Matching Requirements: A minimum of 10 percent equity is required and all loans must be collateralized.

Other Tests: The following compliance features apply to Business and Industrial Direct loan funds whenever Federal grant funds are made a part of the financing package to eligible applicants.

1. Determine that the "credit elsewhere" test has been documented. (See above).

2. Review appropriate escrow accounts, if used.

• • • 10.423 Community Facilities Loans

Authorization: Consolidated Farm and Rural Development Act, Section 306, Pub. L. 92-419; 7 U.S.C. 1926.

Objectives: Loans are made to public bodies, political and quasi-political subdivisions of State and local governments, nonprofit organizations and to Indian Tribes which could also receive Federal grants for other purposes to provide community facilities for public use. These facilities could include fire and rescue services, transportation, traffic control, community, social, cultural, health and recreational benefits, industrial park sites, access ways and utility extensions.

Major Compliance Features

Uses and Use Restrictions: All facilities financed in whole or in part with FmHA funds shall be for public use.

Applicant Eligibility: Applicants should have the legal authority to obtain the loan, give security and repay the loan, as well as for constructing, operating and maintaining the facility. The applicant should be unable to finance the project from its own resources or through commercial credit.

Beneficiary Eligibility: Rural residents in open country and towns and villages of not more than 10,000 population.

Other Tests: See the "Other Tests" outlined for program No. 10.418 Water and Waste Disposal Systems (above). The auditor should make the same tests here.

Department of Commerce

• • • 11.300 Economic Development—Grants and Loans for Public Works and Development Facilities

Authorization: Public Works and Economic Development Act of 1965; Pub. L. 89-136, as amended; 42 U.S.C. 3131, 3132, 3135, 3141, 3171.

Objectives: The Act authorizes the Secretary of Commerce to make grants for public works, public service or development facilities, including related machinery and equipment.

Major Compliance Features

Applicant Eligibility: States, cities, counties, tribal governments and other political subdivisions, and private or public nonprofit organizations or associations representing a redevelopment area or a designated economic development center are eligible to receive grants and loans. Corporations and associations organized for profit are not eligible.

Beneficiary Eligibility: Unemployed and underemployed persons and/or members of low-income families.

Formula and Matching Requirements: The basic grant may be up to 50 percent of the project cost. Severely depressed areas that cannot match Federal funds may receive supplementary grants to bring the Federal contribution up to 80 percent. Designated Indian Reservations are eligible for 100 percent grants. Additionally, redevelopment areas located within designated economic development districts may, subject to the 80 percent maximum Federal grant limit, be eligible for a 10 percent bonus on grants for public works projects. Long-term (up to 40 years) low interest loans may be made to the applicant when financial assistance is not otherwise available from private lenders or Federal agencies on terms which would permit accomplishment of the project. Although the authority for such loans is continuously available, it is rarely needed.

Other Tests: The auditor should test the following:

1. *Interest Expense During Interim Construction.*

a. The construction period may commence prior to the acceptance of the offer of assistance from EDA. Interest on funds borrowed to finance this construction is allowable. When claimed, the explanation of the construction involved with a computation of the interest is to be shown.

b. Interest on funds borrowed in excess of expected requirements or for the period subsequent to 90 days beyond EDA's date of final acceptance is unallowable.

c. In determining allowable interest on bonds issued for the project, exclude any accrued interest purchased for the period falling within the construction period.

d. To determine the net cost of interest, earnings on the investment of project funds will be deducted from the interest paid or accrued. If the grantee did not invest excess funds, the estimated amount of reasonable interest expected will be deducted from gross interest payable. When an estimated amount of interest earned is deducted an explanation should be provided.

e. Imputed interest is not allowable.

2. *Interest During Development.* The development period is a specified period subsequent to project acceptance during which time the revenues produced are expected to be insufficient to meet interest due on the revenue bonds used to assist in financing the project. These interest expenses may be accepted as project costs only to the extent that the grantee and/or borrower does not have other funds or sources of funds for such interest payments. The allowable amount of development period interest will be determined by EDA. The auditor should question any development period interest for which the auditor is unable to determine the need.

The audit should include sufficient testing to assure proper computation of interest expense. At a minimum, the auditor should examine the following for a sampling of loans obtained: (1) Name of lender; (2) date of loan; (3) principal of loan; (4) interest rate; (5) dates and amounts of repayment; (6) amount of interest paid and/or accrued.

3. *Tandem Projects.* Tandem projects are joint projects which usually receive financial assistance from both EDA and another Federal agency. The projects are so interrelated that one project cannot function usefully without the other. The Department of Commerce has determined that "each of these projects is basically an EDA project in which another Federal agency is authorized to participate and pick up certain costs otherwise payable by EDA." For joint projects, the auditor should contact the cognizant EDA Regional Office to determine if the project is considered a tandem project. The auditor should verify the basis used in determining the costs applicable to each of the sponsoring agencies.

• • • 11.000 Local Public Works Grants

Grants Under Title I of the Public Works Employment Act of 1976 and 1977

Authorization: Public Works Employment Act of 1976 and 1977.

Objectives: The Act authorized the Secretary of Commerce to make grants of up to 100 percent of project costs to any State or local government for local public works projects that will stimulate employment.

Major Compliance Features

Uses and Use Restrictions: Public Works projects, approved by EDA, that will help to stimulate employment.

Beneficiary Eligibility: State and local governments including the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, Indian tribes, and under Round II the Trust Territory of the Pacific Islands.

Other Tests: The auditor is advised that, except for denials, any dates referred to below are shown on EDA Standard Form ED-1024 or an equivalent form. This form is sent to the recipient from EDA.

1. *Application Submission Date* (receipt)—EDA considers the submission date to be synonymus with the date the prospective grantee's application was received. The EDA application receipt date is recorded in Block 25 of the original application (EDA-101-LPW).

Where EDA determined that the application was incomplete or inadequately prepared, EDA requested that corrected material be sent, and has revised Block 25 of the original application (EDA-101-LPW).

The auditor should question all costs incurred prior to the date EDA approves on the ED-1024, except for those expenses incurred under the "Uniform Relocation Assistance and Real Property Acquistion Policies Act of 1970" as amended.

Furthermore, for LPW II projects originally submitted but denied under Round I, all costs incurred prior to the project resubmission date (3. below) are unallowable except for administration and the expenses for other nonconstruction activities. All construction related activities including renovation, repair, and other improvements are unallowable (see Note D).

2. *Construction* (including demolition and other site preparation activities) renovation, repair, or other improvement costs—Includes all project costs and the costs of architectural and engineering services required to complete and update plans, specifications and estimates where either architectural design or preliminary engineering or related planning has already been undertaken, and where additional architectural and engineering work or related planning is required to permit construction of the project. All other architectural-engineering services are considered to be construction activities and, except as permitted above, are unallowable when performed by public employees for LPW II projects.

The LPW II restriction concerning use of public employees does not apply to Round I (R-1) error projects.

3. *Project Resubmission Date*—The EDA LPW Round II supplemental application receipt date recorded in Block 25 of the supplemental application (Form ED-101-LPW-S).

4. *Project Denial Date*—The date the grantee was notified on Standard Form ED-1026 or equivalent form that its project was denied, or December 23, 1976, whichever date is earlier.

Unallowable Costs

(Pub. L. 94-369 and 95-28).

A. Listed below are unallowable costs for all LPW grants: 1. All costs incurred before the original application submission (EDA receipt) date (see 1. above) except for those expenses incurred under the "Uniform Relocation Assistance Act of 1970 (Pub. L. 91-646).

2. Acquisition of any interest in real property.

3. Maintenance.

4. Interest costs, except where legislatively authorized.

B. Listed below are unallowable costs for LPW II grants only, excluding LPW II Round I error grants:

1. Construction performed directly by public employees.

2. Purchase of raw materials and goods used in LPW projects, which items were not substantially produced or mined in the U.S.

3. Construction (definition 2. above) work performed prior to the date EDA received the grantees resubmission (definition 3. above) of a Round I application resumbmitted under LPW II.

4. Costs incurred in violation of the grant clause requiring a 10 percent set aside for minority enterprise.

C. Listed below are unallowable costs for LPW II Round I error grants only: 1. Construction costs (definition 2. above) incurred prior to the project denial date (definition 4. above) for Round I error projects awarded under LPW II.

• • • 11.423 Coastal Energy Impact Program Loans and Guarantees

Authorization: Coastal Zone Management Act Amendments of 1976, Section 308(D)(1) loans and 308(D)(2) bond guarantees; 16 U.S.C. 1451 et seq; Pub. L. 94-370.

Objectives: To provide financial assistance for public facilities necessary to support increased populations stemming from new or expanded coastal energy activity.

Major Compliance Features

Uses and Use Restrictions: The public facilities eligible include, but are not limited to, highways and secondary roads, parking, mass transit, docks, navigation aids, fire and police protection, water supply, waste collection and treatement (including drainage), schools and education, and hospitals and health care.

Applicant Eligibility: Any coastal State which has a management program which has been approved under Section 306, or is making, in the judgment of the Assistant Administrator, satisfactory progress toward the development of a management program which is consistent with the polices set forth in Section 303.

Beneficiary Eligibility: Only units of general purpose local government in the coastal zone (as defined by the Department of Commerce) and State agencies are eligible for CEIP financial assistance.

Formula and Matching Requirements: Up to 100 percent Federal funding.

Other Tests: The auditor should test compliance with the terms and conditions of the loan agreement.

Department of Health and Human Services and Department of Education

• • • 13.224 Community Health Centers (Public Health Service Act, Section 330)

Authorization: Section 330, Public Health Service Act; Pub. L. 95-626, as amended by Title I; Pub. L. 95-83, as amended by Title V; Pub. L. 94-63; 42 U.S.C. 254C; (Previously, Public Health Service Act, Title III, Section 314(e); as amended by Section 3 of the Comprehensive Health Planning and PHS Amendments of 1966; Pub. L. 89-749; Section 2 of the Partnership for Health Amendments of 1967; Pub. L. 90-174; and Title II of the 1970 Amendments to PHS Act; Pub. L. 91-515).

Objectives: To support the development and operation of community health centers which provide primary health services, supplemental health services and environmental health services to medically underserved populations.

Major Compliance Features

Uses and Use Restrictions: Proposals designed to improve the availability, accessibility and organization of health care within medically underserved communities. Services must be provided in accordance with plans of the State comprehensive health planning agency. Funds may be used for acquiring and modernizing existing buildings including the costs of amortizing the principal of and paying the interest on loans. Special purpose equipment in excess of $1,000 requires prior approval.

Applicant Eligibility: State and local governments, any public or nonprofit private agency, institution, or organization. Profit making organizations are not eligible.

Beneficiary Eligibility: Population groups in medically underserved areas.

Formula and Matching Requirements: Applicant must assume part of the project costs determined on a case-by-case basis.

centers which are providing all other

provide the newly required services of

Financial Distress Grants: Amount

• • • 13.232 Maternal and Child Health Services (MCH)

Authorization: Social Security Act, Pub. L. 74–271, Title V, Section 503, 42 U.S.C. 703.

Objectives: To provide financial support to States (1) to extend and improve services (especially in rural areas and in areas suffering from severe economic distress) for reducing infant mortality and improvement of the health of mothers and children, (2) to provide programs of projects which offer reasonable assurance, particularly in areas with concentrations of low income families, of satisfactorily (a) helping to reduce the incidence of mental retardation and other handicapping conditions caused by complications associated with childbearing and of satisfactorily helping to reduce infant and maternal mortality; (b) promoting the health of children and youth of school or preschool age; and (c) promoting the dental health of children and youth of school or preschool age, and (3) for special projects of regional or national significance which may contribute to the advancement of maternal and child health services.

Major Compliance Features

Uses and Use Restrictions: The grants may be used for health services in maternity clinics, to find vulnerable patients early in pregnancy and make available a broad spectrum of diagnostic and specialist consultation services, to provide hospitalization during the prenatal period as well as during labor and delivery, for medical and intensive nursing care for prematurely born and other high-risk infants, visits of public health nurses, support of hospital intensive care units for high-risk newborn infants, well-child clinics, pediatric clinics, promotion of health services and for screening, diagnosis, treatment, correction of defects, and after-care, both medical and dental, for children and youth of school and preschool age, school health programs, dental care for children and pregnant women, family planning, immunizations against preventable diseases, and training of professional personnel. States conduct special clinics for mentally retarded children where diagnostic, counselling, treatment, and followup services are provided. These grants may be used for the provision of health services and the purchase of services and care from hospitals, and other providers. States may also include in their dental care programs of projects research looking toward the development of new methods of diagnosis or treatment, or demonstration of the utilization of dental personnel with various levels of training. Funds may not be used for purchase or construction of buildings; for salaries of personnel paid from other Federal grant funds.

Applicant Eligibility: Formula grants are available to State health agencies. Limited project grants are available to State health agencies and to institutions of higher learning for special projects.

Beneficiary Eligibility: Mothers, infants, and children in need of health care, and trainees in the health professions.

• • • 13.256 Health Maintenance Organizations (HMOs)

Authorization: Title XIII of the Public Health Service Act, Health Maintenance Organizations (42 U.S.C. 300e), as amended by Health Maintenance Organization Amendments of 1976, and Pub. L. 95–559, HMO Amendments of 1978.

Objectives: To stimulate the development and increase the number of various models of prepaid, comprehensive health maintenance organizations and the expansion of federally qualified HMO's.

Major Compliance Features

Uses and Use Restrictions: Feasibility surveys, planning, and initial development projects and initial operation costs.

Applicant Eligibility: (1) *Grants and Loans:* Public and private nonprofit organizations that plan to develop, operate and expand an HMO; (2) *Loans guarantees:* private organizations, including profit-making organizations, that plan to develop or operate and expand an HMO in a medically underserved area; and (3) *Loans and loan guarantees for initial operating costs:* Federally qualified HMOs.

Formula and Matching Requirements: Requires 10 percent matching unless servicing a medically underserved area.

• • • 13.295 Community Mental Health Centers Comprehensive Services Support

Authorization: Community Mental Health Center Amendments of 1975, Title III, Pub. L. 94–63; 42 U.S.C. 2681–2696.

Objectives: To provide comprehensive mental health services through a community mental health center via six grant programs: Staffing, planning grants, grants for initial operations, consultation and education services, conversion grants, and financial distress grants. The comprehensive services which centers must provide are: inpatient, outpatient, day care, and other partial hospitalization services and emergency services; specialized services for the mental health of children; specialized services for the mental health of the elderly; consultation and education services; assistance to courts and other public agencies in screening catchment (service) area residents considered for referral for inpatient treatment in a State mental health facility; follow-up care for catchment area residents discharged from a mental facility; transitional halfway house services for catchment area residents discharged from mental health facilities or who would require inpatient care without such halfway house services; unless there is insufficient need, or the need is otherwise being met, specialized programs for the prevention, treatment, and rehabilitation of alcohol and drug abusers, alcoholics, and drug addicts. Cross catchment area sharing of inpatient services, emergency services, and transitional half-way house services through appropriate arrangements with health professionals and others serving the residents of the catchment area is permitted.

Major Compliance Features

Uses and Use Restrictions: Planning grants to assess area needs for mental health services, design a CMHC program, obtain financial and professional assistance and support for the program and encourage community involvement. Maximum support is $75,000 for 1 year.

Grants for Initial Operations provide up to 8 years of financial support (on a decreasing, deficit basis), grantee must have an acceptable plan for the provision of six initial services (inpatients, emergency, outpatient, screening to courts and other agencies, follow-up and consultation and education) in place within 90 days of the first day of funding, and, within three years following receipt of initial operations funding, the Center must have all twelve services in place. Support for centers in poverty areas is provided at a higher level of funding. Existing centers may opt to continue to receive staffing grant support under former provisions of the CMHC Act, but must provide at least the following six services: inpatient, emergency, outpatient, screening to courts and other agencies, follow-up and consultation and education.

Grants for Consultation and Education Services begin with the fifth year of a center's operation unless the Secretary determines that C&E services could not be provided in the third and fourth year without such a grant. Grants may be made to nonfederally funded centers which are providing all other required services. Conversion grants may be provided for a maximum of 2 years to centers funded under the former Act to enable them to provide additional services mandated by this legislation.

Financial distress grants may be provided for up to 5 years to centers whose original staffing or operations grants have terminated because of statutory limits as to funding period and which demonstrate that without such support they would have significant reduction in quality of services or be unable to provide all required services.

Staffing grants provide funds on a matching basis for salaries of professional and technical personnel providing new services within a community mental health center. Only support for continuation grants is available.

Applicant Eligibility: Eligibility for each program is as follows: Planning: public and nonprofit private entities which have the responsibility for planning and program development for the catchment (service) area and are located in an area which has not been awarded any community mental health center grants.

Initial Operations: Public and nonprofit private community mental health centers, and any public or nonprofit private entity which (a) is providing mental health services, (b) meets requirements in Sections 201 and 206 of Pub. L. 94–63 with respect to the provision and coordination of health services, governing bodies, quality assurance programs, medical records systems, professional advisory boards, etc., and (c) has an acceptable plan for the provision of the required services within the time limits imposed by the authorizing legislation.

Consultation and Education: Ongoing community mental health centers; new CMHC's awarded Initial Operations grants; and public or nonprofit private entities which fulfill requirements of Sections 201 and 206 of Pub. L. 94–63.

Conversion Grants: Current recipient of a staffing grant, a "specialty" grant (alcohol, drug abuse, or Part F children's grant), an initial operations grant or a financial distress grant which demonstrates that there is going to be an operating deficit in one or more of newly required services.

Financial Distress Grants: Current community mental health centers which are terminating their eighth year of staffing, or operations grants which demonstrate a need for further support in order to prevent a significant reduction in the types or quality of services provided or an inability to provide the newly required services of Pub. L. 94–63, Section 201(b).

Staffing: Existing centers may opt to continue to receive staffing grant support under former provision of the CMHC Act. A grantee receiving staffing support must provide at least the following six services: inpatient, emergency, outpatient, screening to courts and other agencies, follow-up, and consultation and education. Services must be provided to individuals of all ages.

Formula and Matching Requirements: Planning Grants: Limited to $75,000 by law.

Initial Operations: Lesser of the following: the amount by which the applicant's anticipated costs of operations exceed the anticipated income for a given year or the Federal share percentage of expenditures for each year of operation. Poverty area (as designated by the Secretary, DHEW): first two years: 90 percent of the projected costs of operation; 80 percent (third year) 70 percent (fourth year) 60 percent (fifth year) 50 percent (sixth year) 40 percent (seventh year) and 30 percent (eighth year). Nonpoverty areas: Federal share on a decreasing basis related to the projected costs of operation: 80 percent (first year) 65 percent (second year) 50 percent (third year) 35 percent (fourth year) 30 percent (fifth and sixth years) and 25 percent (seventh and eighth years).

Consultation and Education: Grantees must be in the fourth year or beyond (unless waived by the Secretary). Amount eligible is lesser of the following: estimated costs of providing consultation and education services in proposed grant year or: $.50 per capita of catchment area population plus the lesser of either $.25 per capita or 50 percent of anticipated receipts for consultation and education (first and second grants); $.50 per capita plus the lesser of $.25 per capita or 25 percent of anticipated receipts (third grant); $.25 per capita plus the lesser of $.25 per capita or 25 percent of anticipated receipts for consultation and education services for poverty areas as determined by the Secretary, DHEW (fourth and succeeding grants); $.125 per capita plus the lesser of 12½ percent of the anticipated receipts for consultation and education services or $50,000 (fourth and succeeding grants for non-poverty areas).

Conversion Grants: Amount eligible is the difference between the estimated expenditures and the estimated income for the one year of support being requested for providing new services required by Pub. L. 94–63.

Financial Distress Grants: Amount available is the lesser of: 90 percent of the percentage ceiling of the last CMHC staffing or operations grant awarded (less any costs of providing consultation and education services during the requested grant year) or amount by which estimated costs exceed anticipated income.

Staffing grants are awarded on the lesser of the amount by which the applicant's anticipated costs exceed the anticipated income or a decreasing percentage basis for a period of 8 years. The Federal share may be up to 75 percent of the eligible salary costs for the first 2 years, 60 percent the 3rd year, 45 percent the 4th year, and 30 percent for the last 4 years. Federal share percentage for areas designated by the Secretary as poverty areas is higher: up to 90 percent of staff costs for the first 2 years, 80 percent for the 3rd year, 75 percent for the next 2 years, and 70 percent for the remaining 3 years.

• • • 13.403 Bilingual Education (Title VII)

Authorization: Bilingual Education Act; Title VII of the Elementary and Secondary Education Act of 1965, Pub. L. 89–10, amended by Pub. L. 95–561; 20 U.S.C. 3221–3261.

Objectives: To develop and carry out elementary and secondary school programs, including activities at the pre-school level, to meet the educational needs of children of limited English proficiency.

Major Compliance Features

Uses and Use Restrictions: (1) The establishment, operation, and improvement of programs of bilingual education; (2) auxiliary and supplementary community and educational activities designed to facilitate and expand the implementation of such programs, including adult education programs and preschool programs; (3) the preparation of personnel for bilingual education programs, teacher training including career development opportunities, short-term training institutes, and fellowship for study in the field of training teachers for bilingual education; (4) curriculum and materials development, including assessment and dissemination, (5) planning, and technical assistance for the development of bilingual programs; and (6) desegregation assistance. Federal funds made available under this Title will be used to supplement, not to supplant, existing funds.

Applicant Eligibility: All states including the District of Columbia, Puerto Rico, Guam, American Samoa, the Virgin Islands, the Trust Territory of

V 45 AG 18 80 UMI

the Pacific Islands and the Department of the Interior. Grants may be made to a State Education Agency, Local Education Agency (LEA) or agencies, or to an institution of higher education including Junior and Community Colleges, and private nonprofit organizations which apply jointly or after consultation with one or more local education agencies. A nonprofit institution or organization of an Indiam tribe may be eligible when it operates an elementary or secondary school on the reservation and is approved by the Commissioner for the purpose of the Title. For research contracts, public and private educational agencies, institutions, and organizations are eligible.

Beneficiary Eligibility: Non-English speaking children or children with limited English proficiency ages 3 to 18. Children in both public and nonprofit private schools are eligible to participate.

Formula and Matching Requirements: State Education Agencies are allowed up to 5 percent of the amounts awarded to the LEA's during the preceding fiscal year. No formula or matching requirements for other programs.

* * * 13.428 Educationally Deprived Children-Local Educational Agencies (Title I, ESEA-Part A Sub-Part 1—Basic Grants, and Subpart 2—Special Grants)

Authorization: Elementary and Secondary Education Act of 1965; Title I; Pub. L. 89–10 as amended.

Objectives: To expand and improve educational programs to meet the needs of educationally disadvantaged children in low-income areas whether enrolled in public or private elementary and secondary schools.

Major Compliance Features

Uses and Use Restrictions: Primarily for provision of instructional activities to educationally deprived children in areas having a high concentration of children from low-income families. Also includes service activities not available from other sources. Services must supplement, not supplant, those normally provided by State and local educational agencies.

Applicant Eligibility: Departments of Education in states and outlying areas; Bureau of Indian Affairs.

Beneficiary Eligibility: Local School Districts providing supplementary services to educationally deprived children residing in low-income areas.

* * * 13.429 Migrant Education

Authorization: Elementary and Secondary Education Act of 1965 as amended; Pub. L. 89–10 and Pub. L. 89–750 as amended by Pub. L. 95–561; 20 U.S.C. 2761, 2762, 2763.

Objectives: To expand and improve programs to meet the special educational needs of children of migratory agricultural workers or migratory fishers.

Major Compliance Features

Uses and Use Restrictions: Identify and meet specific needs of migrant children through supplementary instruction, health, nutrition, psychological services, cultural development, and prevocational training and counseling.

Applicant Eligibility: State Educational Agencies.

Beneficiary Eligibility: Children of migratory agricultural workers or migratory fishers.

* * * 13.449 Handicapped Preschool and School Programs (Part B, Education of the Handicapped Act)

Authorization: Education of the Handicapped Act, Title VI, Part B; Pub. L. 91–230; as amended by Pub. L. 93–380 and Pub. L. 94–142; as amended by Part D, Section 1341 of the Education Amendments of 1978; 20 U.S.C. 1411–1419.

Objectives: Free, appropriate public education to all handicapped children.

Major Compliance Features

Uses and Use Restrictions: To provide the special education and related services needed to make a free, appropriate, public education available to all handicapped children in the State.

Applicant Eligibility: State education agencies in the 50 states, District of Columbia, Puerto Rico, American Samoa, Northern Mariana Island, Guam, Virgin Island, and Trust Territory of the Pacific Islands, and the Department of the Interior, Bureau of Indian Affairs may apply to the Office of Education for participation in the Part B, EHA program.

Beneficiary Eligibility: Mentally retarded, hard of hearing, deaf, speech impaired, visually handicapped, seriously emotionally disturbed, orthopedically impaired, other health impaired, children having specific learning disabilities deaf-blind children or multihandicapped children who require special education and related services are eligible.

Formula and Matching Requirements: There are non-supplanting and excess cost requirements. State funds available to the State for direct and support services must be matched on a program basis. There is no matching requirement for funds distributed to the local educational agency or the intermediate education units.

* * * 13.478 School Assistance in Federally Affected Areas-Maintenance and Operation (Impact Aid/Disaster Aid)

Authorization: Federally Impacted Areas, Titles I and IV, of Pub. L. 81–874, as amended.

Objectives: To alleviate burdens due to the Federal Activity where tax base of a district is reduced through the Federal acquisition of real property; sudden and substantial increase in school attendance as the result of Federal activities; education for children residing on Federal property; or children whose parents are employed on Federal property or in the Uniformed Service.

To provide assistance for the education of children residing with a parent who, at any time during the 3-year period preceding the fiscal year of application, was a refugee meeting requirements of the Migration and Refugee Assistance Act of 1962 provided payment was not made under Section 2(b)(4) of that Act.

To provide major disaster assistance by replacing, repairing damaged or destroyed supplies, equipment or facilities.

Major Compliance Features

Uses and Use Restrictions: For payment of maintenance and operation expenditures. This does not limit nor specify the uses that can be made of funds received by an eligible district, except payments attributable to handicapped children. Limited to free public elementary and secondary education.

Applicant Eligibility: Local educational agencies (LEA) which provide free public elementary or secondary education may apply under the following: Section 2–10 percent of the assessed evaluation of property in school district acquired by the Federal Government since 1938 which caused a continuing financial burden; Section 3–3 percent of total average daily attendance (ADA) or 400 ADA of pupils who either live on Federal property or have a parent who works on Federal property or is on active duty in the uniformed services or 20 percent of children in ADA residing with parents who were in refugee status; Section 4—an increase in ADA in current year directly caused by Federal activities equal to 5 percent of non-Federal ADA of preceding year; Section 7—provides assistance for current school expenditures in cases of certain disasters.

Beneficiary Eligibility: Public elementary and secondary school children.

* * * 13.493 Vocational Education—Basic Grants to States

Authorization: Vocational Education Act of 1963, as amended by Title II of the Education Amendments of 1976, Pub. L. 94–482; 20 U.S.C. 2301 to 2461; 90 Stat. 2168–2213.

Objectives: To assist states in improving planning and in conducting vocational programs on the local level for persons of all ages who desire and need education and training for employment.

Major Compliance Features

Uses and Use Restrictions: For vocational education programs; cooperative vocational education programs; energy education programs; construction of area vocational education school facilities; support of full-time personnel to eliminate sex bias; provision of stipends if necessary due to inadequate funding in other programs; placement services for students who have successfully completed vocational education programs if necessary due to inadequate funding in other programs; industrial arts programs; support services for women who enter programs designed to prepare individuals for employment in jobs which have been traditionally limited to men; day care services for children of vocational students; vocational education for displaced homemakers and other special groups; construction and operation of residential vocational schools; vocational training through arrangements with private vocational training institutions; and State and local administration costs. Each State must use 80 percent of its allotment under Section 102(a) for these purposes. Each State must also allocate the following minimum portions of their total allotment under Section 102(a) as follows: 20 percent for vocational education for the disadvantaged and for persons who have limited English-speaking ability and for stipends; 15 percent for postsecondary and adult vocational education; and 10 percent for vocational education programs for handicapped persons.

Applicant Eligibility: State Boards for Vocational Education.

Beneficiary Eligibility: Individuals requiring vocational training.

* * * 13.571 Improvement in Local Educational Practice

Authorization: Elementary and Secondary Education Act, Title IV, Part C, 20 U.S.C. 3111.

Objectives: To local educational agencies to improve their educational practices.

Major Compliance Features

Uses and Use Restrictions: Activities that will improve their educational practices, including (1) development and demonstration of activities addressing serious educational problems such as the need for effective programs for children with special needs (e.g., educationally deprived, gifted and talented, and handicapped, children); high rates of children who do not complete secondary school; need of children in nonpublic schools for improved educational services; (2) encouraging development and demonstration of improved means of carrying out programs for educationally deprived children in areas with large concentrations of low-income families; (3) activities to improve achievement of children in basic skills; (4) activities to encourage parental participation; (5) development of programs to diagnose learning problems and methods to assess achievement of children, including those in nonpublic schools; (6) improving school management; professional development programs for teachers, administrators, and other instructional personnel; (7) early childhood and family education programs; (8) expanding education beyond the school building; (9) encouraging innovation and improvement in compensatory education efforts; (10) improving school management. In fiscal year 1980, 5 percent, and in fiscal year 1981 and thereafter, 10 percent of any increase in the funds available over fiscal year 1979 must be used to improve school management and coordinate all resources to improve means of meeting individual needs of every child in the school; 50 percent of such increase must be used to improve compensatory education efforts. Fifteen percent must be spent on special programs or projects for the education of children with specific learning disabilities and handicapped children; and expenditures for programs and projects for non-public school children will be equal to expenditures for public school children.

Applicant Eligibility: Any State or local educational institution.

Beneficiary Eligibility: Beneficiaries include State and local educational agencies.

* * * 13.600 Administration for Children, Youth and Families

Head Start

Authorization: Head start Economic Opportunity and Community Partnership Act of 1974; Pub. L. 93–644, Title V, Parts A–C 42 U.S.C. 2921 et seq. as amended.

Objectives: To provide comprehensive health educational, nutritional, social and other services primarily to preschool economically disadvantaged children and their families so that the children will attain overall social competence.

Major Compliance Features

Uses and Use Restrictions: Ninety percent of the enrollees in a program must come from families whose income is below the poverty guidelines as established by the Office of Management and Budget. Training programs are available for employees of Head Start programs.

Applicant Eligibility: Any local government or private nonprofit agency.

Beneficiary Eligibility: Full-year Head Start programs are primarily for children from age 3 up to the age when the child enters the school system, but may include some younger children. Summer Head Start programs are for children who will be attending kindergarten or elementary school for the first time in the fall. No less than 10 percent of the total enrollment opportunities in Head Start programs in each State shall be available for handicapped children.

***13.624 Rehabilitation Services and Facilities—Basic Support (Basic Support Program)

Authorization: Rehabilitation Act of 1973; Pub. L. 93–112 as amended by Pub. L. 93–516, 94–230, and 95–602; 29 U.S.C. 701, Title I.

Objectives: To provide vocational rehabilitation services to persons with mental and/or physical handicaps. Priority service is placed on needs of those persons with the most severe disabilities.

Major Compliance Features

Uses and Use Restrictions: To cover the costs of providing rehabilitation services which include: Diagnosis, comprehensive evaluation, counseling; training, reader services for the blind, interpreter services for the deaf, and employment placement. Also assist with payment for medical and related services and prosthetic and orthotic devices, transportation to secure vocational rehabilitation services, maintenance during rehabilitation, tools, licenses, equipment, supplies, and other

goods and services; vending stands for handicapped persons including management and supervisory services; and assistance in the construction and establishment of rehabilitation facilities. Services are provided to families of handicapped individuals when such services will contribute substantially to the rehabilitation of such individuals who are being provided vocational rehabilitation services.

Applicant Eligibility: State agencies designated as the rehabilitation agency.

Beneficiary Eligibility: Eligibility for vocational rehabilitation services is based on the presence of a physical and/or mental disability, which for such individual constitutes or results in a substantial handicap to employment, and a reasonable vocational rehabilitation service may reasonably be expected to benefit the individual in terms of employability.

***13.633 Special Programs for the Aging—Title III Parts A and B—Grants for States and Community Programs on Aging

Authorization: Older Americans Act of 1965. Pub. L. 89–73, as amended by Pub. L. 90–42, 91–69, 92–258, 93–29, 93–351, 94–135, and 95–478, Title III Parts A and B; Stat. 36–45, 42 U.S.C. 3021–3025.

Objectives: Support of programs for older persons via statewide planning, and area planning and provision of social services: including multi-purpose senior centers.

Major Compliance Features

Uses and Use Restrictions: To develop or strengthen comprehensive coordinated service systems through a network of designated State agencies on Aging and area agencies on Aging. Of the funds awarded for social services and centers at least $20,000 or 1 percent (whichever is greater) must be used for an ombudsman program on long term care, up to 8.5 percent of the funds awarded may be used for the administration of area plans, at least 50 percent of the funds awarded to area agencies must be used for access, legal and/or in home services. The remaining funds may be used for other services and for the acquisition, renovation, alteration or construction of multipurpose senior centers as described in the above plan.

Applicant Eligibility: All States and territories which have State agencies on Aging designated by the governors.

Beneficiary Eligibility: Older persons, especially low income and minority.

Formula and Matching Requirements: Programs are funded on a Federal, State matching basis as follows: State Agency Administration, 75–25; Administration of Area Plan, 75–25; Social Services and multipurpose senior centers, 90–10 in fiscal year 1979 and fiscal year 1980, and 85–15 in fiscal year 1981. Cash or in-kind resources from non-Federal sources are allowable. The law does not require that the non-Federal share requirement vary from year to year.

***13.635 Special Programs for the Aging—Title III—Part C—Nutrition Services (Aging Programs—Title VII—Nutrition)

Authorization: Older Americans Act of 1965, Pub. L. 89–73, as amended by Pub. L. 90–42, 91–69, 92–258, 93–29, and 93–351, 94–135, and 95–478, Title III Part C, 79 Stat. 218–226, 81 Stat. 106–108, 82 Stat. 1101, 83 Stat. 108–115.

Objectives: To provide older Americans with low cost nutritious meals, and with appropriate nutrition education and other appropriate nutrition services. Meals may be served in a congregate setting or delivered to the home.

Major Compliance Features

Uses and Use Restrictions: Local projects must provide a hot or other appropriate meal at least once per day, five or more days per week to people aged 60 and over and their spouses. Up to 8.5 percent of the funds may be used for the support of services related to the delivery of meals. States may request transfers of funds between grants made for Home Delivered Nutrition Services and Congregate Nutrition Services.

Applicant Eligibility: All States and territories.

Beneficiary Eligibility: Older persons aged 60 and over and their spouses, especially low income and minority.

Formula and Matching Requirements: The nutrition portion of this program is funded on a Federal/State matching basis at a ratio of 90–10 in fiscal year 1979 and 1980, and 85–15 in fiscal year 1981. Cash or in-kind resources from non-Federal resources are allowable. The law does not require that the non-Federal share vary from year to year. The area agency administration portion is funded at a 75–25 ration.

* * *13.642 Social Services for Low Income and Public Assistance Recipients (Social Services)

Authorization: Social Security Act, Title I, Pub. L. 87–543; 42 U.S.C. 301–306; Title IV, Pub. L. 90–248; 42 U.S.C. 602–3; Title XVI, Pub. L. 87–543; 42 U.S.C. 1361–71; Title X, Pub. L. 87–543; 42 U.S.C. 1201–1206; Title XIV, Pub. L. 89–97; 42 U.S.C. 301–306 and 1361–71; Pub. L. 92–512; Title XI, Title XVI; Pub. L. 92–603; 42 U.S.C. 801–5 and 301; Pub. L. 93–647, Title XX, 42 U.S.C.; Pub. L. 95–171.

Objectives: To enable states to provide social services to public assistance recipients and other low income persons directed toward one of the five goals specified in the law.

Major Compliance Features

Uses and Use Restrictions: For the proper and efficient operation of social services programs to enable eligible individuals to become or remain self supporting and self sufficient; to prevent neglect, abuse or exploitation of children and adults; to prevent inappropriate institutional care; and to arrange for institutional care, when appropriate.

Federal funds cannot be used for public education services that are generally available, land acquisition or services provided by institutions to their inmates. There are other restrictions with respect to medical care, room and board, day care services, in-kind matching, donated funds, and cash payments as a service. Fees must be charged for services provided to specified income eligible persons.

Applicant Eligibility: Designated Title XX State agencies in the states and the District of Columbia; for Titles I, IV A, X, XIV, and XVI, State welfare agencies in Guam, Puerto Rico, the Northern Marianas, and the Virgin Islands.

Beneficiary Eligibility: Under Title XX any recipient of Aid to Families with Dependent Children, Supplementary payment recipients or State supplementary payment recipients as well as low income individuals. Individuals whose gross monthly income exceeds 115 percent of the median income are not eligible for Title XX services. For the other titles in the island jurisdictions, any needy person who is, or may become a recipient of financial assistance, i.e., the blind, aged, permanently and totally disabled, or families with dependent children.

Formula and Matching Requirements: Federal funds are used to reimburse the states for 75 percent of social services costs. Family planning services are matched at 90 percent.

* * *13.646 Work Incentive Program (WIN)

Authorization: Social Security Amendments of 1967, Pub. L. 90–248, as amended 81 Stat. 821, 42 U.S.C. 601 et seq; 42 U.S.C. 630; Pub. L. 92–223, 85 Stat. 802, 42 U.S.C. 601 et seq.; 42 U.S.C. 602; Revenue Act of 1971, Pub. L. 92–178, 85 Stat. 497, 26 U.S.C. 31 et seq.; Pub. L. 94–12, 89 Stat. 26 et seq., 26 U.S.C. 50A; Pub. L. 94–401, 90 Stat. 1217, 26 U.S.C. 50A; Tax Reform Act of 1976, Pub. L. 94–455, 90 Stat. 1903, 26 U.S.C. 50A; Revenue Act of 1978, Pub. L. 95–600:

Stat. 2763 et seq., 26 U.S.C. 50A, 50B; Unemployment Compensation Amendments of 1976, Pub. L. 94–566, 90 Stat. 2689, 42 U.S.C. 601 et seq.

Objectives: To move men, women, and out of school youth, age 16 or older from dependency of AFDC grants to economic independence through permanent, productive employment by providing appropriate employment training, job placement and other related services, supplemented by child care and other social services when needed to enable a person to participate or secure employment.

Major Compliance Features

Uses and Use Restrictions: This integrated DOL/HEW program is directed to employable welfare recipients under the program of Aid to Families with Dependent Children (AFDC) who are required for work and training or who volunteer. Employment and training services offered include: (1) On the job training and job placement; (2) placement in public service employment arranged with public and private nonprofit organizations for individuals for whom unsubsidized jobs are not available; (3) work orientation, basic education, skill training, work experience, employment couseling, vocational testing, and other supportive services to improve employability of individuals who lack job readiness. These services are supplemented by social services approved and arranged by a Separate Administrative Unit (SAU) of the State welfare agencies such as (1) child care; (2) family planning; (3) counseling; (4) employment related remedial care and health related services; (5) selected vocational and rehabilitation services. Employers hiring WIN registrants are eligible for a tax benefit which enables them to receive credit of 50 percent of wages up to $6,000 the first year, and 25 percent the second year paid to these individuals within specified limitations.

Applicant Eligibility: DOL's ETA usually designates the State Employment Service agencies for WIN. Social services are provided through a Separate Administrative Unit of the welfare agency. WIN services are available in Puerto Rico, the Virgin Islands, and Guam.

Beneficiary Eligibility: Recipients of Aid to Families with Dependent Children (AFDC) who are required by law to register with WIN or who choose to register voluntarily.

Formula and Matching Requirements: For employment and training agencies, a maximum of 90 percent can be Federal funds with 10 percent non-Federal cash or inkind matching. For welfare agencies, Federal funds are authorized to pay 90 percent of State costs for child care and supportive services, with a 10 percent State matching in cash only.

* * * 13.679 Child Enforcement (Title IV–D)

Authorization: Title IV–D of The Social Security Act, Pub. L. 93–647, 94–46, 94–88, 94–365, 95–30, 95–59 and 95–171; 26 U.S.C. 6305, 6334; 42 U.S.C. 651–662 5 U.S.C. 1673.

Objectives: To enforce the support obligations owed by absent parents to their children, locate absent parents, establish paternity, and obtain child support.

Major Compliance Features

Uses and Use Restrictions: States provide child support enforcement services directly to individuals who are receiving AFDC or to individuals not eligible for AFDC who have applied for such services. AFDC applicants or recipients must have assigned support rights to the State. Non-AFDC individuals must have signed a written application for the service. The State must provide services to locate absent parents, establish paternity and enforce support obligations.

Applicant Eligibility: All states, the District of Columbia, Pureto Rico, Virgin Islands, and Guam. Must be designated the single and separate State Child Support Agency.

Beneficiary Eligibility: The State must provide the service to all applicants for or recipients of Aid to Families with Dependent Children for whom an assignment to the State of Child Support Rights has been made and who are in need of paternity determination or child support enforcement services; and, any other individual who is in need of such services and who has applied to the State Child Support Enforcement Agency.

Formula and Matching Requirements: Seventy-five (75) percent Federal financial participation in the administrative costs incurred by the State pursuant to an approved Title IV–D plan. This includes costs incurred by law enforcement officials pursuant to cooperative agreements with the IV–D agency.

* * *13.714 Medical Assistance Program (Medicaid (Title XIX))

Authorization: Title XIX, Social Security Act as amended; Pub. L. 89–97; Pub. L. 90–248; Pub. L. 91–56; 42 U.S.C. 1396, et seq. Pub. L. 92–223; Pub. Law 92–223; Pub. L. 92–603; Pub. L. 93–66; Pub. L. 93–233.

Objectives: For payments of Medical Assistance on behalf of cash assistance recipients and, in certain States, on behalf of other medically needy, who, except for income and resources, would be eligible for cash assistance.

Major Compliance Features

Uses and Use Restrictions: States must provide for the categorically needy, in- and out-patient hospital services; other laboratory and x-ray services; skilled nursing home services, home health services for persons over 21; family planning services; physicians' services; and early and periodic screening, diagnosis and treatment for individuals under 21. For the medically needy, States are required to provide any seven of these services for which Federal financial participation is available.

Applicant Eligibility: State and local welfare agencies.

Beneficiary Eligibility: Needy persons who are over 65, blind, disabled, members of families with dependent children, and, in some States, persons under age 21 may apply to a State or local welfare agency for medical assistance. Eligibility is determined by the State in accordance with Federal regulations.

Formula and Matching Requirements: Federal funds are available to match State expenditures for medical care provided under the State Plan; the Federal share ranges from 50 percent to 78 percent according to a formula based upon the relation of State per capita income to national per capita income.

* * * 13.808 Assistance Payments—Maintenance Assistance (State Aid) (Maintenance Assistance)

Authorization: Social Security Act of 1935, as amended; Pub. L. 74–271; Titles I, IV—Part A, X, XI, XIV, XVI; 42 U.S.C. 601 et seq, 1301 et seq, 1351 et seq; Pub. L. 88–571; 24 U.S.C. 321 et seq; Pub. L. 95–171; Pub. L. 95–216 (The Social Security Amendments of 1977); Revenue Act of 1978 and Pub. L. 95–600.

Objectives: To set general standards for State administration, to provide the Federal financial share to states for aid to families with dependent children, emergency assistance to families with children, assistance to repatriated U.S. Nationals, and in Guam, Puerto Rico, and Virgin Islands aid to the aged, blind, permanently and totally disabled also, and administration of these welfare programs, and to monitor performance.

Major Compliance Features

Uses and Use Restrictions: Money payments by states—made directly to eligible needy families with dependent children and to needy, aged, blind, or disabled persons in Guam, Puerto Rico,

V 45 AG 18 80 UMI

the Northern Marianas, and the Virgin Islands are to cover cost for food, shelter, clothing, and other items of daily living recognized as necessary by each State's program. Payments in the form of money or vendor payments assist needy families in emergency or crisis situations to avoid destitution or provide living arrangements. Under the AFDC program, payments are also made for care of specified children in foster homes or institutions. Federal funds up to $250 per home may be available for home repairs of a home owned by a recipient.

Under the fully federally-funded repatriation program, money is provided for food, shelter, clothing, medical care (including hospitalization and treatment of mentally ill persons), and transportation to persons who have been returned to the United States because of destitution and who are not eligible for other financial assistance programs.

Funds for State and local administration of programs are for costs of interviewing public assistance applicants for eligibility determination and validation of eligibility; costs of State and local personnel engaged in program direction and management; and other on-going costs and activities related to administering the programs.

Applicant Eligibility: State and local welfare agencies.

Beneficiary Eligibility: Needy families with dependent children deprived of parental support or care, and families with children needing emergency welfare assistance; destitute repatriates; or needy, aged, blind or permanently and totally disabled persons in Guam, Puerto Rico, and the Virgin Islands.

Formula and Matching Requirements: The Federal share for AFDC is based on a State's average monthly payment of $32 per recipient ($100 per child in foster care). Federal funds pay 5/6 of the first $18 of the average payment and then 50 percent to 60 percent of the balance within the Federal average maximum. If it is to the State's benefit, it may use the medicaid formula with no maximum (provided the State has an approved medicaid Plan) which may range from 50 to 83 percent Federal funds. The Federal share of home repairs is 50 percent with a limit of $500 in Federal and State funds for any one home. The Federal share of payments for AFDC and the adult categories in Guam, Puerto Rico, and the Virgin Islands is determined by individual computation and subject to statutory ceilings.

Department of Housing and Urban Development

* * * 14.146 Low Income Housing Assistance Program (Public Housing)

Authorization: Housing Act of 1937, as amended; Pub. L. 75–412; 42 U.S.C. 1401–1435.

Objectives: To provide decent, safe and sanitary housing and related facilities for families of low income through an authorized Public Housing Agency (PHA).

Major Compliance Features

Uses and Use Restrictions: To assist public housing agencies in providing low-income housing by (1) acquiring existing housing from the private market (acquisition); (2) procuring construction by competitive bidding where the public housing agency acts as the developer (conventional); or (3) letting contracts to private developers (turnkey). Annual contributions are made to public housing agencies to provide debt service payments, to assure the low-income character of the projects, and to achieve and maintain adequate operating and maintenance service and reserve funds.

Applicant Eligibility: Public Housing Agencies established by a local government in accordance with State law, authorized public agencies, or Indian tribal organizations are eligible. The proposed program must be approved by the local governing body.

Beneficiary Eligibility: Families of low income. A single person who is elderly, disabled, handicapped, displaced, or the remaining member of a tenant family is also eligible.

Other Tests: See program 14.158 below.

* * * 14.156 Lower-Income Housing Assistance Program

(Section 8—Housing Assistance Payments Program for Lower Income Families)

Authorization: Housing Act of 1937, Pub. L. 75–412; 42 U.S.C. 1401–1435, as amended by the Housing and Community Development Act of 1974, Pub. L. 93–383; 88 Stat. 662, 42 U.S.C. 1437f; the Supplemental Housing Authorization Act of 1977, Pub. L. 95–24; 91 Stat. 53; and the Housing and Community Development Act of 1977, Pub. L. 95–128; 91 Stat. 1111; Housing and Community Development Amendments of 1978, Pub. L. 95–557; 92 Stat. 2080.

Objectives: To aid lower-income families in obtaining decent, safe and sanitary housing in private accommodations and to promote economically mixed existing, newly constructed, and substantially rehabilitated housing.

Major Compliance Features

Uses and Use Restrictions: Provides housing assistance payments to participating private owners and Public Housing Agencies to provide decent, safe and sanitary housing for lower and very low-income families at rents they can afford. Housing assistance payments are used to make up the difference between the maximum approved rent due to the owner for the dwelling unit which is reasonable in relation to comparable market units and the occupant family's required contribution towards rent. Assisted families are required to contribute not less than 15, nor more than 25 percent of their adjusted family income toward rent.

Applicant Eligibility: Any private owner (profit-motivated and nonprofit, cooperative, or an authorized public housing agency (any State, county, municipality or other governmental entity or public body (or agency or instrumentality thereof) which is authorized to engage in or assist in the development or operation of housing for low-income families).

Beneficiary Eligibility: Very low-income families (whose income does not exceed 50 percent of the median income for the area as determined by the Secretary with adjustments for smaller and larger families); lower income families (whose income does not exceed 80 percent of the median income for the area adjusted for family size). A very low income or lower income single person who is elderly, disabled or handicapped, displaced, or the remaining member of an eligible tenant family is also eligible. At least 30 percent of the families assisted should be very low income families with gross incomes not in excess of 50 percent of area median income.

Other Tests: See program 14.158 below.

* * * 14.158 Public Housing—Modernization of Projects

Authorization: Housing Act of 1937, as amended; Pub. L. 75–412; 50 Stat. 888; 42 U.S.C. 1430–1437].

Objectives: To provide annual contributions to modernize existing public housing projects to upgrade living conditions, correct physical deficiencies, and achieve operating efficiency and economy.

Major Compliance Features

Uses and Use Restrictions: Modernization funds must be used to

finance capital improvements in public housing projects.

Applicant Eligibility: Public Housing Agencies (PHAS) operating PHA-owned low income public housing projects under an existing annual contributions contract (ACC).

Beneficiary Eligibility: The tenants of the modernized project are the ultimate beneficiaries.

Formula and Matching Requirements: Formula based on annual contributions needed to meet debt service requirements. PHAs shall use current operating funds to assist in the financing of the modernization programs if such funds are available.

Other Tests: 1. *Accounting Records and Financial Reporting Procedures.* The Low-Rent Housing Accounting Handbook 7510.1 contains the chart of accounts and accounting records and procedures that are the minimum acceptable to HUD. Chapter 13 of the Accounting Handbook prescribes the financial reporting procedures for Public Housing Agencies (PHAs). The auditor will determine the following:

a. Whether the accounting records include the applicable control accounts and subsidiary records prescribed by HUD Handbook 7510.1;

b. Whether the PHA follows the pertinent accounting procedures called for in HUD Handbook 7510.1;

c. Whether the accounting records are in proper condition for audit;

d. Whether the PHA records indicate that the required financial reports were submitted within prescribed time intervals as prescribed in HUD Handbook 7510.1; and

e. Whether the reports submitted to HUD reflect what is in the books of accounts.

2. *Collection Policy and Practice.* The auditor is to determine if tenant accounts receivable and/or collection loss write-offs are reasonable. Receivables less than an average of $15 per unit and collection losses less than 1 percent of annual dwelling rental income are considered reasonable. If tenant accounts receivable and/or collection losses are excessive, the auditor is required to confirm at least the large balances. In addition, the auditor should determine the following:

a. Whether the PHA has an official collection policy;

b. Whether the collection policy is enforced consistently; and

c. Whether collection loss write-offs are approved by the governing board or an official designated such authority.

The PHA is required to reconcile certain program compliance matters as described in HUD Handbook IG 7476.3.

Community Development Block Grant Program (CDBG)

* * * 14.218 Community Development Block Grants/Entitlement Grants Development

and

* * * 14.219 Community Development Block Grants/Small Cities Program (Small Cities)

and

* * * 14.221 Urban Development Action Grants

Authorization: Title I of the Housing and Community Development Act of 1974 (Pub. L. 93–383). Principal amendments to Title I were included in the Housing and Community Development Act of 1977 (Pub. L. 95–128).

Objectives: The primary objective of Title I is the development of viable urban communities. Several methods of funding CDBG participants are prescribed:

1. *Entitlement grant funds,* the most common, are allocated to designated communities or counties which qualify as "Entitlement Communities." The entitlement grant is determined by formula and is made to metropolitan and nonmetropolitan recipients.

2. *Discretionary grant funds* are allocated to communities which may or may not receive an entitlement grant. Discretionary grants include the following:

a. *Secretary's Fund.* Grants, which represent three percent of the CDBG funds appropriated for each fiscal year 1978, 1979, and 1980, to be used for a variety of purposes.

b. *Transition/Categorical Program Settlement Fund.* Grants to facilitate an orderly transition to the CDBG program and for financial settlement of projects and programs terminated and consolidated by Title I.

c. *Small Cities Program.* Grants to States and units of general local government in both metropolitan and nonmetropolitan areas to undertake the same activities as may be funded in the entitlement grant program. The primary distinction is that the Small Cities program is competitive.

d. *Urban Development Action Grants.* Grants to assist distressed cities and distressed urban counties.

Major Compliance Features

1. *Conditional Approvals.* Under certain circumstances, HUD may make conditional approval of an application, in which case the full entitlement amount will be approved but the obligation and utilization of funds for affected activities will be restricted. Conditional approvals may be made where (1) local environmental reviews have not yet been completed, (2) a recipient is required to seek other Federal funds for the provision of public services or for flood or drainage facilities, or (3) there is substantial evidence there has been or will be a lack of substantial progress, nonconformance, noncompliance, or a lack of continuing capacity.

Recipients may not be reimbursed for expenditures incurred prior to HUD's release of funds for the projects in question. The auditor should ascertain whether the grantee obtained HUD authorization (release of funds) to expend funds prior to incurring costs or submitting requests for fund drawdowns for those activities on which HUD placed conditional approval (item number 16—HUD Form 7082).

2. *Assurances and Certifications.* A CDBG recipient must submit certifications each year that certain statutory and regulatory requirements have been complied with:

a. *Maximum Feasible Priority Certification.* All projects and activities must benefit principally either low- and moderate-income persons, aid in the prevention or elimination of slums and blight, or meet other community development needs having a particular urgency. The auditor should check the recipient's documentation of such compliance.

b. *Lead Based Paint Poisoning Prohibition (Pub. L. 91–695).* The auditor should verify that contracts for construction, rehabilitation and modernization contain a clause prohibiting the use of lead based paint.

c. The certifications of compliance with Davis Bacon, Flood Protection, Citizen Participation and Relocation Assistance in the front of this document.

3. *Limitation on Planning and Aministrative Costs.* No more than 20 percent of the total program year costs may be budgeted or expended for planning and administrative costs as defined by HUD.

The auditor should obtain a copy of the cost summary submitted as part of the Annual Community Development Program, ascertain that the grantee has not budgeted more than 20 percent and review the planning and administrative costs to ensure that the grantee has not expended more than 20 percent.

4. *Close-Out of Urban Renewal Projects.* HUD must approve various types of closeout and financial settlement of urban renewal projects which will result in full payment of all temporary loans. Any surplus may be made available to the local government

V 45 A G 18 80 UMI

for use under the CDBG program, pursuant to the closeout agreement.

Note.—The auditor should determine whether any urban renewal projects have been closed-out during the audit period. This information may have to be obtained from the HUD Area Office or the local government. If this is the case, the auditor should make the standard test for credits from program income in Circular A-102.

Federal Emergency Management Administration

• • • 83.000 Disaster Assistance Urban Development

Authorization: The Disaster Relief Act of 1974, Pub. L. 93-288, 88 Stat. 143; the Disaster Relief Act of 1970, as amended, Pub. L. 91-606, as amended, 84 Stat 1744; Executive Order 11795, 39 FR 25939; as amended by Executive Order 11910, 41 FR 15661; Reorganization Plan No. 1 of 1973; Executive Order 11749, 38 FR 34177; Delegation of Authority, Secretary of Housing and Urban Development to Administrator of Federal Disaster Assistance, 39 FR 28227; 40 FR 27711, and 41 FR 19365; Redelegation of Authority to Regional Directors of Federal Disaster Assistance Administration, as amended, 39 FR 32046, 39 FR 40186, 41 FR 19365, 41 FR 29719, and 44 FR 1226.

Note.—Effective July 20, 1979 by Executive Order 12148, the Federal Disaster Assistance Administration was transferred to the Federal Emergency Management Agency.

Objectives: To provide assistance to States, local governments, owners of selected private nonprofit facilities, and individuals in alleviating suffering and hardship resulting from emergencies or major disasters declared by the President. The natural disaster program is intended to supplement the costs borne by State and local governments and others. (Pub. L. 93-288 sec. 101.) States apply for assistance. The Scope of Work to be accomplished in each project is outlined in a Damage Survey Report (DSR) for the Public Assistance Program, usually prepared on site by field staff of FEMA. The DSR is the same narrative required by OMB Circular A-102. The DSR for Public Assistance and expenditures under the individual and Family Grant Program will cover only "disaster related" damage.

Major Compliance Features

Uses and Use Restrictions: Services are provided and grants and contributions are made available for suppression of forest or grassland fires, and for post-disaster assistance, including repair, restoration, or replacement of public facilities of States and local governments and selected private nonprofit facilities; removal of wreckage and dibris; performance of essential protective work on public and private lands; emergency shelter and temporary housing for displaced individuals and families; assistance to unemployed individuals; loans to local governments suffering substantial loss of tax and other revenues; emergency transportation service; emergency communications; food coupons; crisis counseling; survey and allocation of construction materials; and individual and family grants to meet disaster related expenses or serious needs of persons adversely affected by a major disaster.

Applicant Eligibility: State and local governments in declared emergency or major disaster areas, owners of selected private nonprofit facilities, and individual disaster victims.

Formula and Matching Requirements: Fire suppression assistance funds normally are made available on a cost-sharing basis.

Other Tests: Suggested Approach.—1. Compare the expenditures with the repair work specified in the DSR (defined above) for the Public Assistance Program.

2. Compare labor rates (police, fire and supervisory) and equipment rates (bulldozers, earthmovers, etc.) with rates established by FEMA.

3. Ensure that the recipient is participating in the flood program outlined in the front of this document.

• • • 15.400 Outdoor Recreation-Acquisition, Development and Planning (Land and Water Conservation Fund Grants)

Authorization: 16 U.S.C. 1-4 et seq. Land and Water Conservation Fund Act of 1965; Pub. L. 88-578; 78 Stat. 897; as amended by Pub. L 90-401 (82 Stat. 354); Pub. L. 91-485 (84 Stat. 1084); Pub. L. 91-308 (84 Stat. 410); Pub. L. 92-347 (86 Stat. 460); Pub. L. 93-81 (87 Stat. 178); Pub. L. 94-422 (90 Stat. 1313); and Pub. L. 95-42 (91 Stat. 210).

Objectives: To provide financial assistance to the States and their political subdivisions for the preparation of comprehensive statewide outdoor recreation plans and acquisition and development of outdoor recreation areas and facilities for the general public, to meet current and future needs.

Major Compliance Features

Uses and Use Restrictions: Acquisition and development grants may be used for a wide range of outdoor recreation projects, such as picnic areas, inner city parks, campgrounds, tennis courts, boat launching ramps, bike trails, outdoor swimming pools, and support facilities such as roads, water supply, etc. Facilities must be open to the general public and not limited to special groups. Development of basic rather than elaborate facilities is favored. Priority consideration generally is given to projects serving urban populations. Fund monies are not avaialable for the operation and maintenance of facilities.

Grants are also available to States only for revising and updating existing State outdoor recreation plans, preparation of new plans and for statewide surveys, technical studies, data collection and analysis and other planning purposes which are clearly related to the refinement and improvement of the State outdoor recreation plan.

Applicant Eligibility: For planning grants, only the State agency formally designated by the Governor or State law as responsible for the preparation and maintenance of the Statewide Comprehensive Outdoor Recreation Plan is eligible to apply, including District of Columbia, Puerto Rico, the Virgin Islands, American Samoa, and Guam.

For acquisition and development grants, the above designated agency may apply for assistance for itself, or on behalf of other State agencies or political subdivisions, such as cities, counties, and park districts. Additionally, Indian tribes which are organized to govern themselves and perform the function of a municipal government qualify.

Formula and Matching Requirements: The Land and Water Conservation Fund Act specifies that not more than 50 percent of the project cost may be federally financed. Under certain conditions, all or part of the project Sponsor's matching share may be from certain other Federal assistance programs, such as Title I Community Development, Appalachia and all other Regional Commissions. Forty percent of the first $225 million; thirty percent of the next $275 million; and twenty percent of all additional appropriations is apportioned equally among the States. The remaining appropriation is apportioned on the basis of need.

Department of Justice

• • • 16.502 Law Enforcement Assistance-Improving and Strengthening Law Enforcement and Criminal Justice (Safe Streets, Crime Control)

Authorization: Omnibus Crime Control and Safe Streets Act of 1968; Pub. L. 90-351, as amended by Omnibus Crime Control Act of 1970; Pub. L. 91-644; 42 U.S.C. 3731-3737, as amended by the Crime Control Act of 1973; Pub. L. 93-83; 42 U.S.C. 3701 as amended; Juvenile Justice and Delinquency Prevention Act of 1974; Pub. L. 93-415; 42 U.S.C. 5601, as amended; and the Crime Control Act of 1976; Pub. L. 94-503, 42 U.S.C. 3701, as amended.

Objectives: To provide matching grants to implement a State's law enforcement and criminal justice program as developed in the State comprehensive action plan.

Part B Planning: It is the purpose of this part to provide financial and technical aid and assistance to encourage States and units of general local government to develop and adopt comprehensive law enforcement and criminal justice plans.

Part C Block Action Grants: It is the purpose of this part, through the provision of Federal technical and financial aid and assistance, to encourage States and units of general local government to carry out programs and projects developed under Part B Planning.

Major Compliance Features

Applicant Eligibility: States which have established operating State criminal justice planning agencies.

Beneficiary Eligibility: Units of a State and its local governments, with funds being dispersed to operating criminal justice system components.

Formula and Matching: In addition to a general nonsupplant provision

A. *Part B—Planning Funds.* 1. Forty percent of a State's Federal planning grant funds must be passed-through to general local units of government, or combinations of local units, unless a waiver from the local units of government has been obtained. (Section 203(f).)

2. Each state shall provide that at least $50,000 of the Federal funds awarded to them for any fiscal year be made available to the judicial planning committee. (Section 203(f).)

B. *Part C—Action Funds.* A variable percentage of a State's Federal block action grant funds must be passed through to units of general local government or combinations of local units. This percentage is determined by calculating the ratio of the total non-Federal local expenditures for criminal justice system operation to the total non-Federal expenditures for all operations of the criminal justice system within the State during the preceding fiscal year. (Section 303(a)(2).)

1. *Buy-In Requirements:* This requirement is applicable to the total aggregate Part B and Part C funds which each state is required to pass-through to units of general local government or combination of local units. Each state is required to provide in the aggregate for Part B or C planning and action grants not less than the following percentages of the required non-Federal share.

a. *FY 1973*—25 percent of the required non-Federal share for Part C Action grants.

b. *FY 1974 and later*—50 percent of the required non-Federal share for Part B Planning and Part C Action grants.

2. *Federal Participation Ratios:* Matching contributions need not be applied at the exact time or in proportion to the obligation of the Federal funds. However, the full grantee and/or subgrantee matching share must be obligated by the end of the period for which the Federal funds have been made available for obligation. The required percentage of matching shares is as follows:

a. *Beginning with FY 1971:* (1) Ninety percent for Part B planning funds. (2) Seventy-five percent for Part C action funds EXCEPT for construction which is 50 percent.

b. *Beginning with FY 1974:* (1) Ninety percent for Part B planning; up to 100 percent to regional planning units. (2) Ninety percent for Part C action (EXCEPT for construction which is 50 percent).

3. *Hard Match Requirement.* Must be new money, appropriated in the aggregate:

a. Hard match may be applied from funds from the following sources:

(1) Funds from State and local units of government that have been identified in their budgets or appropriations as a binding commitment of matching funds for programs or projects;

(2) Housing and Community Development Act of 1974;

(3) Public and private sources;

(4) Appalachian Redevelopment Act;

(5) General Revenue Sharing Act.

b. *New Funds.* May be calculated on the basis of:

(1) The amount of increase in cash input to a program or project from the previous year's hard match and nonrecurring items.

(2) The extent to which the current cash input exceeds the previous three years average input, less the previous year's hard match and nonrecurring items.

c. Salaries of personnel transferred to a grantor agency project may not be considered hard match unless the vacancies created by their transfer are filled by personnel whose salaries are from appropriated State or local funds.

d. Required portion of hard match for the various fiscal years: (1) Beginning with fiscal year 1973, 40 percent of the REQUIRED non-Federal funding of the cost of any program or project under Part C action funds. (2) Beginning with fiscal year 1974, the required percentage is the total REQUIRED non-Federal funding (10 or 50 percent) of the cost of any program or project under Part B planning and Part C action funds.

4. *Obligations:* For Parts B, C and E, an obligation is incurred only when committed by the ultimate (lowest) user.

5. *One-Third Personnel Limitation.* The ceiling on Part C for compensation of police and other regular law enforcement and criminal justice personnel is one-third (exclusive of training, research, development, demonstration, or other short-term projects). Federal funds expended shall not exceed the amount of State or local funds made available to increase such compensation. (Section 301(d).)

6. *20 Percent Contract Limit.* With FY 1973, not more than 20 percent of the State's Planning Grant (State and local portions) or 20 percent of either the State or local portion, may be used for contracted planning services or assistance by nongovernmental organizations.

7. *Special Limits on Construction.* a. *Definition.* Construction means acquisition, alteration and initial equipment (including architects' fees) but not the cost of land (Section 103(10)). Initial equipment includes permanent fixtures only. Minor repairs and remodeling are not allowed.

The minimum grantee contribution ratio for costs of programs for construction of law enforcement facilities within Section 301(b)(4) of the Act is 50 percent State and/or local funds to 50 percent Federal funds. For fiscal year 1974, the minimum grantee contribution of 50 percent must be hard match.

To the extent that construction is included in any law enforcement action program submitted for a Part C block action grant and such construction is not described as a separate program, the State Planning Agency must specify in its program description that a dual contribution ratio will be applied to construction costs (50-50) and other program costs (90-10) within the larger program.

b. *Qualifications.* The following should be noted:

(1) Minor remodeling or repairs to existing facilities need not be treated as construction programs subject to the 50 percent contribution minimum. Any such work totalling in excess of $5,000 for any building or facility should be submitted to LEAA for written determination that the "minor remodelling and repair" exception is applicable.

V 45 A G 18 80 UMI

(2) Projects for architectural studies or design which do not include a construction component may be funded at the 90–10 contribution ratio. Where the project includes both actual construction and architectural, or other design costs, the 50–50 contribution ratio must be used.

(3) The cost of a construction project includes the cost of site preparation, including demolition of existing structures. Any proceeds realized from site preparation activities (e.g., salvage value of structures demolished or the proceeds from sale of timber) should be applied to reduce the total cost of the construction project.

8. *Assumption of Costs.* The recipient's plan should demonstrate future non Federal appropriations for the projects.

9. *Non-Supplant.* Test that Federal funds don't supplant State and local funds.

Department of Labor

*** * * 17.207 Employment Service**

Authorization: The Wagner-Peyser Act of 1933, Pub. L. 73–30, as amended; 29 U.S.C. 49–49n and 39 U.S.C. 338. The Social Security Act of 1935, Pub. L. 74–271, as amended; and provisions relating to Employment Security; 42 U.S.C. 1101 et seq. The Vietnam Era Veterans' Readjustment Assistance Act of 1974, Title IV Pub. L. 93–508 as amended; 38 U.S.C. 2001–2014; The Trade Expansion Act of 1974, Pub. L. 93–618. Comprehensive Employment and Training Act of 1973, as amended by Pub. L. 95–524, 92 Stat. 1909, 29 U.S.C. 801 note; The Rehabilitation Act of 1973, Pub. L. 93–112; Emergency Jobs and Unemployment Extension Act of 1975, Pub. L. 94–45. Airline Deregulation Act of 1978, Pub. L. 95.504, 92 Stat. 1705, 49 U.S.C. 1301; The Revenue Act of 1978, Pub. L. 95–600, 92 Stat. 2763, 26 U.S.C. 51; Redwood National Park Expansion Act, Pub. L. 95–250, 92 Stat. 163, 16 U.S.C. 79a.

Other legislative bases foir employment security programs (not mentioned above):

Federal Unemployment Tax Act (FUTA); Food Stamp Act (Pub. L. 91–671 as amended 1971); Federal-State Extended Unemployment Compensation Act of 1970 (EB); 5 U.S.C. 8501–8508 and 8521–8525, (UCFE and UCX); Emergency Unemployment Compensation Act of 1974 (Pub. L. 93–572); Trade Expansion Act of 1962, as amended (19 U.S.C. 1941–1944 and 1952); Trade Reform Act of 1970 (Pub. L. 93–618), Title II; Disaster Relief Act of 1970 (Pub. L. 91–106); Disaster Relief Act of 1974 (Pub. L. 93–288), Title IV; Immigration and Nationality Act; Special Unemployment Compensation Act of 1974, as amended; Title IV of Social Security Act as amended (WIN).

Objectives: To place persons in employment by providing a variety of placement-related services to job seekers and to employers seeking qualified individuals to fill job openings.

Major Compliance Features

Uses and Use Restrictions: General services to job seekers include outreach, interviewing, testing, counseling, and referral to employment opportunities. Also, job seekers in need of specialized training or supportive services to local, State or Federal offices that are able to provide such services. General services to employers include providing a source of qualified applicants for job openings within the local area or, if necessary, nationwide, and providing selected technical assistance in identifying and resolving internal workforce problems such as turnover, absenteeism, and special recruitment difficulties as well as assisting in the development of personnel.

Applicant Eligibility: State employment security agencies, including Virgin Islands, Puerto Rico, and Guam.

Beneficiary Eligibility: All employers seeking workers, persons seeking employment, community groups, and employer organizations. Priority in service is given to veterans, with handicapped veterans receiving preferential treatment over other veterans.

Other Tests: For this program, the auditor should review (vis-a-vis Grants-to-States funds), the State agency's financial agreements with other agencies including CETA, Food Stamps, WIN and Job Corps.

*** * * 17.211 Job Corps**

Authorization: Title IV of the Comprehensive Employment and Training Act of 1973 as amended by Pub. L. 93–567, 88 Stat. 1845, 29 U.S.C. 801 note, and Pub. L. 95–524, 92 Stat. 1909, 29 U.S.C. 801 note.

Objectives: To assist young men and women who need, and can benefit from, an intensive educational and vocational training program in order to become more responsible, employable, and productive citizens. Operated in a residential group setting.

Major Compliance Features

Uses and Use Restrictions: Jobs Corps contractors operate residential centers to serve low-income young men and women, ages 16 through 21, who require additional education, training, or intensive counseling to secure and hold meaningful employment, participate successfully in regular schoolwork, qualify for other training programs suitable to their needs, or satisfy Armed Forces entrance requirements. Corpsmembers receive a comprehensive program of basic and remedial education, vocational training, work experience, and personal and vocational counseling are given room and board, medical and dental services, work and casual clothing, and a monthly allowance for living expenses. A readjustment payment is made upon completion of at least six months of training and job placement assistance is provided. *Maximum* enrollment is 2 years.

Applicant Eligibility: Federal, State, local government agencies including U.S. Territories, private profit and nonprofit organizations and Indian tribes and organizations having the capabilities to carry out the objectives of the program. Usually the program operators are State Unemployment Security Agencies (SESA's).

Beneficiary Eligibility: (Source: CETA, sec. 452). a. has attained age 14 but not attained age 22 at the time of enrollment, except that such maximum age limitation may be waived, in accordance with regulations of the Secretary in the case of any handicapped individuals; b. is economically disadvantaged or is a member of a family who is economically disadvantaged, and who requires additional education, training, or intensive counseling and related assistance in order to secure and hold meaningful employment, participate successfully in regular school work, qualify for other suitable training programs, or satisfy Armed Forces requirements; c. is currently living in an environment so characterized by cultural deprivation, a disruptive homelife, or other disorienting conditions as to substantially impair prospects for successful participation in other programs providing needed training, education, or assistance; d. is determined, after careful screening, as provided for in sectiojns 453 and 454, to have the present capabilities and aspirations needed to complete and secure the full benefit of the Job Corps and to be free of medical and behavioral problems so serious that the individual could not adjust to the standards of conduct, discipline, work, and training which the Job Corps involved; and e. meets such other standards for enrollment as the Secretary may prescribe and agrees to comply with all applicable Job Corps rules and regulations.

*** * * 17.225 Unemployment Insurance**

Authorization: The Social Security Act, as amended, 42 U.S.C. 501–504, 1101–1108; Trade Act of 1974, Pub. L. 93–618, 88 Stat. 2024, 19 U.S.C. 2311; Benefit provisions-Federal Unemployment Tax Act as amended, 26 U.S.C. 3404 note; Federal Employees and Ex-servicemen, 5 U.S.C. 8505(h); Redwood National Park Expansion Act, Pub. L. 95–250, 92 Stat. 163, 16 U.S.C. 79K,1; Trade Act of 1974 (cited above); Disaster Relief Act of 1974, Pub. L. 93–288, 88 Stat. 153, 42 U.S.C. 5171; Airline Deregulation Act of 1978, Pub. L. 95–504, 92 Stat. 1705, 49 U.S.C. 1552.

Objectives: To administer programs of unemployment insurance for eligible workers through Federal and State cooperation; to administer payment of worker adjustment assistance.

Major Compliance Features

Uses and Use Restrictions: The States have the direct responsibility for establishing and operating their own unemployment insurance programs, while the Federal Government finances the cost of administration. State unemployment insurance tax collections are used solely for the payment of benefits; Federal unemployment insurance tax collections are used to finance expenses deemed necessary for proper and efficient administration of the State unemployment insurance programs, and to reimburse State funds for one-half the costs of extended benefits paid under the provisions of State laws which conform to the provisions of the Social Security Act and the Federal Unemployment Tax Act. Federal Unemployment Benefits and Allowances (FUBA) funds are used to pay benefits to CETA PSE enrollees, unemployed Federal military and civilian (including USPS) employees and for the Trade and Redwood Programs (See Beneficiary Eligibility). FUBA funds may not be used for any program administration costs nor for training, job search, and job relocation payments.

"Reed Act" Funds: States may use unemployment funds for administration under certain conditions.

—The amount available for this purpose is limited to those sums allocated to a State account in the Unemployment Trust Fund from excess FUTA revenues, generally referred to as "Reed Act" distributions.
—Any use of these "Reed Act" monies must be authorized by a specific appropriation of a State legislature, automatically expiring in 2 years.
—Under certain conditions, "Reed Act" funds expended for the purchase of real estate and high cost equipment may be redeposited for future use.

Applicant Eligibility: State unemployment insurance agencies, including Puerto Rico and the Virgin Islands.

Beneficiary Eligibility: All workers whose employers contribute to or make payments in lieu of contributions to State unemployment funds, Federal civilian employees, ex-servicemen, workers deemed "affected employees" in the Redwood industry, eligible protected employees under the Airline Deregulation Act, workers whose unemployment is caused by a Presidentially declared disaster under the Disaster Relief Act, and "adversely affected workers" under the Trade Act are eligible if they are involuntarily unemployed, able to work, available for work, meet the eligibility and qualifying requirements of the State law, and are free from disqualifications. Individual State information and eligibility requirements are available from local employment offices.

Other Tests: State Unemployment Fund: Federal Law requires that all receipts be transferred immediately (24 hour turnaround) to the U.S. Treasury. Examine agency procedures for this.

Determine that the Unemployment Fund consists only of those accounts necessary to receive contributions and payments in lieu of contributions from employers (clearing account).

Collection of Contributions: The auditor should test for procedures to ensure the following:

—State accounts in which activity has ceased should be closed out and balances reverted to their sources.
—Estimating procedures should be reviewed where withdrawals of funds routinely exceed expenditures.
—Extended Benefit, or other emergency compensation balances in a State account, should be returned to the proper trust fund account if not expended within 10 days.
—If unemployment funds are maintained within a State general fund, ascertain whether a pro rata share of the State's earnings are applied to the unemployment fund.

The auditor should review "Reed Act" accounts for the following:

—The balance in a State "Reed Act" account (see discussion above) cannot exceed the amounts allocated to the State from the excess in the Federal accounts in the Unemployment Trust Fund.
—Expenditures for administration cannot exceed allocations plus redeposits.
—"Reed Act" balances should be reduced by any amounts used to pay benefits.

*****17.232 Comrehensive Employment and Training Programs (Comprehensive Employment and Training Act of 1973, as Amended)**

Authorization: Titles I, II, IV, VI, and VII of the Comprehensive Employment and Training Act of 1973, as amended, Pub. L. 95–524, 92 Stat. 1909, 29 U.S.C. 801 note.

Objectives: To provide job training and employment opportunities for economically disadvantaged, unemployed, and underemployed persons and to assure that training and other services lead to increased earnings and enhanced self-sufficiency by establishing a flexible decentralized system of Federal, State, and local programs.

Major Compliance Features

Note.—The CETA regulations (and statutes) are found in a number of separate citations:

—CETA of 1973: 29 CFR Parts 94–99 (Pub. L. 93–203)
—CETA "Transition Period" (10/26/78 to 1/25/79) 29 CFR Part 93.2 (Pub. L. 95–524)
—CETA of 1978: 20 CFR Parts 675–680 (Pub. L. 95–524)

Introduction—the major compliance features for this program relate princially to *ELIGIBILITY.*

Definitions: 1. *Veteran:* (1) Served more than 180 days on active duty, or (2) discharged or released from active duty with a service-connected disability and; (3) has not obtained permanent, ful! time, unsubsidized employment between the release date (from service) and the application date.

2. *Resident:* At the time of application and selection, the person resides within the geographic area covered by the grant.

3. *Poverty Family:* Person is a member of a family whose total income does not exceed the OMB established poverty level.

4. *Welfare Family:* Person is a member of a family which either qualifies and receives public assistance/welfare payment, or which could so qualify.

5. *LLSIL:* The person is a member of a family which is at "some" percentage of the lower living standard income level (LLSIL).

6. *Barrier individual:* The youth, or other applicant, presents significant barriers to employment because he/she is: a. A client of a sheltered workshop or b. Handicapped or

d. Age 16–21, and
2. Be unemployed (See Title IIB

Major Compliance Features

c. Institutionalized with 24 hour support, e.g., prison hospital, care facility etc., or

d. Regular outpatient of a mental facility or rehab facility or similar.

7. *10 and 30 Rule:* At least seven days prior to application, the person did not work more than ten hours nor earn more than $30 in any week.

Title I—For the Period fiscal year 1978 and fiscal year 1979 up to January 25, 1979

A. *Non* Public-Service applicant must meet one of the following criteria: 1. *Economically Disadvantaged:* a. Member of Welfare Family; or

b. Member of a Poverty Family at either: (1) Poverty level established by OMB; or (2) 70 percent LLSIL.

2. *Unemployed:* a. Person who did not work during the calendar week preceding the week in which the determination of eligibility is made (welfare recipients excluded); or

b. Person who is confined in a jail, penitentiary, or other institution and the expected release date is not unreasonably long after planned completion of training date; or

c. Member of Welfare Family; or

d. Veteran.

3. *Underemployed:* a. Person working part-time, seeking full-time job or is working full-time, and

b. Same as A.1.b. above.

B. *Public Service Employment (PSE)* applicant must: 1. Meeting either one of the requirements in A. above, and

2. Be a Resident.

Title II—For the Period fiscal year 1978 and fiscal year 1979 to January 25, 1979

All applicants must be: 1. Unemployed for at least 30 days prior to application, and a member of a welfare family, or during the 30 days preceding application, person met the "10 and 30 Rule" (as defined above), or

2. Underemployed which is defined as working part-time and seeking full-time or working full-time and a member of a poverty family, or

3. Veteran, and

4. Resident.

Title III—Summer Youth [3]

A. *For the Period fiscal year 1978 and fiscal year 1979 to March 30, 1979.* All applicants must be: 1. Economically Disadvantaged at application time (as defined in Title I above), and

2. Age 14–21 (inclusive), at application time.

B. *For the Period fiscal year 1979 as of April 1, 1979.* All applicants must be: 1. Economically Disadvantaged at application time: a. Member of welfare family, which receives public assistance, or

b. Member of a family whose income during the previous six months, on an annualized basis, was such that: (1) Family would qualify for public assistance, or

(2) Family income does not exceed poverty level, or

(3) Family income does not exceed 70 percent LLSIL.

c. Foster child, or

d. BARRIER individual, and

2. Age 14–21 (inclusive), at time of enrollment.

Title III—Youth Incentive Entitlement Pilot Projects [3]

A. *For the period fiscal year 1978–80.* At time of application and selection, a youth must show documentation that the following criteria have been met:

1. Age 16–19 (inclusive), unless otherwise authorized,

2. Has not received a high school diploma or equivalent,

3. Is a resident for 30 days, except for newly discharged veteran,

4. Is from a welfare or poverty family (economically disadvantaged),

5. a. Enrolled in and attending a State-certified program leading to a high school diploma, or is so scheduled within 30 days of YIEPP, or

b. Scheduled for an equivalency (GED) program within 30 days.

6. Has participation approved in writing, if under the juvenile or criminal justice system.

Title III—Youth Community Conservation and Improvement Project [4]

A. *For the period fiscal year 1978 to April 4, 1978.* 1. All applicants must be: a. Age 16–19 (inclusive) at *enrollment,* and

b. Unemployed (same as Title I).

B. *For the period fiscal year 1978 as of April 7, 1978 and 1979 up to March 30, 1979.* 1. At the time of *application and enrollment,* all applicants must be: a. Age 16–19 (inclusive) and

b. Unemployed (same as Title I).

C. *For the period fiscal year 1979 (beginning April 1, 1979) and fiscal year 1980.* 1. At the time of *application,* all applicants must be: a. Age 16–19 (inclusive), and

b. Unemployed

(1) Without a job for at least 7 consecutive days prior to application and meet the "10 and 30 Rule,"

(2) A BARRIER individual, or

(3) Age 18, and a member of a welfare family, or

(4) Veteran.

Title III—Youth Employment and Training Programs [5]

A. *For the period fiscal year 1978 and fiscal year 1979 to March 30, 1979.* 1. At *application* and *enrollment* time, the youth must meet the following: a. Unemployed (as in Title I), or

b. Underemployed (as in Title I), or

c. In school: (1) A youth who is currently enrolled in and attending a secondary, trade, or technical school or was enrolled in, and attended the last regularly scheduled quarter or semester of such school, and is scheduled to attend the next regularly scheduled quarter or semester, or

(2) A youth who has a high school diploma or its equivalent and who attended the last regularly scheduled quarter or semester of a community college or vocational school, but has not completed all required course work, or

(3) A youth who has not completed high school and who agrees to enroll in a school program leading to a secondary school diploma or its equivalent.

d. Age 16–21, and

e. Family at or below 85% LLSIL.

2. On an exception basis, applicants who are "in school" and 14 or 15 years of age may participate in "broad career" programs under YETP. These applicants need not meet the criteria in 3. above, if they participate in a special component which mixes youth above and below LLSIL.

3. Youth who do not meet the income criteria and who are not in a special component (see CETA regulations, Subpart A, paragraph 680.6 (44 FR 56869)) may also be offered services.

B. *For the period fiscal year 1979 as of April 1, 1979 and fiscal year 1980.* 1. At application time, youth must be: a. Unemployed, or

(1) Person who is without a job for at least seven consecutive days and meets the "10 and 30 Rule," or

(2) A BARRIER individual, or

(3) Age 18 and member of a welfare family, or

(4) Veteran, or

b. Underemployed: (1) A person who is working part-time, but seeking full-time, or working full-time, and

(2) Current annualized wage rate is not in excess of (for a family of one) the higher of either: (a) the poverty level, or

(b) 70% LLSIL, or

c. In school youth (for YETP, as of 10/1/79) the definition of "in school" youth excludes 14 and 15 year olds.

[3] This Title is now promulgated under Title IV, Part C, of the CETA amendments of 1978.

[3] This Title is not promulgated under Title IV, Part A, Subpart E, of the CETA amendment of 1978.

[4] This Title is now promulgated under Title IV, Part A, Subpart E, of the CETA amendment of 1978.

[5] This Title is now promulgated under Title IV, Part A, Subparts 3 and 4, of the CETA amendments of 1978.

d. Age 16–21, and

e. Family at or below 85% LLSIL.

2. Exceptions (see para A.2. and A.3. above).

Title III—Special Grant

An individual must meet the eligibility requirements outlined in the grantee's Title III—Special Grants.

Title VI—Public Service Employment

An individual must meet the eligibility requirements outlined in the grant agreement.

Title IIB—For the period fiscal year 1979 (beginning January 26, 1979 and fiscal year 1980 [6]

A. At application time, to be eligible an individual must meet the following criteria: 1. Economically disadvantaged (as defined under Title III—Summer Youth) and either

2. Unemployed: a. Person who is without a job for at least seven consecutive days prior to application, and meets the "10 and 30 Rule," or

b. A BARRIER individual, or

c. Age 18 and member of a welfare family, or

d. Veteran.

3. Underemployed (as defined in Title III—YETP, para B.1.b.)

4. Enrolled in school full-time at present, and scheduled for next semester.

Title IIC—As of April 1, 1979 [6]

A. *Upgrading Program:* At time of application, an individual must be: 1. Operating at least that full skill potential, and

2. Working for at least the prior six months with the same employer in either entry level, unskilled, or semi-skilled position or a position with little or no advancement opportunity in a normal promotional line.

B. *Retraining Program.* At time of application, an individual must: 1. Have received a bonafide notice of impending layoff within the last six months, and

2. Have been determined by the prime sponsor, wih the assistance of the local employment service, as having little opportunity to be reemployed in the same or an equivalent occupation or skill level within the labor market area.

Title IID—Public Service Employment [7]

A. *For the period fiscal year 1979 as of January 26, 1979 to March 30, 1979.* To be eligible, an individual must: 1. Be economically disadvantaged (see Title IIB definition), and

2. Be unemployed (See Title IIB definition) during 15 of the 20 weeks immediately prior to application (except for welfare recipients),

3. Be a resident, and

4. Not have quit a job paying the Federal minimum wage without good cause during six months prior to application.

B. *For the period fiscal year 1979 as of April 1, 1979 and fiscal year 1980.* To be eligible, an individual must: 1. Be economically disadvantaged (see Title IIB definition), and

2. Unemployed (see Title IIB definition) during 15 of the 20 weeks immediately prior to application, or

3. Be a member of a welfare family,

4. Be a resident, and

5. Not have quit a job paying the Federal, state or local minimum wage without good cause during six months prior to application.

Title VI—Public Service Employment

A. *For the period fiscal year 1979 as of January 26, 1979 to March 30, 1979.* 1. To be eligible, an individual must: a. Be unemployed (see Title IIB definition) for at least 10 out of the 12 weeks immediately prior to application (except for welfare recipients),

b. Be unemployed at the time of application,

c. Family income does not exceed 100 percent LLSIL, based upon annualization of income three months prior to application,

d. Be a member of welfare family receiving public assistance 10 of the last 12 weeks immediately prior to application,

e. Be a resident, and

f. Not have quit a job paying the Federal, State, or local minimum wage without good cause during six months prior to application.

Note to the Auditor.—The interim PSE eligibility criteria for new Titles IID and VI (CETA Amendments of 1978) during the "Transition Period" (10/26/78 to 1/25/79) shall be the same as old Title VI (New Criteria) per CETA of 1973.

* * * 17.235 Senior Community Service Employment Program

Authorization: Title V of Older Americans Act, Pub. L. 94–135, 89 Stat. 720, 42 U.S.C. 3056A.

Objectives: To provide, foster, and promote useful part-time work opportunities up to 20 hours per week in community service activities for low income persons who are 55 years old and older, and who have poor employment prospects.

Major Compliance Features

Uses and Use Restrictions: Organizations which receive project grants or contracts may use the funds to create and pay for part-time community service job positions. The individuals who are employed may be placed in work assignments at established local service agencies (e.g., schools, hospitals, day care centers, park systems, etc.), or may be given work assignments in connection with newly formed or innovative community service projects. A portion of project funds may be used to provide participants with training, counseling, and other supportive services. No more than 15 percent of the Federal share of the project costs may be spent for administration.

Applicant Eligibility: The following types of organizations are eligible to receive project grants: (1) States and agencies of a State, (2) national, public and private nonprofit agencies and organizations other than political parties, (3) U.S. Territories.

Beneficiary Eligibility: Adults 55 years or older and economically disadvantaged. Upon first time enrollment, participants must have an income at or below 125 percent of the poverty level. Reentry persons enrolled in the program may have incomes which exceed the poverty level by no more than $500. SCSEP positions must: (a) Represent an addition to regular agency employment opportunities; (b) not displace current employees, including partial displacement; (c) not impair existing contracts or substitute Federal funds for other funds.

Other Tests: Payment of wages. SCSEP wages must be the higher of the Federal or State minimum wage and/or the prevailing rates of pay for persons employed in similar public occupations by the same employer.

Limitation on hours worked. SCSEP participants may not work more than 1,300 hours in any 12 month period.

Department of Transportation

* * * 20.102 Airport Development Aid Program (ADAP)

Authorization: Airport and Airway Development Act of 1970; Pub. L. 91–258, 49 U.S.C. 1701, as amended by Public Law 92–174, Pub. L. 93–44, and Pub. L. 94–353. Current act expires at the end of fiscal year 1980, and new legislation will be required to extend the program.

Objectives: To assist public agencies in the development of a nationwide system of public airports adequate to meet the needs of civil aeronautics.

[6] This Title was formerly Title I under CETA of 1973, exclusive of Title IID.

[7] This Title was formerly Title II under CETA of 1973.

Level of Effort (LOE): This is the local

c. An offsetting increase may be

4. Grantees will not engage in charter

Major Compliance Features

Uses and Use Restrictions: Constructing, improving, or repairing a public airport or portion thereof consisting of: (1) Land acquisition, (2) site preparation, (3) construction, alteration, and repair of runways, taxiways, aprons, and roads within airport boundaries, (4) construction and installation of lighting utilities, navigational aids, and certain offsite work; (5) safety equipment required for certification of airport facility, (6) security equipment required of the sponsor by the Secretary of Transportation by rule or regulation for the safety and security of persons and property on the airport, (7) snow removal equipment, (8) noise suppressing equipment, construction of physical barriers, landscaping and land acquisition for noise compatibility, and (9) terminal development.

Applicant Eligibility: State, county, municipal, and other public agencies including an Indian tribe or Pueblo are eligible for airport development grants if the airport on which the development is required is listed in the national airport system plan.

Formula and Matching Requirements: Federal government share of allowable costs of airport development project may not exceed: 75 percent for an air carrier (other than a commuter service airport) which enplanes one-quarter of one percent or more of all passengers enplaned at all such airports, and 80 percent for all other airports, i.e., general aviation airports, reliever airports, and commuter service airports, and air carrier airports which enplane less than one-quarter of one percent of such passengers. The Federal share for terminal development projects at air carrier airports may be funded only from the airport's enplanement apportionment and no more than 60 percent of such apportionment for any fiscal year may be obligated for such projects. The Federal share of terminal development projects shall be 50 percent.

Other Tests: 1. The following costs are unallowable: a. Passenger automobile parking facilities, buildings to be used as hangars, living quarters, nonairport purposes and building construction which is not airport development; and

b. The cost of general area, urban, or statewide planning of airports, as distinguished from planning a specific project.

2. When FAA permits a grantee to dispose of land acquired with Federal funds, the net proceeds from its sale are to be offset against the allowable costs for new airport development or for master planning grants.

The following two programs are administered by UMTA. The compliance features for both are outlined following the description of program #20.507 below.

* * * 20.500 Urban Mass Transportation Capital Improvement Grants

Authorization: Urban Mass Transportation Act of 1964: Pub. L. 88–365, as amended through February 5, 1976; 49 U.S.C. 1601 et. seq.

Objectives: To assist in financing the acquisition, construction, reconstruction, and improvement of facilities and equipment for use, by operation, lease, or otherwise, in Mass Transportation Service in urban areas and in coordinating service with highway and other transportation in such areas.

* * * 20.507 Urban Mass Transportation Capital and Operating Assistance

Authorization: Urban Mass Transportation Act of 1964: Pub. L. 88–365, as amended through February 5, 1976; 49 U.S.C. 1601 et. seq.

Objectives: To assist in financing the acquisition, construction, and improvement of facilities and equipment for use by operation or lease or otherwise in Mass Transportation service, and the payment of operating expenses to improve or to continue such service by operation, lease, contract or otherwise.

Major Compliance Features

For 20.500 Only

Uses and Use Restrictions: Eligible facilities and equipment include land, buses, other rolling stock, and other real and personal property needed for an efficient and coordinated mass transportation system. Ordinary governmental or project operating expenses are excluded. Adequate public notice must be given of intent; social and economic impact on environment must be considered; project must be consistent with official plans for comprehensive development of urban areas.

Applicant Eligibility: Public agencies. Private transportation companies may participate through contractual arrangements with a public agencies grantee. Applicant must have legal, financial, and technical capacity to carry out proposed project. Capital funds are also available through the states to private, nonprofit organizations for the purpose of providing transportation services to the elderly and the handicapped.

For 20.507 Only

Uses and Use Restrictions: Eligible capital assistance projects may include the acquisition, construction or reconstruction of facilities and equipment for use in mass transportation, including designing, engineering, locating, surveying, mapping, acquisition of rights-of-way, relocation assistance, and acquisition and replacement of housing sites. An operating assistance project represents the eligible operating expenses incurred or projected during a local fiscal year by a mass transportation operator or system serving an urbanized area. Projects must be development through a continuing cooperative and comprehensive urban transportation planning process, resulting in plans and programs for a unified or officially coordinated urban transportation system consistent with the planned development of the urban area.

Applicant Eligibility: Funds will be made available to urbanized areas (as defined by the Bureau of the Census) through designated recipients which must be public entities and legally capable of receiving and dispensing federal funds. The Governor, responsible local officials and publicly-owned operators of mass transportation services must designate recipient(s) jointly for urbanized areas of 200,000 or more population. The Governor or his designee is the recipient for urbanized areas of 50,000 to 200,000 population. Recipients must submit a program of projects to UMTA and the Governor through the Metropolitan Planning Organization; and certify that a public hearing has been conducted.

Section 5—All Operating Assistance Grants Requirements: Formula and Matching Requirements: Determine whether UMTA assistance was the smallest of: (a) 50% of the New Project Cost (loss); (b) the eligible local share (amount of local funds); (c) the operating deficit after adding local funds but before adding UMTA funds (the operating deficit less the local share); or (d) the original maximum funding agreed to by UMTA (the maximum amount of the UMTA grant).

Maintenance of Effort (MOE): This is the level of funding the local government must exceed in order to get Federal funding. It is the average of the two prior years. Ascertain how the grantee computes this share and from what sources. Check these against a schedule of allowable sources, available from DOT or from the grantee.

Level of Effort (LOE): This is the local level of funding computed for 1 fiscal year only. Though similar to MOE, the eligible sources are not exactly the same. Perform the same computation and analysis as that in MOE above, using the same schedule of allowable sources. The LOE must equal or exceed the MOE.

1. Ineligible costs must be eliminated from the eligible operating expenses in determining net operating deficit.

2. All expenses for nontransit revenue are ineligible: a. Charter bus,

b. School bus operations which are not regular service,

c. Sightseeing, and,

d. Freight.

If the grantee does not segregate expenses associated with nontransit activities, assume expenses equal revenues.

3. Sample employee pension plan payments (contributions) to see if they are actually paid and are on a cash basis as required.

Section 5 involves some complex features, unique to that program, such as eligible expenses, maintenance of effort, local share, level of effort, net project cost and the application or revenues to expenses.

For grants awarded after November 6, 1978, the recipient must adhere to the following (in lieu of the above).

General Discussion: As of the Act of 1978, any grant recipient may reduce LOE below the average of the previous two local fiscal years. A reduction in the LOE may result in reduction in the level of Federal assistance. If an operator provides both bus and rapid rail, but requests assistance for the bus operation only then only that portion is subject to MOE requirements. However, if the applicant applies for assistance based on the eligible costs for the operation of only a portion of the bus fleet eligible for assistance, the MOE requirement is applied to the total level of effort for the entire eligible bus operation. Contributions toward capital projects do not contribute toward MOE.

1. *Offsetting Increase in Fare Structure.* If the grantee's LOE is less than its MOE, the difference can be offset if: a. Offset dollar for dollar by an increase from changes in the fare structure, fare increases or reductions, zone structure, zone changes, or new peak hours.

b. Increases in operating revenues which result from changes to service levels cannot be used. Measures of service levels include total number of vehicle miles, route miles, frequency, the number of reverse commuter trips, and the characteristics of special services, etc.

c. An offsetting increase may be claimed only for one local fiscal year. In cases where the change is in the last three months of the local fiscal year, the grantee may claim the offset for this year or the following year. In all other cases, only for the year in which put into effect.

d. The grantee must establish that the offset claimed is due solely to increases in operating revenues resulting solely from changes in the fare structure ("offset amount").

e. Actual revenues and expenses must be reported in the same year.

f. A grantee who has offset reductions in project year #1 may apply the same offset in the application for project year #2.

2. *Reduced Operating Costs.* If a grantee reduces costs while maintaining service levels, it may reduce its LOE proportional to the reduction in operation cost without a loss of UMTA funds providing: a. Service levels are maintained.

b. Grantees who seek to reduce their LOE must specify the dollar amount and percentage reduction compared to the previous year and describe the actions taken to offset.

c. Changes which result in reduced operating costs may be claimed only for one local fiscal year. (Same provision as 1.c above.)

d. Same as 1.e. above.

e. The grantee must also certify reductions in expenses being used to justify a reduction in the LOE don't reflect decreases in future service.

f. Same as 1.f above.

3. *Commensurate Reductions.* A grantee who has an LOE less than the MOE will receive commensurate reduction. Section 5 assistance will be reduced either (1) and amount equal to the amount by which the grantee's LOE is less than the MOE or, (2) an amount proportional to the percentage shortfall from MOE. (The method most advantageous to the grantee.)

Section 3 and 5 Capital Grants. The auditor should determine the following:

1. Depreciation, amortization and use allowances are unallowable project costs.

2. Test that the grantee uses and disposes of mass transportation property, e.g. buses and railcars, in accordance with Attachment N of Circular A–102. Check that the Federal government is notified promptly and receives fair market value for property which is destroyed.

3. Grantee shall keep insurance adequate to protect project facilities and equipment throughout use.

4. Grantees will not engage in charter bus operations outside the urban area within which it provides regular service.

5. Grant recipients will not engage in school bus operations exclusively for the transporation of students or school personnel in competition with school bus operators.

*** * * 20.205 Highway Research, Planning, and Construction (Federal Aid Highway Program)**

Authorization: Title 23 U.S.C., "Highways"; Federal-Aid Highway Act of 1973, Pub. L. 93–87; Federal-Aid Highway Amendments of 1974, Pub. L. 93–643; Federal-Aid Highway Act of 1976, Pub. L. 94–280; Surface Transportation Assistance Act of 1978, Pub. L. 95–599.

Objectives: To assist State highway agencies in constructing and rehabilitating the Interstate highway system and building or improving primary, secondary, and urban systems roads and streets, to provide aid for their repair following disasters, and to foster safe highway design; and to replace or rehabilitate unsafe bridges.

Major Compliance Features

Construction

The auditor should determine the following: 1. No funds for rehabilitation work on the superseded section of a relinquished highway.

2. The contractor's own organization must perform not less than 50 percent of the total contract price (excluding Speciality Items).

3. FHWA must approve claim awards made on the basis of arbitration board awards or State court judgments.

4. FHWA must approve a Federal amount where contract time extensions granted by a State affect project costs or liquidated damages.

5. Federal-aid in cooperative projects using the soil moved by heavy equipment (highway fill) e.g. flood control, will be limited to the pro rata share of the highway only.

6. Maintenance work is not eligible.

7. The cost of procuring and installing the business signs on panels or on ramp signs is not allowed.

8. Projects under Certification Acceptance (CA) follow CA procedures; all others are performed, measured and paid vis-a-vis the approved plan.

9. No funds will be used in any allowance for anticipated profit on work not actually performed.

10. Stockpiled material cost is allowable if it is not excessive to complete the project and its value doesn't exceed the value of contract items in which incorporated (23 U.S.C. 121).

11. Foreign structural steel will not be used unless the project (a) costs less than $450,000; (b) is under CA procedures; (c) favors domestic steel; (d) would cost 10 percent more otherwise.

Utility Relocation and Adjustment

The auditor should determine the following: 1. Where privately owned, located on the owner's land and not serving the public, FHWA right-of-way procedures apply.

2. If nearly all of a facility moves, or if extensive damage will occur, the State's analysis of trade-offs must be concurred in by FHWA.

3. Generally, prior approval is required for engineering services over $5,000 to engineers, architects and others.

4. A credit is required for any betterment unless required by governing codes or there is a direct benefit to the highway department.

5. Generally, each State-utility agreement must be approved.

6. Where the utility self-insures against public liability, reimbursement will be at a rate developed by the utility, or not in excess of one percent of salaries and wages.

Financial Management

The auditor should determine the following: 1. Except for salary and related costs of Highway Planning Research and Development (HPR), State costs for the establishment, maintenance, general administration, supervision, and other overhead, costs including internal audit, are unallowable in accordance with Section 302(a) of Title 23, U.S.C.

2. The limitation on construction engineering cost is either 10 or 15 percent of construction cost as approved by FHWA.

3. Reimbursement of bond proceeds may be made only for those amounts actually spent in construction of Federal-aid projects. Such projects must be free of tolls.

Planning, Research, and Development

The auditor should determine the following: 1. Metropolitan Planning Organizations (MPO's) must spend in accordance with a unified work plan (23 U.S.C. 104F and 134).

2. FHWA must approve changes in principal investigator (except approved management option procedures) and all proposed R&D studies except for the more limited type "B" study.

Railroads

The auditor should determine the following: 1. Salaries and expenses of the overhead organization may be reimbursed for the time working directly on the project, when the work is essential and could not have been accomplished as economically outside.

2. The cost of labor surcharges will be reimbursed either at actual cost or at the rates established between FHWA and the Association of American Railroads.

3. Temporary materials recovered and accepted for re-use shall be credited at amounts charged the project less 10 percent for rails, angle bars, tie plates and metal turnout materials and 15 percent for all other.

4. In lieu of handling costs, at the option of the company, 5 percent of billable materials will be reimbursable in lieu of actual costs.

5. In lieu of actual costs, reimbursement for equipment cost may be made at the rate and under the conditions set forth in circulars issued by the General Managers Association of Chicago and the Eastern General Managers Association of New York. In lieu of average or actual costs of company owned vehicles, reimbursement may be made at rates of recorded use per mile established by agreement between FHWA and AAR.

6. Transportation of materials over its own lines in a revenue train is reimbursable at rates which do not exceed ten mills a ton-mile or the published tariff rate (the lesser). No charge will be made except for the operating expenses of the work train. When more economical to move equipment on its own wheels, reimbursement may be made at rate of $0.20 a car mile haul for heavy construction equipment and six cents a car-mile haul for other equipment.

7. Generally, the maximum coverage (Federal funds), with respect to bodily injury, death, and property damage, is a combined amount of $2 million per occurrence.

8. There will be no charge for the existing right-of-way being transferred to the State except when the value exceeds the value of the replacement.

Preliminary Engineering

The auditor should determine the following: 1. Lacking acceptable State procurement procedures, FHWA will approve contracts exceeding $10,000.

2. Except for 23 U.S.C. 104(f) or 402 funds, contracts will show that the prime contractor performs all work, except exempted or specialized tasks.

* * * 20.600 State and Community Highway Safety

Authorization: Highway Safety Acts of 1966, 1970, 1973, 1976 and 1977; Surface Transportation Act of 1978; Pub. L. 89–654; Pub. L. 91–605; Pub. L. 93–355; Pub. L. 93–643 23 U.S.C. 402 as amended; 23 U.S.C. 120; Pub. L. 94–280; Pub. L. 94–387; Pub. L. 95–599.

Objectives: To provide a coordinated national highway safety program to reduce traffic accidents, deaths, injuries, and property damage.

Major Compliance Features

Uses and Use Restrictions: Funds may be used for problems identified in the areas of motor vehicle inspection, vehicle registration, motorcycle safety, driver education, driver licensing, traffic codes and laws, traffic courts, alcohol in relation to highway safety, emergency medical services, traffic records, highway design (excluding construction and maintenance), traffic engineering services, identification and surveillance of accident locations, pedestrian and bicycle safety, police traffic services, debris hazard control and cleanup, accident investigation, school bus safety, community support and planning, and administration of programs. FHWA funds may be used to fund the installation of regulatory and warning devices of the Federal-aid highway system. The law provides that at least 40 percent of Federal funds apportioned to a State for any fiscal year will be expended by the political subdivisions of such State.

Applicant Eligibility: State, American Indian, District of Columbia, American Samoa, Guam, Virgin Islands and Puerto Rico highway safety programs.

Beneficiary Eligibility: Political subdivisions, through the State Highway Safety Agencies.

Formula and Matching Requirements: Federal share shall not exceed 75 percent or applicable sliding scale.

* * * 20.309 Railroad Rehabilitation and Improvement Guarantee of Obligations

Authorization: Title V, Section 511 of the Railroad Revitalization and Regulatory Reform Act of 1966; Pub. L. 94–210.

Objectives: To provide financial assistance for the acquisition or rehabilitation and improvement of railroad facilities or equipment.

Major Compliance Features

Uses and Use Restrictions: Funds received by applicants must be used for acquisition or rehabilitation and improvement of facilities or equipment. Equipment and facilities include locomotives, freight cars, track, roadbed and related structures, communication and power transmission systems, signals, yard and terminal facilities and shop or repair facilities.

Applicant Eligibility: Applicant is defined to mean any railroad or person, including State and local government entities, which submits an application to the Administrator for the guarantee of an obligation under which it is an obligor. Under this definition of applicant, a government entity may apply for, and receive, guarantees. However, the policy of FRA is not to guarantee tax exempt obligations unless the applicant can demonstrate reasons why such a guarantee should be extended.

Beneficiary Eligibility: The ultimate purpose is to provide the means to rehabilitate and maintain the physical facilities, improve the operations and structure, and restore the financial stability of the railway system of the United States, and to promote the revitalization of such railway system so that this mode of transportation will remain viable in the private sector of the economy and will be able to provide energy-efficient, ecologically compatible transportation services with greater efficiency, effectiveness and economy. Beneficiaries are the users of rail properties which have been acquired or modernized with Federal assistance.

Other Tests: The auditor should test compliance with the terms and conditions of the grant or loan agreement.

Appalachian Regional Commission

* * * 20.003 Appalachian Development Highway System (Appalachian Corridors)

Authorization: Section 201, Appalachian Regional Development Act of 1965, Pub. L. 89–4; as amended by Section 106, Pub. L. 90–103; Section 103, Pub. L. 91–123; and Section 110, Pub. L. 94–188; 40 App. U.S.C. 201.

Objectives: To provide a highway system which, in conjunction with other federally-aided highways, will open up areas with development potential within the Appalachian region where commerce and communication have been inhibited by lack of adequate access.

Major Compliance Features

Uses and Use Restrictions: The grants may be used for preliminary engineering, right-of-way, and construction of highways meeting the objectives stated above. Total highway construction may not exceed 3,025 miles for the 13-State system. The highways must be accepted and maintained as a Federal-aid highway.

Applicant Eligibility: State governments, only within their Appalachian portions.

Community Services Administration

* * * 49.002 Community Action

Authorization: Economic Opportunity Act of 1964, as amended, Title II, Pub. L. 95–568; 42 U.S.C. 2790, et seq.

Objectives: The Community Action Agency (CAA) is the prime mechanism for implementing Community Action Programs. The objectives of the CAA are to mobilize and channel the resources of private and public organizations and institutions into antipoverty action; to increase the capabilities as well as opportunities for participation of the poor in the planning, conduct, and evaluation of programs affecting their lives; to stimulate new and more effective approaches to the solution of poverty problems; to strengthen communications, achieve mutual understanding and to strengthen the planning and coordination of antipoverty programs in the community. Detailed information applicable to specific programs funded by the Community Services Administration is included in the Code of Federal Regulations 45, Public Welfare, Parts 500 to 1199.

Major Compliance Features

Uses and Use Restrictions: Funds may be used for administrative costs of CAAs, nonprogram staff activities, and locally developed programs which further the objectives of community action. Projects may include community organization; job development, placement, follow-up, and vocational training; direct employment; day care; school age education; adult education; housing services; housing development corporations; medical care; dental care; mental health care; environmental health; consumer action and financial counseling; cooperatives; emergency financial assistance; family development; youth development programs; recreation; energy; narcotics addiction and alcoholism. Technical assistance is also available to communities in developing, conducting and administering programs under Title II and for training for specialists or other personnel which are needed with those programs.

Applicant Eligibility: A CAA must be designated by the State, a political subdivision of the State, or a combination of such political subdivisions or Indian tribal governments.

Beneficiary Eligibility: Low income families and individuals of all ages (as defined by CSA poverty guidelines), in urban and rural areas.

Formula and Matching: Limitations on Assistance: Section 225(c); 714(a)(1); and 803(b). The matching requirements in the law vary somewhat from section to section and may be waived by the Director. They are as follows: Section 221, Local Initiative Program and Section 222, Special Programs and Assistance include programs mentioned above under Uses and Use Restrictions. Section 225(c) limits the financial assistance provided for these programs to 80 percent of the total program or activity; 20 percent of the program shall be contributed by non-Federal sources.

Title VII of the Act is Community Economic Development and its purpose is to encourage the development of special programs by which the residents of urban and rural low income areas may, through self-help and mobilization of the community-at-large, improve the quality of their economic and social participation in community life. This contributes to the elimination of poverty and the establishment of permanent economic and social benefits. Section 714(a)(1) limits financial assistance to 90 percent of the cash of any program funded under Title VII, including costs of administration; 10 percent of the program shall be contributed by non-Federal sources.

Title VIII: The purpose of this title is to promote the goal of economic and social self-sufficiency for American Indians, Hawaiian Natives, and Alaskan Natives. Section 803(b) of this title limits financial assistance extended to any agency to 80 percent of the approved costs of the program; 20 percent of the program be contributed by non-Federal sources.

Other Tests: The auditor should determine the following: 1. *General Prohibitions:* Section 244 and 611.

Sec. 244(1) Funds awarded under this title or matching non-Federal funds may not be used to pay allowances for an individual's attendance at meetings of any community action agency governing board, neighborhood council or committee, if the individual is a Federal, State or local government employee, or an employee of a community action agency, or for payment of an allowance to any individual for attendance at more than two meetings a month.

Sec. 244(5) No financial assistance shall go to elementary or secondary education, except for special, remedial, and other noncurricular assistance.

2. *Salary:* Sections 244(2); 602(b)(1); 610(a); 610(b) Except where approved by Director:

Sec. 244(2) No employee will be compensated in excess of $18,000 per annum. Any amount in excess shall not be considered in determining the non-Federal contributions.

V. 45 AUG 18 1980 UMI

Sec. 602(b)(1) May employ experts for 100 days in any fiscal year not in excess of $100 per diem, including travel time; and travel expenses (including per diem in lieu of subsistance) (contracts may be renewed annually).

Sec. 603(b)(c): This section prohibits programs funded under this Act to use any funds and services or to employ or assign personnel for the purpose of engaging in political activities.

Sec. 610(a)(b): (a) Persons employed under title II (except as provided in section 602) shall not receive compensation (1) in excess of the average compensation paid in the area, or paid to a substantial number of the persons providing substantially comparable services in the area of the person's immediately preceding employment whichever is higher or (2) less than the minimum wage rate prescribed by DOL. The grantee is required to perform a comparability study and sign certifications for inclusion in applications for funding or refunding, and must maintain documentation of methods used to determine wage and salary comparability. (b) No person whose compensation exceeds $8,000 per annum shall receive compensation 20 percent higher than the last job held. Grantee is required to maintain prior salary information in employees' personnel folders.

3. *Administrative Cost Limitation:* Section 244(7) Except where approved by Director: Sec. 244(7) Administrative costs are limited to 15 percent, including non-Federal contributions. In certain cases, the Director may set the limit lower.

4. *Special:* Section 302(a); 305.

Sec. 302(a) Loans may be made for 15 years not resulting in indebteness of more than $3,500 to elderly and rural persons to: 1. Acquire or improve real estate or reduce encumbrances or erect improvements thereon;

2. Operate or improve the operation of farms not larger than family sized, including but not limited to the purchase of feed, seed, fertilizer, livestock, poultry, and equipment; or

3. Participate in cooperative association; and/or to finance nonagricultural enterprises which will enable such families to supplement their income.

Sec. (305) Assurances for the above loans: 1. There is reasonable assurance of repayment;

2. Credit is not available on reasonable terms from other sources;

3. Total funds are adequate for project completion;

4. Bears interest at a rate determined by the Treasury, plus program costs;

5. Section 303 loans don't exceed thirty years; and

6. No financial or other assistance shall be provided any cooperation or cooperative organization for the production of agricultural commodities or for manufacturing purposes: Provided, that

a. Packing, canning, cooking, freezing, or other processing used in preparing or marketing edible farm products, including dairy products, shall not be regarded as manufacturing merely by resulting in the creation of a new or different substance; and

b. A cooperative organization formed of members of an Indian tribe (including any tribe with whom the special Federal relationship has been terminated) engaged in the production of agricultural commodities, or in manufacturing products, on an Indian reservation (or former reservation) shall not be regarded as a cooperative organization.

Environmental Protection Agency

***66.418 Construction Grants for Wastewater Treatment Works

Authorization: Clean Water Act, as amended, Sections 101(e), 109(b), 201 through 205, 207, 208(d), 210 through 212, 215 through 217, 304(d)(3), 313, 501, 502, 511, and 516(b); Pub. L. 95–217; 33 U.S.C. 1251 et seq.

Objectives: To assist and serve as an incentive in construction of municipal sewage treatment works which are required to meet State and Federal water quality standards.

Major Compliance Features

Uses and Use Restrictions: For construction of municipal wastewater treatment works including privately owned individual treatment systems, if a municipality applies on behalf of a number of such systems. Such works may serve all or portions of individual communities, metropolitan areas, or regions. A project may include, but may not be limited to, treatment of industrial wastes. Grantee must require pretreatment of any industrial wastes which would otherwise be detrimental to efficient operation and maintenance, or grantee must prevent the entry of such waste into the treatment plant. The grantee must initiate an acceptable system of user charges, and recover from industry capital costs associated with the treatment of industrial wastes. (ICR payments have been suspended until December 1, 1979.)

Applicant Eligibility: Any municipality, intermunicipal agency, State, or interstate agency having jurisdiction over waste disposal. This program is available to each State, territory and possession of the U.S., including the District of Columbia.

Formula and Matching Requirements: 75 percent of the cost of a treatment works. After September 30, 1978, Step 2 and 3 projects that incorporate innovative or alternative technologies up to 85 percent of eligible costs. In addition, if the innovative project fails, then 100 percent of the modification or replacement costs can be reimbursed (see definition of steps below).

Other Tests: These features issue from Pub. L.: Pub. L. 84–660 and Pub. L. 92–500

An audit must include a review of the records of contracts under grants, for which the EPA maintains cognizance. Ascertain whether an audit was conducted at the contractor's site. EPA will continue to make audits of contracts made under grants. State auditors should rely on these audits to the extent possible.

A. *Definitions.* 1. Construction grants are usually obligated in three stages (steps) of project development: 1. facility plans and related elements, 2. preparation of construction drawings and specifications, 3. fabrication and building of treatment works.

2. Eligible Costs: Federal participation is authorized pursuant to statutes. For wastewater treatment works, EPA reviews and approves the engineering plans and specifications and determines the portion eligible.

3. Subagreements: A written agreement between an EPA grantee and another party (not a public agency) and any tier of agreement thereunder for the furnishing of services, supplies, or equipment necessary to complete the project. These agreements include contracts and subcontracts for personal and professional services, agreements with consultants, and purchase orders.

B. *Pub. L. 84–660 Grants.* 1. Percentage of Federal Participation: Up to 55 percent of eligible project costs.

C. *Pub. L. 92–500 Grants.* 1. Program Requirements: Determine that the following requirements were met:

a. *User Charge Systems (UCS)* For Step 3 awards after March 1, 1973, determine whether the grantee has developed a UCS. With the Regional Administrator's (RA) approval, a grantee may utilize an ad valorem tax system in lieu of a UCS based on actual use. The auditor need not concern himself with the requirements for developing a UCS. However, the auditor should report on the status of UCS development.

b. *Industrial Cost Recovery (ICR)* For Step 2 and 3 grants awarded after March 1, 1973, determine whether: (1) The grantee has indicated to the RA that it has no industrial users. The auditor should be alert for information to the contrary during the audit.

(2) The grantee has obtained letters from "significant" industrial users agreeing to pay under the ICR system.

Note.—For final audits of construction grants which have ICR systems, the auditor should ensure that the system proposed by the grantee has been approved by the RA. The auditor should state in his report the extent to which he has not audited the ICR system but that the system is subject to audit at a later date.

c. *Operation and Maintenance (O&M) Manual.* The facility must have an approved O&M Manual.

d. *Sewer Use Ordinance.* The grantee must develop, and obtain approval for, the sewer use ordinances.

D. *Items Applicable to both Pub. L. 84–660 and Pub. L. 92–500 Grants*

Retainages: The grantee has the option of withholding a portion of each progress payment or accepting a financial instrument in lieu of the cash retainage.

If the grantee elects to retain a portion of the amount due a construction contractor: 1. The compliance requirements for the grantee are: a. Up to ten percent may be withheld when work is less than 50 percent complete;

b. retainage can be reduced to five percent when more than 50 percent complete;

c. When the work is substantially completed, retainages can be further reduced;

d. A grantee may not claim retainages in its outlay report; and

e. When a grantee delays disbursement of grant funds to a contractor, it will be required to credit to the United States all interest earned on those funds.

2. The auditor should ensure that: a. Retainages are not included as expenditures in the outlay reports submitted to EPA;

b. Where retainages are claimed as expenditures, costs are questioned to the extent of the retainage plus interest attributable to the retainage; and

c. The interest recouped is the amount actually earned if higher than the prime rate. In no event shall the interest be calculated at a rate less than the prime rate for the term improperly claimed.

Department of Energy

***81.042 Weatherization Assistance Program for Low-Income Persons

Authorization: Title IV, Part A of the Energy Conservation and Production Act, Pub. L. 94–385; 42 U.S.C. 6861–6870; Department of Energy Organization Act, 42 U.S.C. 7101; Pub. L. 95–91; Title II, Part 2 of the National Energy Conservation Policy Act, Pub. L. 95–619 (92 Stat. 3207).

Objectives: To insulate the dwellings of low-income persons, particularly the elderly and handicapped low-income, in order to conserve needed energy and to aid those persons least able to afford higher utility costs.

Major Compliance Features

Uses and Use Restrictions: Improvement of the thermal efficiency of dwellings by the installation of weatherization materials such as ceiling insulation, caulking, weather-stripping and storm windows, and furnace efficiency modifications. Thirty percent of each grant may be used for such program support costs as tools and equipment, transportation of tools, materials and workers to the job site, and on-site supervisory personnel. Up to 10 percent of each grant may be spent for administrative expenses (5 percent for the grantee and 5 percent for the subgrantee).

Applicant Eligibility: States, including the District of Columbia, and in certain instances, Native American tribal organizations. In the event a State does not apply, a unit of general purpose local government, or Community Action Agency within that State becomes eligible to apply.

Beneficiary Eligibility: All low-income households will be eligible to receive weatherization assistance. A low-income household is one whose combined income falls at or below 125 percent of the poverty level determined by the Office of Management and Budget, or the basis on which Federal, State or local cash assistance payments have been made.

***81.052 Energy Conservation Programs for Schools, Hospitals and Public Buildings

Authorization: National Energy Conservation Policy Act, Title III, Parts 1, 2, Pub. L. 95–619, 92 Stat. 3206 et seq.

Objectives: To provide grants to States, public and private non-profit schools, hospitals, units of local government, and public care institutions to identify and implement energy conservation, maintenance and operating procedures in buildings, and to acquire and install energy conservation measures to reduce energy consumption.

Major Compliance Features

Uses and Use Restrictions: Assistance may be used to conduct preliminary energy audits, energy audits, technical assistance analyses, and to acquire energy conservation measures. Assistance may not be used for buildings completed later than April 20, 1977. Funds received by grantees must be matched 50/50 and no Federal funds may be used. No item of equipment or personal property for audit or State administration costing more than $300 or for technical assistance costing over $500 may be acquired without the Department's approval. Not more than 25 percent of funds provided to States for audits may be used for administrative expense, training, development of materials for audits, preliminary energy audits, sample energy audits, and monitoring and evaluations. The balance (at least 75 percent) must be used for conducting energy audits of buildings.

Applicant Eligibility: State energy agencies are eligible to apply for financial assistance to conduct energy audits of schools, hospitals, local government buildings, and public care institutions (public and private non-profit institutions). Local governments and individual institutions are eligible for assistance to conduct technical assistance and energy conservation measures.

Beneficiary Eligibility: Schools, hospitals, buildings of local governments, and public care institutions.

Formula and Matching Requirements: Funds granted to States, local governments and individual institutions must be matched 50/50, all from non-Federal funds. Grantees may use in-kind contributions to make up all or part of that match.

Department of the Treasury

***21.000 Revenue Sharing

Authorization: Title I State and Local Fiscal Assistance Act of 1972 (Pub. L. 92–512 amended) and Title II Public Works Employment Act for 1976 (Pub. L. 94–369 amended).

Objectives: State and locan fiscal assistance of a general nature.

This is an entitlement program not subject to the standard application and award process. For this reason the auditor may find the agency regulations of some assistance during the audit. The citation is 31 CFR 51.0.

Major Compliance features

Financial Audit. Only recipient governments receiving $25,000 or more in annual entitlement payments must have an independent audit of their financial statements (all funds).

Compliance Audit. a. Determine that the recipient has established a separate trust fund or bank account (Section 51.100(a)).

b. Determine if any revenue sharing funds have not been appropriated, obligated or spent within 24 months after the end of the entitlement period or the date to which an extension has been granted by ORS. (Section 51.100b)

c. Determine if the recipient has observed the same laws and procedures for revenue sharing expenditures that are applicable to its own revenues (Section 51.100(c)).

d. If funds were spend for debt redemption after January 1, 1972, use professional judgment in determining if the grantee complied with subparts D and E of the Regulations.

e. While performing the other "Davis Bacon tests" at the front of this document, determine if individuals employed by the recipient, in jobs financed by revenue sharing funds, have been paid wages no lower than the prevailing rates of pay for persons employed in similar public occupations by the same employer.

f. Determine if Native American recipients spend funds only for the benefit of members of the tribe or village residents in the county area from which the funds were allocated (Section 51.43).

g. Determine that accounts have been maintained in a manner that permits the tracing of entitlement funds to a level of expenditure adequate to establish that such funds have not been used in violation of the restrictions and prohibitions of the Act and regulations (Section 51.100(d)(2)). Where expenditures either recorded in a separate set of fund accounts or deposited in a separate bank account are subsequently transferred to another fund for expenditure, a memorandum record must be kept of the voucher numbers and amount of expenditures made from the fund to which the transfer is made.

h. Determine that the recipient's accounts have been maintained in a manner sufficient to permit preparation of reports as required by the Director of ORS.

i. Publication of Reports and Public Hearings (Subsection B): 1. Compare figures in the Use Report (Section 51.12(a)) to audited figures. These figures are reported to Census in its "Survey of Government Finances." If revenue sharing funds have been transferred from the Revenue Sharing Trust Fund to another fund for expenditure, review the amounts of the transfer and the totals, by categories, of expenditures of revenue sharing funds made from the fund to which the transfer was made. Report any material differences.

(a) Determine that a notice has been published in a newspaper of general circulation after filing the "Use Report" with census to advise that the report is available for public inspection. To prove newspaper publication, inspect certification of publication, or newspaper clippings. If an alternative publication method has been used, ascertain that a waiver has been obtained from ORS (Section 51.13(c)(2)).

2. Determine that a public hearing (proposed use hearing) has been held on possible use of entitlement funds at least 7 days before the budget is presented to the legislative body (Section 51.13(a)).

(a) If the hearing has been waived because its cost is estimated to exceed 15% of the entitlement (Section 51.13(c)(1)), obtain detailed estimates of cost and determine that they are reasonable.

(b) Determine that a notice of the proposed use hearing was published in a newspaper at least 10 days prior to the hearing date or that an alternate publication method was used (Section 51.13(b)).

3. Determine that a public hearing (budget hearing) has been held prior to enactment of the budget (Section 51.14(a)).

(a) Determine that notice of the hearing was published in a newspaper of general circulation or by alternative means, at least 10 days prior to the hearing date (Section 51.14(b)), or within the time limit prescribed by the State or local law applicable to the recipient (Section 51.14(d)). This notice must include the intended uses of entitlement funds and a summary of the entire proposed budget.

4. Determine that a notice has been published in a newspaper of general circulation or by alternative means stating that a summary of the enacted budget is available for public inspection within 30 days of its enactment (Section 51.14(g)).

5. If the recipient chooses to use budget hearing procedures prescribed by State or local law as an alternative to the regulations, review those procedures to determine that they provide citizens with the opportunity to present oral and written comments and to ask questions concerning the proposed use of funds (Section 51.14(b)(1)).

6. If State or local laws requiring hearings (as outlined above) do not apply to amendments or modifications of budgets, and such changes are made affecting 25% or $1,000 of entitlement funds (whichever is greater), determine that the provisions of Sections 51.13 and 51.14 as outlined above have been followed.

j. Maintenance of Transfer Effort (Sec. 51.27) for States only, determine that the level of transfer effort has been maintained.

k. Verification of Census Data—obtain the data on census figures submitted by the local government. Reconcile with audited amounts if possible (for latest fiscal period).

l. Lobbying is prohibited under certain circumstances. If evidence of the expenditure of revenue sharing funds for lobbying not specifically permitted by ORS are disclosed, a statement to this effect showing the amount involved should be shown.

Civil Rights (Subpart E). a. If the recipient has 100 or more employees, determine if it has filed annual reports with the Equal Employment Opportunity Commission (EEOC) as required. (Form EEO–4) If the recipient has between 15 and 100 employees, determine if it has kept EEOC records. Also, inquire if the recipient has ever been required to file a report with EEOC, and if so, when. The report to EEOC must include all employees except elected officials and their immediate secretary, administrative, legislative or other first line aide, legal advisor and appointed cabinet officials of States and heads of executive departments for units of local government.

b. Determine the nature and status of any complaints filed with EEOC.

c. Determine if there is a State and/or local agency responsible for Civil Rights enforcement. If so, ascertain if there are any current complaints filed or investigations in progress. Determine the nature and status of each.

d. Determine if the recipient has an office responsible for Civil Rights enforcement internally. If so, make the same tests as in (iii) above.

e. Determine if any Civil Rights suits have been adjudicated or are pending.

f. Determine by inquiring if the recipient is required to develop an Equal Opportunity Affirmative Action Compliance Program and, if so, whether this has been done.

g. Determine, using professional judgment, if facilities financed by revenue sharing funds have been located in such a manner as to have the effect of discriminating (Section 51.52(b)(4)).

h. Ascertain if a formal policy concerning nondiscriminatory action in employment exists.

i. For property acquired with revenue sharing funds: 1. Office of Revenue Sharing shall have jurisdiction over any program or activity for ensuring compliance with the nondiscrimination provisions of the Act and of the regulations as long as a recipient retains ownership or possession of any real or personal property purchased with revenue sharing funds. Further, if the property is transferred to another party, the Office of Revenue Sharing will retain jurisdiction over the primary recipient for the purposes of compliance.

2. For purposes of CR, the term "transferred" means the passage of possession or title, or both, (except by bona-fide sale) of the property to a secondary recipient, another unit of government, another government agency within the primary recipient government, or to any other person, firm, or organization. For example, if an automobile acquired with revenue sharing funds for use in the Police Department was subsequently transferred to the Health Department, the Health Department would be likewise subject to these provisions while the vehicle was assigned to it.

3. For purposes of CR, real property, personal property and nonexpendable tangible personal property are defined the same way as property acquired by the recipient with its own funds. Many governmental units include in their definitions of property only those acquisitions costing more than a stated minimum amount. Such minimum amounts are acceptable to ORS up to $1,000.

4. Any record for property subject to CR is acceptable so long as it contains the following minimum information: date of purchase; date of disposal or date of transfer, transferee (if applicable); and location.

5. If the property is disposed of, CR will have no further applicability.

Suggested Approach:

—Determine that a record such as that previously described is maintained.

—Such property is in the same category as operating/maintenance expenses in determining whether revenue sharing funds have been used in a program in which discrimination is suspected.

j. Any determination in a. to i. above indicating a possible discriminatory action shall be shown.

Appendix I—Inspectors General [1]

Commerce—Office of the Inspector General, (202) 634–7888, Department of Commerce, 1730 K Street, NW., Suite 410, Washington, D.C. 22006; attention: Matthew Groff.

Energy—Office of the Inspector General, (202) 252–8888, Department of Energy, 1000 Independence Avenue, SW., Room 5A 179, Washington, D.C. 20585; attention: Bill Bernsdorf.

HHS—Office of the Inspector General, (202) 472–3188, Department of Health and Human Services, 5760 North HHS Building, 330 Independence Avenue, SW., Washington, D.C. 20201; attention: Frederick Lehrer.

HUD—Office of the Inspector General, (202) 755–7217, Department of Housing and Urban Development, 451 Seventh Street, SW., Room 8176, Washington, D.C. 20410; attention: Anna Virbick.

Interior—Office of the Inspector General, (703) 235–8133, Contract and Grant Operations, Department of the Interior, Room 401, 800 N. Quincy Street, Arlington, VA 22217; attention: Isak M. Danon.

Labor—Office of the Inspector General, (202) 523–8404, Department of Labor, Room S5030, 200 Constitution Avenue, NW., Washington, D.C. 20210; attention: Edward W. Stepnick.

CSA—Office of the Inspector General, (202) 254–6420, Community Services Administration, 1200 19th Street, NW., Room 473, Washington, D.C. 20506; attention: Joseph E. Kratz.

GSA—Office of the Inspector General (JA), (202) 566–1584, General Services Administration, 18th & F Streets, NW., Room 5001, Washington, D.C. 20405; attention: Paul F. Gibbons.

NASA—Office of the Inspector General, (202) 755–3555, NASA Headquarters, Washington, D.C. 20546; attention: Anthony J. Gabriel.

SBA—Office of the Inspector General, (202) 653–6613, Small Business Administration, 1441 L Street, NW., Room 203, Washington, D.C. 20416; attention: Raymond F. Randolph, Assistant IG for Audit.

VA—Office of the Inspector General (50), (202) 389–2636, Veterans Administration, 810 Vermont Avenue, NW., Washington, D.C. 20410; attention: Allan Reynolds.

Part VI

Department of Agriculture

Federal Grain Inspection Service

Grain Regulations and Standards; Corrections

DEPARTMENT OF AGRICULTURE

Federal Grain Inspection Service

7 CFR Parts 800, 801, 802

Grain Regulations and Standards; Final Rule; Corrections

AGENCY: Federal Grain Inspection Service, USDA.

ACTION: Corrections to final rule for grain regulations and standards.

SUMMARY: On March 11, 1980, the Federal Grain Inspection Service (Service) published final regulations and standards to implement the United States Grain Standards Act, as amended in 1976 and 1977 (45 FR 15802–15873). A subsequent review of the rules published that date disclosed a number of errors in the heading, the preamble, and the regulatory text. The Service is correcting these parts.

DATES: These corrections to the final rule become effective upon publication.

ADDRESS: Copies of corrections to the final rule will be given general distribution. Requests for additional copies should be sent to the Issuance and Coordination Staff, FGIS, USDA, Room 1127, Auditors Building, 1400 Independence Avenue SW., Washington, DC 20250

FOR FURTHER INFORMATION CONTACT: L. E. Malone, Assistant Deputy Administrator, Program Operations (Staff), FGIS, USDA, Room 1627—South Building, 1400 Independence Avenue SW., Washington, DC 20250, telephone (202) 447–9166.

SUPPLEMENTARY INFORMATION: On March 11, 1980, the Service published final rules in the **Federal Register** at 45 FR 15802–15873. There were a number of errors in the heading, the preamble (all the material in the final rule document as published in the **Federal Register** from the AGENCY line to and including the SUPPLEMENTARY INFORMATION), and the text of the final regulations as published. The errors were typographical and format mistakes. Their correction does not constitute substantive changes. Through an error the provision for the fee charge that accompanies the application for approval to operate as a scale testing organization was inadvertently omitted although notice was given for comment in the publication of the proposed regulations on March 2, 1979. Accordingly, a paragraph containing this provision is being added to § 800.71 and § 800.198. An additional correction is also being made in Section 800.71(b)(ii). In identifying persons who must pay a registration fee of $270, the term "subsidiaries" was used incorrectly. The intent was that persons who are required to register and who are also in a "control relationship" (as defined in section 17A(b)(2) of the Act; i.e., has an ownership interest of 10 percent or more) in any other business engaged in the business of buying, handling, weighing, or transporting grain for sale in interstate commerce would pay the $270 fee. Therefore, the item is being corrected to reflect this meaning. The heading (Line 3) in the table in Item 4 under Regulatory Text is being corrected because the words "Acceptance" and "Maintenance" were inadvertently transposed in the Final Rule. Concerning this correction it should be noted that the heading was presented correctly in the Proposed Rule.

Corrections in the heading are identified by page, column, and line number, and corrections in the preamble are identified by page, column, paragraph, and line number. Items 1 through 4 list corrections to the regulatory text. Corrections in the regulatory text are identified by section reference, page, column, and line number. The column number listed in the regulatory text contains the last cited subsection in which the correction can be found. Numbering for lines in the regulatory text begins with the line containing the last cited subsection. The following are corrections of the errors:

Heading

Page	Column	Line	Correction
15802	1	Between lines 1 and 2	Insert the following line "Federal Grain Inspection Service".
15802	1	2	Delete the words "Parts 26".
15802	1	4	Add the words "Regulations and" between "Grain" and "Standards" so that the line reads "Grain Regulations and Standards".

Preamble

Page	Column	Paragraph and line	Correction
15802	3	2—line 4	Change "ll" to "li".
15803	2	1 (partial)—line 14	Change "or" to "of".
15803	3	4—line 15	Change "to" to "To".
15805	2	1—line 8	Change "states" to "States".
15805	2	3—line 19	Change "means" to "mean".
15809	1	3—line 5	Change "nonretoractive" to "nonretroactive".
15810	1	5—line 12	Change "to" to "of".

Regulatory Text

Item 1. Sections are corrected as follows:

Section	Page	Column	Line	Corrections
Index	15811	3	7—Chapter Heading	Change "Certificate" to "Certificates" so that the line reads "Official Certificates".
800.0(b)	15812	1	6	Change "each" to "easy".
800.0(b)(4)	15812	1	4	Change "of" to "or".
800.0(b)(22)	15812	2	2	Change "of" to "or".
800.0(b)(33)	15812	3	3	Add the words "Federal Register" between "the" and "Act" so that the line reads "the Federal Register Act of July 26, 1935, as amended (44)".
800.0(b)(34)	15812	3	2	Change "peform" to "perform".
800.8(b)	15815	1	2	Change "service" to "Service".
800.19(a)	15816	2	18	Between the words "verification." and "In" add the sentence "The provisions for record retention are the same as those of § 800.25(g)." so that the line reads "verification. The provisions for record retention are the same as those of § 800.25(g). In addition, the exporters or".
800.40	15819	1	4	Add the symbol "§" to "800.39" so that the line reads "suspended or revoked under § 800.39 shall".
800.45(b)	15819	1	2	Add the words "and checkweighing" between "weighing" and "services" so that the line reads "Class X weighing and checkweighing services on export".
800.45(b)(2)	15819	1	2	Add the words "and checkweighing" between "weighing" and "services" so that the line reads "X weighing and checkweighing services on sacked grain".

Regulatory Text—Continued

Item 1. Sections are corrected as follows:

Section	Page	Column	Line	Corrections
800.46(c)(5)	15820	1	1	Change "addreses" to "addresses".
800.70(f)(2)	15822	3	3	Change "will" to "with".
800.71(a)	15822			In the heading in the third column of table 1 in schedule A change "or" to "and" and after the word "inspection" add the word "service" so that the heading reads "Reinspection and appeal inspection service".
800.71(a), footnote 10	15823		1	Delete the words "or supervision".
800.71(b)(ii)	15824	1	7	Delete the words "have subsidiaries engaged in interstate or foreign commerce grain business." and substitute the words "are in a control relationship, as defined in section 17A(b)(2) of the Act, with respect to a business engaged in the business of buying, handling, weighing, or transporting grain for sale in interstate commerce."
800.71(c)	15824	1	Immediately after line 4	Add paragraph (d) which reads "(d) Each application for approval to operate as a scale testing organization shall be accompanied by a fee of $250."
800.72(a)	15824	1	9	Change "(3)" to "(4)" and add the number "(3)" between "costs;" and "the" so that the line reads "costs; (3) the cost of overtime; and (4)".
800.80(a)(4)	15826	2	7	Add the word "the" between "in" and "instructions" so that the line reads "size will be prescribed in the instructions. If".
800.80(c)	15826	2	4	Add the word "or" after "stamped" so that the line reads "service shall be promptly stamped or".
800.81(a)	15826	3	8	Change "protection" to "protected".
800.81(a)(3)	15826	3	18	Change "sample" to "sample(a)".
800.81(d)	15827	1	9	Change "filed" to "field".
800.85(g)	15830	1	1	Change "*uniform*" to "*uniform*".
800.85(h)(1)	15830	1	5	Change "quality" to "quality".
800.85(h)(4)	15830	1	15	Change "inpsection" to "inspection".
800.85(h)(5)	15830	2	25	Change "certifiate" to "certificate".
800.86(b)	15830	3	5	Change "quantiy" to "quantity".
800.86(e)(1)	15830	3	31	Change "beeen" to "been".
800.95(a)(1)	15831	3	7	Change "described" to "prescribed".
800.115(b)(3)	15835	1	5	Change "of" to "or".
800.130(a)(1)	15837	1	5	Change "(c)(1)" to "(b)(1)".
800.130(b)(2)	15837	2	13	Change "(c)(1)" to "(b)(1)".
800.140(a)(1)	15839	1	5	Change "(c)(1)" to "(b)(1)".
800.140(b)(1)	15839	1	15	Change ")" immediately following the word "service" to a closing quotation mark. Ad the symbol ")" between "inspection" and "service" so that the line reads "appeal inspection) service"; or (ii)".
800.140(b)(1)	15839	1	21	Delete ")" immediately after the word "appeal". Add the symbol ")" between "inspection" and "service" so that the line reads "appeal inspection) service."
800.140(b)(2)	15839	2	15	Change "(c)(1)" to "(b)(1)".
800.146(a)	15840	1	19	Delete duplicate line 19 "Fee schedules . . . 5 years after last use".
800.161(d)(1)	15845	2	10–17	See item 2.
800.185(h)	15851	1	8	Change "of" to "on".
800.187(e)(3)	15852	2	6	Add the word "a" between "for" and "license" so that the line reads "subject (i) and applicant for a license to a".
800.196(e)(1)(i)	15853	2	11	Change "dispostion" to "dispoition".
800.196(e)(3)(i)	15853	3	12	Change "of" to "or".
800.198(c)	15854	2	Immediately after line 31	Add the following paragraph: "Each application for approval to operate as a scale testing organization shall be accompanied by the fee specified by the Service."
800.207(e)(1)	15857	2	4	Add the word "port" between "export" and "location" so that the line reads "export port location in the area shall be".
800.208(d)	15857	3	6	Add the word "prohibited" between "actions" and "by" so that the line reads "of actions prohibited by §§ 800.185 through 800.198."
800.208(1)	15858	2	1	Change "(1)" to "(i)".
800.216(f)	15859	2	3	Delete the words "to be".
801.7	15861	1	Heading of table (b)	Change "all" to "All" and add the word "BAR" between "than" and "master" so that the line reads "(b) All other than BAR Master/Standard meters".
801.9(c)	15861	2		See item 3.
802.1(b)(14)	15862	3	1	Change "*Damping*" to "*Dampening*".
802.10(b)	15868	3	3–22	See item 4.
802.13(b)	15871	2	2	Change "*accurancy*" to "*accuracy*".

Item 2. The table in § 800.161(d) is recaste as to format only as follows:

§ 800.161 Official certificate requirements.

* * * * * * * * *

(d) *Format and color requirements for certificates.* (1) *General* * * *

Caption on certificate	Color of original certificate	Color of copy
Official Certificate—Warehouseman's Sample—Lot Inspection	Yellow	Yellow.
Official Certificate—Submitted Sample Inspection	Pink	Pink.
Official Supervision of Grain Weight Certificate	Yellow	Yellow.

* * * * * * * * *

Item 3. Change "51/2/64" to "5½/64" in the third line listed in the table in § 801.9(c) so that it reads as follows:

§ 801.9 Minimum tolerance for sieve devices.

* * * * *

(c) Sieving accuracy:

Sieve description	Minimum tolerance [1]	
	Direct comparison	Sample exchange
.084 × ¾ inch oblong	±0.2	±0.3
5/64 × ¾ inch slotted	±0.3	±0.5
5½/64 × ¾ inch slotted	±0.5	±0.7
6/64 × ¾ inch slotted	±0.7	±1.0

[1] Mean deviation from standard—percent.

Item 4. In the table in § 802.10(b), change the heading of the first column from "Types of scale" to "Type of scale"; add "0" preceding all decimal points of percentages listed in items 1–4 of the second and third columns; change "Acceptance" to "Maintenance" and "Maintenance" to "Acceptance" in the heading, line 3; add "is" between "whichever" and "greater" in the third column, line 13; delete dotted line in the second column, line 20 opposite the word "Portable"; and delete all of the solid line, line 22, immediately after the word "platform" so the table will read as follows:

§ 802.10(b) Tolerances and sensitivity requirements.

* * * * *

(b) *Tolerance values.* * * *

Type of scale	Maintenance tolerance	Acceptance tolerance
(1) Hopper scale	0.05 pct × the applied test load or the minimum tolerance value, whichever is greater.	0.05 pct × the applied test load or the minimum tolerance value, whichever is greater.
(2) Motor vehicle scale	0.1 pct × the applied test load or the minimum tolerance value, whichever is greater.	0.05 pct × the applied test load or the minimum tolerance value, whichever is greater.
(3) Railroad track scale	0.1 pct × the applied test load or the minimum tolerance value, whichever is greater.	0.05 pct × the applied test load or the minimum tolerance value, whichever is greater.
(4) Portable platform:		

Test load		Maintenance tolerances expressed—		Acceptance tolerances expressed—	
From—	To but not including—	In ounces	In pounds	In ounces	In pounds
Pounds:					
1	2	1/16	0.004	1/32	0.002
2	4	1/8	.008	1/16	.004
4	7	3/16	.012	3/32	.006
7	10	1/4	.016	1/8	.008
10	15	5/16	.020	5/32	.010

Part VII

Department of Health and Human Services

Public Health Service

Health Maintenance Organizations; Federal Financial Assistance General

V 45 A G 18 80 UMI

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Public Health Service

42 CFR Part 110

Health Maintenance Organizations; Federal Financial Assistance: General

AGENCY: Public Health Service, HHS.

ACTION: Final regulations.

SUMMARY: This document amends the general requirements for the award of grants, loans and loan guarantees to public and private entities under Title XIII of the Public Health Service Act (the Act). It sets forth (1) a condition that the Secretary may impose with respect to the approval of any application for a feasibility study or for a project for the planning or initial development of a health maintenance organization (HMO), and (2) a number of technical revisions to conform these regulations with the Department's grant administration requirements of 45 CFR Part 74.

EFFECTIVE DATE: These amendments are effective on August 18, 1980.

FOR FURTHER INFORMATION CONTACT: Howard R. Veit, Director, Office of Health Maintenance Organizations, Park Building 3rd Floor, 12420 Parklawn Drive, Rockville, Maryland 20857, 301/443-4106.

SUPPLEMENTARY INFORMATION: On July 18, 1979, final regulations were published in the **Federal Register** (44 FR 42074-9) to amend 42 CFR Part 110, Subpart B. Subpart B sets forth general provisions which apply to Federal financial assistance for the development and operation of HMOs. In the preamble to the July 18 regulations, the Secretary of Health and Human Services (HHS; at that time, Health, Education, and Welfare) also invited comments on a proposal to add a requirement that for awards made under sections 1303 and 1304 of the Act (feasibility studies and planning and initial development projects), one element of an approvable application would be that the project director be approved by the Secretary. Interested persons were invited to submit written comments on this proposed amendment by September 17, 1979. Five organizations submitted comments.

One commenter opposed the proposal on the ground that it "inappropriately usurps a legitimate prerogative of an applicant organization to select, and to change the person who will act as project director." A second commenter expressed concern that imposition of this requirement would result in delays in appointing project directors. The other three commenters supported the proposal that the Secretary have the right to approve the project director.

As to the ability to select and replace the project director, the Department has decided to amend 42 CFR 110.206 (now § 110.205) by adding a new paragraph (b), stating that, with respect to feasibility, planning and initial development activities funded under Title XIII of the Act, the Secretary may reserve the right to approve the project director. Thus, the rule does not require that every project director be approved by the Secretary. Rather, the rule gives the Secretary the authority to reserve, as to any particular applicant, the right to approve the project director. Accordingly, the Department emphasizes that entities assisted under sections 1303 and 1304 of the Act will still be able both to select and to replace the project director, subject in certain cases to the Secretary's right to approve the selection or replacement.

As to the potential for delay, the Department anticipates that it should be able, in most cases, to exercise its right of approval as part of the normal process of reviewing the application for assistance. In any event, the Department notes its experience that the competence of the project director is one of the major factors in determining whether a project is accomplished successfully. Thus, it believes that, in those cases where the Secretary has reserved the right to approve the project director, the importance of ensuring that the entity has a competent project director outweighs any potential administrative inconvenience.

Several technical revisions have also been made in these regulations to conform with the Department's grant administration regulations at 45 CFR Part 74. These changes are:

1. Deletion of § 110.205, "What records must be maintained and what reports must be submitted?". This section duplicates provisions in 45 CFR Part 74 which applies to grants funded under this part. As to loans and loan guarantees, these provisions are contained in the applicable loan documents. Accordingly, § 110.206 is renumbered as § 110.205.

2. Deletion of § 110.207, "What are the government's rights with respect to data developed during the term of Federal financial assistance?". This section also duplicates provisions in 45 CFR Part 74. As to loans and loan guarantees, the Department has determined that, in general, it is not appropriate to impose the requirements with respect to data developed during the term of Federal financial assistance. Accordingly, § 110.208 is renumbered as § 110.206.

3. Section 110.209 (now § 110.207) sets forth the other HHS regulations that are applicable to grants and those that are applicable to loans and loan guarantees awarded under this part. It is revised to clarify that the references to other applicable HHS regulations are not intended to be an exclusive list of what other regulations may apply to recipients of awards under this Part. The section has also been revised to add the following to the list of HHS regulations that, among others, are applicable to awards made under this Part: (a) 42 CFR Part 50, Subpart D—Public Health Service grant appeals procedures (applicable to grants only), (b) 45 CFR Part 81—Practice and procedures for hearings under Part 80, and (c) 45 CFR Part 90—Nondiscrimination on the basis of age in programs or activities receiving Federal financial assistance from HHS.

4. A new § 110.208 is added to set forth clearly the purposes for which grant funds awarded under this Part may be used.

5. Section 110.210 (now § 110.209) is now entitled, "What is the effect of a grantee's failure to become or remain a qualified HMO?" It is also corrected to bring it into conformity with grant administration regulations at 45 CFR Part 74 which relate to the accountability of grantees.

6. Section 110.211 (now § 110.210) is revised to provide clear guidance to grantees and recipients of loans and loan guarantees as to the obligation of the Federal Government to make additional awards.

7. Section 110.212 is renumbered as § 110.211.

(Sec. 215, 58 Stat. 690 (42 U.S.C. 216); secs. 1301-1318, as amended, 92 Stat. 2131-2141 (42 U.S.C. 300e-300e-17))

Dated: June 11, 1980.

Julius B. Richmond,

Assistant Secretary for Health.

Approved: August 7, 1980.

Patricia Roberts Harris,

Secretary.

42 CFR Part 110, Subpart B, is revised as follows:

§ 110.205 [Deleted]

(1) Delete § 110.205.

§ 110.206 [Renumbered as § 110.205 and Amended]

(2) Section 110.206 is renumbered § 110.205 with existing text designated paragraph (a) and new paragraph (b) is added as follows: "(b) In approving any application under Section 1303 or 1304 of the Act for feasibility, planning, or initial development, the Secretary may reserve the right to approve the project director."

§ 110.207 [Deleted]

(3) Delete § 110.207.

§ 110.208 [Renumbered as § 110.206]

(4) Section 110.208 is renumbered as § 110.206.

(5) Section 110.209 is renumbered as § 110.207 and is revised to read:

§ 110.207 What other HHS regulations apply?

(a) Several other HHS regulations apply to grants under this Part. These include, but are not limited to:

42 CFR Part 50, Subpart D—Public Health Service grant appeals procedure.
45 CFR Part 16—Department grant appeals process.
45 CFR Part 74—Administration of grants.
45 CFR Part 80—Nondiscrimination under programs receiving Federal assistance through the Department of Health and Human Services—effectuation of Title VI of the Civil Rights Act of 1964.
45 CFR Part 81—Practice and procedure for hearings under Part 80.
45 CFR Part 84—Nondiscrimination on the basis of handicap in federally assisted programs.
45 CFR Part 90—Nondiscrimination on the basis of age in programs or activities receiving Federal financial assistance from HHS.

(b) Several other HHS regulations apply to loans and loan guarantees under this Part. These include, but are not limited to:

45 CFR Part 80—Nondiscrimination under programs receiving Federal assistance through the Department of Health and Human Services—effectuation of Title VI of the Civil Rights Act of 1964.
45 CFR Part 81—Practice and procedure for hearings under Part 80.
45 CFR Part 84—Nondiscrimination on the basis of handicap in federally assisted programs.
45 CFR Part 90—Nondiscrimination on the basis of age in programs or activities receiving Federal financial assistance from HHS.

(6) A new § 110.208 is added as follows:

§ 110.208 For what purposes may grant funds be used?

A grantee may spend funds it receives under this Part only according to the approved application and budget, Title XIII of the Act, the terms and conditions of the grant award, the applicable cost principles specified in Subpart Q of 45 CFR Part 74, and the regulations of this Part.

(7) Section 110.210 is renumbered to § 110.209 and is revised to read as follows:

§ 110.209 What is the effect of a grantee's failure to become or to remain a qualified HMO?

The failure of a grantee to become a qualified HMO in accordance with Subpart F of this Part, or to remain a qualified HMO, is a material failure to comply with the terms of the grant. Upon this failure, the subsequent use and disposition of any property acquired with grant funds will be governed by 45 CFR Part 74.

(a) If the grant project period has not yet expired, this failure is grounds for termination of the grant under 45 CFR Part 74.115(a).

(b) If the grant period has expired, property acquired with grant funds will be deemed, under 45 CFR Part 74, Subpart O, to be no longer needed for the program or project for which it was acquired.

(8) Section 110.211 is renumbered § 110.210 and is revised to read as follows:

§ 110.210 What obligation does the Federal Government have to continue support for an approved project?

(a) The notice of award specifies how long the Secretary intends to support the project without requiring the project to recompete for funds. For feasibility grants under Subpart C and planning grants and loan guarantees under Subpart D, this period, called the project period, will usually be for, and cannot exceed, one year. For initial development grants and loan guarantees under Subpart D, the project period will usually be for 1-3 years and cannot exceed three years.

(b) Generally, the initial development grant or loan guarantee will be for one year initially and subsequent continuation awards will also generally be for one year at a time. Although the project period for a feasibility grant and for a planning grant or loan guarantee is limited to one year, the Secretary may either make one additional grant or loan guarantee for such a project or permit additional time (up to one year) for completion of the project. A grantee or a recipient of a loan guarantee must submit a separate application to have the support continued for each subsequent year. Decisions regarding continuation awards and the assistance level of such awards will be made after consideration of such factors as the progress and management practices of the grantee or recipient of the loan guarantee, and the availability of funds. In all cases, continuation awards require a determination by the Secretary that continued assistance is in the best interest of the Federal government.

(c) Neither the approval of any application nor the making of an award commits or obligates the Federal government in any way to make an additional, supplemental, continuation, or other award with respect to any approved application or portion of an approved application.

§ 110.212 [Renumbered as § 110.211]

(9) Section 110.212 is renumbered as § 110.211.

Part VIII

Department of the Interior

Geological Survey

Final Revision of Certain Requirements of Outer Continental Shelf (OCS) Orders Nos. 1, 2, 5, and 7

DEPARTMENT OF THE INTERIOR

Geological Survey

Final Revision of Certain Requirements of Outer Continental Shelf (OCS) Orders Nos. 1, 2, 5, and 7

Notice is hereby given that, pursuant to Title 30 of the Code of Federal Regulations, Part 250.10 and Part 250.11 (30 CFR 250.10 and 250.11), and the U.S. Geological Survey (USGS) Director's Delegation of Authority, as published in the **Federal Register**, Volume 45, No. 52, on March 14, 1980, the Deputy Chief, Conservation Division—Offshore Minerals Regulation, has approved the issuance of revisions to the Outer Continental Shelf (OCS) Orders Nos. 1, 2, 5, and 7 for the following OCS Areas: Gulf of Mexico, Pacific, Gulf of Alaska, and Atlantic.

These revisions to the OCS Orders will be effective September 15, 1980. The revised paragraphs and subparagraphs of these Orders supercede the corresponding paragraphs and subparagraphs currently in effect for the OCS Areas listed above, which were published in the **Federal Register**, Volume 44, No. 247, on December 21, 1979.

These revisions incorporate appropriate suggestions which were received in response to a solicitation for comments which was published in the **Federal Register**, Volume 45, No. 71, on April 10, 1980. They also incorporate appropriate suggestions which were received at a public meeting at the USGS National Center in Reston, Virginia, on May 20, 1980.

In accordance with the USGS Director's Delegation of Authority, which was published in the **Federal Register**, Volume 45, No. 52, on March 14, 1980, the change of the title of the position of the "Oil and Gas Supervisor" to "Deputy Conservation Manager" has been incorporated as well as the redelegation of the authority of the "Chief, Conservation Division," to the "Deputy Chief, Conservation Division—Offshore Minerals Regulation," for the approval of the Orders. The new titles of these positions and approval authority are effective throughout all of the OCS Orders. These title changes will be incorporated into the booklet copies of the remainder of the OCS Orders when the next edition of the booklet is issued.

These revisions will also be incorporated into the final Arctic OCS Orders when published. The proposed Arctic OCS Orders were published in the **Federal Register**, Part 5, Volume 44, No. 115, on June 13, 1979.

Comments were received from the following organizations: Alaska Oil and Gas Association, Amoco Production Company, Arco Oil and Gas Company, Cameron Iron Works, Inc., Chevron U.S.A., Inc., Conoco, Inc., Environmental Protection Agency, Exxon Company, U.S.A., Gulf Oil Exploration and Production Company, Huthnance Drilling Company, National Oceanic and Atmospheric Administration, Ocean Drilling and Exploratioin Company, Offshore Operators Committee, Otis Engineering Corporation, Shell Oil Company, Zapata Corporation.

Summaries of the comments received, discussions for accepting or rejecting the suggestions of the commenters, and the final revisions of the Orders are published below. The requirements of certain paragraphs and subparagraphs are different for the various Areas due to environmental, geological, geophysical, or geographical differences. The Areas which are affected by these varying requirements are identified following the headings for each of the final revisions of the Orders. Revised insert pages of the final revisions, suitable for placement in the booklet copies of the Orders for each Area, can be obtained from the addresses listed below.

The primary author of this document is Mr. Lloyd M. Tracey, Chief, OCS Orders and Standards Section, Branch of Offshore Rules and Procedures, Conservation Division, U.S. Geological Survey, Mail Stop 640, Reston, Virginia 22092 (703–860–7835). Reprints of this Notice and copies of the revised insert pages can be obtained after September 15, 1980, from the following:

Conservation Manager, Gulf of Mexico OCS Region, U.S. Geological Survey, P.O. Box 7944, Metairie, Louisiana 70011.
Conservation Manager, Atlantic OCS Region, U.S. Geological Survey, 1725 K Street, N.W., Suite 204, Washington, D.C. 20006.
Conservation Manager, Alaska OCS Region, U.S. Geological Survey, P.O. Box 259, Anchorage, Alaska 99510.
Conservation Manager, Pacific OCS Region, U.S. Geological Survey, 1340 West Sixth Street, Los Angeles, California 90017.
Deputy Chief, Conservation Division—Offshore Minerals Regulation, U.S. Geological Survey, Mail Stop 640, National Center, Reston, Virginia 22092.

Dated: August 13, 1980.

Robert L. Rioux,
Deputy Chief, Conservation Division—Offshore Minerals Regulation, Conservation Division.

OCS Order No. 1

Paragraph 4, *Identification of Subsea Objects*

Comments. The U.S. Coast Guard and others have expressed concern that excessive reports are being filed because the currently effective Order does not place any limitations on the objects which are to be reported.

Discussion. The USGS proposes to revise paragraph 4 of OCS Order No. 1 as set forth below. The U.S. Coast Guard will forward all reports disclosing potential obstructions to the National Marine Fisheries Service for appropriate inclusion on the list of obstructions to fishing devices which is published in the Weekly Notice to Mariners by the Defense Mapping Agency Hydrographic/Topographic Center. The Notice to Mariners will be distributed to all USGS District Supervisors. This publication is available from: DMAOOS, Code IMA, 650 Brookes Lane, Washington, D.C. 20315.

The U.S. Coast Guard also intends to publish a Notice which will outline the method of position fixing.

Comments. There was a wide divergence of opinion on the proposed revision of this paragraph. One commenter agreed with the proposed revision; another contended that the 40-pound limitation on the reporting of objects was too low; and another contended that this limitation was too high. The first commenter stated that "* * * a 6" ANSI 600 series weld neck flange weights 73 lbs., and an 8" ANSI 600 series flange weights 112 lbs. and these would not be considered an obstruction." This commenter suggested that the limitation should be 120 pounds or less. Another commenter suggested the limitation should be 150 pounds. The opposing view maintains that 55-gallon drums are a major cause of net damage. It was contended that "* * * platform workers knock holes in the drums and throw them into the Gulf rather than return them to the shore. The drums weigh less than 40 pounds empty, but on the sea floor filled with mud they weigh half a ton or more. Often they rip through the net wings or through the bottom of the net causing the loss of a catch."

This commenter also contended that batteries and diesel fuel filters would also weigh less than 40 pounds, and these items have caused damage to fishing nets.

Discussion. The 40-pound weight limitation was selected because the USGS determined that a 55-gallon steel drum without a top weighs approximately 42 pounds. Therefore, any 55-gallon steel drum lost, with or without a top, would be required to be reported. The disposal of material such as containers, batteries, and diesel fuel filters is prohibited by OCS Order No. 7, subparagraphs 1.2, *Solid Material Disposal*, 1.2.2, *Containers*, and 1.2.3, *Equipment*. Engine starting batteries weigh 45 to 55 pounds and, therefore, would be a reportable item. It would appear that the 40-pound weight limitation is reasonable.

Comments. It was suggested that subparagraph 4.b should be revised to separate the weight limitation from the configuration limitation. It was contended that the configuration limitation should be treated alone since it alone provides sufficient reason for exclusion.

Discussion. The USGS disagrees with this contention. The intent was to require the reporting of light bulky items which would damage fishing nets regardless of weight.

Comments. It was suggested that a new subparagraph 4.d should be added to the Order as follows:

"d. Are located within 150 feet of fixed structures on which approved aids to navigation are maintained."

It was contended that prudent fishermen would maintain this distance for safety.

Discussion. The USGS agrees with the intent of this suggestion and has revised the subparagraph to include a new subparagraph 4.c as follows:

"c. Are determined to be located on the seafloor within 46 meters (150 feet) of fixed structures on which approved aids to navigation are maintained."

The phrase "determined to be located on the seafloor" was added because an accidentally dropped object may roll or be carried by currents more than 150 feet from the structure and, therefore, could present a hazard to fishing gear. Paragraph 4 is hereby revised as set forth below:

Final Revision of OCS Order No. 1, Paragraph 4, Identification of Subsea Objects

All OCS Areas:

4. *Identification of Subsea Objects.* Prior to the installation of subsea equipment required for lease operations, or in the event of the accidental sinking of an object, the owner shall report the submerged equipment or object to the appropriate U.S. Coast Guard District Commander subject to the following limitations. Reports are not required for equipment or objects that:

a. Are submerged in water depths greater than 305 meters (1,000 feet); or

b. Weigh 18 kilograms (40 pounds) or less and are of such shape or configuration that they are unlikely to snag or damage fishing devices; or

c. Are determined to be located on the seafloor within 46 meters (150 feet) of fixed structures on which approved aids to navigation are maintained.

The report shall contain the object's description, weight, dimensions, location, and the depth of water in which it is located. The U.S. Coast Guard will determine if it is a hazard to navigation and will determine whether it requires marking in accordance with 33 CFR 64.

Paragraph 5, *Marking of Equipment*

Comments. Several commenters commented on the content of this paragraph.

Discussion. As stated in the **Federal Register** on April 10, 1980, Volume 45, No. 71, appropriate comments received in response to the solicitation for comments on 30 CFR 250.54 would be considered in the development of the final revision of paragraph 5 of OCS Order No. 1. These comments have been incorporated into a proposed revision of paragraph 5 which was published in the **Federal Register**, Volume 45, No. 117, June 16, 1980. Comments are to be submitted by August 15, 1980. These comments will be analyzed and appropriate suggestions will be incorporated into an additional final revision of paragraph 5 which will be published in the **Federal Register** in the near future.

OCS Order No. 2

Subparagraphs 2.2, *Mobile Drilling Units*, Item c (Pacific, Gulf of Alaska, and Atlantic), 2.3, *Well-Site Surveys* (Gulf of Mexico), and 2.1.3, *Well-Site Surveys* (Pacific, Gulf of Alaska, and Atlantic).

Comments. It was suggested that the requirement of subparagraph 2.2, Item c, should be applicable only to the Pacific, Gulf of Alaska, and Atlantic Areas. Several commenters suggested that the submittal of seabed data should be selectively required for unusual conditions such as mud slides.

Discussion. Paragraph 2 of OCS Order No. 2 for the Gulf of Mexico does not contain a subparagraph 2.2c which addresses *Mobile Drilling Units*. The insertion of the heading "All OCS Areas" was an editorial error. The USGS has reviewed the criteria for requiring this data and has determined that seabed data is important for the determination of the stability of mooring points and for the stability of the location for subsea blowout-preventer stacks. Therefore, the USGS intends to revise the Order for all Areas to allow the District Supervisors to selectively require the submittal of the data as indicated in italics below. It should be noted that subparagrah 2.1.3 for the Pacific has been revised to require the data to be submitted to the Deputy Conservation Manager, Offshore Field Operations, instead of the District Supervisor.

Final Revision of OCS Order No. 2, Subparagraphs 2.2, Mobile Drilling Units, Item c (Pacific, Gulf of Alaska, and Atlantic), 2.3, Well-Site Surveys (Gulf of Mexico), and 2.1.3, Well-Site Surveys (Pacific, Gulf of Alaska, and Atlantic)

Gulf of Mexico:

2.3 *Well-Site Surveys.* Lessees shall submit a shallow geologic hazards report and conduct such shallow geologic hazard surveys or other surveys as required by the *Deputy Conservation Manager (DCM), Offshore Field Operations.* The results of these surveys and an analysis of the geologic hazards shall be furnished to the District Supervisor. All data obtained from the surveys and all geophysical data relating to shallow hazards shall be furnished upon request to the District Supervisor. *When requested, this data shall include sediment and seabed data, e.g., seabed profiles, sediment consistency, allowable bearing and sliding loads, and nearby potential seabed hazards, i.e., sand waves, slumps, and mud slides.*

Pacific:

2.1.3 *Well-Site Surveys.* Lessees

Discussion. The USGS has deleted the *all pertinent factors for well control*

2.1.3 *Well-Site Surveys.* Lessees shall submit a shallow geologic hazards report and conduct such shallow geologic hazard surveys or other surveys as required by the *Deputy Conservation Manager (DCM), Offshore Field Operations.* The results of these surveys and an analysis of the geologic hazards shall be furnished to the *DCM, Offshore Field Operations.* All data obtained from the surveys and all geophysical data relating to shallow hazards shall be furnished upon request to the *DCM, Offshore Field Operations. When requested, this data shall include sediment and seabed data, e.g., seabed profiles, sediment consistency, allowable bearing and sliding loads, and nearby potential seabed hazards, i.e., sand waves, slumps, and mud slides.*

Gulf of Alaska, and Atlantic:

2.1.3 *Well-Site Surveys.* Lessees shall submit a shallow geologic hazards report and conduct such shallow geologic hazards surveys or other surveys as required by the *Deputy Conservation Manager (DCM), Offshore Field Operations.* The results of these surveys and an analysis of the geologic hazards shall be furnished to the District Supervisor. All data obtained from the surveys and all geophysical data relating to shallow hazards shall be furnished upon request to the District Supervisor. *When requested, this data shall include sediment and seabed data, e.g., seabed profiles, sediment consistency, allowable bearing and sliding loads, and nearby potential seabed hazards, i.e., sand waves, slumps, and mud slides.*

Pacific, Gulf of Alaska, and Atlantic:

2.2 *Mobile Drilling Units.*

* * * * *

Delete item "c" and reletter item "d" as item "c."

Subparagraph 3.1, *General Requirements (Well Casing and Cementing)*

Comments. It was suggested that the first sentence of the revised footnote should be replaced with the definitive sentence: "Anticipated surface pressure is defined as that surface well pressure which can reasonably be expected to be exerted upon the casing string and its related wellhead equipment."

Discussion. The USGS agrees with the intent of this comment and has revised the first sentence of the footnote.

Comments. The previous commenter also agreed that the revised footnote renders the first sentence of the second paragraph of subparagraph 5.1.1 redundant and suggested that this sentence should be deleted.

Discussion. The USGS has deleted the referenced sentence.

Comments. It was suggested that the last sentence of the footnote should be revised to state:

"The lessee shall include as part of the statement of anticipated surface pressure a statement containing the calculations used to determine this pressure during the drilling phase, the completion phase, and the anticipated surface pressure used for production string design."

It was contended that "The anticipated surface pressure for *production purposes* through the *production casing* is usually based on the estimated bottom hole pressure less the pressure exerted by a column of gas with the hole void of fluid. This type of calculation is *not* appropriate for calculation of anticipated pressure for the drilling and completion phases and our recommended change recognizes this difference."

Discussion. The USGS agrees that the suggested revision would go well with the penultimate sentence of the footnote. The sentence was adopted with minor editorial changes. Refer to the final revision of the footnote.

Comments. It was suggested that the following sentence should be added to the footnote:

"Any reasonable criteria for calculating anticipated surface pressure known to provide safe operations for a particular company in combination with appropriate historical design factors, equipment, and operational practices for the type well proposed shall be deemed acceptable."

It was contended that:

"Technology which has proven safe as well as cost effective for a particular company should not be arbitrarily set aside."

Discussion. The USGS does not agree with this suggestion. The District Supervisor is required to make an engineering judgment on the validity of the calculations used to determine anticipated surface pressure. The second paragraph of subparagraph 3.1 is hereby revised as set forth below in italics. The first, third, and fourth paragraphs of subparagraph 3.1 remain unchanged.

Final Revision of OCS Order No. 2, Subparagraph 3.1, General Requirements

All OCS Areas:

3.1 *General requirements.*

* * * * *

The design criteria considered for all wells shall be submitted with the Application for Permit to Drill. The criteria to be considered shall include all pertinent factors for well control, such as:

a. Formation fracture gradients.

b. Formation pressure.

*c. Anticipated surface pressure.**

d. Casing setting depths.

**Anticipated surface pressure is defined as the surface well pressure which can reasonably be expected to be exerted upon a casing string and its related wellhead equipment. In the calculation of anticipated surface pressure, the lessee shall take into account the drilling, completion, and producing conditions. He shall consider mud densities to be used below various casing strings, fracture gradients of the exposed formations, casing setting depths, total well depth, formation fluid type, and other pertinent conditions. Considerations for calculating anticipated surface pressure may vary for each segment of the well. The lessee shall include as a part of the statement of anticipated surface pressure the calculations used to determine this pressure during the drilling phase and the completion phase, including the anticipated surface pressure used for production string design.*

* * * * *

Subparagraph 5.1.1, *BOP Equipment*

Comments. A large portion of the comments addressed the requirements of this subparagraph. It was the concensus of opinion that the phrase "except that the working pressure of the annular preventer need not exceed 34,475 kPa (5,000 psi)" should be reinstated in the subparagraph. One commenter suggested that a qualifying phrase such as, "If, upon review of an applicant's request for permit to drill, the District Supervisor determines that the blowout preventer equipment proposed for use is not adequate, he may require equipment they limit the use of annular preventers to controlling pressures in the range of 2,000 to 3,500 psi. This limitation is accomplished through the use of prudent well-control procedures."

Discussion. After considering all comments, the USGS has revised subparagraph 5.1.1 as set forth below in italics. It should be noted that the first sentence of the second paragraph of the former subparagraph 5.1.1 has been deleted. The deleted sentence was rendered redundant by the revisions of subparagraph 3.1.

Final Revision of OCS Order No. 2, Subparagraph 5.1.1, BOP Equipment

All OCS Areas:

5.1.1 *BOP Equipment.* Blowout-preventer equipment shall consist of annular preventer and the specified number of ram-type preventers. The pipe rams shall be of proper size to fit the drill pipe in use. The working pressure of any blowout preventer shall exceed the anticipated surface pressure to which it may be subjected, *except that the working pressure of the annular preventer need not exceed 34,475 kPa (5,000 psi), unless a higher working pressure is required by the District Supervisor. When the anticipated surface pressure exceeds the rated working pressure of the annular preventer, the lessee shall submit with the Application for Permit to Drill a well-control procedure which indicates how the annular preventer will be utilized and the pressure limitations which will be applied during each mode of pressure control.*

All blowout-preventer systems shall be equipped with:

* * * * *

Subparagraph 5.2, *Subsea BOP Requirements,* and Subparagraph 5.3, *Surface BOP Requirements*

Comments. The majority of the commenters objected to the requirements for the third set of pipe rams when a tapered drill string is in use.

Three commenters contended that if the blowout-preventer stack were arranged with the smaller pipe rams between the larger pipe rams and the blind rams, either the small or large drill pipe rams located below the drilling spool could be closed, and the blind rams could then be replaced with a small or large pipe ram if a redundant ram is considered necessary for a long term well-control operation. Another option would be to replace the small pipe rams with large pipe rams for large ram-to-large ram stripping.

Discussion. The USGS does not consider these suggestions as viable alternatives. In the case of the surface blowout-preventer stack, it appears that changing rams with the lower portion of the stack under pressure would be an extremely hazardous operation. Neither commenter indicated that he would attempt such an operation with a subsea blowout-preventer stack. It would appear that, with a subsea blowout-preventer stack, this operation would be impossible or prohibitive from the standpoint of personnel safety. Furthermore, by removing the blind shear ram, the last line of defense, i.e., closing the blind shear rams, shearing the pipe, and moving off location, is forever lost. Another alternative to the third set of pipe rams is suggested in the following comment.

Comments. One commenter suggested the following alternative for the third set of pipe rams:

"The objection that the addition of one set of pipe rams to a surface stack will cost over $100,000 and to a subsea stack, over $250,000, assumes that one blowout-preventer must be added to existing stacks to comply with Order No. 2. However, by simply replacing one set of 5" pipe rams with one set of 2-⅞" through 5" variable bore rams at a cost of about $25,000, the number of preventers in existing subsea and surface stacks is sufficient to comply with Order No. 2."

"Variable bore rams seal on a range of pipe sizes, i.e., 2-⅞" through 5" or 3-½" through 7". In a three ram surface BOP stack, blind/shear or blind rams may be installed in the upper ram cavity, 2-⅞" through 5" variable bore rams in the middle cavity, and 5" in the lower cavity. Middle and lower pipe rams can then be used to seal on the major or 5" pipe string and the middle rams used to seal on the smaller size pipe. Indeed, by using variable bore rams in both pipe ram cavities, two ram preventers would provide double protection for both pipe sizes of a tapered drill string. Drill pipe can be suspended on variable bore ram 2-⅞" through 5" in the same manner as on 5" pipe rams."

Discussion. The USGS reaffirms the rationale contained in the **Federal Register** Notice of April 10, 1980. However, as a result of comments received at the public meeting on May 20, 1980, and subsequent comments, it has been recognized that certain optional alternative requirements should be incorporated for subsea and surface BOP stacks. Therefore, the requirements for subsea and surface BOP stacks are revised as set forth below. Lessees should plan to use a three pipe ram stack arrangement when a tapered drill string is anticipated for use. In the event of an unplanned requirement for a tapered drill string, or when there are mechanical or physical restraints, the revised requirements provide optional alternatives.

It should be noted that item "d" of subparagraph 5.2, and item "e" of subparagraph 5.3 provide the same redundancy as item "a" of subparagraphs 5.2 and 5.3, and that item "e" of subparagraph 5.2 and item "f" of subparagraph 5.3 provide the same redundancy as item "c" of subparagraphs 5.2 and 5.3. It should also be noted that item "d" of subparagraph 5.3 is not allowed as an option for subsea BOP stacks under subparagraph 5.2, because picking up a crossover sub and switching to the larger size pipe when a well control problem occurs with the smaller pipe within the stack is not a viable option with a subsea stack in deep water. With a subsea stack having only two sets of rams for the larger size pipe, the only course of action with the smaller size pipe within the stack during a blowout might be to shear the small pipe. We believe that operating in this mode should be an exception to approved practice and therefore should only be allowed under exceptional circumstances through the departure procedure; furthermore, the majority of subsea stacks have sufficient cavities to provide redundant pipe rams, and the "last ditch" option of shearing the pipe is always available with subsea stacks.

Final Revision of OCS Order No. 2, Subparagraph 5.2, Subsea BOP Requirements and Subparagraph 5.3, Surface BOP Requirements

All OCS Areas:

5.2 *Subsea BOP Requirements.*

* * * * *

—5. When a tapered drill string is in use, the BOP stack shall be equipped with one of the following pipe ram configurations:

a. Two (2) sets of pipe rams for the larger size string and one (1) set for the smaller size string of drill pipe.

b. Two (2) sets of pipe rams for the larger size string and one (1) set of variable bore pipe rams to fit both sizes of pipe.

c. Two (2) sets of variable bore pipe rams to fit both sizes of pipe.

d. One (1) set of pipe rams for the larger size string and one (1) set of variable bore pipe rams to fit both sizes of pipe.

e. One (1) set of pipe rams for the larger size string, one (1) set of pipe rams for the smaller pipe, and one (1) set of variable bore pipe rams to fit both sizes of pipe.

* * * * *

5.3 *Surface BOP Requirements.*

* * * * *

—2. When a tapered drill string is in use, the BOP stack shall be equipped with one of the following pipe ram configurations:

a. Two (2) sets of pipe rams for the larger size string and one (1) set for the smaller size string of drill pipe.

b. Two (2) sets of pipe rams for the larger size string and one (1) set of variable bore pipe rams to fit both sizes of pipe.

c. Two (2) sets of variable bore pipe rams to fit both sizes of pipe.

d. Two (2) sets of pipe rams for the larger size string. The blind ram cavity shall be equipped with blind shear rams

and the blind ram actuator shall be converted to operate the blind shear rams. A crossover sub to the largest size pipe shall be readily available on the rig floor.

e. One (1) set of pipe rams for the larger size string and one (1) set of variable bore pipe rams to fit both sizes of pipe.

f. One (1) set of pipe rams for the larger size string, one (1) set of pipe rams for the smaller pipe, and one (1) set of variable bore pipe rams to fit both sizes of pipe.

* * * * *

Subparagraph 5.7.1, *BOP Testing Frequency*, Subparagraph 5.7.2, *Pressure Testing of Surface BOP Systems*, and Subparagraph 5.7.3, *Pressure Testing of Subsea BOP Systems*

Comments. Several commenters agreed with the proposed revision of subparagraph 5.7.1, Item c, which was proposed for the Gulf of Mexico and Pacific Areas only. This revision would require blind and blind shear rams to be tested prior to drilling out after each casing string has been set, instead of requiring these rams to be tested weekly. All of the commenters suggested that the revision should be applicable to all Areas of the OCS.

Discussion. As a result of comments received at the public meeting on May 20, 1980, it was concluded that, due to the variations in drilling rates for all Areas of the OCS, adopting the proposed revision for all Areas would result in the blind rams and blind shear rams being tested after a time lapse of 1 week to 2 months. Several BOP manufacturers suggested that this frequency would be entirely satisfactory for testing blind and blind shear rams. This contention is based on the fact that the sealing surfaces of blind and blind shear rams are not subjected to as much friction wear as occurs with pipe rams; therefore, the seal life is longer and requires less testing.

The USGS agrees with this contention and has revised the requirements for all areas of the OCS. Since this revision pertains to the frequency of testing, it was recognized that it would be editorially simpler and clearer to revise subparagraph 5.7.1, BOP Testing Frequency. Therefore, we have revised subparagaphs 5.7.1, 5.7.2, and 5.7.3 for all Areas of the OCS as set forth below in italics. It should be noted that an additional sentence has been inserted after the first sentence of item "c" of subparagraph 5.7.1. This sentence was formerly contained in item "d" of subparagraph 5.7.4. Refer to the Discussion of the revision of subparagraph 5.7.4.

Final Revision of OCS Order No. 2, Subparagraph 5.7.1, BOP Testing Frequency, Subparagraph 5.7.2, Pressure Testing Surface BOP Systems, and Subparagraph 5.7.3, Pressure Testing of Subsea BOP Systems

All OCS Areas:

5.7.1 *BOP Testing Frequency.* Surface and subsea BOP stacks shall be tested as follows:

* * * * *

c. At least once each week, but not exceeding 7 days between tests, alternating between control stations. *If either control system is not functional, further drilling operations shall be suspended until that system becomes operable.* A period of more than 7 days between blowout-preventer tests is allowed when well operations prevent testing and remedial efforts are being performed, provided the tests will be conducted as soon as possible before normal operations resume, and the reason for postponing testing is entered into the log. Well operations which prevent testing are stuck drilling pipe and pressure-control operations. Testing shall be at staggered intervals to allow each drill crew to operate the equipment.

The weekly test is not required for blind and blind shear rams. These rams need only be tested prior to drilling out after each casing string has been set.

* * * * *

5.7.2. *Pressure Testing Surface BOP Systems.*

Gulf of Mexico:

The last two sentences of subparagraph 5.7.2 are hereby deleted. These sentences were rendered redundant by the revision of subparagraph 5.7.1, Item c.

5.7.3 *Pressure Testing Subsea BOP Systems.*

Gulf of Mexico:

The last two sentence of subparagraph 5.7.3 is hereby deleted. This sentence was rendered redundant by the revision of subparagraph 5.7.1, Item c.

Subparagraph 5.7.4, *Actuation of Surface BOP Systems*, and Subparagraph 5.7.5, *Actuation of Subsea BOP Systems*

Comments. Several commenters objected to the "partial actuation" requirement of these subparagraphs when tapered drill strings are in use because there is no reliable way to assure that the smaller size rams would not close completely on the pipe and thereby damage the rams and the pipe. Other commenters objected to the frequency of the daily and every other day requirement for the actuation of surface and subsea BOP pipe rams. At the public meeting on May 20, 1980, several BOP manufacturers expressed their opinion that the actuation of rams required during the weekly pressure test is adequate to assure the reliabiity of the BOP stack. It was contended that daily and every other day action of the rams could result in unnecessary "wear and tear."

Discussion. In consideration of all of the comments, the USGS has reevaluated the rationale for the actuation tests and has revised the Orders as set forth below:

It should be noted that the last sentence of item "d" of the deleted subparagraph 5.7.4 has been incorporated into item "c" of the revised subparagraph 5.7.1.

Final Revision of OCS Order No. 2, Subparagraphs 5.7.4, Actuation of Surface BOP Systems, and 5.7.5, Actuation of Subsea BOP Systems

All OCS Areas:

The existing subparagraphs 5.7.4 and 5.7.5 are hereby deleted in their entirety, and a revised subparagraph 5.7.4 is hereby adopted as set forth below:

5.7.4 *Actuation of Auxiliary Well-Control Equipment.* In conjunction with the weekly pressure test of surface and subsea BOP systems, auxiliary well-control equipment such as choke manifold valves, kelly cocks, and drill pipe safety valves shall be actuated. Casing safety valves shall be actuated prior to running casing.

Subparagraph 5.8, *Inspection and Maintenance (BOP Systems)*

Comments. Several commenters objected to the requirement that all BOP systems, marine risers, and associated equipment shall be inspected and maintained in accordance with the manufacturers' recommended procedures.

Discussion. The USGS believes this comment has merit and has revised subparagraph 5.8 as set forth below in italics.

Final Revision of OCS Order No. 2, Subparagraph 5.8, Inspection and Maintenance

All OCS Areas:

5.8 *Inspection and Maintenance.* All BOP systems, marine risers, and associated equipment shall be inspected and maintained *to assure that the equipment will function properly. The manufacturers' recommended inspection and maintenance procedures are acceptable as guidelines in complying with this requirement.* The BOP systems and marine risers shall be visually inspected at least once each day if the weather and sea conditions permit the inspection. Inspection of subsea installations may be accomplished by the use of television equipment.

Subparagraph 5.9, *Blowout-Preventer Drills*

Comments. Several commenters objected to the wording of the sentence which provides that a blowout-preventer drill may be required by a USGS designated representative at any time during the drilling operation. It was contended that, "The authority for the USGS representative to call for a BOP drill should be tempered to require some discretion in the Drilling Supervisor."

Discussion. The USGS reaffirms the rationale contained in the April 10 Notice. However, it is intended to clarify the intent of the requirement by rewording the subparagraph as indicated below in italics.

Final Revision of OCS Order No. 2, Subparagraph 5.9, Blowout-Preventer Drills

All OCS Areas:

5.9 *Blowout-Preventer Drills.* All drilling personnel shall be indoctrinated in blowout-preventer drills and be familiar with the blowout-preventer equipment before starting work on the well. A blowout-preventer drill shall be conducted for each drilling crew in accordance with the well-control drill requirements of the U.S. Geological Survey (USGS) Outer Continental Shelf Standard "Training and Qualifications of Personnel in Well-Control Equipment and Techniques for Drilling on Offshore Locations," No. T 1 (GSS–OCS–T 1), First Edition, December 1977, and subsequent revisions thereto. A BOP drill may be required by a USGS designated representative at any time during the drilling operation, after notifying *and consulting with* the lessee's senior representative present.

All BOP drills shall be recorded in the driller's report.

Subparagraph 6.1, *Mud Control*

Comments. It was contended that subparagraph 6.1, item "b," should be tempered to allow some reasonable difference in the weight of returning mud and the weight of mud entering the hole. One commenter suggested an allowable mud weight difference of 0.2 pound per gallon, and another commenter suggested an allowable difference of 1 percent.

Discussion. The USGS agrees with this contention and hereby revises subparagraph 6.1, item "b," as follows:

Final Revision of OCS Order No. 2, Subparagraph 6.1, Mud Control,

Item "b."

All OCS Areas:

6.1 *Mud Control.*

* * * * *

b. The weight of the returning mud is essentially the same as the weight of the mud entering the hole. In the event that the returning mud is lighter than the entering mud by a weight differential equal to or greater than 0.2 pound per gallon, the lessee shall circulate until the annular volume is displaced, and check the mud properties for the influx of gas or liquid.

* * * * *

OCS Order No. 5

Subparagraph 3.2, *Specification for Subsurface-Safety Valves*

Comment. It was suggested that this paragraph be revised to allow the use of valves that had been qualified by performance test to a previous edition of "API Specification for Subsurface Safety Valves," API Spec 14A, during the performance test effectivity.

Discussion. The USGS has revised subparagraph 3.2, as set forth below in italics, to allow the use of previous qualified valves for the duration of the 3-year qualification period. These valves must then be requalified to the Fourth Edition of API Spec 14A as required by section 4.2 of API Spec 14A if manufacturing is to be continued.

It should be noted that we have also revised subparagraph 3.2 for the Gulf of Alaska and Atlantic Areas to address future replacement of subsurface-safety valves and to define the term "replacement."

Comment. Another commenter expressed his agreement with the proposed revision pertaining to subsurface-safety valves and recommended that a similar revision be included for surface-safety valves.

Discussion. The USGS does not propose to revise Subparagraph 4.3, *Specifications for Wellhead Surface-Safety Valves (SSV)*, because these valves are required to conform to API Spec 14D, Second Edition, November 1977, as amended by Supplement 2, November 1978. Section 4.2 of this document states that "performance testing is not required for SSV equipment other than valves for Class 2 service." Periodic retesting is a requirement of API Spec 14A. There is no retest requirement in API Spec 14D.

Final Revision of OCS Order No. 5, Subparagraph 3.2, Specification for Subsurface Safety Valves

Gulf of Mexico and Pacific:

3.2 *Specification for Subsurface-Safety Valves.* Surface-controlled and subsurface-controlled subsurface-safety valves required by subparagraphs 3.4 and 3.5, which are installed on new installations or replaced on old installations after February 1, 1980, shall conform to "American Petroleum Institute (API) Specification for Subsurface Safety Valves," API Spec 14A, Fourth Edition, November 1979, or subsequent revisions which the *Deputy Chief, Conservation Division—Offshore Minerals Regulation*, has approved for use at the time of installation. *A valve qualified to a previous edition of API SPEC 14A is acceptable provided that the valve enters inventory within 3 years of its qualifying performance test date.*

For purposes of this requirement, the term "replacement" is defined as occurring when that portion of the valve assembly containing the serial number is removed from inventory and a new certified valve is placed in inventory.

Gulf of Alaska and Atlantic:

3.2 *Specification for Subsurface-Safety Valves.* Surface-controlled and subsurface-controlled subsurface-safety valves required by subparagraphs 3.4 and 3.5, *which are installed or replaced* shall conform to "American Petroleum Institute (API) Specification for Subsurface Safety Valves," API Spec 14A, Fourth Edition, November 1979, or subsequent revisions which the *Deputy Chief, Conservation Division—Offshore Minerals Regulation*, has approved for use at the time of installation. *A valve qualified to a previous edition of API Spec 14a is acceptable provided that the valve enters inventory within 3 years of its qualifying performance test date.*

For purposes of this requirement, the term "replacement" is defined as occurring when that portion of the valve assembly containing the serial number is removed from inventory and a new certified valve is placed in inventory.

OCS Order No. 7

Subparagraph 1.1.3.b, *Curbs, Gutters, and Drains for Mobile Drilling Units*

Comments. One commenter agreed with the final version of this Order, and another suggested that the Order does not provide a reasonable amount of time to accomplish the necessary installation work for curbs, gutters, and drains in mobile drilling units.

Discussion. The USGS reiterates the rationale for the final version of this Order as published in the Federal

Register on April 10. Approval for

Final Revision of OCS Order No. 7,

Contingency Plan shall contain the

Register on April 10. Approval for extending the time for compliance with this requirement will only be granted by the District Supervisor after review on a case-by-case basis.

Subparagraph 1.2.3, *Equipment (Disposal)*

Comments. One commenter stated "The requirement to report 'The location and description of *any* equipment disposed of * * *' is extremely burdensome both for the lessee and the agencies." The commenter appealed this requirement "* * * as unnecessary and unreasonable in the light of paragraph 4 of OCS Order No. 1."

Discussion. As previously stated, the requirements of paragraph 4 of OCS Order No. 1 have been revised to provide limitations on the reporting of intentional and accidentally submerged objects. Consistent with this revision, the word "any" and the phrase "to the District Supervisor" have been deleted from the second sentence of the subparagraph. Subparagraph 1.2.3 is hereby revised as set forth below.

Final Revision of OCS Order No. 7, Subparagraph 1.2.3 Equipment

All OCS Areas:

1.2.3 *Equipment.* Disposal of equipment into the ocean is prohibited except under emergency conditions. The location and description of equipment disposed of into OCS waters shall be reported to the U.S. Coast Guard in accordance with paragraph 4 of OCS Order No. 1.

Subparagraph 2.2.2, *Unattended Facilities (Inspection)*

Comments. Several commenters objected to the daily inspection requirement for unattended platforms. It was suggested that these facilities should be inspected weekly and that the subparagraph should provide an exception in the event of prohibitive weather.

Discussion. The USGS does not agree with the suggestion of weekly inspections. Early detection of a leak or equipment malfunction is the key to pollution prevention. The phrase "or at intervals prescribed by the District Supervisor" provides latitude to waive the daily inspection requirement for those unmanned facilities which have a consistent record of pollution-free operation. In order to provide relief in the event of adverse weather conditions, the subparagraph has been revised as indicated below in italics.

Final Revision of OCS Order No. 7, Subparagraph 2.2.2, Unattended Facilities

2.2.2 *Unattended Facilities.* Unattended facilities, including those equipped with remote control and monitoring systems, shall be inspected daily or at intervals prescribed by the District Supervisor to determine if pollution is occurring. *Daily inspections may be postponed in the event of adverse weather conditions.* Necessary maintenance or repairs shall be made immediately.

Subparagraph 3.2, *Oil Spill Contingency Plans*

Comments. One commenter objected to the requirement that the oil spill contingency plan shall contain provisions for identifying and protecting areas of special biological sensitivity. It was contended that the requirement is unclear and does not provide a time for existing plans to be brought into compliance.

Another commenter stated "Oil Spill Contingency Plans are already required" and contended that, if the particular facility/rig/platform does not involve a sensitive area, there is no real need for such plan to include additional stringent requirements to protect sensitive areas.

Discussion. The intent of this requirement is for the operator to state in his plan the procedures he would use in the event of an oil spill to protect areas of special biological sensitivity such as waterfowl, fish, oyster beds, and other aquatic life.

In order to provide a time for existing plans to be brought into compliance, subparagraph 3.2 is revised as set forth below in italics.

Final Revision of OCS Order No. 7, Subparagraph 3.2, Oil Spill Contingency Plan

All OCS Areas:

3.2 *Oil Spill Contingency Plans.* The lessee shall submit an Oil Spill Contingency Plan for approval by the *Deputy Conservation Manager (DCM), Offshore Field Operations,* with or prior to submitting an Exploration Plan or a Development and Production Plan. *Existing Oil Spill Contingency Plans which do not conform to the requirements of this subparagraph shall be modified and submitted to the DCM, Offshore Field Operations, for approval by December 15, 1980.* Oil Spill Contingency Plans shall be reviewed annually. All modifications of the Oil Spill Contingency Plans and the results from the review of the plan shall be submitted to the *DCM, Offshore Field Operations,* for approval. The Oil Spill Contingency Plan shall contain the following:

* * * * *

Part IX

Environmental Protection Agency

Controls Applicable to Gasoline Refiners; Lead Phase-down Regulations

V 45 A G 18 80 UMI

V 4 5 A G 1 8 1 9 8 0 UMI

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 80

[FRL-1563-6]

Controls Applicable to Gasoline Refiners; Lead Phase-down Regulations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule amends the lead phase-down regulations (40 CFR 80.20) by revoking the unleaded gasoline production requirements associated with the optional 0.8 gram per gallon (gpg) standard for the quarter beginning July 1, 1980, and ending September 30, 1980. These requirements are unnecessary this quarter because of adequate supplies of unleaded gasoline.

DATES: The revocation of the unleaded gasoline production requirement is effective on August 6, 1980. Under section 307(b)(1) of the Clean Air Act, judicial review of this action is available *only* by the filing of a petition for review in the United States Court of Appeals for the appropriate circuit within 60 days of August 18, 1980 (October 17, 1980). Under section 307(b)(2) of the Clean Air Act, the requirements which are the subject of today's notice may not be challenged later in judicial proceedings brought by EPA to enforce these requirements.

ADDRESSES: Copies of information relevant to this rule are available for public inspection at the Central Docket Section (Docket EN–80–11), Environmental Protection Agency, Gallery I, West Tower, 401 M Street SW., Washington, D.C. 20460 and are available for review between the hours of 8:00 a.m. and 4:00 p.m. As provided in 40 CFR Part 2, a reasonable fee may be charged for coping services.

FOR FURTHER INFORMATION CONTACT: Robert Summerhayes, Fuels Section, Field Operations and Support Division (EN–397), 401 M Street SW., Washington, D.C. 20460 at (202) 472–9367.

SUPPLEMENTARY INFORMATION: On September 12, 1979, EPA published amended regulations which relaxed for one year the lead phase-down standard of 0.5 gpg effective October 1, 1979, to 0.8 gpg conditioned upon an increase in quarterly unleaded gasoline production of six percentage points over the corresponding quarter of the previous year, or an unleaded gasoline production of at least 45 percent of total gasoline (44 FR 53144). EPA relaxed the lead standard to enable refiners to produce more total gasoline. The unleaded gasoline production requirement was included to insure that sufficient supplies of unleaded gasoline would be produced to help protect against increased fuel switching due to shortages of gasoline, particularly unleaded gasoline. Alternatively, refiners were provided the option of complying with the 0.5 gpg requirement on October 1, 1979, as originally promulgated, in which case they would not be required to produce a minimum percentage of unleaded gasoline.

The 6 percent/45 percent unleaded gasoline production percentages were based on the historical growth of unleaded gasoline demand. But EPA noted in the preamble of the September 1979 amendments that it would "continue to monitor unleaded gasoline demand," and stated that "if demand does not grow by at least the historical rate, EPA will take appropriate actions to avoid the unnecessary overproduction of unleaded gasoline."

During January and February 1980, EPA received reports indicating that demand was not continuing to increase at the historical rate and that some overproduction of unleaded gasoline had occurred during the Octoberr-December 1979 quarter and the first part of the January-March 1980 quarter. Some refiners reported unusual difficulties in trading excess unleaded gasoline for leaded gasoline. EPA has also noted that cargo trading differentials on the inter-refinery spot market, which normally reflect a two to three cents per gallon premium for unleaded gasoline, dropped to zero cents per gallon in some areas. In one particular area the cargo trading differential fell to minus one and one-half cents per gallon; that represents a one and one-half cent premium for leaded gasoline over unleaded gasoline. Recent unleaded gasoline sales showed a smaller than six percentage points increase in unleaded gasoline demand during 1979 and early 1980. This reduction in the historical growth rate of unleaded gasoline has been attributed to both the declining sales of new vehicles using unleaded gasoline and the trend towards the use of smaller, more fuel efficient cars. Based on this information, EPA concluded that adequate supplies of unleaded gasoline (relative to leaded) would be available for the January-March 1980 quarter without the imposition of the 6 percent/45 percent production requirement.

In order to avoid the unnecessary loss of energy caused by the overproduction of unleaded gasoline EPA revoked the unleaded gasoline production requirement for the January-March 1980 quarter (45 FR 14854) and proposed alternatives for amending the requirements for the subsequent quarters (45 FR 14899).

On June 2, 1980, EPA revoked the unleaded gasoline production requiremetns for the April-June 1980 quarter (45 FR 37197). The primary reason for doing so was the slackening of consumer demand for gasoline (down about 8% so far this year), which, accompanied by the world-wide stability of crude oil supplies, has resulted in very high inventories of both crude oil and gasoline. Since the possibility of a serious disruption of retail gasoline supplies during the short term is reduced greatly when these inventories are high, EPA concluded that adequate supplies of unleaded gasoline would probably be available for the quarter without the imposition of an unleaded gasoline production requirement.

Simultaneously, EPA proposed three alternatives for amending the requirements for the July-September 1980 quarter. The possible alternatives included, but were not limited to: (1) No change; (2) adjust the 6%/45% production requirement to more accurately reflect the increased demand for unleaded gasoline during the quarter beginning July 1, 1980, and ending September 30, 1980, over the corresponding quarter in 1979; or (3) revoke the unleaded production requirements for the second and third quarters of calendar year 1980. EPA solicited comments from interested parties concerning which of the proposed alternatives would be most effective.

Consumer demand for gasoline products has remained low. Deliveries of gasoline for the first five months of 1980 were 8% below the amount delivered during the comparable period in 1979. At the same time, inventories of motor gasoline have been high (about 8% higher than the DOE Projected Normal Level). Significantly, the average retail price of motor gasoline has fallen by a small yet perceptible amount in recent weeks showing that competition in the retail marketplace has grown. Lastly, stocks of crude oil, distillate fuel oil, and residual fuel oils have remained high recently. In the event of a sudden increase in consumer demand for gasoline or a major disruption in crude oil supplies, these extra stocks could provide refiners the flexibility to produce greater quantities of both leaded and unleaded gasolines.

When all of these stocks are high, the possibility of a serious disruption of retail gasoline supplies during the short term is reduced greatly. While complete assurance is not possible, it appears that adequate supplies of unleaded gasoline will be available for the current quarter without the imposition of an unleaded gasoline production requirement.

Because of EPA's desire to avoid any unnecessary loss of energy from the overproduction of unleaded gasoline, the lead phase-down regulations are being amended to remove the production requirement for the July-September 1980 quarter.

Because this rule relieves a restriction on the regulated industry, EPA is publishing this amendment as a final rule effective immediately, pursuant to the exemptions in 5 U.S.C. 553(d). Since this rule results in a relaxation of an existing regulatory control, EPA has determined that this document does not contain a major action requiring an Economic Impact Analysis under Executive Orders 11821, 11949, 12044, and section 317 of the Clean Air Act, as amended.

Summary of Comments Received

The following is a summary of public comments received on the three alternatives proposed in June:

1. Keep present requirements in place.

No commenters suggested that EPA maintain an unleaded gasoline production requirement for the July-September 1980 quarter. Some stated that the continuation of the present requirements would result in marketplace perturbations such as those which occurred in January and February of 1980.

2. Adjust the requirements to an intermediate figure. Several commenters stated that if some unleaded production requirement were imposed, then the magnitude of the requirement should be lowered. They argued, however, that such a revision would be difficult because of continuing changes in consumer driving habits which have occurred in response to higher gasoline prices. One refiner noted that the growth in unleaded sales in its particular market was only 1.5–2.0 percentage points over 1979 levels. Other estimates were somewhat higher (up to 5.8 percentage points). As a result, lowering the requirements to 5 or 5.5 percentage points could still cause market disruptions, though of a smaller magnitude.

EPA understands the difficulty in precisely revising the estimate of unleaded market share growth and has determined that adjusting the unleaded production requirements to some intermediate value is not practicable.

3. Revoke the unleaded production requirements.

All of the commenters identified this option as their preferred approach. Some commenters had previously noted that the refining industry has more than sufficient capacity to produce unleaded gasoline and that the existing two cents per gallon cost pass-through rule provided by the Department of Energy provides a sufficient incentive to use that capacity. A couple of commenters stated that sufficient volumes of unleaded gasoline would be available as long as crude supplies are not significantly interrupted.

An analysis of such factors as world-wide crude production levels, domestic crude oil and motor gasoline stocks, and product prices indicates that domestic supplies of gasoline should be adequate for the reaminder of this quarter. Since the unleaded production requirements are unnecessary when adequate supplies of unleaded gasoline are available and since refiners have both the capability and incentive to produce the market split of unleaded gasoline if adequate crude supplies are available, EPA has decided to revoke the unleaded requirements for the July-September 1980 quarter.

Dated: August 6, 1980.

Douglas M. Costle,

Administrator.

Accordingly, notice is hereby given that 40 CFR Part 80 is amended by amending § 80.20(a)(7) to remove the unleaded gasoline production requirements for the July-September 1980 quarter so as to read as follows:

§ 80.20 Controls applicable to gasoline refiners.

(a) * * *

(7) In the manufacture of gasoline, no gasoline refiner who has submitted a valid registration form for refineries in accordance with paragraph (a)(6) of this section, shall, in aggregate, at those registered refineries, produce unleaded gasoline as a percentage of total gasoline for the quarter beginning October 1, 1979, that is less than that percentage in the quarter beginning October 1, 1978, plus six (6) percentage points unless the production of unleaded gasoline as a percentage of total gasoline produced by the refiner in aggregate at registered refineries is greater than 45%.

* * * * * *

(Sections 211, 301(a), Clean Air Act, as amended, 42 U.S.C. 7545, 7601(a).)

AGENCY PUBLICATION ON ASSIGNED DAYS OF THE WEEK

The following agencies have agreed to publish all documents on two assigned days of the week (Monday/Thursday or Tuesday/Friday).

This is a voluntary program. (See OFR NOTICE 41 FR 32914, August 6, 1976.)

Monday	Tuesday	Wednesday	Thursday	Friday
DOT/SECRETARY	USDA/ASCS		DOT/SECRETARY	USDA/ASCS
DOT/COAST GUARD	USDA/APHIS		DOT/COAST GUARD	USDA/APHIS
DOT/FAA	USDA/FNS		DOT/FAA	USDA/FNS
DOT/FHWA	USDA/FSQS		DOT/FHWA	USDA/FSQS
DOT/FRA	USDA/REA		DOT/FRA	USDA/REA
DOT/NHTSA	MSPB/OPM		DOT/NHTSA	MSPB/OPM
DOT/RSPA	LABOR		DOT/RSPA	LABOR
DOT/SLSDC	HHS/FDA		DOT/SLSDC	HHS/FDA
DOT/UMTA			DOT/UMTA	
CSA			CSA	

Documents normally scheduled for publication on a day that will be a Federal holiday will be published the next work day following the holiday.

Comments on this program are still invited. Comments should be submitted to the Day-of-the-Week Program Coordinator, Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408

REMINDERS

The "reminders" below identify documents that appeared in issues of the Federal Register 15 days or more ago. Inclusion or exlusion from this list has no legal significance.

Rules Going Into Effect Today

ENERGY DEPARTMENT

Federal Energy Regulatory Commission—

49077 7–23–80 / Rules generally applicable to regulated sales of natural gas

ENVIRONMENTAL PROTECTION AGENCY

48132 7–18–80 / Attainment States designations for air quality planning proposes; Illinois

55346 **Government Procurement** FEMA establishes procedures for acquisition of personal property and nonpersonal services; effective 8-14-80 (Part II of this issue)

CONTINUED INSIDE

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The **Federal Register** will be furnished by mail to subscribers, free of postage, for $75.00 per year, or $45.00 for six months, payable in advance. The charge for individual copies is $1.00 for each issue, or $1.00 for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the **Federal Register**.

Questions and requests for specific information may be directed to the telephone numbers listed under INFORMATION AND ASSISTANCE in the READER AIDS section of this issue.

Highlights

55402 **Radioactive Materials** NRC upgrades emergency planning regulations; effective 11–3–80 (Part VIII of this issue) (2 documents)

55374 **Oil** DOE/ERA adopts procedures for distribution of Strategic Petroleum Reserve crude oil; effective 9–18–80 (Part III of this issue)

55386 **Waste Treatment** EPA publishes regulations regarding the hazardous waste management system (Part V of this issue)

55213 **Environmental Protection** FCA proposes policy statement on implementation of National Environmental Policy Act; comments by 10–20–80

55205 **Railroads** ICC exempts State acquisition of abandoned rail lines from certain regulations; effective 9–18–80

55223 **Petroleum** FTC publishes proposal regarding deceptive advertising and labeling of previously used lubricating oil; comments by 9–18–80

55172 **Consumer Safety** HHS/FDA requires warning label for bubble bath products; effective 8–19–80

55257 **Petroleum Allocation** DOE/ERA issues supplemental allocation notice for 7–1 through 9–30–80 period for Canadian crude oil

55394 **Pesticide** FMCS appoints arbitrators to assist pesticide producers in resolution of disputes over value of technical data; effective 9–18–80 (Part VII of this issue)

55252 **Import** CITA increases import restraint levels for certain man-made fiber textile products from Singapore; effective 8–18–80

55317 **Sunshine Act Meetings**

Rules and Regulations

Federal Register
Vol. 45, No. 162
Tuesday, August 19, 1980

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.
The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 213

Excepted Service; National Credit Union Administration

AGENCY: Office of Personnel Management.

ACTION: Final rule.

SUMMARY: This amendment excepts from the competitive service under Schedule C one Secretary (Typing) to the Board, National Credit Union Administration, because it is confidential in nature. Appointments may be made to this position without examination by the Office of Personnel Management.

EFFECTIVE DATE: February 12, 1980.

FOR FURTHER INFORMATION CONTACT:
On position authority: William Bohling, Office of Personnel Management, 202–632–6000.
On position content: James Jackson, National Credit Union Administration, 202–254–9817.

Office of Personnel Management.
Kathryn Anderson Fetzer,
Assistant Issuance System Manager.

Accordingly, 5 CFR 213.3357(h) is revised as set out below:

§ 213.3357 National Credit Union Administration.

* * * * *

(h) One Secretary and one Secretary (Typing) to the Board.

(5 U.S.C. 3301, 3302; EO 10577, 3 CFR 1954–1958 Comp., p. 218)

[FR Doc. 80-25160 Filed 8-18-80; 8:45 am]
BILLING CODE 6325-01-M

5 CFR Part 213

Excepted Service; Department of State

AGENCY: Office of Personnel Management.

ACTION: Final rule.

BILLING CODE 6325–01–M

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

7 CFR Part 908

[Valencia Orange Reg. 658, Amdt. 1]

[Valencia Oranges Grown in Arizona and Designated Part of California; Limitation of Handling

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Amendment to final rule.

SUMMARY: This action increases the quantity of fresh California-Arizona Valencia oranges that may be shipped to market during the period August 8–14, 1980. Such action is needed to provide for orderly marketing of fresh Valencia oranges for the period specified due to the marketing situation confronting the orange industry.

EFFECTIVE DATES: The amendment is effective for the period August 8–14, 1980.

FOR FURTHER INFORMATION CONTACT: Malvin E. McGaha, 202–447–5975.

SUPPLEMENTARY INFORMATION: *Findings.* This amendment is issued under the marketing agreement, as amended, and Order No. 908, as amended (7 CFR Part 908), regulating the handling of Valencia oranges grown in Arizona and designated parts of California. The agreement and order are effective under the Agricultural Marketing Agreement

Act of 1937, as amended (7 U.S.C. 601–674). The action is based upon the recommendations and information submitted by the Valencia Orange Administrative Committee and upon other information. It is hereby found that this action will tend to effectuate the declared policy of the act.

This action is consistent with the marketing policy for 1979–80 which was designated significant under the procedures of Executive Order 12044. The marketing policy was recommended by the committee following discussion at a public meeting on January 22, 1980. A final impact analysis on the marketing policy is available from Malvin E. McGaha, Chief, Fruit Branch, F&V, AMS, USDA, Washington, D.C. 20250, telephone 202–447–5975.

The committee met again on August 13, 1980, at Los Angeles, California, to consider the current and prospective conditions of supply and demand and recommended a quantity of Valencia oranges deemed advisable to be handled during the specified week. The committee reports the demand for Valencia oranges has improved.

It is further found that there is insufficient time between the date when information became available upon which this amendment is based and when the action must be taken to warrant a 60-day comment period as recommended in E.O. 12044, and that it is impracticable and contrary to the public interest to give preliminary notice, engage in public rulemaking, and postpone the effective date until 30 days after publication in the Federal Register (5 U.S.C. 553), and this amendment relieves restrictions on the handling of Valencia oranges. It is necessary to effectuate the declared purposes of the act to make this regulatory provision effective as specified, and handlers have been apprised of such provision and the effective time.

Paragraph (a) of § 908.958 Valencia Orange Regulation 658 (45 FR 52356) is amended to read as follows:

§ 908.958 Valencia orange regulation 658.

(a) * * *

(1) District 1: 376,000 cartons;

(2) District 2: 424,000 cartons;

BILLING CODE 3410–02–M

Commodity Credit Corporation

[CCC Grain Price Support Regulations, 1979 Crop Barley Supplement, Amendment 1]

7 CFR Part 1421

1979 Crop Barley Loan and Purchase Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: The purpose of this rule is to amend 7 CFR 1421.76 that appeared in the Federal Register at 44 FR 31611. The rule revises the basic county loan and purchase rates to accord with the increase in the 1979 crop barley national average loan and purchase rates from $1.63 to $1.71 per bushel, previously announced in the Federal Register. Premiums and discounts will remain unchanged.

EFFECTIVE DATE: January 8, 1980.

ADDRESS: Price Support and Loan Division, ASCS, USDA, P.O. Box 2415, Washington, D.C. 20013.

FOR FURTHER INFORMATION CONTACT: Thomas Fink, ASCS, (202) 447–7923.

With respect to the availability of an impact analysis, the increases in the basic county loan and purchase rates announced by this final rule were considered under provisions of the "Notice of Increase of 1979 Crop Loan and Purchase Rates" published in the Federal Register (45 FR 6812) on January 30, 1980, as well as the Final Impact Statement prepared for that action. Thus, the Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Harold Jamison, Price Support and Loan Division (ASCS), Room 3749, South Building, P.O. Box 2415, Washington, D.C. 20013, (202) 447–7973.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant."

On January 4, 1980, the President announced that exports of grain to the Soviet Union were being restricted in accordance with the Export Administration Act of 1979. As a result, the Secretary of Agriculture announced that effective January 8, 1980, that the 1979 loan and purchase rate for barley was being increased to $1.71 per bushel in accordance with Section 105A of the Agricultural Act of 1949, as amended (7 U.S.C. 1444c). This action was taken by the Secretary to encourage producers to participate and remain in the loan and purchase program rather than disposing of their stocks in the market. It was determined that increased participation in the loan and purchase program would stabilize the market by permitting the orderly disposition of grain, thus preventing the accumulation of excess stocks.

This rule announces the revision of the individual basic county loan and purchase rates to conform with the increased national average loan and purchase rate of $1.71 per bushel for the 1979 crop of barley, published in the Federal Register on January 30, 1980, (45 FR 6812), effective January 8, 1980.

Title and number of the federal assistance program that this Final Rule applies to is: Title—Commodity Loans and Purchases; Number—10.051; as found in the catalog of Federal Domestic assistance.

This action will not have a significant impact specifically on area and community development. Therefore, review as established by OMB Circular A–95 was not used to assure that units of local government are informed of this action.

Final Rule

Accordingly, 7 CFR 1421.76(a) is revised to read as follows:

§ 1421.76 Loan and purchase rates, premiums and discounts.

(a) Basic loan and purchase rate (counties). Basic rates per bushel for loan and settlement purposes for barley are established for barley grading No. 2 or better as follows:

[1] In Alaska, loan rates are for marketing areas.

Since the 1979 crop of barley has been harvested in the barley producing areas and the provisions of this amendment are needed to carry out the loan program more effectively, compliance with the notice of proposed rulemaking would be impracticable and contrary to the public interest. Therefore, this amendment is issued as a final rule.

Signed at Washington, D.C. on August 12, 1980.

Ray Fitzgerald,

Executive Vice President, Commodity Credit Corporation.

[FR Doc. 80-25144 Filed 8-18-80; 8:45 am]

BILLING CODE 3410-05-M

7 CFR Part 1421

[CCC Grain Price Support Regulations, 1979 Crop Corn Supplement, Amendment 1]

1979 Crop Corn Loan and Purchase Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: The purpose of this rule is to amend 7 CFR 1421.115 that appeared in the **Federal Register** at 44 FR 48647. The rule revises the basic county loan and purchase rates to accord with the increase in the 1979 crop corn national average loan and purchase rates from $2.00 to $2.10 per bushel, previously announced in the **Federal Register.** Premiums and discounts will remain unchanged.

EFFECTIVE DATE: January 8, 1980.

ADDRESS: Price Support and Loan Division, ASCS, USDA, P.O. Box 2415, Washington, D.C. 20013.

FOR FURTHER INFORMATION CONTACT: Thomas Fink, ASCS, (202) 447–7923. With respect to the availability of an impact analysis, the increases in the basic county loan and purchase rates announced by this final rule were considered under provisions of the "Notice of Increase of 1979 Crop Loan and Purchase Rates" published in the **Federal Register** (45 FR 6812) on January 30, 1980, as well as the Final Impact Statement prepared for that action. Thus, the Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Harold Jamison, Price Support and Loan Division (ASCS) Room 3749, South Building, P.O. Box 2415. Washington, D.C. 20013, (202) 447–7973.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant".

On January 4, 1980, the President announced that exports of grain to the Soviet Union were being restricted in accordance with the Export Administration Act of 1979. As a result, the Secretary of Agriculture announced that effective January 8, 1980, that the 1979 loan and purchase rate for corn was being increased to $2.10 per bushel in accordance with Section 105A of the Agricultural Act of 1949, as amended (7 U.S.C. 1444c). This action was taken by the Secretary to encourage producers to participate and remain in the loan and purchase program rather than disposing of their stocks in the market. It was determined that increased participation in the loan and purchase program would stabilize the market by permitting the orderly disposition of grain, thus preventing the accumulation of excess stocks.

This rule announces the revision of the individual basic county loan and purchase rates to conform with the increased national average loan and purchase rate of $2.10 per bushel for the 1979 crop of corn, published in the **Federal Register** on January 30, 1980, (45 FR 6812), effective January 8, 1980.

Title and number of the federal assistance program that this Final Rule applies to is: Title—Commodity Loans and Purchases; Number—10.051; as found in the catalog of Federal Domestic assistance.

This action will not have a significant impact specifically on area and community development. Therefore, review as established by OMB Circular A–95 was not used to assure that units of local government are informed of this action.

Final Rule

Accordingly, 7 CFR 1421.115(a) is revised to read as follows:

§ 1421.115 Loan and Purchase Rates, Premiums and Discounts.

(a) Basic loan and purchase rate (counties). Basic rates per bushel for loan and settlement purposes for corn are established for corn grading No. 2 and containing from 15.1 through 15.5 percent moisture as follows:

Since the 1979 crop of corn has been harvested in the corn producing areas and the provisions of this amendment are needed to carry out the loan program more effectively, compliance with the notice of proposed rulemaking would be impracticable and contrary to the public interest. Therefore, this amendment is issued as a final rule.

Signed at Washington, D.C., on August 12, 1980.

Ray Fitzgerald,

Executive Vice President, Commodity Credit Corporation.

[FR Doc. 80-25141 Filed 8-18-80; 8:45 am]

BILLING CODE 3410-05-M

7 CFR Part 1421

[CCC Grain Price Support Regulations, 1979 Crop Sorghum Supplement, Amendment 1]

1979 Crop Sorghum Loan and Purchase Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: The purpose of this rule is to amend 7 CFR 1421.239 that appeared in the **Federal Register** at 44 FR 44822. The rule revises the basic county loan and purchase rates to accord with the increase in the 1979 crop sorghum national average loan and purchase rates from $3.39 to $3.57 per hundredweight, previously announced in the **Federal Register**. Premiums and discounts will remain unchanged.

EFFECTIVE DATE: January 8, 1980.

ADDRESS: Price Support and Loan Division, ASCS, USDA, P.O. Box 2415, Washington, D.C. 20013.

FOR FURTHER INFORMATION CONTACT: Thomas Fink, ASCS, (202) 447-7923.

With respect to the availability of an impact analysis, the increases in the basic county loan and purchase rates announced by this final rule were considered under provisions of the "Notice of Increase of 1979 Crop Loan and Purchase Rates" published in the **Federal Register** (45 FR 6812) on January 30, 1980, as well as the Final Impact Statement prepared for that action. Thus, the Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Harold Jamison, Price Support and Loan Division (ASCS), Room 3749, South Building, P.O. Box 2415, Washington, D.C. 20013, (202) 447-7973.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant."

On January 4, 1980, the President announced that exports of grain to the Soviet Union were being restricted in accordance with the Export Administration Act of 1979. As a result, the Secretary of Agriculture announced that effective January 8, 1980, that the 1979 loan and purchase rate for sorghum was being increased to $3.57 per hundredweight in accordance with Section 105A of the Agricultural Act of 1949, as amended (7 U.S.C. 1444c). This action was taken by the Secretary to encourage producers to participate and remain in the loan and purchase program rather than disposing of their stocks in the market. It was determined that increased participation in the loan and purchase program would stabilize the market by permitting the orderly disposition of grain, thus preventing the accumulation of excess stocks.

This rule announces the revision of the individual basic county loan and purchase rates to conform with the increased national average loan and purchase rate of $3.57 per hundredweight for the 1979 crop of sorghum, published in the **Federal Register** on January 30, 1980 (45 FR 6812), effective January 8, 1980.

Title and number of the federal assistance program that this Final Rule applies to is: Title—Commodity Loans and Purchases; Number—10.051; as found in the catalog of Federal Domestic assistance.

This action will not have a significant impact specifically on area and community development. Therefore, review as established by OMB Circular A-95 was not used to assure that units

of local government are informed of this action.

Final Rule

Accordingly, 7 CFR 1421.239(a) is revised to read as follows:

§ 1421.239 Loan and purchase rates, premiums and discounts.

(a) Basic loan and purchase rate (counties). Basic rates per hundredweight for loan and settlement purposes for sorghum are established for sorghum grading No. 2 as follows:

Since the 1979 crop of sorghum has been harvested in the sorghum producing areas and the provisions of this amendment are needed to carry out the loan program more effectively, compliance with the notice of proposed rulemaking would be impracticable and contrary to the public interest. Therefore, this amendment is issued as a final rule.

Signed at Washington, D.C. on August 12, 1980.

Ray Fitzgerald,

Executive Vice President, Commodity Credit Corporation.

[FR Doc. 80-25148 Filed 8-18-80; 8:45 am]

BILLING CODE 3410-05-M

7 CFR Part 1421

[CCC Grain Price Support Regulations, 1979 Crop Oats Supplement, Amendment 1]

1979 Crop Oats Loan and Purchase Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: The purpose of this rule is to amend 7 CFR 1421.274 that appeared in the Federal Register at 44 FR 31614. The rule revises the basic county loan and purchase rates to accord with the increase in the 1979-crop oats national average loan and purchase rates from $1.03 to $1.08 per bushel, previously announced in the Federal Register. Premiums and discounts will remain unchanged.

EFFECTIVE DATE: January 8, 1980.

ADDRESS: Price Support and Loan Division, ASCS, USDA, P.O. Box 2415, Washington, D.C. 20013.

FOR FURTHER INFORMATION CONTACT: Thomas Fink, ASCS, (202) 447-7923.

With respect to the availability of an impact analysis, the increases in the basic county loan and purchase rates announced by this final rule were considered under provisions of the "Notice of Increase of 1979 Crop Loan and Purchase Rates" published in the Federal Register (45 FR 6812) on January 30, 1980, as well as the Final Impact Statement prepared for that action. Thus, the Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Harold Jamison, Price Support and Loan Division (ASCS), Room 3749, South Building, P.O. Box 2415, Washington, D.C. 20013, (202) 447-7973.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant."

On January 4, 1980, the President announced that exports of grain to the Soviet Union were being restricted in accordance with the Export Administration Act of 1979. As a result, the Secretary of Agriculture announced

that effective January 8, 1980 that the 1979 loan and purchase rate for oats was being increased to $1.08 per bushel in accordance with Section 105A of the Agricultural Act of 1949, as amended (7 U.S.C. 1444c). This action was taken by the Secretary to encourage producers to participate and remain in the loan and purchase program rather than disposing of their stocks in the market. It was determined that increased participation in the loan and purchase program would stabilize the market by permitting the orderly disposition of grain, thus preventing the accumulation of excess stocks.

This rule announces the revision of the individual basic county loan and purchase rates to conform with the increased national average loan and purchase rate of $1.08 per bushel for the 1979 crop of oats, published in the **Federal Register** on January 30, 1980, (45 FR 61812), effective January 8, 1980.

Title and number of the federal assistance program that this Final Rule applies to is: Title—Commodity Loans and Purchases; Number—10.051; as found in the catalog of Federal Domestic assistance.

This action will not have a significant impact specifically on area and community development. Therefore, review as established by OMB Circular A–95 was not used to assure that units of local government are informed of this action.

Final Rule

Accordingly, 7 CFR 1421.274(a) is revised to read as follows:

§ 1421.274 Loan and purchase rates, premiums and discounts.

(a) Basic loan and purchase rate (counties). Basic rates per bushel for loan and settlement purposes for oats are established for oats grading No. 3 or better as follows:

[1] In Alaska, loan rates are for marketing areas.

Since the 1979 crop of oats has been harvested in the oats producing areas and the provisions of this amendment are needed to carry out the loan program more effectively, compliance with the notice of proposed rulemaking would be impracticable and contrary to the public interest. Therefore, this amendment is issued as a final rule.

Signed at Washington, D.C. on August 12, 1980.

Ray Fitzgerald,

Executive Vice President, Commodity Credit Corporation.

[FR Doc 80-25146 Filed 8-18-80; 8:45 am]

BILLING CODE 3410-05-M

7 CFR Part 1421

[CCC Grain Price Support Regulations, 1979 Crop Rye Supplement, Amendment 1]

1979 Crop Rye Loan and Purchase Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: The purpose of this rule is to amend 7 CFR 1421.354 that appeared in the **Federal Register** at 44 FR 18467. The rule revises the basic county loan and purchase rates to accord with the increase in the 1979 crop rye national average loan and purchase rates from $1.70 to $1.79 per bushel, previously announced in the **Federal Register**. Premiums and discounts will remain unchanged.

EFFECTIVE DATE: January 8, 1980.

ADDRESS: Price Support and Loan Division, ASCS, USDA, P.O. Box 2415, Washington, D.C. 20013.

FOR FURTHER INFORMATION CONTACT: Thomas Fink, ASCS, (202) 447-7923. With respect to the availability of an impact analysis, the increases in the basic county loan and purchase rates announced by this final rule were considered under provisions of the "Notice of Increase of 1979 Crop Loan and Purchase Rates" published in the **Federal Register** (45 FR 6812) on January 30, 1980, as well as the Final Impact Statement prepared for that action. Thus, the Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Harold Jamison, Price Support and Loan Division (ASCS), Room 3749, South Building, P.O. Box 2415, Washington, D.C. 20013, (202) 447-7973.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant."

On January 4, 1980, the President announced that exports of grain to the Soviet Union were being restricted in accordance with the Export Administration Act of 1979. As a result, the Secretary of Agriculture announced that effective January 8, 1980 that the 1979 loan and purchase rate for rye was being increased to $1.79 per bushel in accordance with Section 105A of the Agricultural Act of 1949, as amended (7 U.S.C. 1444c). This action was taken by the Secretary to encourage producers to participate and remain in the loan and purchase program rather than disposing of their stocks in the market. It was determined that increased participation in the loan and purchase program would stabilize the market by permitting the orderly disposition of grain, thus preventing the accumulation of excess stocks.

This rule announces the revision of the individual basic county loan and purchase rates to conform with the increased national average loan and purchase rate of $1.79 per bushel for the 1979 crop of rye, published in the **Federal Register** on January 30, 1980 (45 FR 61812), effective January 8, 1980.

Title and number of the federal assistance program that this Final Rule applies to is: Title—Commodity Loans and Purchases; Number—10.051; as found in the catalog of Federal Domestic assistance.

This action will not have a significant impact specifically on area and community development. Therefore, review as established by OMB Circular A-95 was not used to assure that units of local government are informed of this action.

Final Rule

Accordingly, 7 CFR 1421.354(a) is revised to read as follows:

§ 1421.354 Loan and purchase rates, premiums and discounts.

(a) Basic loan and purchase rate (counties). Basic rates per bushel for loan and settlement purposes for rye are established for rye grading No. 2 or better as follows:

Since the 1979 crop of rye has been harvested in the rye producing areas and the provisions of this amendment are needed to carry out the loan program more effectively, compliance with the notice of proposed rulemaking would be impracticable and contrary to the public interest. Therefore, this amendment is issued as a final rule.

Signed at Washington, D.C. on August 12, 1980.

Ray Fitzgerald,

Executive Vice President, Commodity Credit Corporation.

[FR Doc. 80-25145 Filed 8-18-80; 8:45 am]

BILLING CODE 3410-05-M

7 CFR Part 1421

[CCC Grain Price Support Regulations, 1979 Crop Wheat Supplement, Amendment 1]

1979 Crop Wheat Loan and Purchase Program

AGENCY: Commodity Credit Corporation, USDA.

ACTION: Final rule.

SUMMARY: The purpose of this rule is to amend 7 CFR 1421.490 that appeared in the **Federal Register** at 44 FR 47526. The rule revises the basic county loan and purchase rates to accord with the increase in the 1979-wheat national average loan and purchase rates from $2.35 to $2.50 per bushel, previously announced in the **Federal Register**. Premiums and discounts will remain unchanged.

EFFECTIVE DATE: January 8, 1980.

ADDRESS: Price Support and Loan Division, ASCS, USDA, P.O. Box 2415, Washington, D.C. 20013.

FOR FURTHER INFORMATION CONTACT: W. W. Beesley, ASCS, (202) 447-7923. With respect to the availability of an impact analysis, the increases in the basic county loan and purchase rates announced by this final rule were considered under provisions of the "Notice of Increase of 1979 Crop Loan and Purchase Rates" published in the **Federal Register** (45 FR 6812) on January 30, 1980, as well as the Final Impact Statement prepared for that action. Thus, the Final Impact Statement describing the options considered in developing this final rule and the impact of implementing each option is available on request from Harold Jamison, Price Support and Loan Division (ASCS), Room 3749, South Building, P.O. Box 2415, Washington, D.C. 20013, (202) 447-7973.

SUPPLEMENTARY INFORMATION: This final action has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044, and has been classified "not significant."

On January 4, 1980, the President announced that exports of grain to the Soviet Union were being restricted in accordance with the Export Administration Act of 1979. As a result, the Secretary of Agriculture announced that effective January 8, 1980, that the 1979 loan and purchase rate for wheat was being increased to $2.50 per bushel in accordance with Section 107A of the Agricultural Act of 1949, as amended (7 U.S.C. 1444c). This action was taken by the Secretary to encourage producers to participate and remain in the loan and purchase program rather than disposing of their stocks in the market. It was determined that increased participation in the loan and purchase program would stabilize the market by permitting the orderly disposition of grain, thus preventing the accumulation of excess stocks.

This rule announces the revision of the individual basic county loan and purchase rates to conform with the increased national average loan and purchase rate of $2.50 per bushel for the 1979 crop of wheat, published in the **Federal Register** on January 30, 1980, (45 FR 6812), effective January 8, 1980.

Title and number of the federal

1979—Crop Wheat Loan and Purchase

1979—Crop Wheat Loan and Purchase

1979—Crop Wheat Loan and Purchase

1979—Crop Wheat Loan and Purchase

Title and number of the federal assistance program that this Final Rule applies to is: Title—Commodity Loans and Purchases; Number—10.051; as found in the catalog of Federal Domestic assistance.

This action will not have a significant impact specifically on area and community development. Therefore, review as established by OMB Circular A–95 was not used to assure that units of local government are informed of this action.

Final Rule

Accordingly, 7 CFR 1421.490(a) is revised to read as follows:

§ 1421.490 Loan and purchase rates, premiums and discounts.

(a) Basic loan and purchase rate (counties). Basic rates per bushel for loan and settlement purposes for wheat are established for wheat grading No. 1 as follows:

Since the 1979 crop of wheat has been harvested in the wheat producing areas and the provisions of this amendment are needed to carry out the loan program more effectively, compliance with the notice of proposed rulemaking would be impracticable and contrary to the public interest. Therefore, this amendment is issued as a final rule.

Signed at Washington, D.C. on August 12, 1980.

Ray Fitzgerald,

Executive Vice President, Commodity Credit Corporation.

BILLING CODE 3410-05-M

---

7 CFR Part 1427

CCC Cotton Loan Program Regulations Governing 1980 and Subsequent Crops

Correction

In FR Doc. 80-24098, at page 53077, in the issue of Monday, August 11, 1980, on page 53078 in the first column, in the table, under the cities of Aliceville and Atmore, which are the second and third entries down respectively, correct the entries under "Loan Rate" from 46.95 to 48.95 for Aliceville and from 49.95 to 46.95 for Atmore and (2) on the same page in the last column, under the "city" of Yatesville, the nineteenth entry down, correct the "County" from "Vpson" to "Upson".

BILLING CODE 1505-01-M

DEPARTMENT OF COMMERCE

National Bureau of Standards

15 CFR Part 200

Policies, Services, Procedures and Fees for Measurement Services; Revision

AGENCY: National Bureau of Standards, Department of Commerce.

ACTION: Final rule.

SUMMARY: Part 200 in Subchapter A of Chapter II, Title 15 of the Code of Federal Regulations was last published in its entirety on December 29, 1967. Since that time some of the information given in Part 200 has become outdated as a result, in part, of reorganizations within the National Bureau of Standards and because, among other changes, improvements, and corrections, there are now seven base units that serve as a practical base for an International System of Units as opposed to six at the time of the last publication. Therefore the entire part was reviewed and appropriate changes to update it were made. There have been no substantive changes to Part 200.

EFFECTIVE DATE: August 18, 1980.

FOR FURTHER INFORMATION CONTACT: Allen J. Farrar, Office of the Legal Adviser, National Bureau of Standards, Washington, D.C. 20234, telephone (301) 921-2425.

SUPPLEMENTARY INFORMATION: Because the revision to Part 200 in Subchapter A of Chapter II, Title 15 of the Code of Federal Regulations does not contain any substantive changes and this part concerns general statements of policy and procedure, the revision is effective immediately. Accordingly Part 200 as revised is set out below.

Dated: August 13, 1980.

Ernest Ambler,

Director.

Authority: Sec. 9, 31 Stat. 1450, as amended; 15 U.S.C. 277. Interprets or applies sec. 7, 31 Stat. 1450; 15 U.S.C. 275a.

§ 200.100 Statutory functions.

(a) The National Bureau of Standards (NBS) has been assigned the following functions (15 U.S.C. 271 et seq.):

(1) The custody, maintenance, and development of the national standards of measurement, and the provision of means and methods for making measurements consistent with those standards, including the comparison of standards used in scientific investigations, engineering, manufacturing, commerce, and educational institutions with the standards adopted or recognized by the Government.

(2) The determination of physical constants and properties of materials when such data are of great importance to scientific or manufacturing interests and are not to be obtained with sufficient accuracy elsewhere.

(3) The development of methods for testing materials, mechanisms, and structures, and the testing of materials, supplies, and equipment, including items purchased for use of Government departments and independent establishments.

(4) Cooperation with other governmental agencies and with private organizations in the establishment of standard practices, incorporated in codes and specifications.

(5) Advisory service to Government agencies on scientific and technical problems.

(6) Invention and development of devices to serve special needs of the Government.

(b) The calibration and testing activities of NBS stem from the functions in paragraphs (a) (1) and (3) of this section. NBS provides the central basis within the United States for a complete and consistent system of measurement; coordinates that system, and the measurement systems of other nations; and furnishes essential services leading to accurate and uniform physical measurements throughout this Nation's scientific community, industry, and commerce.

(c) The provision of standard reference materials for sale to the public is assigned to the Office of Standard Reference Materials of the National Measurement Laboratory, NBS. That Office evaluates the requirements of science and industry for carefully

characterized reference materials, stimulates efforts of NBS to develop methods for production of needed reference materials and directs their production and distribution. For further information on standard reference materials see Subchapter B, Chapter II, Part 230, of this Title 15.

§ 200.101 Measurement research.

(a) The NBS staff continually reviews the advances in science and the trends in technology, examines the measurement potentialities of newly discovered physical phenomena, and uses these to devise and improve standards, measuring devices, and measurement techniques. As new requirements appear, there are continual shifts of program emphasis to meet the most urgent needs for the measurement of additional quantities, extended ranges, or improved accuracies.

(b) The basic research and development activities of NBS are primarily funded by direct appropriations, and are aimed at meeting broad general needs. NBS may also undertake investigations or developments to meet some specialized physical measurement problem of another Government agency, industrial group, or manufacturing firm, using funds supplied by the requesting organization.

§ 200.102 Types of calibration and test services.

(a) NBS has developed instrumentation and techniques for realizing standards for the seven base units of the International System of Units, as agreed upon by the General Conference of Weights and Measures. Reference standards have been established not only for these seven base units, but also for many derived quantities and their multiples and submultiples. Such reference standards, or equivalent working standards, are used to calibrate laboratory and plant standards for other organizations. Accuracy is maintained by stability checks, by comparison with the standards of other national and international laboratories, and by the exploration of alternative techniques as a means of reducing possible systematic error.

(b) Calibrations for many types of intruments and ranges of physical quantities are described in the NBS Special Publication 250 (SP 250). (See § 200.115 for details relating to the description of service items and listing of fees.)

(c) In recent years NBS has offered to the public new measurement services called measurement assurance programs. These programs are designed for laboratories whose measurement process involves the calibration of other standards. A measurement assurance program is a measurement quality control process. By use of carefully designed redundant measurements and measurements made on NBS transport standards a total uncertainty of the laboratories measurement process can be determined by NBS. The results of these tests are then reported to the customer as uncertainties of the customer's measurements relative to national standards.

(d) Special measurements not listed in SP 250 may be made upon request. These might involve unusual physical quantities, upper or lower extremes of range, higher levels of accuracy, fast response speeds, short durations, broader ranges of associated parameters, or special environmental conditions. Such inquiries should describe clearly the measurement desired. Indication of the scientific or economic basis for the requirements to be satisfied will be helpful in determining future NBS programs. Fees for work accepted will be based upon actual costs incurred.

(e) The principal emphasis of NBS is on those calibrations and other tests requiring such accuracy as can be obtained only by direct comparison with its standards.

(f) Other services which may be obtained include:

(1) Tests of measuring instruments to determine compliance with specifications or claims, when the evaluation is critical in national scientific or technical operations, and when suitable facilities are not available elsewhere; and

(2) Referee tests in important cases when clients are unable to agree upon the method of measurement, the results of tests, or the interpretation of these results, but have agreed in advance in writing to accept and abide by the findings of NBS.

(g) NBS reserves the right to decline any request for services if the work would interfere with other activities deemed by the Director to be of greater importance. In general, measurement services are not provided when available from commercial laboratories.

(h) Suggestions will be offered on measurement techniques and on other sources of assistance on calibration or measurement problems when the equipment and personnel of NBS are unable to undertake the work. The National Conference of Standards Laboratories issues a Directory of Standards Laboratories in the United States which perform calibration work (obtainable from NCSL Secretariat, c/o National Bureau of Standards, Boulder, CO 80303). Those laboratories which perform testing are listed in the ASTM Directory of Testing Laboratories, Commercial and Institutional. (Directory available from the Amercian Society for Testing and Materials, 1916 Race Street, Philadelphia, PA 19103.) Similar listings appear in buyer's guides for commercial products and in technical journals concerned with physical measurement.

§ 200.103 Consulting and advisory services.

(a) In areas of its special competence, NBS offers consulting and advisory services on various problems related to measurement, e.g., details of design and construction, operational aspects, unusual or extreme conditions, methods of statistical control of the measurement process, automated acquisition of laboratory data, and data reduction and analysis by computer. Brief consultation may be obtained at no charge; the fee for extended effort will be based upon actual costs incurred. The services outlined in this paragraph do not include services in connection with legal proceedings not involving the United States as a named party, nor to testimony or the production of data, information, or records in such legal proceedings which is governed by the policies and procedures set forth in Subchapter H, Chapter II, Part 275, of this Title 15.

(b) To enhance the competence of standards laboratory personnel, NBS conducts at irregular intervals several group seminars on the precision measurement of specific types of physical quantities, offering the opportunity of laboratory observation and informal discussion. A brochure describing the current series of seminars can be obtained by writing the Office of Measurement Services, National Bureau of Standards, Washington, DC 20234.

§ 200.104 Standard reference materials.

Often the performance of a device or structure can be evaluated at the user's laboratory by comparing its response to unknown materials with its response to a stable, homogeneous reference specimen which has been well-characterized with regard to the physical or chemical property being measured. For information regarding carefully characterized materials see Subchapter B, Chapter II, Part 230, of this Title 15. The Office of Standard Reference Materials in the NBS National Measurement Laboratory administers a program to provide many types of well-characterized materials that are needed to calibrate a measurement system or to

produce scientific data that can be readily referred to a common base. NBS SP 260 is a catalog of Standard Reference Materials available from NBS.

§ 200.105 Standard reference data.

Data on the physical and chemical properties of the large variety of substances used in science and technology need to be compiled and evaluated for application in research, development, engineering design, and commerce. The Office of Standard Reference Data (OSRD) in the NBS National Measurement Laboratory provides coordination of and access to a number of governmental and nongovernmental data centers throughout this country and the world which are responsive to user needs for data. The OSRD's present program is assembled under a series of tasks which include data for application in energy, environment and health, industrial process design, materials durability, and resource recovery. The subject data are disseminated as hard-copy information in the Journal of Physical and Chemical Reference Data, published jointly with the American Chemical Society and the American Institute of Physics, in the National Standard Reference Data System reports as the NSRDS–NBS series, and as NBS special reports. Magnetic tapes of data on selected topics are also issued through the OSRD and the National Technical Information Service. A newsletter, "Reference Data Report," is issued bimonthly describing current activities. Information concerning the above is available upon request from the OSRD.

§ 200.106 Publications.

Publications provide the primary means of communicating the results of the NBS programs and services to its varied technical audiences, as well as to the general public. NBS issues some fifteen categories of publications including three periodicals, ten non-periodicals series, interagency reports, and papers in the journals and books of professional organizations, technological associations, and commercial publications. The calibration services, standard reference materials and related measurement services along with changes and fees are published in two Special Publications (SP's) and their supplements. These are SP 250 "Calibration and Related Measurement Services of the National Bureau of Standards" [1] and SP 260 "NBS Standard Reference Materials Catalog." [1] A complete catalog of all publications by NBS authors is issued annually as a supplement to SP 305 "Publications of the National Bureau of Standards." Announcements and listings of recent NBS publications and services are published in each issue of the bimonthly "NBS Journal of Research" [2] and the NBS monthly magazine, "Dimensions/NBS" [2]. Complete citations to NBS publications, along with information on availability are published bimonthly in the "NBS Publications Newsletter", available free from the Technical Information and Publications Division, National Bureau of Standards, Washington, DC 20234. NBS publications are also announced (with abstracts) in "Government Reports Announcements and Index" published every two weeks by the National Technical Information Service (NTIS), Springfield, Virginia 22161 [3]. NTIS also sells microfiche copies of all NBS GPO-published documents, as well as paper copy and microfiche versions of NBS Interagency Reports.

§ 200.107 WWV-WWVH-WWVB broadcasts.

(a) *Technical services.* The NBS radio stations WWV at Fort Collins, Colorado, and WWVH on the island of Kauai, Hawaii, broadcast a number of technical services continuously night and day. These services are: (1) Standard radio frequencies, 2.5, 5, 10, 15, and 20, MHz (WWV) and 2.5, 5, 10, and 15 MHz (WWVH); (2) standard time signals; (3) time intervals; (4) UT1 corrections; (5) standard audio frequencies; (6) standard musical pitch; (7) a slow time code; (8) Omega Navigation System status reports; (9) geophysical alerts; and (10) marine storm warnings. NBS also broadcasts time and frequency signals from its low frequency station, WWVB, also located at Fort Collins, Colorado.

(b) *Time announcements.* Once per minute voice announcements are made from WWV and WWVH. The two stations are distinguished by a female voice from WWVH and a male voice from WWV. The WWVH announcement occurs first, at 15 seconds before the minute, while the WWV announcement occurs at 7½ seconds before the minute. Coordinated Universal Time (UTC) is used in these announcements.

(c) *Time corrections.* The UTC time scale operates on atomic frequency, but by means of step adjustments is made to approximate the astronomical UTI scale. It may disagree from UTI by as much as 0.9 second before step adjustments of exactly 1 second are made. These adjustments, or leap seconds are required about once per year and will usually be made on December 31 or June 30. For those who need astronomical time more accurately than 0.9 second, a correction to UTC is encoded by the use of double ticks after the start of each minute. The first through the eighth seconds ticks will indicate a "plus" correction, and from the ninth through the 16th a "minus" correction. The correction is determined by counting the number of double ticks. For example, if the first, second, and third ticks are doubled, the correction is "plus" 0.3 second. If the ninth, 10th, 11th, and 12th ticks are doubled, the correction is "minus" 0.4 second.

(d) *Standard time intervals.* An audio pulse (5 cycles of 1000 Hz on WWV and 6 cycles of 1200 Hz on WWVH), resembling the ticking of a clock, occurs each second of the minute except on the 29th and 59th seconds. Each of these 5-millisecond second pulses occur within a 40-millisecond period, wherein all other modulation (voice or tone) is removed from the carrier. These pulses begin 10 milliseconds after the modulation interruption. A long pulse (0.8 second) marks the beginning of each minute.

(e) *Standard frequencies.* All carrier and audio frequencies occur at their nominal values according to the International System of Units (SI). For periods of 45-second duration, either 500-Hz or 600-Hz audio tones are broadcast in alternate minutes during most of each hour. A 440-Hz tone, the musical pitch A above middle C, is broadcast once per hour near the beginning of the hour.

(f) *Accuracy and stability.* The time and frequency broadcasts are controlled by the NBS atomic frequency standards, which realize the internationally defined cesium resonance frequency with an accuracy of 1 part in 10^{12}. The frequencies transmitted by WWV and WWVH are held stable to better than ± 2 parts in 10^{11} at all times. Deviations at WWV are normally less than 1 part in 10^{12} from day to day. Incremental frequency adjustments not exceeding 1 part in 10^{13} are made at WWV and WWVH as necessary. Changes in the propagation medium (causing Doppler effect, diurnal shifts, etc.) result in fluctuations in the carrier frequencies as received which may be very much greater than the uncertainties described above.

(g) *Slow time code.* A modified IRIG H time code occurs continuously on a 100-Hz subcarrier. The format is 1 pulse per second with a 1-minute time frame. It gives day of the year, hours, and minutes in binary coded decimal form.

(h) *Omega announcements.* Omega Navigation System status reports are broadcast in voice from WWV at 16 minutes after the hour and from WWVH at 47 minutes after the hour. The international Omega Navigation System is a very low frequency (VLF) radio navigation aid operating in the 10 to 14 kHz frequency band. Eight stations are in operation around the world. Omega, like other radio navigation systems, is subject to signal degradation caused by ionospheric disturbances at high latitudes. The Omega announcements on WWV and WWVH are given to provide users with immediate notification of such events and other information on the status of the Omega system.

(i) *Geophysical alerts.* These occur in voice at the 18th minute of each hour from WWV. They point out outstanding events which are in process, followed by a summary of selected solar and geophysical events in the past 24 hours and a forecast for the next 24 hours. They are provided by the Space Environment Laboratory, National Oceanic and Atmospheric Administration, Boulder, CO 80303.

(j) *Marine storm information.* Weather information about major storms in the Atlantic and eastern North Pacific are broadcast in voice from WWV at 8, 9, and 10 minutes after each hour. Similar storm warnings covering the eastern and central North Pacific are given from WWVH at 48, 49, and 50 minutes after each hour. An additional segment (at 11 minutes after the hour on WWV and at 51 minutes on WWVH) may be used when there are unusually widespread storm conditions. The brief messages are designed to tell mariners of storm threats in their areas. If there are no warnings in the designated areas, the broadcasts will so indicate. The ocean areas involved are those for which the U.S. has warning responsibility under international agreement. The regular times of issue by the National Weather Service are 0500, 1100, 1700, and 2300 UTC for WWV and 0000, 0600, 1200, and 1800 UTC for WWVH. These broadcasts are updated effective with the next scheduled announcement following the time of issue.

(k) *"Silent" periods.* These are periods with no tone modulation during which the carrier, seconds ticks, minute time announcements, and 100 Hz modified IRIG H time code continue. They occur during the 16th through the 20th minute on WWVH and the 46th through the 51st minute on WWV.

(l) *WWVB.* This station (antenna coordinates 40°40'28.3" N., 105°02'39.5" W.; radiated power 12 kw.) broadcasts on 60 kHz. Its time scale is the same as for WWV and WWVH, and its frequency accuracy and stability are the same. Its entire format consists of a 1 pulse per second special binary time code giving minutes, hours, days, and the correction between its UTC time scale and UTI astronomical time. Identification of WWVB is made by its unique time code and a 45° carrier phase shift which occurs for the period between 10 minutes and 15 minutes after each hour. The useful coverage area of WWVB is within the continental United States. Propagation fluctuations are much less with WWVB than with high-frequency reception, permitting frequency comparisons to be made to a few parts in 10^{11} per day.

(m) *Special Publication 432.* This publication describes in detail the standard frequency and time service of NBS. Single copies may be obtained at no charge upon request from the National Bureau of Standards, Time & Frequency Services Group, 524.06, Boulder, CO 80303. Quantities may be obtained from the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, at a nominal charge per copy.

§ 200.108 Request procedure.

(a) A formal purchase order for the calibration or test should be sent before or at the time the instrument or standard is shipped. The purchase order should provide clear identification of the apparatus being submitted, and give separate instructions for return shipment, mailing of report, and billing. If a customer wishes to minimize the time during which the equipment is out of service, the customer can usually arrange to be notified of the scheduled test date to allow timely shipment. (See § 200.110.) Requests from Federal agencies, or from State agencies, for calibrations or tests on material to be used on private or Federal contract work should be accompanied either by purchase order or by letter or document authorizing the cost of the work to be billed to the agency.

(b) The submission of a purchase order for measurement services under this subchapter shall be understood as constituting an agreement on the part of the customer to be bound by the restrictions on the use of results as set forth in section 200.113 below. Acceptance of purchase orders does not imply acceptance of any provisions set forth in the order contrary to the policy, practice, or regulations of NBS or the U.S. Government. (A statement to the effect that NBS is an agency of the U.S. Government should satisfy other Government agencies with regard to compliance with Government regulations and Executive orders.)

(c) A test number will be assigned by NBS to each instrument or group of similar instruments or standards when the order is accepted. This test number should be referred to in all subsequent communications. Also, each instrument in a group must be uniquely identified, usually by the manufacturer's name and instrument serial number. When the serial number is lacking, an alternative identifying mark should be provided. If none is found, NBS will mark the piece with an NBS identification number. If the apparatus submitted has been previously calibrated by NBS, the serial number or identifying mark should be given on the new order, so that a continuing record of stability history can be established.

(d) Inquires for measurement services should be directed to the NBS address listed in the various sections of the Appendix to SP 250.

§ 200.109 Shipping, insurance, and risk of loss.

(a) Shipment of apparatus to NBS for calibration or other test should be made only after the customer has accepted the estimate of cost and the tentative scheduling. Repairs and adjustments on apparatus submitted should be attended to by the owner, since NBS will not undertake them except by special arrangement. Apparatus not in good condition will not be calibrated. If defects are found after calibration has begun, the effort may be terminated, a report issued summarizing such information as has been found, and a fee charged in accordance with the amount of work done.

(b) The customer should pack apparatus sent to NBS so as to minimize the likelihood of damage in shipment and handling. Suggestions on packing and shipping are made in some sections of SP 250. In every case, the sender should consider the nature of the apparatus, pack it accordingly, and clearly label shipments containing fragile instruments or materials, such as glass and the like.

(c) To minimize damage during shipment resulting from inadequate packing, the use of strong reusable

[1] Single copies available free from the National Bureau of Standards, Washington, DC 20234.

[2] For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402, for a subscription price. The annual subscription price for the NBS Journal of Research on the date of the publication of these regulations is $13.00 and for Dimensions/NBS it is $11.00. Prices, however, for these publications are subject to change without notice.

[3] The annual subscription rate at the date of the publication of these regulations for this service is $275.00, North American Continent, $375.00 all others.

*Copies of the Complaint and the Decision and Order filed with the original document.

[1] Single copies available free from the National Bureau of Standards, Washington, DC 20234.

containers is recommended. As an aid in preventing loss of such containers, the customer's name should be legibly and permanently marked on the outside. In order to prolong the container's use the notation "REUSABLE CONTAINER, DO NOT DESTROY" should be marked on the outside.

(d) Shipping and insurance coverage instructions should be clearly and legibly shown on the purchase order for the calibration or test. The customer must pay shipping charges to and from NBS; shipments from NBS will be made collect. The method of return transportation should be stated, and it is recommeded that return shipments be insured, since NBS will not assume liability for their loss or damage. For long-distance shipping it is found that air express and air freight provide an advantage in reduction of time in transit. If return shipment by parcel post is requested or is a suitable mode of transportation, shipments will be prepaid by NBS, but without covering insurance. When no shipping or insurance instructions are furnished, return shipment will be made by common carrier collect, but uninsured.

(e) NBS will not be responsible for the risk of loss or damage to any item during shipment to or from NBS. Any arrangements for insurance covering this risk must be made by the customer. Return shipment will be made by NBS as indicated in paragraph (d) of this section. The purchase order should always show the value of the equipment, and if transit insurance is carried by the customer, this fact should be stated.

(f) The risk of loss or damage in handling or testing of any item by NBS must be assumed by the customer, except when it is determined by NBS that such loss or damage was occasioned solely by the negligence of NBS personnel.

(g) When a test number has been assigned prior to shipment to NBS, this number should be clearly marked on the shipping container. When a test number has not been assigned, an invoice, copy of the purchase order, or letter should be enclosed in the shipment to insure proper identification. The orginal purchase order should be forwarded as appropriate to:

Office of Measurement Services, National Bureau of Standards, Washington, DC 20234; or to Measurement Services Clerk, National Bureau of Standards, Boulder, CO 80303.

(h) The calibrations listed in SP 250 are performed at Boulder, Colorado and Gaithersburg, Maryland.

§ 200.110 Priorities and time of completion.

Schedule work assignments for calibrations and other tests will generally be made in the order in which confirmed requests are received. However, Government work may be given priority. On the regular services, the workload is usually such that the turn-around interval, between the date a customer's apparatus is received and the date it is prepared for return shipment, will be not more than 45 days. Some types of instruments may require considerably longer, particularly if their abnormal behavior requires reruns to check reliability. The customer who can spare the instrument for only a short time can usually arrange by letter or telephone call for shipping it to NBS just as the assigned starting date approaches. A notice will be sent acknowledging receipt of the customer's standard and/or purchase order. If both a confirmed purchase order (or equivalent) and the apparatus have been received, estimates of the completion date and the calibration fee will be sent upon request.

§ 200.111 Witnessing of operations.

NBS welcomes scientists and engineers who may wish to visit its laboratories and discuss its methods. Ordinarily visitors will not be permitted to witness the actual carrying out of highly precise measurements because their presence introduces distraction that may lead to errors or delays. This policy may be waived in those cases where NBS determines that the visitor can be of service in setting up apparatus of a new or unusual nature, in the case of referee tests, or in other cases in which the legal validity of the result may require the presence of duly authorized witnesses.

§ 200.112 Reports.

(a) Results of calibrations and other tests are issued to the customer as formal reports entitled, "National Bureau of Standards Report of Calibration," "National Bureau of Standards Report of Test," or "National Bureau of Standards Report of Analysis," as appropriate. Copies are not supplied to other parties except under applicable Federal law. Whenever formal certification is required by law, or to meet special conditions adjudged by NBS to warrant it, a letter will be provided certifying that the particular item was received and calibrated or tested, and identifying the report containing the results.

(b) NBS reports of calibration generally include in sentence form a statement of the uncertainty attached to the numerical values reported. Limits of uncertainty usually comprise an estimate of systematic error plus a value of imprecision. Details on how these estimates are arrived at are in many cases included in the calibration report. Additional information may be found in SP 250.

(c) The NBS practice is to express data given in calibration or test reports in the SI or International System of Units. The International System of Units (SI) was defined and given official status by the 11th General Conference of Weights and Measures, 1960. A complete listing of SI units is presented in detail in NBS SP 330. The NBS will express data in SI units unless this makes communication excessively complicated. For example, commercial gage designations, commonly used items identified by nominal dimensions, or other commercial nomenclatures or devices (such as drill sizes, or commercial standards for weights and measures) expressed in customary units are an exception from this practice. However, even in such instances, when practical and meaningful, SI and customary units may be given in parallel. Users of NBS calibration services may specify the units to be used in the calibration, especially for commercial devices and standards using customary units or units having some legal definition.

§ 200.113 Use of results or reports.

(a) As the national standards laboratory of the United States, NBS maintains and establishes the primary standards from which measurements in science and industry ultimately derive. It is therefore sometimes desirable for manufacturers or users of measurement standards to make appropriate reference to the relationship of their calibrations to NBS calibrations. The following considerations must be borne in mind, and shall be understood as constituting an agreement on the part of the NBS customer to be bound thereby in making reference to NBS calibration and test reports.

(b) The results of calibrations and tests performed by NBS are intended solely for the use of the organization requesting them, and apply only to a particular device or specimen at the time of its test. The results shall not be used to indicate or imply that they are applicable to other similar items. In addition, such results must not be used to indicate or imply that NBS approves, recommends, or endorses the manufacturer, the supplier, or the user of such devices or specimens, or that NBS in any way "guarantees" the later performance of items after calibration or test.

(c) NBS declares it to be in the national interest that it maintain an impartial position with respect to any commercial product. Advertising the findings on a single instrument could be misinterpreted as an indication of performance of other instruments of identical or similar type. There will be no objection, however, to a statement that the manufacturer's primary standards have been periodically calibrated by NBS, if this is actually the case, or that the customer might arrange to have NBS calibrate the item purchased from the manufacturer.

(d) NBS does not approve, recommend, or endorse any proprietary product or proprietary material. No reference shall be made to NBS, or to reports or results furnished by NBS in any advertising or sales promotion which would indicate or imply that NBS approves, recommends, or endorses any proprietary product or proprietary material, or which has as its purpose an intent to cause directly or indirectly the advertised product to be used or purchased because of NBS test reports or results.

In its own activities as a scientific institution, NBS uses many different materials, products, types of equipment, and services. This use does not imply that NBS has given them a preferential position or a formal endorsement. Therefore, NBS discourages references, either in advertising or in the scientific literature, which identify it as a user of any proprietary product, material, or service. Occasionally, effective communication of results by NBS to the scientific community requires that a proprietary instrument, product, or material be identified in an NBS publication. Reference in an NBS publication, report, or other document to a proprietary item does not constitute endorsement or approval of that item and such reference should not be used in any way apart from the context of the NBS publication, report, or document without the advance express written consent of NBS.

§ 200.114 Fees and bills.

(a) In accordance with 15 U.S.C. 271 et seq., fees are charged for all measurement services performed by NBS, unless waived by the Director, or the Director's designee, when deemed to be in the interest of the Government. The above-mentioned statutes authorize the issuance from time to time of appropriate regulations regarding the payment of fees, the limits of tolerance on standards submitted for verification, and related matters.

(b) The minimum fee for any service request accepted by NBS is $10, unless otherwise indicated in SP 250. If apparatus is returned without testing, a minimum charge of $10 may be made to cover handling. Charges commensurate with the work performed will be assessed for calibrations which cannot be completed because of faulty operation of the customer's device. Fees for calibrations or tests include the cost of preparation of an NBS report. Remittances should be made payable to the National Bureau of Standards.

§ 200.115 Description of services and list of fees, incorporation by reference.

(a) NBS Special Publication 250, "Calibration and Related Measurement Services of the National Bureau of Standards" is hereby incorporated by reference, pursuant to 5 U.S.C. 552(a)(1) and 1 CFR Part 51. SP 250 states the authority under which NBS performs various types of measurement services including calibrations and tests and charges fees therefor, states the general conditions under which the public may secure such services, decribes these services in considerable detail, and lists the fees to be charged, and sets out the instructions for requesting them in an appendix which is reviewed, revised and reissued semi-annually (December and June). The Director, Office of the Federal Register, approved the incorporation by reference on December 28, 1967.

(b) SP 250 is available at the following places:

(1) Superintendent of Documents, Government Printing Office, Washington, DC 20402.

(2) Technical Information and Publications Division, National Bureau of Standards, Washington, DC 20234.

(3) District Offices of the U.S. Department of Commerce.

(4) Federal Depository Libraries.

(c) Revisions of SP 250 will be issued from time to time by the National Bureau of Standards, Washington, DC 20234.

(d) Further information concerning policies, procedures, services, and fees may be obtained by writing the Office of Measurement Services, National Bureau of Standards, Washington, DC 20234.

[FR Doc. 80-25108 Filed 8-18-80; 8:45 am]

BILLING CODE 3510-13-M

FEDERAL TRADE COMMISSION

16 CFR Part 13

[Docket No. C-3031]

Terrance D. Lesko, M.D.; Prohibited Trade Practices, and Affirmative Corrective Actions

AGENCY: Federal Trade Commission.

ACTION: Final order.

SUMMARY: In settlement of alleged violations of federal law prohibiting unfair acts and practices and unfair methods of competition, this consent order requires, among other things, a medical doctor affiliated with two California firms engaged in the sale of hair replacement services, to cease soliciting, selling or performing hair implants; or misrepresenting, in advertising or otherwise, the safety or effectiveness of the hair implant process in the treatment of baldness. Should Dr. Lesko engage in any hair replacement business during period specified in the order, he must expend at least $8,000 on corrective advertising warning consumers that "Hair Implants Are Unsafe." The order also requires that the respondent notify past hair implant customers that the process is unsafe and that they should seek prompt medical attention.

DATES: Complaint and order issued July 28, 1980.*

FOR FURTHER INFORMATION CONTACT: Robert J. Enders, Director, 7R, Los Angeles Regional Office, Federal Trade Commission, 11000 Wilshire Blvd., Los Angeles, Calif. 90024. (213) 824-7575.

SUPPLEMENTARY INFORMATION: On Wednesday, April 2, 1980, there was published in the **Federal Register**, 45 FR 21649, a proposed consent agreement with analysis In the Matter of Terrance D. Lesko, M.D., an individual, for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions or objections regarding the proposed form of order.

No comments having been received, the Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered its order to cease and desist, as set forth in the proposed consent agreement, in disposition of this proceeding.

The prohibited trade practices and/or corrective actions, as codified under 16 CFR Part 13, are as follows: Subpart-Advertising Falsely or Misleadingly: § 13.90 History of product or offering; § 13.170 Qualities or properties of product or service; § 13.190 Results; § 13.195 Safety; § 13.195-60 Product; § 13.205 Scientific or other relevent facts. Subpart-Corrective Actions And/Or Requirements: § 13.533 Corrective actions and/or requirements; § 13.533-10 Corrective advertising; § 13.533-20 Disclosures; § 13.533-40 Furnishing information to media. Subpart-Disseminating Advertisements, Etc.:

*Copies of the Complaint and the Decision and Order filed with the original document.

§ 13.1043 Disseminating advertisements, etc. Subpart-Misrepresenting Oneself and Goods—Goods: § 13.1650 History of product; § 13.1710 Qualities or properties; § 13.1730 Results; § 13.1740 Scientific or other relevant facts. Subpart-Neglecting, Unfairly or Deceptively, To Make Material Disclosure: § 13.1854 History of products; § 13.1885 Qualities or properties; § 13.1890 Safety; § 13.1895 Scientific or other relevant facts.

(Sec. 6, 38 Stat. 721; 15 U.S.C. 46. Interprets or applies sec. 5, 38 Stat. 719, as amended; 15 U.S.C. 45.)

James A. Tobin,
Acting Secretary.

BILLING CODE 6750-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 740

[Docket No. 78N-0468]

Cosmetic Product Warning Statements Bubble Bath Products Label Warning

AGENCY: Food and Drug Administration.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is requiring a caution statement on labels of cosmetic bubble bath products. This action is based on the proposed rule on this matter. The statement cautions consumers against product misuse, identifies some of the adverse reactions that may occur, and urges discontinuance of use and consultation with a physician should injury occur.

EFFECTIVE DATE: All affected products initially introduced or initially delivered for introduction into interstate commerce on or after August 19, 1981, shall comply with this regulation.

FOR FURTHER INFORMATION CONTACT: Heinz J. Eiermann, Bureau of Foods (HFF-440), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202-245-1530.

SUPPLEMENTARY INFORMATION: The caution statement required by this rule was proposed in the Federal Register of January 28, 1977 (42 FR 5368). The proposal also defined the products required to bear the caution statement and recommended additional statements on powder products and products intended for use by children. On request of one of the comments, namely, the Cosmetic, Toiletry and Fragrance Association, Inc., a trade association representing cosmetic manufacturers and distributors, the period for filing comments on the proposed regulation was extended from March 29, 1977 to April 29, 1977. The notice of extension of time for filing comments was published in the Federal Register of March 25, 1977 (42 FR 16159).

Eighty-two comments were received during the comment period in response to the proposed regulation. Most comments were from consumers; some came from physicians; several came from manufacturers and distributors of cosmetics; one came from a cosmetic trade organization; and one came from a Federal agency's office of consumer affairs. Three comments were received after the comment period had expired.

Sixty-five comments fully supported the proposed caution statement; two supported it but requested exemptions or modifications; and five opposed it. Ten comments neither supported nor opposed the proposal; some of these comments recommended a ban on bubble bath products. The three comments received after expiration of the extended comment period supported without qualification the proposed caution statement.

Substantiation of Need for Label Warning on Bubble Bath Products

1. Among the comments supporting the caution were comments from five physicians. They told of bubble bath preparations causing many cases of urinary tract infection in children. Some said children had undergone unnecessary, expensive urological evaluations for cystitis, only to have their symptoms abate when they stopped using the bubble bath product. In light of these adverse experiences, the commenting physicians emphasized the need for the proposed caution statement on bubble bath product labels. In contrast to these comments, one physician consulted by a trade association said he had never encountered a patient with a urinary tract infection that could be directly related to the use of bubble bath products.

The five comments support the agency's finding, as discussed in the Federal Register of January 28, 1977, that bubble bath products can cause adverse reactions, particularly when misused, as when consumers use excessive amounts of bubble bath, take bubble baths too frequently, or remain in the bath for a long period of time, thereby subjecting themselves to prolonged exposures to a product.

2. Three comments argued that a label warning was not justified because the adverse reaction reports were anecdotal and a causal relationship between bubble bath products and urinary tract irritation could not be established.

The causal relationship between bath products and urinary tract irritation is supported by the comments from physicians stating that no therapy was required other than discontinuance of the use of bubble bath products. Similar observations were reported by users of these products and parents of children experiencing adverse reactions.

Additional support for the agency's conclusion that bubble bath products can cause harm is provided by the reports in the medical literature of urogenital disorders associated with bubble baths as cited in the proposed regulation published in the Federal Register of January 28, 1977. Besides discussing the seriousness of harm inflicted to the users of bubble baths, all reports reported withdrawal of the offending product as the essence of treatment.

3. Four comments said the number of injury complaints cited by the agency in support of the proposed regulation was not high enough to demonstrate a serious hazard of widespread public concern warranting the requirement of a label warning.

FDA rejects this argument. Considering the small number of all cosmetic injury complaints FDA receives annually from consumers, the annual number of complaints of adverse reactions from the use of bubble bath products has been sufficiently large enough to indicate a public hazard. Physicians or cosmetic manufacturers or distributors are not legally required to submit reports on cosmetic-related injuries that are brought to their attention by consumers. Accordingly, even a small number of reports of consumer injuries associated with a particular brand or category of products assumes significance.

Two events support the agency's conclusion that bubble bath products present a public health hazard. First, the number of consumer reports of adverse reactions related to bubble bath products was significantly higher in 1973 than the number for prior and subsequent years. This was because of a press and radio solicitation by the Federal Trade Commission (FTC) in the Cleveland, Ohio, area. Forty-four percent of the bubble bath product complaints for the January 1, 1972 to July 16, 1973 period were received by FTC's Cleveland, Ohio, district office. This demonstrates that any organized effort to obtain adverse reaction information, no matter how limited in scope, uncovers many cases of injury that normally go unreported. If the number of adverse reactions reported in the Cleveland, Ohio, area could be extrapolated statistically to reflect the entire country, the total number of adverse reactions would certainly confirm a hazard of widespread concern.

The second event supporting the Commissioner's conclusion that bubble bath products may be hazardous occurred in response to the publication of the proposed label warning in the Federal Register of January 28, 1977. Many consumers reported injuries associated with the use of bubble bath products that might not have been reported otherwise. These comments reported either personal adverse experiences or experiences observed on their children. In addition, the agency received the comments from physicians treating such cases, and there were several comments from nurses observing such effects at hospitals or medical practices.

The agency rejects the argument that the tabulations for the years 1974 and 1975 of cosmetic adverse reactions submitted to the FDA under the program of voluntary filing of cosmetic product experiences (21 CFR Part 730) contradict the need for a label warning. These data are deficient and underrated for several reasons. First, only a limited number of firms have been participating in the voluntary program, and the principal marketers of bubble bath products have not been filing consumer complaints of adverse reactions associated with these products. Second, an investigation of the voluntarily-filed bubble bath products in terms of formulations revealed that a significant number of these products were reported incorrectly in product categories under § 720.4(c)(2) (i) and (iv) (21 CFR 720.4(c)(2) (i) and (iv)), "Bath oils, tablets and salts" and "Other bath preparations," apparently because they are marketed as foaming bath oils. However, foaming bath oil formulations do not differ significantly, if at all, from bubble bath formulations. The adverse reaction rates under § 720.4(c)(2)(i) for 1974 and 1975 were significantly higher than those under § 720.4(c)(2)(ii), i.e., "Bubble baths," and exceeded also in each year the cumulative rate reflecting all cosmetic categories. Third, it is known that consumers report only a small portion of the experienced adverse reactions to cosmetic manufacturers.

The following comparison of adverse reactions data brings to light this reporting deficiency. During 1974, the 123 firms participating in the voluntary program received 27 adverse reaction reports under § 720.4(c)(2)(ii), 94 under § 720.4(c)(2)(i), and 29 under § 720.4(c)(2)(iv). Some of the adverse reactions reported under § 720.4(c)(2) (i) and (iv) relate to bubble bath products. During the same year, FDA received 25 consumer complaints relating to bubble bath products. These data relate to the entire population, whereas the industry data reflect only a portion of the market. In contrast to these figures, the survey group of approximately 30,000 persons participating in a consumer survey of adverse reactions associated with cosmetics reported for a period of only 3 months a total of 24 adverse reactions associated with bubble bath products. Further, this reporting period covered the months of September, October, and November, and not the winter months when indoor air is dry and the reaction rate is expected to be high. For those reasons, the agency concludes that the adverse reaction data for bubble bath products do not contradict but support the need for a label warning.

4. Three comments argued that the label warning was not justified because the annual numbers of adverse reactions reported by consumers to FDA had been decreasing after 1973. Two comments contended that the rate of adverse reactions per million units of bubble bath products distributed annually, as reported by the cosmetics industry to FDA under the program of voluntary filing of adverse reactions (21 CFR Part 730), had declined between 1974 and 1975.

The agency acknowledges a decline in the annual number of reports of adverse reactions associated with bubble bath products received from consumers after 1973. FDA disagrees, however, with the contention that this decrease negates the need for the proposed label warning. As discussed in the preamble of the proposed regulation and restated in the preceding section of this preamble, the number of consumer reports of adverse reactions related to bubble bath products was higher in 1973 than in subsequent years because of the press and radio solicitation by the Federal Trade Commission in the Cleveland, Ohio, area. The voluntary placement of caution statements on the label of the leading children's bubble bath product in 1974 also may have contributed to the decline in consumer complaints. Without evidence to the contrary, it seems logical to the agency to assume from these facts that a label warning promotes the safe use of bubble bath products and should therefore be required.

The decline in the rate of adverse reactions per million units of bubble bath products distributed annually, as reported under 21 CFR Part 730, from 1.74 in 1974 to 1.32 in 1975 was not of sufficient magnitude to be considered significant. The decrease in the rate occurred because of an increase in the estimate of the number of units distributed, i.e., from 15.5 million units in 1974 to 22.87 million units in 1975. The total number of adverse reaction reports under § 720.4(c)(2)(ii) i.e., "Bubble baths," actually increased from 27 in 1974 to 30 in 1975.

5. One comment argued that, because the referenced complaints related principally to one product, a warning should not be required for the entire industry.

The agency is not persuaded that the available complaint data relate to only one product and do not support a label warning on all bubble bath products. Although many of the complaints received by FDA related to the leading bubble bath product for children, they represented little more than half the total number of complaints and were proportionate to the product's estimated share of the market. Additionally, all of the adverse reactions voluntarily reported by the cosmetic industry in accordance with 21 CFR Part 730 were associated with products other than the leading bubble bath for children. There is also the technical consideration that all bubble bath products, including those labeled foaming bath oils, contain as principal ingredients surface-active agents serving as cleansing and foaming agents as well as foam stabilizers or boosters whose adverse effects on the skin were fully discussed in the preamble of the proposed regulation (42 FR 5368). Accordingly, all bubble bath products may be equally hazardous and in need of a label warning.

6. One comment said no scientifically controlled study using human subjects was included in the administrative record in support of the proposed label warning. Another comment argued that an animal study conducted for the FDA under contract suggested that bubble baths have a low potential for causing adverse reactions.

FDA advises that the human experience information received from consumers, physicians, and the industry fully supports the conclusion that the proposed label warning on bubble bath products is needed to reduce the risk of future harm. The agency opposes for ethical reasons any consideration of a controlled study in humans to determine the potential of bubble bath products to cause urinary tract infection.

In recognition of the health hazard associated with bubble bath products, the agency contracted in 1975 for a program of animal studies to determine the relative adverse reaction potential of

bubble bath products and ingredients. The studies were not intended to prove the existence of a hazard to humans associated with the use of bubble bath products. The existence of the human hazard had already been established. The objectives of these studies were to develop animal testing procedures that would produce in the chosen animal species the skin irritation effects and genito-urinary tract infections observed in humans and to investigate thereafter various bubble bath products and ingredients in accordance with these testing procedures. The results of such tests were expected to demonstrate the adverse effects that may occur in humans and permit a comparative ranking of the tested substances.

As was pointed out by one comment, the results reported in the first four quarterly reports referenced in the comment showed no significant adverse effects under the conditions of the experimental testing procedure. However, it was erroneous for the comment to conclude from these results that bubble bath products have a low potential for causing adverse reactions. The negative results meant that the testing protocol was deficient in that it did not reproduce in the test animals the reactions observed in humans. The investigator recognized this deficiency and modified the procedure accordingly. In the fifth quarterly report, it was stated that the new protocol appeared to be a more effective and definitive procedure than the tests previously used for evaluating the irritant or toxic effects of the bubble bath ingredients.

To determine the precise testing conditions for reproduction of adverse reactions, toxicologists prefer to gradually intensify the exposure conditions in a test series. Once the desired reactions are achieved and the testing conditions established, subsequent testing in accordance with the established procedure permits the determination of the relative adverse reaction potential of the tested substances. It should be noted, however, that the study was terminated for contractual reasons before the reported data assumed significance.

Definition

7. Several comments took issue with the proposed definition of the term "bubble bath product." It was argued that the definition was too broad because it would include foaming bath oils, bath oils and emulsions serving as emollients, and cleansers for infant care intended to be applied to the skin, wash cloth, or bath. One comment requested that cosmetics that are also drugs and serve either as medicated bath oils that may include cleansing agents or as medicated bath products for persons who may be affected adversely by soap be exempted from the warning requirements.

The agency recognizes that the proposed definition of the term "bubble bath product" may have been too broad and could have been interpreted to include products for which foaming is not one of the principal functions or performance characteristics under conditions of use. Accordingly, the definition has been revised to include only products added to a bath for the purpose of producing foam and containing a surface-active agent that serves as a detergent or foaming ingredient.

The revised definition of bubble bath products therefore excludes bath oils containing a surfactant serving as a spreading agent and producing some froth (i.e., incidental, light, unstable foam) and lotion or similar products serving as emollients and containing surface-active agents serving as emulsifiers. Further excluded from this definition are baby, medicated and general cosmetic cleansers containing surface-active agents, if these products are not intended to be added to a bath for the purpose of producing foam. Incidental foaming during the cleansing process without a claim of such property as a principal cosmetic characteristic does not categorize a product as a bubble bath product.

Foaming bath oils and similarly identified products, however, are not excluded from the definition of the term "bubble bath product." Like bubble bath products, these products are intended to be added to a bath for the purpose of producing foam. Furthermore, as discussed in a previous section, these products do not differ significantly in composition from products labeled bubble bath products, and several consumer complaints of adverse reactions refer to foaming bath oil products.

Labeling and Other Issues

8. Comments argued that the warning should not be required on the label of bubble bath products in liquid form, on products marketed for males, on products intended for adults, and on small packages of 2 ounces or less per application.

The agency is not persuaded that liquid products should be exempted from a requirement of a label warning because of an alleged low incidence of adverse reactions. The adverse reaction data in the consumer complaint files do not permit the agency to conclude that liquid products and those intended for adults or for males cause fewer adverse effects in these subgroups or that they will not be used by others. Such products do not differ in surfactant composition from powder formulations or bubble bath products intended for use by children. The marketing of bubble bath products in small packages does not offer the agency assurance that adverse reactions will not occur. Consumers may misuse these products by using more than one package per bath, by prolonging individual exposure, or by using bubble bath products too frequently.

9. One comment requested that the proposed statement "* * * may cause irritation to the skin and urinary tract" be changed to "* * * cause irritation to skin or *mucous membrane*" (emphasis added). It was argued that irritation of the mucous membrane more accurately describes what may occur from the use of bubble bath products and that urinary tract irritation reported in association with the use of bubble bath arises as a consequence of irritation of the mucous membrane surrounding the urethra. Another comment recommended a warning that deletes any references to urinary tract symptoms as well as to excessive use or prolonged exposure.

The agency disagrees with the contention that the reference in the label warning to urinary tract irritation does not accurately describe what may occur as a result of the use of bubble bath products. Although irritation of the mucous membrane may be mentioned in the label warning to identify the precursor of irritation of the urinary tract, FDA concludes that, for the sake of brevity of the label statement and, at the same time, to fully inform consumers of the possible consequences of such use, the proposed caution that urinary tract irritation may occur is appropriate. If no mention were made of the possible occurrence of urinary tract irritation, consumers would be misled to believe that the most serious reaction that may occur from the use of bubble bath products would be irritation of the mucous membrane.

The reference to urinary tract irritation is also in agreement with some of the comments volunteered by physicians. Those comments reported that the irritation of the urinary tract disappeared when the use of bubble bath products was discontinued.

The agency also disagrees with the request for omission in the label warning of the statement that adverse reactions may be caused by excessive use of, or prolonged exposure to, bubble bath products. Such a deletion from the warning could mislead consumers to believe that prudent use of these products may be as harmful as misuse. The adverse reaction data available to the agency indicate that excessive use and prolonged exposure are the causes of serious harm to consumers.

10. One comment suggested that the statement "Avoid inhalation of dust to prevent respiratory discomfort" not be adopted as a requirement for all bubble bath products in powder form. The comment stated that the commenter's product had been reformulated and the respiratory irritation problem resolved. The comment contended that the inhalation caution statement should therefore not be required for that product. Another comment suggested that this statement be included in the directions rather than the label warning.

The agency is persuaded that the problem of respiratory irritation from inhalation of the dust of powder bubble bath products has been eliminated, or at least significantly curtailed, through appropriate product reformulation. A review of the consumer complaints received by the FDA during the period of 1970 to 1976 demonstrated that the largest number of respiratory complaints were received in 1972. The number of such complaints decreased significantly in 1973, and no complaints of this type were received thereafter. Because of these events, the agency has decided to delete the phrase "Avoid inhalation of dust to prevent respiratory discomfort" from the required caution statement on bubble bath products in powder form. However, the agency urges manufacturers of powdered bubble bath products to include this or a similar statement in the directions for use. The respiratory irritation effect of the dust of detergent raw materials is well-known, and careless sprinkling of these products into water may result in such irritation. Notification of consumers in the directions for use that dusting may cause respiratory discomfort and should be avoided would greatly enhance the safe use of these products.

11. One comment recommended that the proposed effective date be abandoned and two other effective dates be established in its stead. The comment suggested that the first effective date apply to the ordering of new labels bearing the warning, and be the date 60 days after the date of publication of the final rule. The suggested second effective date would be the date when bubble bath products would be reqired to be labeled with the new labels bearing the required warning, and would be the date 9 months after publication of the final regulation.

The comment further argued that, should FDA continue to require the effective date by which bubble bath products introduced into interstate commerce must bear the label warning, cosmetic firms should be given no fewer than 2 years to comply with the new rule. The reasons given for these suggested delays in implementing the final rule were that the label changes could not be accomplished within the proposed 6 months, the proposed effective date would require overlabeling, and such label changes could be expensive.

The agency recognizes the difficulties and economic factors associated with the requirement for the label warning. However, FDA is not convinced that the time to implement the label change needs to be as long as suggested. Furthermore, such a delay would be contrary to FDA's mission of effective consumer protection. Accordingly, all affected products initially introduced or initially delivered for introduction into interstate commerce on or after August 19, 1981, shall comply with this regulation. This effective date should provide adequate time to implement the labeling of inventory not introduced into interstate commerce by the end of the 12-month period.

Therefore, under the Federal Food, Drug, and Cosmetic Act (secs. 201(n), 601, 602, 701(a), 52 Stat. 1041 as amended, 1054 as amended, 1055 (21 U.S.C. 321(n), 361, 362, 371(a))) and under authority delegated to the Commissioner of Food and Drugs (21 CFR 5.1), Part 740 is amended by adding new § 740.17, to read as follows:

§ 740.17 Bubble bath products.

(a) For the purpose of this section, a bubble bath product is any product intended to be added to a bath for the purpose of producing foam that contains a surface-active agent serving as a detergent or foaming ingredient.

(b) The label of bubble bath products within the meaning of paragraph (a) of this section shall bear adequate directions for safe use and the following caution:

Caution—Use only as directed. Excessive use or prolonged exposure may cause irritation to skin and urinary tract. Discontinue use if rash, redness, or itching occur. Consult your physician if irritation persists. Keep out of reach of children.

(c) In the case of products intended for use by children, the phrase "except under adult supervision" may be added at the end of the last sentence in the caution required by paragraph (b) of this section.

Effective dates. All affected products initially introduced or initially delivered for introduction into interstate commerce on or after August 19, 1981, shall comply with this regulation.

(Secs. 201(n), 601, 602, 701(a), 52 Stat. 1041 as amended, 1054 as amended, 1055 (21 U.S.C. 321(n), 361, 362, 371(a)))

Dated: August 8, 1980.

Jere E. Goyan,

Commissioner of Food and Drugs.

BILLING CODE 4110-03-M

DEPARTMENT OF LABOR

Wage and Hour Division

29 CFR Part 575

Waiver of Child Labor Provisions for Agricultural Employment of 10 and 11 Year Old Minors in Hand Harvesting of Short Season Crops; Provisions Governing Application for and Issuance of a Waiver; Restrictions on Use of Pesticides and Other Chemicals

AGENCY: Wage and Hour Division, Labor.

ACTION: Final rule.

SUMMARY: On February 15, 1980, the United States Court of Appeals for the District of Columbia Circuit entered a judgment ruling that certain portions of a regulation published by the Department of Labor relating to waivers pursuant to Section 13(c)(4) of the Fair Labor Standards Act for the employment of 10 and 11 year old children in the hand harvesting of pesticide-treated crops were invalid. The court held that the statute requires that there be absolute proof of the absence of danger to such children from the use of pesticides or other chemicals before waivers can be issued, and found that the department's regulation failed to apply this standard. The court further ruled that the Secretary of Labor lacked good cause to dispense with the notice-and-comment procedures required by the Administrative Procedure Act. The court remanded the case to the United States District Court for the District of Columbia for entry of an injunction pending appropriate notice-and-comment rulemaking (*National Association of Farmworker Organizations* v. *Marshall*, No. 79-1587).

The District Court issued an Order on February 29, 1980, enjoining the Secretary of Labor from granting any waivers pursuant to the portions of the regulation which the Court of Appeals held were invalid (Civil Action No. 79-1044). The District Court further ordered the Secretary to publish proposed regulations in the **Federal Register**, provide a period of at least 30 days for

dispense with the notice-and-comment

Witt of Oregon State University which

Effective date. The Department finds

public comment, with an additional 15 days thereafter for interested persons to reply, and to issue final regulations as soon as practicable after the close of the comment period.

The present Final Rule is issued pursuant to the order of the District Court, following issuance of proposed regulations and an appropriate comment period. The comments received during the comment period did not provide the degree of certainty required by the ruling of the Court of Appeals. Accordingly, the Final Rule merely republishes the applicable portions of the regulations published on June 21, 1978 (43 FR 26562), which were previously subjected to appropriate notice-and-comment rulemaking.

EFFECTIVE DATE: These regulations shall be effective on August 19, 1980.

FOR FURTHER INFORMATION CONTACT:
Lucille C. Pinkett, Wage and Hour Division, Room S-3022, Frances Perkins Department of Labor Building, 200 Constitution Avenue, NW., Washington, D.C. 20210; telephone 202-523-8412.

SUPPLEMENTARY INFORMATION:

The child labor provisions of the Fair Labor Standards Act generally prohibit employment of children under the age of 16. Certain exceptions allow the employment of younger children in agriculture under specific conditions delineated in the statute. In 1974, Congress prohibited the employment in agriculture of any child under the age of 12 under most conditions. This prohibition applied until 1977, when Congress enacted the waiver amendment for certain agricultural employment.

Section 13(c)(4) of the Act authorizes the Secretary to grant a waiver from the Act's prohibitions, to permit the limited employment of 10 and 11 year olds as hand harvesters of short season crops under specified conditions. Among other conditions, the statute prohibits the Secretary from granting such a waiver "unless he finds, based on objective data submitted by the applicant," that five enumerated requirements are met. One of these five prerequisites is a finding that "the level and type of pesticides and other chemicals used would not have an adverse effect on the health or well-being of the individuals to whom the waiver would apply." Section 13(c)(4)(A)(iii).

The Labor Department's final regulations implementing the waiver provisions were published on June 21, 1978 (43 FR 26562), after the Department had considered comments and testimony on its proposed regulations published on April 4, 1978 (43 FR 14068). The introduction to the final regulations discussed the testimony at a public hearing and information provided by the Environmental Protection Agency (EPA) and explained that "it was apparent from the testimony at the hearings that currently established EPA and other federal standards have not been shown to be safe for 10 and 11 year olds." Accordingly, the final regulations provided that the applicant for a waiver "will either have to submit a statement that no pesticides or other chemicals were used on the crop to be harvested or submit data which upon study by the Secretary or the Secretary's designee establishes safe reentry times for 10 and 11 year olds." The regulation also stated that in the event such data submitted by the growers, or additional studies undertaken by the Department, established safe reentry standards for particular chemicals, the regulation would be amended to include such standards so that a waiver applicant need merely identify the chemical and date last used.

When the Department determined that EPA standards could not be used to establish safe reentry times for children, the Department was concerned that the individual growers would simply not be able to meet their statutory burden of producing objective data showing that pesticides used would have no adverse effect on the health or well-being of 10 and 11 year old hand harvesters. Accordingly, the Department decided to try to develop its own expertise, by acquiring the scientific knowledge which would enable the Secretary to issue waivers where some pesticides had been used, if the necessary information to meet the statutory criteria existed. The Labor Department contracted in June, 1978, with Clement Associates, Inc., scientific regulatory consultants, to review data on the chemicals used by the affected growers.

Under a short term contract in 1978, Clement reviewed the scientific literature regarding approximately 30 chemicals used for strawberry and potato crops and issued reports in August, 1978, recommending minimum entry times for some chemicals. In reliance on these reports, the Department amended its regulations in August, 1978 to list certain pesticides which could be used if the specified periods had elapsed before 10 and 11 year olds were admitted to the fields. (August 18, 1978, 43 FR 36623).

Throughout the second half of 1978, officials of the Department consulted with EPA, OSHA, NIOSH, and experts outside the government to try to determine what type of longer term studies, including possible field observations, were needed to acquire pesticide data relating to children. They were advised that the needed study would take 3 to 5 years, and steps were taken to commence the long-term study to measure exposure levels and evaluate the risk to children more precisely. (In March 1980, the Department signed an agreement with EPA to conduct a 5-year study of the effects of pesticide exposure on the health of youth under 16 years of age employed in agriculture. This will, of course, include children 10 and 11 years of age affected by the waiver provision. The study will undertake to determine the actual pesticide exposure and physical effects of such exposure; absorption rates of pesticides into the body; and acute and chronic health effects in relation to duration and level of exposure.)

After publication of the August 18, 1978 amendment, the growers asked the Labor Department to study additional pesticides for possible inclusion on the approved pesticide list. Accordingly, the Department of Labor, in early 1979, initiated a second contract with Clement Associates to review 16 additional chemicals and re-review the 30 chemicals it had already studied under the first contract. Under this second contract, Clement Associates expanded its research of the scientific literature. Accordingly, in April and May, 1979, the waiver regulations were amended to delete certain chemicals from the approved list while including others (April 13, 1979, 44 FR 22061; April 24, 1979, 44 FR 24059; May 16, 1979, 44 FR 29049).

The National Association of Farmworker Organizations sued the Secretary of Labor on April 12, 1979, asserting that the standards adopted in the various amendments to the June 21, 1978 regulations were unlawful. The District Court ruled on June 7, 1979, that these standards were consistent with the Act's requirements.

The United States Court of Appeals for the District of Columbia Circuit subsequently ruled, however, that in publishing the amendments in question, the Secretary had failed to satisfy the statutory criteria. Specifically, the court stated that the Clement Report, on which the Secretary relied in issuing specific pesticide standards, was "based on the assumption that his recommendations would provide only 'reasonable protection' for the children." The court held, however, that under the statute there must be absolute proof of the absence of danger to 10 and 11 year old children from the use of pesticides or other chemicals. The court further ruled that the Secretary lacked good cause to dispense with the notice-and-comment procedures required by the Administrative Procedure Act (*National Association of Farmworker Organizations* v. *Marshall*, No. 79-1587; Mar. 20, 1980).

In *Washington State Farm Bureau et. al.*, v. *Marshall* (C.A. 9, No. 79-4449), the Department is continuing to assert its position that its pesticide regulations are consistent with the statutory standard. This case was argued in the United States Court of Appeals for the Ninth Circuit on March 5, 1980. It is possible that the Ninth Circuit will reach a different result from that of the District of Columbia Circuit, in which event the matter may require resolution by the United States Supreme Court. In the meantime, however, in order to abide by the ruling in *National Association of Farmworker Organizations* v. *Marshall*, the Department is now issuing final regulations, after having thoroughly studied all of the comments following the close of the 45-day comment period provided in the proposed regulations issued on March 7, 1980.

The Secretary's proposed regulations listed the same pesticides and other chemicals and set the same minimum entry times for strawberries and potatoes as did those portions of the amended regulations which were held to be invalid by the Court of Appeals for the District of Columbia Circuit, and which were codified at 29 CFR 575.5(d). This was done in order to provide interested parties with a concrete proposal on which to comment.

A total of 43 written comments were received, as well as 10 responses to comments. The commenters included government officials, individuals and organizations in four states and the District of Columbia.

Thirty-five of the commenters expressed opinions favoring the employment of 10 and 11 year old children as hand harvesters but opposing restrictive regulations. Two organizations opposed the statutory provisions permitting such employment, as well as the Secretary's proposed implementing regulations. Several commenters noted the lack of documentation of illness or harm resulting from proper use of pesticides. Several comments related specifically to Benomyl and Captan, arguing for the importance and safety of these particular chemicals in the growing of strawberries.

Only 4 letters of comment included supporting scientific data.

One letter defended the use of Captan and Benomyl in the harvesting of strawberries by 10 and 11 year olds, and attached the affidavit of Dr. James M. Witt of Oregon State University which was filed with the Court of Appeals for the Ninth Circuit in the *Washington State Farm Bureau* case. Dr. Witt's affidavit criticizes the scientific bases and conclusions of the Clement Report.

Dr. Witt himself also submitted a statement reviewing his criticisms of the Clement Report.

Another letter enclosed material published in the journal *Agrichemical Age* regarding the herbicides 2,4-D and 2,4,5-T, and the chemical residue TCDD. Neither the commenter nor the journal material indicated whether these herbicides were necessary or appropriate for use on the short season crops which are the subject matter of the present regulations.

Finally, the National Association of Farmworker Organizations submitted material criticizing the Secretary's proposed regulations and contending that scientific data upon which safe entry standards may be developed for 10 and 11 year old children is presently non-existent.

The Secretary has concluded that none of the data submitted by commenters meets the test laid down by the Court of Appeals for the District of Columbia Circuit, i.e., absolute proof of no adverse health effects of pesticides or other chemicals on 10 and 11 year old children. In the opinion of the EPA, which reviewed the technical and scientific comments, none of the "comments establish, with absolute certainty, that there would be no adverse effect on the health or well-being of 10- and 11-year-old children where any of the pesticides or other chemicals described [in the proposed regulations] have been used on short season crops." Indeed, the EPA stated its belief that there is not "any scientific data or methods presently available which would show that particular pesticides or other chemicals can be used on crops with an absolute assurance of safety to harvesters." Thus, no minimum entry times for 10- and 11-year-old hand harvesters can presently be established for specific pesticides or other chemicals.

Consequently, the final regulation provides, as did the final regulation of June 21, 1978, that an applicant, in order to satisfy the statutory pesticide requirement, will either have to submit a statement that no pesticides or other chemicals were used on the crop to be harvested or submit data which upon study by the Secretary or the Secretary's designee establishes safe reentry times for 10 and 11 year olds. If such data is sufficient, the application will be considered as meeting the statutory pesticide requirement.

Effective date. The Department finds that there is good cause for having this regulation become effective upon publication, thereby dispensing with the normal rule in section 553(d) of Title 5, U.S.C., that regulations are to be published not less than 30 days before their effective date. The regulation as now published authorizes the granting of waivers on the same basis as authorized under Section 13(c)(4) of the FLSA itself, even if there were no regulation. For this reason, there is no need for a delay in the effective date of the regulation.

This document was prepared under the direction and control of Henry T. White, Jr., Deputy Administrator, Wage and Hour Division.

Accordingly, Part 575, of Title 29 of the Code of Federal Regulations is revised by striking out all of present § 575.5(d) and substituting therefor the following:

§ 575.5 Supporting data to accompany application.

* * * * *

(d) The "level and type of pesticides and other chemicals used would not have an adverse effect on the health or well-being of" minors employed under the waiver. The safe reentry standards established by the Environmental Protection Agency, and followed by other federal and state agencies, were established for adult workers and have not been shown to be safe for 10 and 11 year olds. Therefore, the applicant, in order to satisfy this condition, will either have to submit a statement that no pesticides or other chemicals were used on the crop to be harvested or submit data which upon study by the Secretary or the Secretary's designee establishes safe reentry times for 10 and 11 year olds. If such data, or additional studies conducted by the Secretary or the Secretary's designee, establish safe reentry standards for 10 and 11 year olds, this section will be amended to include such standards and the applicant will then need only identify the type and level of pesticides or chemicals used and the date of last application of same prior to harvest.

* * * * * *

(Secs. 11, 12, 13, 18, 52 Stat. 1067, 1069, as amended; (29 U.S.C. 211, 212, 213, 218); Secretary of Labor's Order No. 16-75, 40 FR 55913)

Signed at Washington, D.C. on this 14th day of August 1980.

Donald Elisburg,
Assistant Secretary for Employment Standards.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FRL 1556–5]

Approval of Revision of the Commonwealth of Pennsylvania State Implementation Plan

AGENCY: Environmental Protection Agency.

ACTION: Final Rule.

SUMMARY: This notice announces the Administrator's approval of an amendment to the Pennsylvania Air Resources Regulations, Chapter 129, Standards for Sources, which relates to open burning. The amendment would allow sources to use on a temporary basis, for a defined site, an air curtain destructor for open burning both inside and outside of an air basin. Use of an air curtain destructor, which is a transportable incineration-type device, is optional if used outside of an air basin. The air curtain destructor must operate in such a manner that there are very little or no emissions and no odor problems. If subsequent to approval by the Department of Environmental Resources (DER) the operation should cause particulate, visible, or malodorous emissions, DER can rescind the approval. Since there are very little or no emissions, there is not expected to be a significant impact to ambient air quality.

EFFECTIVE DATE: September 18, 1980.

ADDRESSES: Copies of the amendment and associated support material are available for public inspection during normal business hours at the following locations:

U.S. Environmental Protection Agency, Region III, Curtis Building, Tenth Floor, Sixth and Walnut Streets, Philadelphia, Pennsylvania 19106. Attn: Patricia Sheridan.

Pennsylvania Bureau of Air Pollution Control, Fulton Building, 18th Floor, 200 North Third Street, Harrisburg, PA 17120. Attn: Mr. James K. Hambright.

Public Information Reference Unit, Room 2922, EPA Library, U.S. Environmental Protection Agency, 401 M Street SW. (Waterside Mall), Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Patricia Sheridan, Air Programs Branch (3AH10), U.S. Environmental Protection Agency, Region III, Curtis Building, 6th & Walnut Streets, Philadelphia, Pennsylvania 19106, telephone (215) 597–8176.

SUPPLEMENTARY INFORMATION:

I. Background

The Secretary of the Department of Environmental Resources (DER) of the Commonwealth of Pennsylvania submitted for the Governor a revision of the Pennsylvania State Implementation Plan (SIP) consisting of an amendment to the Pennsylvania Air Resources Regulations. The revision submitted on August 11, 1976 pertains to Chapter 129, Standards for Sources, and relates to open burning operations. The Commonwealth of Pennsylvania submitted proof that public hearings were held for this revision on June 6, 7, and 8, 1976 in Norristown, Pittsburgh, and Harrisburg, Pennsylvania, respectively, in accordance with the requirements of 40 CFR 51.4. This amendment gives DER the authority to allow sources to use an air curtain destructor, a transportable incineration-type device, for clearing and grubbing wastes such as trees, shrubs and other native vegetation which are cleared from land during or prior to the process of construction.

Permission to use an air curtain destructor will be for a defined site on a temporary basis, not to exceed three months, both inside and outside of an air basin, for open burning. The use of an air curtain destructor is optional if used outside of an air basin. An extension may be approved by DER after three months for additional limited periods not to exceed six months. The air curtain destructor, once installed, must operate in such a manner that there are very little or no emissions and no odor problems. Although the Commonwealth of Pennsylvania has not stated in its regulations, DER notified EPA in a letter dated December 9, 1976 that if any visible emissions do occur, they would have less than 20% opacity. If, subsequent to approval by DER, the operation should cause particulate, visible or malodorous emissions, i.e., an air pollution problem, DER can rescind the approval. Since there are very little or no emissions, there is not expected to be a significant impact to ambient air quality. The Regional Administrator invited comments in the notice published in the **Federal Register** on March 13, 1980, 45 FR 16207, and provided for a 30-day comment period ending April 12, 1980.

II. Control Strategy Demonstration

This amendment is a regulatory change rather than a substantive change. Because the amendment has no adverse impact on air quality, a modeling demonstration of attainment and maintenance of standards is not required.

III. Public Comments

No comments were received during the 30-day public comment period.

IV. Policy Issues

There are no policy issues involved with this revision other than the basis for the Administrator's approval; i.e., whether the revision submitted by the Commonwealth of Pennsylvania meets the criteria of Section 110(a)(1) of the Clean Air Act and 40 CFR 51.4, Public Hearings; 51.5, Submittal of Plans; preliminary review of plans; 51.6, Revisions; and 51.11, Legal Authority.

V. EPA Evaluation

The revision submitted by the Commonwealth of Pennsylvania meets the criteria of Section 110(a)(1) of the Clean Air Act and 40 CFR 51.4, 51.6, and 51.11.

VI. Final Action

In view of this evaluation, the Administrator approves the above-described amendments to the Pennsylvania Air Resources Regulations, Chapter 129, Standards for Sources, which relates to open burning, as a revision to the Pennsylvania State Implementation Plan. The revision allows sources to use, on a temporary basis, an air curtain destructor for open burning both inside and outside of an air basin.

Under Executive Order 12044 EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized." I have reviewed this regulation and determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

Under section 307(b)(1) of the Clean Air Act, judicial review of this action is available *only* by the filing of a petition for review in the United States Court of Appeals for the appropriate circuit within 60 days of today. Under section 307(b)(2) of the Clean Air Act, the requirements which are the subject of today's notice may not be challenged later in civil or criminal proceedings brought by EPA to enforce these requirements.

(42 U.S.C. 7401–642)

Dated: August 5, 1980.

Douglas M. Costle,

Administrator.

Part 52 of Title 40, Code of Federal Regulations is amended as follows:

Subpart NN—Pennsylvania

1. Section 52.2020(c) is amended by adding a new paragraph (33) to read as follows:

§ 52.2020 Identification of plans

* * * * *

(c) The plan revision listed below was submitted on the date specified

* * * * *

(33) A revision submitted by the Commonwealth of Pennsylvania on August 11, 1976 consisting of an amendment to the Pennsylvania Air Resources Regulations, Chapter 129, Standards for Sources, which relates to open burning.

BILLING CODE 6560–01–M

40 CFR Part 52

[FRL 1569–1]

Approval of Revision of the Maryland State Implementation Plan

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: This final rulemaking amends the Maryland State Implementation Plan (SIP) to include the Secretarial Order issued to the Maryland Cup Corporation of Owings Mills, Baltimore County, Maryland. The revision would be effective for three (3) years from September 11, 1979 and applies to the regulation prohibiting visible emissions. During the three year period visible emissions may not exceed 25 percent opacity.

EFFECTIVE DATE: September 18, 1980.

ADDRESSES: Copies of the revision and the accompanying support documents are available for inspection during normal business hours at the following offices:

U.S. Environmental Protection Agency, Air Programs Branch, Curtis Building, 6th and Walnut Streets, Philadelphia, PA 19106. Attn: Pat Sheridan.

Air Quality Programs, State of Maryland, O'Conor Office Building, 201 West Preston Street, Baltimore, MD 21203. Attn: George Ferreri.

Public Information Reference Unit, Room 2922, EPA Library, U.S. Environmental Protection Agency, 401 M Street, S.W. (Waterside Mall), Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: Pat Sheridan (3AH10), U.S. Environmental Protection Agency, Region III, 6th & Walnut Streets, Philadelphia, PA 19106, telephone number (215) 597–8176.

SUPPLEMENTARY INFORMATION:

I. Background

On September 27, 1979, the Administrator of Air Quality Programs for the State of Maryland submitted to EPA, Region III, a revision of the Maryland State Implementation Plan. The revision consisted of a Secretarial Order for the Maryland Cup Corporation of Owings Mills, Baltimore County, Maryland.

The Company's Owings Mills plant sprays paraffin wax onto paper cups. This operation causes visible emissions of wax vapors which are discharged through four rooftop exhausters.

Stack tests on one of the four (4) exhausters, conducted by Maryland indicated an average grain loading of 0.009 grains/SCFD and an emission rate of about 1.8 lbs./hr., well below the maximum levels for particulate emissions of 0.03 grains/SCFD required by Maryland regulations.

Additionally, a significant portion of this particulate matter, i.e. wax, settles out in the immediate vicinity of the rooftop exhausters.

The potential toxicity of the paraffin wax was investigated by the State and it was determined that this material is nontoxic and poses no known threat to the public health.

The Company and the County reported that there is no air pollution control device which could feasibly eliminate or reduce emissions because of the high volume of air and the clogging of any control device by the waxy particulate discharge.

The revision is effective for three (3) years from September 11, 1979, and applies to the regulation prohibiting visible emissions (COMAR 10.18.04.02A). During the three year period, visible emissions may not exceed 25 percent opacity.

Also, during this three year period, the company will continue to research the development of new control technology which may be adaptable to its drinking cup coating operations and will report its finding to local and State control agencies. Then, if necessary, determinations will be made whether to extend the variance once the three year period expires.

Since particulate emissions meet all applicable air quality regulations, and will not increase as a result of this revision, there is no need to revise those regulations.

The Regional Administrator invited comments in the notice published in the **Federal Register** on May 8, 1980, 45 FR 30456, and provided for a 30-day comment period.

II. Public Comment

No comments were received during the 30-day comment period.

III. Control Strategy Demonstration

A review of the submittal indicates that this revision will not result in a violation of either the National Ambient Air Quality Standards (NAAQS) or exceed the PSD increments for particulate matter.

IV. Approvability of the Proposed Revision

Based upon an evaluation of the material submitted by the State of Maryland, the Agency believes that the revision satisfies the applicable requirement of Section 110 of the Clean Air Act and EPA's regulations, 40 CFR Part 51. The revision will not exceed the PSD increments. Therefore, the Administrator approves the revisions to the Maryland State Implementation Plan.

Concurrently, the Administrator amends 40 CFR 52.1070 (Identification of Plan) of Subpart V (Maryland) to incorporate this plan revision into Maryland's SIP.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized". I have reviewed this regulation and

determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

(42 U.S.C. 7401–642)

Dated: August 8, 1980.

Douglas M. Costle,

Administrator.

Part 52 of Title 40, Code of Federal Regulations is amended as follows:

Subpart V—Maryland

1. Section 52.1070 (c) is amended by adding a new paragraph (35) to read as follows:

§ 52.1070 Identification of plans.

* * * * *

(c) The plan revisions listed below were submitted on the dates specified.

* * * * *

(35) Variance from Maryland regulation 10.18.04.02(A) relating to visible emissions and allowing a maximum visible emission of 25% opacity. This variance expires on September 11, 1982. The variance request was submitted on September 27, 1979 by the State of Maryland.

[FR Doc. 80–25142 Filed 8–18–80; 8:45 am]

BILLING CODE 6560–01–M

40 CFR Part 52

[FRL 1576–4]

Approval of Revision of Virginia State Implementation Plan

AGENCY: Environmental Protection Agency.

ACTION: Final rule.

SUMMARY: The purpose of this notice is to approve, on a conditional basis, portions of the State Implementation Plan (SIP) revision submitted by the Commonwealth of Virginia on January 12, 1979. Those portions upon which no conditions are placed are fully approved unless indicated otherwise. This revised SIP was for those areas in Virginia designated as not attaining the National Ambient Air Quality Standards (NAAQS) for ozone and carbon monoxide. The plan addresses attainment of the standards for those pollutants and includes revisions required to meet the requirements of Part D of Title I of the Clean Air Act (the Act), as amended in 1977. Some of the most significant provisions of the revised SIP are the adoption of regulations requiring the installation of Reasonably Available Control Technology (RACT) for certain categories of Volatile Organic Compound sources, the implementation of an Inspection and Maintenance program for automobiles, and the implementation of transportation control measures in certain areas of Virginia.

EFFECTIVE DATE: August 19, 1980.

ADDRESSES: Copies of the revision and accompanying support material are available for public inspection during normal business hours at the following locations:

U.S. Environmental Protection Agency, Region III, Air Programs Branch, Curtis Building, Tenth Floor, Sixth & Walnut Streets, Philadelphia, PA 19106, Attn: Patricia Sheridan

Public Information Reference Unit, Room 2922, EPA Library, U.S. Environmental Protection Agency, 401 M Street, Southwest (Waterside Mall), Washington, D.C. 20460

Virginia State Air Pollution Control Board, Ninth Street Office Building, Room 1106, Richmond, Virginia 23219, Attn: Mr. John M. Daniel, Jr.

For the Transportation Control portions of the plan:

Southeastern Virginia Planning District Commission—Suite 100, 16 Koger Executive Center, Norfolk, Virginia 23502

Peninsula Area Transportation Policy Committee, 2019 Cunningham Drive, Hampton, Virginia 23366

Richmond Metropolitan Planning Organization, 6 North Sixth Street, Richmond, Virginia 23219

Public Information Center, Metropolitan Washington Council of Governments, 1875 Eye Street, NW., Suite 200, Washington, D.C. 20006

FOR FURTHER INFORMATION CONTACT: Mark E. Garrison (3AH13), Air Programs Branch, U.S. Environmental Protection Agency, Curtis Building, Tenth Floor, Sixth & Walnut Streets, Philadelphia, Pennsylvania 19106; telephone: (215) 59–2745.

SUPPLEMENTARY INFORMATION: On July 30, 1979, EPA published a notice of proposed rulemaking, 44 FR 44564, which described the nature of the SIP revision, discussed certain provisions which in EPA's judgment did not comply with the requirements of the Act, and requested public comment. Several comments on this proposed rulemaking notice were received by EPA. In addition, Virginia submitted SIP revisions on September 7, 1979 and September 24, 1979 that contain, in part, corrections to the deficiencies noted by EPA in the July 30, 1979 notice of proposed rulemaking. Finally, on December 18, 1979 Virginia submitted a SIP revision designed to demonstrate attainment of the new .12 standard for ozone (this revised standard was published February 8, 1979 at 44 FR 8202). Certain elements of this last submittal also correct noted deficiencies. EPA has evaluated the portions of the later submittals that correct noted deficiencies and is taking final approval action on those portions. Rulemaking on the balance of the later sumittals will take place in the near future.

The portion of the Virginia nonattainment plan revision dealing with implementation of the "bubble" concept, namely Section 4.55(b) of the Virginia regulations, is not adequately enforeable and is therefore disapproved. Since implementation of this concept is not a Part D requirement, disapproval of Section 4.55(b) does not require the disapproval of Virginia's nonattainment plan revision.

EPA has reviewed and evaluated all public comments received during the comment period and has come to the conclusion that the SIP revision submitted by Virginia on January 12, 1979 for attainment and maintenance of the NAAQS for ozone and carbon monoxide should be approved on a conditional basis and that such approval be contingent upon the satisfactory accomplishment of the conditions and deadlines contained herein.Elsewhere in today's **Federal Register**, EPA is inviting public comment on the acceptability of deadlines for complying with the conditions of approval. In addition, because the January 12, 1979 submittal makes numerous revisions to Part II, Section 2.33, PERMITS—Stationary Sources and Indirect Sources of the Virginia regulations, this rulemaking will address not only this submittal but all previous proposals dealing with Section 2.33 and not yet finalized by EPA. Such proposed SIP revisions included the submittals dated August 14, 1975 (proposed at 40 FR 53595), October 20, 1976 (proposed at 42 FR 16446), August 31, 1977 (proposed at 43 FR 24858), and September 20, 1978 (proposed at 45 FR 34018).

The information in this notice is divided into five sections entitled "INTRODUCTION," "BACKGROUND", "DEFICIENCIES AND REMEDIES", "PUBLIC COMMENTS ON PROPOSAL," and "EPA ACTIONS." The INTRODUCTION section outlines the development of the Virginia Implementation Plan revision. The "BACKGROUND" section describes the Virginia plan revision for each nonattainment area. The "DEFICIENCIES AND REMEDIES" section describes where the SIP is inadequate because it did not satisfy all the regulatory requirements and presents schedules and deadlines to correct these deficiencies. It also explains how some of the deficiencies cited in the proposed rulemaking **Federal Register** Notice, 44 FR 44564 (1979), were satisfied by later submittals by Virginia. The "PUBLIC COMMENTS ON PROPOSAL" section summarizes relevant comments received on the proposal and provides EPA's response to them. The "EPA ACTIONS" section explains EPA's decision to approve conditionally portions of Virginia's plan revision and to approve other portions based on considerations discussed in the two preceding sections.

I. Introduction

The Virginia nonattanment plan revision was developed and submitted to EPA in response to the requirements of Part D of the Act. In general, the SIP is required to provide for attainment and maintenance of the National Ambient Air Quality Standards (NAAQS) for all areas which have been designated "nonattainment" pursuant to Section 107 of the Act. On March 3, 1978, 43 FR 8962, and on September 12, 1978, 43 FR 40502, the Adminstrator of the Environmental Protection Agency, in accordance with requirements of Section 107 of the Act, as amended, designated certain areas of Virginia as nonattainment for ozone and carbon monoxide. These designations are indicated in Table 1 below.

Table I—Nonattainment Areas in Virginia

Ozone

I. Southwest Virginia-Eastern Tennessee Interstate AQCR
Smyth County
II. Valley of Virginia Intrastate AQCR
Roanoke County; Roanoke City; Salem City
III. Northeastern Virginia Interstate AQCR
Stafford County
IV. State Capital Intrastate AQCR
Richmond City; Henrico County; Chesterfield County
V. Hampton Roads Interstate AQCR
Chesapeake City; Norfolk City; Portsmouth City; Suffolk City; Virginia Beach City; Newport News City; Hampton City
VI. National Capital Interstate AQCR

Carbon Monoxide

I. National Capital Interstate AQCR
City of Alexandria; Arlington County; Fairfax County—areas of high traffic density

Virginia in its submittal sub-divided the Hampton Roads Intrastate AQCR into two parts, the Peninsula and Southeastern Virginia areas. For the sake of simplicity, the nonattainment areas indicated above will be referred to throughout the remainder of this notice as follows:

1. Southwest Virginia-Eastern Tennessee Interstate AQCR: referred to as "Smyth County."
2. Valley of Virginia Intrastate AQCR: referred to as "Roanoke Area."
3. Northeastern Virginia Interstate AQCR: referred to as "Stafford County."
4. State Capital Intrastate AQCR: referred to as "Richmond Area."
5. Hampton Roads Intrastate AQCR: referred to as "Peninsula Area" (Hampton and Newport News cities) and "Southeastern Virginia Area" (Chesapeake, Norfolk, Portsmouth, Suffolk, and Virginia Beach cities).
6. National Capital Interstate AQCR: referred to as "Northern Virginia."

Section 174 of the Act requires that certain portions of the SIP for carbon monoxide and ozone be prepared by an organization of local elected officials. The Governor of Virginia designated local planning groups as the agencies responsible for developing the transportation components of the Virginia SIP for their area. The designated Section 174 agencies were generally responsible for development of transportation control measures, which were coordinated with the transportation planning process. The Commonwealth was responsible for technical support to designated agencies as well as for Inspection/Maintenance (I/M) programs, stationary source control, new source review, and any other programs encompassing areas beyond the authority of local governments.

Based on the January 12, 1979 SIP submittal, the Commonwealth does not anticipate achieving the .08 ppm standard by the end of 1982 for any of the nonattainment area; accordingly, the Commonwealth requested an extension of the deadline for achieving this standard until the end of 1987. Since EPA revised the ozone standard to .12 ppm on February 8, 1979, 44 FR 8202, the Commonwealth's submittal was evaluated by EPA to determine if the new standard can be achieved by 1982. The results of this evaluation indicate that Richmond and Northern Virginia are the only areas which will not attain the ozone standard by 1982. Further details are presented below in the section entitled Deficiencies and Remedies.

The Commonwealth of Virginia held public hearings on October 10, 1978 and December 18, 1978 in accordance with the public notice and all other requirements of 40 CFR 51.4. Subsequent to these hearings the regulations were formally adopted. EPA proposed the Virginia nonattainment plan revision in the **Federal Register** on July 30, 1979, 44 FR 44564, and solicited public comments on the plan. The comments received and EPA's response are summarized below in the section entitled Public Comments on Proposal.

The following summarizes Virginia's major submittals in response to the notice of proposed rulemaking and additional submittals regarding attainment of the ozone standard:

July 11, 1979: Senator Howard Anderson, Chairman of the Virginia Air Pollution Study Commission, submitted a schedule for submission of proposed I/M legislation to the Governor.

August 28, 1979: Virginia submitted comments on the notice of proposed rulemaking including a discussion of how Virginia intended to deal with each of the deficiencies cited in the notice. This submittal also contained an official request to redesignate Smyth County to attainment based on the new ozone standard.

September 7 and September 24, 1979: Virginia submitted SIP revisions that included, among other things, corrections to some of the deficiencies noted in the notice of proposed rulemaking.

October 15, 1979: Virginia submitted a draft of a revised control strategy demonstration for the Richmond area.

December 18, 1979: Virginia submitted a SIP revision that was designed to show attainment of the .12 ppm statistical ozone standard. This submittal included, among other things, corrections to some of the deficiencies noted in the notice of proposed rulemaking. It also contained regulations implementing the "Round II CTGs" which are discussed in Section III below.

April 8, 1980: Virginia submitted I/M legislation to EPA. Specific requirements for an approvable SIP are discussed in the General Preamble published on April 4, 1979, 44 FR 20372, and in the following Supplements:

July 2, 1979, 44 FR 38583
August 28, 1979, 44 FR 50371
September 17, 1979, 44 FR 53761
November 23, 1979, 44 FR 67182

The following list summarizes the basic requirements for nonattainment area plans.

1. Evidence that the proposed SIP revisions were adopted by the State after reasonable notice and public hearing.

2. A provision for expeditious attainment of the standards.

3. A determination of the level of control needed to attain the standards by 1982 and the criteria necessary for approval of any extension beyond that date.

1987 may be granted. In such cases

charged with implementing the program

date may be as late as December 31

4. An accurate inventory of existing emissions.

5. Provisions for reasonable further progress (RFP) as defined in Section 171 of the Clean Air Act.

6. An identification of emissions growth.

7. A permit program for major new or modified sources, consistent with Section 173 of the Clean Air Act.

8. Use of Reasonably Available Control Technology (RACT) control measures as expeditiously as practicable.

9. Inspection and Maintenance (I/M) if necessary, as expeditiously as practicable.

10. Necessary transportation control measures, as expeditiously as practicable.

11. Enforceability of the regulations.

12. An identification of and commitment to the resources necessary to carry out the plan.

13. State commitments to comply with schedules.

14. Evidence of public, local government, and State involvement and consultation.

A discussion of the conditional approval of certain elements in Virginia's plan and its practical effect appears in Supplements to the General Preamble, 44 FR 38583, July 2, 1979, and in 44 FR 61782, November 23, 1979. The conditional approval requires the State to submit additional materials by the deadlines proposed elsewhere in today's **Federal Register**. There will be no extensions of conditional approval deadlines which are being promulgated today. EPA will follow the procedures described below when determining if the State has satisfied the conditions.

1. If the State submits the required additional documentation according to schedule, EPA will publish a notice in the **Federal Register** announcing receipt of the material. The notice of receipt will also announce that the conditional approval is continued pending EPA's final action on the submission.

2. EPA will evaluate the State's submission to determine if the condition is fully met. After review is complete, a **Federal Register** notice will be published proposing or taking final action either to find the condition has been met and approve the plan, or to find the condition has not been met and withdraw the conditional approval and disapprove the plan. If the plan is disapproved, the Section 110(a)(2)(I) restrictions on construction will be imposed.

3. If the State fails to submit in a timely manner the required materials needed to meet a condition, EPA will publish a **Federal Register** notice shortly after the expiration of the time limit for submission. The notice will announce that the conditional approval is withdrawn, the SIP is disapproved and Section 110(a)(2)(I) restrictions on growth are in effect. Moreover, if a State has failed to submit the required data to meet any condition contained in this Notice, EPA will at that time consider whether the funding restrictions contained in Sections 176(a) and 316 are also appropriate. (See 44 FR 33473, June 11, 1979.)

Although public comment is solicited on the deadlines, and the deadlines may be changed in light of comment, the State remains bound by its commitment to meet the proposed deadlines, unless they are changed.

It is important to note that EPA is taking final action today only on the January 12, 1979 submittal and on those elements of the September 7, September 24, and December 18, 1979 SIP submittals that satisfy conditional approval items. Rulemaking on the balance of the September 7, September 24 and December 18 SIP submittals will take place in the near future.

The 1978 edition of 40 CFR Part 52 lists in the subpart for Virginia the applicable deadlines for attaining ambient standards (attainment dates) required by Section 110(a)(2)(A) of the Act. For each nonattainment area where a revised plan provides for attainment by the deadlines, those deadlines are substituted on Virginia's attainment date chart in 40 CFR Part 52. The earlier attainment dates under Section 110(a)(2)(A) will be referenced in a footnote to the chart. Sources subject to plan requirements and deadlines established under Section 110(a)(2)(A) prior to the 1977 Amendments remain obligated to comply with those requirements, as well as with the new Section 172 of the Act.

Congress established new attainment dates under Section 172(a) to provide additional time for previously regulated sources to comply with new, more stringent requirements and to permit previously uncontrolled sources to comply with newly applicable emission limitations. These new deadlines were not intended to give sources that failed to comply with pre-1977 plan requirements by the earlier deadlines more time to comply with those requirements. As stated by Congressman Paul Rogers in discussing the 1977 Amendments:

> Section 110(a)(2) of the Act made clear that each source had to meet its emission limits "as expeditiously as practicable" but not later than three years after the approval of a plan.
>
> This provision was not changed by the 1977 Amendments. It would be a perversion of clear Congressional intent to construe part D to authorize relaxation or delay of emission limits for particular sources. The added time for attainment of the national ambient air quality standards was provided, if necessary, because of the need to tighten emission limits or bring previously uncontrolled sources under control. Delays or relaxation of emission limits were not generally authorized or intended under Part D.
>
> (123 Cong. Rec. H11958, daily ed. November 1, 1977).

To implement Congress' intention that sources remain subject to pre-existing plan requirements, sources cannot be granted variances extending compliance dates beyond attainment dates established prior to the 1977 Amendments. EPA cannot approve such compliance date extensions even though a Section 172 plan revision with a later attainment date has been approved. However, a compliance date extension beyond a pre-existing attainment date may be granted if it will not contribute to a violation of an ambient standard or a PSD increment.*

In addition, sources subject to pre-existing plan requirements may be relieved of complying with such requirements if a Section 172 plan imposes new, more stringent control requirements that are incompatible with controls required to meet the pre-existing regulations. Decisions on the incompatibility of requirements will be made on a case-by-case basis.

"Inspection/Maintenance" (I/M) refers to a program whereby motor vehicles receive periodic inspections to assess the functioning of their exhaust emission control systems. Vehicles which have excessive emissions must then undergo mandatory maintenance. Generally, I/M programs include passenger cars, although other classes can be included as well. Operation of non-complying vehicles must be prohibited. This can best be accomplished by requiring proof of compliance to purchase license plates or to register a vehicle. In certain cases, a windshield sticker system may be used, much like many safety inspection programs.

Section 172 of the Clean Air Act requires that State Implementation Plans for States which include nonattainment areas must meet certain criteria. For areas which demonstrate that they will not be able to attain the ambient air quality standards for ozone or carbon monoxide by the end of 1982, despite the implementation of all reasonably available measures, an extension to

* *See* General Preamble for Proposed Rulemaking, 44 FR 20373–74 (April 4, 1979).

1987 may be granted. In such cases Section 172(b)(11)(B) requires that: "the plan provisions shall establish a specific schedule for implementation of a vehicle emission control inspection and maintenance program * * *"

EPA issued guidance on February 24, 1978, on the general criteria for SIP approval including I/M, and on July 17, 1978, regarding the specific criteria for I/M SIP approval. Both of these items are part of the SIP guidance material referred to in the General Preamble for Proposed Rulemaking, 44 FR 20372 (1979). Though the July 17, 1978 guidance should be consulted for details, the key elements for I/M SIP approval are as follows:

Legal Authority. States or local governments must have adopted the necessary statutes, regulations, ordinances, etc., to implement and enforce the inspection/maintenance program. (Section 172 (b)(10).)

Commitment. The appropriate governmental unit(s) must be committed to implement and enforce the I/M program. (Section 172(b)(10).)

Resources. The necessary finances and resources to carry out the I/M program must be identified and committed. (Section 172(b)(7).)

Schedule. A specific schedule to establish the I/M program must be included in the State Implementation Plan. (Section 172 (b)(11)(B).) Interim milestones are specified in the July 17, 1978, memorandum in accordance with the general requirement of 40 CFR 51.15(c).

Program Effectiveness. As set forth in the July 17, 1978 guidance memorandum, the I/M program must achieve a 25% reduction in passenger car exhaust emissions of hydrocarbons and a 25% reduction of carbon monoxide. This reduction is measured by comparing the levels of emission projected to December 31, 1987, with and without the I/M program. This policy is based on Section 172(b)(2) which states that "the plan provisions * * * shall * * * provide for the implementation of all reasonably available control measures * * *"

Specific detailed requirements of these five provisions are discussed below.

To be acceptable, I/M legal authority must be adequate to implement and effectively enforce the program and must not be conditioned upon further legislative approval or any other substantial contingency. However, the legislation can delegate certain decision-making to an appropriate regulatory body. For example, a State Department of Environmental Protection or Department of Transportation may be charged with implementing the program, selecting the type of test procedure, as well as the type of program to be used, and adopting all necessary rules and regulations. I/M authority must be included with any plan revision which must include I/M (i.e., a plan which establishes an attainment date beyond December 31, 1982) unless an approved extension to certify legal authority is granted by EPA. The granting of such an extension, however, is an exceptional remedy to be utilized only when a State legislature has had no opportunity to consider enabling legislation. As discussed later in this Notice, Virginia has met the requirements for obtaining a one-year legislative extension for I/M.

Written evidence is also required to establish that the appropriate governmental bodies are "committed to implement and enforce the appropriate elements of the plans." (Section 172(b)(10).) Under Section 172 (b)(7), supporting commitments for the necessary financial and manpower resources are also required.

A specific schedule to establish an inspection/maintenance program is required. (Section 172(b)(11)(B).) The July 17, 1978, guidance memorandum established as EPA policy the key milestones for the implementation of the various I/M programs. These milestones were the general SIP requirements for compliance modified at 40 CFR 51.15(c). This section requires that increments of progress be incorporated for compliance schedules of over one year in length.

To be acceptable, an I/M program must achieve the requisite 25% reductions in both hydrocarbon and carbon monoxide exhaust emissions from passenger cars by the end of calendar year 1987. The Act mandates "Implementation of all reasonably available control as expeditiously as practicable." (Section 172(b)(2)). At the time of passage of the Clean Air Act Amendments of 1977, several inspection/maintenance programs were already operating, including mandatory programs of New Jersey and Arizona operating at about a 20% stringency. (The stringency of a program is defined as the initial proportion of vehicles which would have failed the program's standards if the affected fleet had not previously undergone I/M. Because some motorists tune their vehicles before I/M tests, the actual proportion of vehicles failing is usually a smaller number than the stringency of the program.) Depending on program type (private garage or centralized inspection) a mandatory I/M program may be implemented as late as December 31, 1982 and the attainment date may be as late as December 31, 1987. Based on an implementation date of December 31, 1982 and a 20% stringency factor, EPA predicts that reductions of both CO and HC exhaust emissions of 25% can be achieved by December 31, 1987. Earlier implementation of I/M will produce greater emission reductions. Thus, because of the Act's requirement for the implementation of all reasonably available control measures and because New Jersey and Arizona have effectively demonstrated practical operation of I/M programs with 20% stringency factors, it is EPA policy to use a 25% emission reduction as the criterion to determine compliance of the I/M portion with Section 172(b)(2).

II. Background

As a result of the nonattainment designations described in the Introduction section of this Notice, and in accordance with the requirements of Part D of the Clean Air Act, as amended, Maurice B. Rowe, Secretary of Commerce and Resources acting on behalf of Governor John N. Dalton, submitted a revised SIP for each nonattainment area on January 12, 1979. The nonattainment plan revisions submitted by the Commonwealth of Virginia are summarized below. The submittals did not vary for each nonattainment area except as noted.

A. Stationary Source Control Measures

Virginia's nonattainment plan revision contains provisions for controlling volatile organic compound (VOC) emissions from stationary and mobile sources. For oxidant nonattainment areas, EPA requires the adoption of reasonably available control technology (RACT) for eleven (11) VOC source categories. The Virginia SIP regulates sources in all 11 categories: solvent metal cleaning; tank-truck gasoline loading terminals; cutback asphalt; bulk gasoline plants; gasoline service stations—Stage I controls; storage of petroleum liquids in fixed-roof tanks; surface coating for insulation of magnet wire; surface coating of cans, coils, paper, fabrics, automobiles, and light-duty trucks; petroleum refinery sources; and surface coating of metal furniture.

B. Preconstruction Review

The Commonwealth of Virginia included regulations in its nonattainment plan revision providing, among other things, for the issuance of permits to new stationary sources. These regulations were submitted to satisfy the requirements of Sections 172(b)(6) and 173 of the Act regarding

Chapter 3 of the Northern Virginia plan

new major stationary sources to be constructed in nonattainment areas.

C. Transportation Control Measures

Virginia's submittal included a chapter on Transportation Source Measures (TCMs) for each nonattainment area except Smyth County, Roanoke, and Stafford County. TCMs are not required for these ozone nonattainment areas because their population is less than 200,000. This portion of the plan describes ongoing transportation source measures and measures that have been committed to future study and implementation.

In reviewing the Transportation Control Measures portion of Virginia's nonattainment plan revision, EPA solicited comments from the U.S. Department of Housing and Urban Development (HUD) and the U.S. Department of Transportation (DOT).

EPA has evaluated these comments along with others before taking final action on the SIP. Also, HUD and DOT have been given an opportunity to comment on this final rule. EPA and DOT's meetings with Section 174 agencies on the transportation control measures portion of the Virginia submittal resulted in their submitting supplemental information. EPA evaluated this supplemental information for adequacy in relation to the approval status of the various Virginia plans and has reflected the results of this analysis in the formulation of this final rule.

D. Inspection/Maintenance

Virginia's January 12, 1979 submittal included a tentative schedule in Chapter 9 of the plans for the four major urbanized areas for the implementation of I/M for both the contractor and private-garage approaches. This schedule is based on anticipated 1980 legislative authority for the program. On March 9, 1979, the Governor submitted a letter to EPA requesting reconsideration of EPA's January 3, 1979 denial of a one-year legislative extension and enclosed as an attachment Senate Joint Resolution #118 which continues the Air Pollution Study Commission until December 1, 1979, when it is to provide its report and recommended legislation to the Governor and to the General Assembly. On July 11, 1979 State Senator Howard Anderson, Chairman of the Virginia Air Pollution Study Commission, submitted a schedule for submission of proposed I/M legislation to the Governor. The proposed legislation was submitted to the Governor on December 7, 1979, and was introduced to the Virginia Legislature on January 15, 1980. The Virginia Legislature passed an I/M bill in March 1980, and it was submitted to EPA on April 8, 1980.

III. Deficiencies and Remedies

This section contains a discussion of the status of deficiencies identified by EPA in the proposed rulemaking in the July 30, 1979 **Federal Register** and during the public comment period. Where conditional approvals are appropriate, schedules for correction of deficiencies are presented. These schedules are proposed elsewhere in today's **Federal Register** for public comment. The deficiencies are summarized for each pollutant following the same format as the proposed rulemaking. Any SIP elements not addressed contained no deficiencies and are being approved in today's Notice. Where a deficiency had been clearly identified in EPA's proposed rulemaking, and where a later submittal clearly remedied that deficiency, EPA is taking final action on the portion of the later submittal that remedies the deficiency.

In the following sections of this Notice there are several references to the terms "design value," "rollback," and "CTG." To avoid confusion or misunderstanding, these terms are defined below.

Design Value—the level of existing air quality used as a basis for determining the amount of change of pollutant emissions necessary to attain a desired air quality level.

Rollback—a proportional model used to calculate the percent reduction in pollutant emissions needed for attainment of a national ambient air quality standard.

CTG—this refers to the Control Techniques Guideline documents published by EPA, establishing guidelines for determining reasonably available control technology (RACT) for different categories of volatile organic compound (VOC) sources. "Round I" refers to CTGs published prior to January, 1978, and "Round II" refers to CTGs published between January 1978 and January 1979.

A. Ozone

1. *Attainment Date.* Based on the January 12, 1979 SIP submittal, the Commonwealth does not anticipate achieving the .08 ppm standard by the end of 1982 for any of the designated nonattainment areas. The Commonwealth requested an extension of the deadline for achieving this standard until the end of 1987. In the proposed rulemaking, EPA stated that an extension may be approved provided Virginia demonstrates that attainment by 1982 is impossible, despite the implementation of RACT for stationary source categories of volatile organic compounds (VOC's) and the implementation of transportation control measures, including inspection and maintenance (I/M) in those major urbanized areas where the population exceeds 200,000.

EPA has evaluated the Virginia SIP to determine if the current ozone standard of .12 ppm can be achieved by 1982. This would then be the determining factor in granting an extension. Based on this analysis, the Northern Virginia and Richmond nonattainment areas will not be able to attain the .12 ppm ozone standard by the end of 1982. EPA is therefore approving the ozone plan with an attainment date for Northern Virginia and Richmond of December 31, 1987.

Based on EPA's analysis, the remaining nonattainment areas will show 1982 attainment of the .12 ppm ozone standard. Therefore, Virginia's request for extensions in these areas is no longer necessary. The attainment date for the Roanoke area, Stafford County, Peninsula, and Southeastern Virginia will be December 31, 1982.

Persons interested in a more complete discussion of EPA's analysis are encouraged to consult the Rationale Document prepared by EPA, Region III for this rulemaking action which is available for public inspection at the locations identified in the Addresses section of this notice. It should be noted that Virginia's submittal of December 18, 1979 for attainment of the .12 ppm ozone standard included an extension request only for the Richmond and Northern Virginia areas. Thus the results of EPA's analysis are consistent with Virginia's most recent request.

2. *Control Strategy and Demonstration of Attainment.* The Commonwealth's submittal was developed on the basis of the former .08 ppm oxidant standard. Virginia submitted a request for a SIP revision based on the new .12 ppm ozone standard on December 18, 1979, which will be acted on at a later date.

In the proposed rulemaking, EPA requested that the Commonwealth select an ozone design value for Northern Virginia that is compatible with the design value adopted by the District of Columbia and State of Maryland in their portions of the National Capital Interstate AQCR. Virginia has agreed to use a common design value for this area. The new SIP revision based on the .12 ppm ozone standard reflects this change. Therefore, EPA approves the demonstration element of the Northern Virginia portion of the Virginia ozone SIP, and also approves the design value used in Chapter 3 of the Northern Virginia plan submitted on December 18, 1979.

3. *Emission Inventory.* In the proposed rulemaking, EPA noted that source-specific operating data, actual calculations, and methods of estimation used in developing the inventory were not included in Virginia's SIP. Although this source-specific information has not been submitted, EPA believes that the emissions inventory satisfies the minimum requirements set forth in EPA guidance on the development of emissions inventories and is therefore approved. However, EPA will require Virginia to include source-specific data and emission reductions achieved as part of the Commonwealth's RFP tracking reports. These reports must be submitted to EPA at least on an annual basis.

4. *Reasonable Further Progress.* In the notice of proposed rulemaking, EPA stated that the reasonable further progress (RFP) requirement was met with respect to the volatile organic compound (VOC) demonstration but not met for the transportation control measures (TCM) portion of the SIP. Following its further review of the Virginia SIP, EPA concludes that the RFP requirement for TCM has in fact been met. This conclusion is based on the commitment made by the Virginia Department of Highways and Transportation (VDH&T) to show "RFP" as future transportation source measures are developed (See p. 10.2 of the Northern Virginia plan). Therefore the RFP portion of the SIP is approved.

In response to comments received during the public comment period, EPA wishes to make the following statements regarding RFP:

a. The "objective" line in Virginia's RFP demonstration is interpreted by EPA as the RFP line, although not explicitly identified as such.

b. The definition of RFP is deficient; however, the deficiency is treated below in the "enforceability" section of this Notice.

5. *Margin for Growth.* EPA noted in the proposal that a tracking system for emissions growth was not included in the SIP. Virginia has agreed to submit a growth tracking system by September 30, 1980. This tracking system combined with the Commonwealth's preconstruction review program will adequately track growth in Virginia. Therefore, EPA approves this SIP element conditioned on the formal submittal of the growth tracking system by September 30, 1980. Elsewhere in today's **Federal Register**, EPA is soliciting public comment on the acceptability of this schedule.

6. *Preconstruction Review.* Virginia's submittal included Section 2.33 of the Virginia regulations which was intended to satisfy the preconstruction review requirements of Sections 172(b)(6) and 172(b)(11)(A) of the Clean Air Act. EPA stated in the proposed rulemaking that Virginia's submittal satisfied these requirements. During the public comment period a commenter pointed out that Virginia's provisions for preconstruction review were deficient in a number of areas. Each of the issues raised and EPA's response to each are presented below in the Public Comments section. One of the comments expresses concerns that deal with the definition of "reasonable further progress" (RFP) and are addressed in the "enforceability" section below (number 10).

In response to another of the comments, EPA wishes to express its interpretation of the enforceability of offset requirements. Any source required to reduce emmissions in order to provide an offset will be required to meet the lower emission rate as a legally binding permit condition or revised emission limitation. Furthermore, any revised permit/emission limitation for a third party offset must be submitted to EPA as a SIP revision in order to become enforceable under Federal law. The effect of this will be to have an enforceable emission limitation for both the new source and any existing source(s) from which offsets were obtained. That this is, in fact, the way in which the offset provision will work has been confirmed by discussions with VSAPCB staff and by letter dated April 15, 1980. Approval of the new source review element of the SIP is based on this interpretation of the offset regulation and any deviation from this interpretation (as, for example, a case where an offset obtained from a third party is not directly enforceable against that third party) will not be acceptable.

Subject to this interpretation, the preconstruction review program as expressed in Section 2.33 of Virginia's regulations remains acceptable insofar as meeting the requirements of Sections 172(b)(6) and 172(b)(11)(A) of the Act.

Section 2.33 has undergone numerous revisions for which EPA has published proposed rulemaking but has not taken final action. Outlined below is a description of the different parts of Section 2.33 and the action that EPA is now taking on them. This description should clarify the status of Section 2.33 in relation to EPA approval. The only public comment received by EPA about Section 2.33 was that addressed above and in the Public Comments section below.

1. Sections 2.33(a) and (f)—The Commonwealth submitted administrative changes including a new numbering system on August 14, 1975. There were also several changes submitted on October 20, 1976, September 20, 1978, and January 12, 1979. These changes were published as Proposed Rulemaking (PRM) in the **Federal Register** on November 19, 1975, 40 FR 53595, March 28, 1977, 42 FR 16446, May 21, 1980, 45 FR 34018, and July 30, 1979, 44 FR 44564 respectively.

EPA is approving Sections 2.33(a) and 2.33(f) as they appear in the January 12, 1979 submittal except for 2.33(f)(3), which as noted below in Section III. 10(f) of this Notice, is being approved as it appears in the September 24, 1979 submittal.

2. Section 2.33(b), (i), and (j)—revisions were submitted on August 14, 1975 and subsequently proposed in the **Federal Register**, 40 FR 53595 (1975). § 2.33(b) and (i) are being approved in today's Notice. However, § 2.33(j) as submitted on August 14, 1975 relates to an indirect source, Parking Management Supply Alternative, and the Commonwealth requested by letter dated December 1, 1978 that consideration of this Section as a SIP revision be withdrawn. This has been done and is addressed the Proposed Rulemaking published on May 21, 1980 at 45 FR 34018.

3. Sections 2.33(c) and (g)—again, numerous revisions have been submitted since August 14, 1975 and were published as proposed rulemaking in the **Federal Register** on the dates noted in paragraph 1. The final revision to Section 2.33(c) occurred in the January 12, 1979 submittal. EPA is approving Section 2.33(c) as written and submitted at that time. As noted elsewhere in today's Notice, Section 2.33(g)(1) as amended on September 7, 1979, is approved (see Section III.10(d) below). Section 2.33(g)(2) relates to Indirect Sources and as noted in the May 21, 1980 **Federal Register** 45 FR 34018, this subsection is not considered part of the Virginia SIP.

4. Sections 2.33(d) and (e)—revisions were submitted on August 14, 1975, proposed at 40 FR 53595, and January 12, 1979, proposed at 44 FR 44564. EPA is approving these sections as submitted on January 12, 1979.

5. Section 2.33(h)—revisions were submitted on August 14, 1975 and August 31, 1977 and proposed in the **Federal Register** on November 19, 1975, 40 FR 53595, and June 8, 1978, 43 FR 24858. No further revisions have been submitted and EPA is taking final action

to approve this section as it reads in August 31, 1977 submittal.

6. Section 2.33(k)—this section as submitted on August 14, 1975 was withdrawn by letter dated December 1, 1978, 45 FR 34018. A new Section 2.33(k) was submitted on January 12, 1979, 44 FR 44564, and is being approved in this Notice.

7. Section 2.33(l)—relates to Indirect Sources and is not considered a part of the Virginia SIP.

Also, at this time EPA would like to clarify a point in the **Federal Register** published on May 21, 1980, 45 FR 34018, 34019. It is not only Section 2.33(a)(1)(ii) of the September 20, 1978 submittal which is withdrawn from consideration as a SIP revision, but also the parenthetical reference contained in Section 2.33(a)(1)(i) is deleted.

The above information provides a comprehensive analysis of each subsection of Section 2.33 which is approved as a part of the Virginia SIP.

7. *RACT as Expeditiously as Practicable.* In the July 30, 1979 proposed rulemaking, EPA outlined six sections of Virginia's VOC regulations which were not considered to reflect the implementation of RACT. EPA also noted that another section of Virginia's VOC regulations, although legally acceptable, could encourage the use of certain degreasing compounds which may be potentially harmful.

Virginia has corrected some of the RACT deficiencies and has agreed to correct the remaining ones as described in detail below. The schedule to correct the remaining deficiencies is presented here:

(1) Not later than September 30, 1980 Virginia will submit draft revised regulations remedying the remaining deficiencies noted below, or will submit adequate documentation to justify the proposed regulations as RACT. A draft revised regulation or an adequate justification must be submitted for each source category identified below as still being deficient. If a justification is submitted in lieu of a draft revised regulation, the second increment due November 30, 1980 will no longer be applicable.

(2) Not later than November 30, 1980 Virginia will submit final regulations, where applicable, correcting the noted RACT deficiencies.

The RACT deficiencies that must be corrected according to the above schedule are given in (a) through (d) below:

(a) The emission limitation on automobile and light duty truck coating in Section 4.55(e)(2) for topcoat application is not considered RACT.

(b) Section 4.56(d)(3)(ii) provides an exemption from Stage I vapor controls for gasoline service stations with a throughput of less than 20,000 gallons per month. This exempts sources from regulation that should be covered under RACT. EPA policy require RACT on only those sources which have the potential to emit greater than 100 tons per year (major sources) of volatile organic compounds in those areas where the attainment date for the ozone NAAQS is December 31, 1982. In areas where the attainent date is later than December 31, 1982, RACT is required for all sources unless a specific justification is provided. Since gasoline service stations with a throughput of less than 20,000 gallons per month are not major sources, the exemption contained in Section 4.56(d)(3)(ii) is acceptable for all areas except Richmond and Northern Virginia. These sources in Northern Virginia are covered by regulations promulgated by EPA (40 CFR 52.2438). While this coverage eliminates the noted deficiency for Northern Virginia, EPA encourages Virginia to bring its regulations in line with EPA RACT requirements for the sake of eliminating the confusion that may result from different size sources being covered by different regulations in Northern Virginia. Furthermore, it should be noted that EPA may in the future require States to submit a SIP revision adopting the Federal regulations where applicable. Section 4.56(d)(3)(ii) is therefore deficient only as it applies to the Richmond area.

(c) Section 4.54(a)(4)(i) provides a general exemption for sources of VOC emissions. This exemption allows a large portion of the sources in the solvent metal cleaning industry to go uncontrolled. There are a large number of small metal cleaning operations and control of these sources is considered RACT. Because of the policy regarding major sources outlined above (see (b)), and because the exemption does not affect any major sources, this deficiency only applies for the Richmond and Northern Virginia areas where the request for an extension until December 31, 1987 is still necessary. The exemption, furthermore, is a deficiency only as it applies to Section 4.54(c) dealing with Solvent Metal Cleaning.

(d) In the proposed rulemaking, EPA noted three deficiencies with Section 4.57(b), Virginia's regulations controlling cutback asphalt paving. The first deficiency, allowing temperature exemption instead of a seasonal exemption, has been remedied as described below. The final two deficiencies with Section 4.57(b) have not been remedied. They are as follows:

(i) Allowing up to 15 percent solvent in emulsified asphalt is not considered RACT.

(ii) Allowing the use of cutback asphalt as a tack coat is not considered RACT.

Virginia has agreed to remedy these RACT deficiencies; therefore, EPA conditionally approves the RACT portion of the Virginia SIP based on Virginia's meeting the above schedule for resolution of all of the RACT deficiencies. Elsewhere in today's **Federal Register**, EPA is soliciting public comment on this conditional approval and the acceptability of the schedule.

Three other regulations were also cited in the notice of proposed rulemaking as not representing RACT. In the September 24, 1979 submittal, Virginia corrected the deficiencies as noted in (e), (f) and (g) below:

(e) The temperature exemption contained in Section 4.57(b)(2)(ii) was replaced by a seasonal exemption. This is acceptable to EPA.

(f) The emission limitati n for end sealing compound coating of cans (Section 4.55(f)(4)(i)) was changed from 4.2 lbs. of VOC to 3.7 lbs. of VOC per gallon of coating, excluding water. EPA believes that this represents RACT for this type of operation.

(g) In the January 12, 1979 SIP submittal, only a 50 percent efficient vapor control system for bulk plants with a throughput greater than or equal to 4,000 gallons per day was required by Section 4.56(e), Virginia's Gasoline Bulk Loading—Bulk Plant regulations. This emission limit was not considered RACT. Virginia has remedied this deficiency, in the SIP revision of September 24, 1979 by including a provision requiring 77 percent overall plant control instead of 50 percent control. This will result in the installation of the same type of control technology as recommended in the CTG for bulk plants, and the overall control efficiency corresponds to the efficiency contained in the CTG.

EPA therefore approves sections 4.57(b)(2)(ii), 4.55(f)(4)(i), and 4.56(e) of Virginia's September 24, 1979 submittal which remedy noted deficiencies in the nonattainment plan. Rulemaking on the balance of the September 24, 1979 submittal will take place in the near future.

Virginia's SIP exempts methyl chloroform (1,1,1, trichloroethane) and methylene chloride from its definition of "nonmethane." On May 16, 1980, EPA published a clarification of agency policy concerning the control of methyl chloroform and methylene chloride in ozone SIPs. (45 FR 32424). EPA explained that it cannot approve or enforce controls on either of these two compounds as part of a federally-enforceable ozone SIP because current

information indicates that neither compound is an ozone precursor. Consequently, EPA is not disapproving Virginia's exemption of methyl chloroform and methylene chloride from the definition of "non-methane."

This policy is in no way an expression of EPA's view on the desirability of controls on these compounds. States retain the authority to control these compounds under the authority reserved to them in Section 116 of the Clean Air Act. In addition, state officials and sources should be advised that there is a strong possibility of future regulatory action by EPA to control emissions of these two compounds. (See, *e.g.* Proposed New Source Performance Standards for Organic Solvent Cleaners, 45 F.R. 39766, June 11, 1980.)

8. *Inspection/Maintenance.* In the Governor's designation letter for Section 174 agencies dated March 27, 1978, he delegated the responsibility to develop I/M legislation to the State Air Pollution Study Commission created by Joint Resolution #37 of the 1978 General Assembly of Virginia. The Commission conducted numerous meetings and public hearings in the State concerning the development of an I/M program but could not decide whether a contractor or private-garage approach to I/M should be employed.

The Commission's inability to decide on an I/M approach, coupled with the fact that the Virginia Legislature does not make appropriations for capital items during the off-budget years of the biennium budget, further delayed the adoption of necessary I/M programs. The biennium budget for the Commonwealth of Virginia is approved only during the General Assembly's long session, held in even-numbered years. The Governor petitioned EPA on November 8, 1978 citing this fact and the fact that the upcoming 1979 short session would be in an off-budget (odd) year where major revenue intensive measures, such as would be required to implement any type of I/M program, cannot be considered. The Governor thus requested a one-year extension (until June 30, 1980) so that the legislative commitment to I/M can be obtained during the 1980 General Assembly Session. EPA declined the Executive Branch's request for an extension on January 3, 1979, stating that consideration of such a request was premature and that any such request must come from the co-equal Legislature. An extension request could be evaluated only after due consideration by the Legislature, a finding of insufficient opportunity to enact the necessary I/M legislation, and a confirmation of the Legislature's commitment to consider I/M legislation during the next session. When Virginia submitted its SIP revision, it included in Chapter 9 a tentative schedule of the four major urbanized nonattainment plans for the implementation of I/M for both the contractor and private-garage approaches. This schedule, however, is based on anticipated 1980 legislative authority for the program. On March 9, 1979, the Governor submitted a letter to EPA requesting reconsideration of its denial of a one-year legislative extension and enclosed as an attachment Senate Joint Resolution #118 which continues the Air Pollution Study Commission until December 1, 1979, when it was to provide its report and recommended legislation to the Governor and to the General Assembly. In compliance with EPA's requirement for a letter from the Legislature officially requesting the legislative extension, Senator Howard Anderson, Chairman of the Virginia Air Pollution Study Commission submitted on July 11, 1979 a schedule for submission of proposed I/M legislation to the Governor. This proposed legislation was submitted to the Governor on December 7, 1979 and was introduced to the Legislature on January 15, 1980. The Virginia Legislature passed an I/M bill in March, 1980 and the bill was submitted to EPA on April 8, 1980. (As noted below, EPA is not taking action on this I/M legislation in today's Notice.)

EPA believes that the July 11, 1979 submittal, along with Senate Joint Resolution #118, satisfies the three conditions cited in the July 30, 1979 notice of proposed rulemaking for approving a legislative extension request; namely, due consideration by the Legislature, a finding of insufficient opportunity to enact the necessary I/M legislation, and a confirmation of the Legislature's commitment to consider I/M legislation during the next session. Therefore, EPA approves the one-year extension requested by Virginia for adoption of the necessary I/M legislation.

The approval of this extension results in the conditional approval of the I/M portion of the Virginia nonattainment plan revision. To satisfy the condition, Virginia must submit adequate I/M legislation to EPA by July 1, 1980. Virginia has already submitted I/M legislation to EPA; however, an additional submittal is required by July 1, 1980 that must include a schedule for implementation of the program and must provide a clear commitment to implement and enforce the I/M program and to reduce emissions by 25 percent by 1987. Specifically, the SIP should include a commitment to require retesting of vehicles initially failing the annual emissions test, along with a commitment to prohibit registration or provide some equally effective mechanism to prevent vehicles not complying with applicable emission requirements from operating on public roads. Because of the requirement for an additional submittal by July 1, 1980, EPA is not taking action in today's Notice on the I/M legislation submitted by Virginia. Elsewhere in today's **Federal Register**, EPA is soliciting public comment on the acceptability of this deadline.

The Commonwealth of Virginia has requested that the boundary of the urbanized area in Northern Virginia be modified to exclude Loudoun County, since this is primarily a rural area which accounts for only 5.0 percent of the light duty vehicle registrations in the Northern Virginia Region. The effect of this modification, if approved, would be to exclude Loudoun County from the requirement to implement an Inspection/Maintenance (I/M) program for motor vehicles. It would not change Loudoun County's designation, under Section 107 of the Clean Air Act, as nonattainment for ozone. EPA is proposing this modification elsewhere in today's **Federal Register**.

9. *Transportation Control Measures*—a. *Reassessment of General Evaluation of Transportation Control Measures.* Presented in this section are major comments and actions that were assessed in the General Evaluation of Transportation Control Measures section of the July 30, 1979 notice of proposed rulemaking (NPRM). The issues discussed that were designated as acceptable are not repeated here.

With the exception of the Northern Virginia area, the U.S. Department of Transportation (DOT) noted a serious discrepancy in the emissions inventory provided for the transportation control plans. Virginia's submittal of January 12, 1979 contains an updated emissions inventory different from the emissions inventory in the transportation control plans. EPA requested Virginia to clarify this issue so that EPA could conduct its final review. Another major comment made by the U.S. DOT was its concern about the relative burden to reduce emissions borne by transportation sources as compared to stationary sources.

In an August 28, 1979 response to the NPRM, Virginia responded in the following manner:

"Transportation Control Measures"—The difference in the emission inventory

identified in Section 108(f) of the Clean

Peninsula Area

the implementation of an inspection and

(COG #11) VPI&SU, City of

contained in the transportation control plans (TCPs) and that submitted by the State is due simply to the passage of time between the 174 agency's approval of their plan and the final submittal by the State of the total plan. The 174 agencies received a copy of the emission inventory in late summer of 1978 for inclusion in their TCP. The TCP was approved by the designated agency and sent to the State to be part of the official public hearing process. However, by the time all of these actions had been completed, the inventory had been further refined and the State used the latest version in their portion of the SIP submittal. The differences in the two versions are not considered great. All 174 agencies were provided with copies of the version submitted on January 12, 1979 so that future uses of the inventory will be consistent from one group to another. U.S. DOT has expressed concern about the relative burden in emissions reductions from transportation sources compared to that for stationary sources. It should be noted that the Virginia Plan does not call for any specific amount if emissions reductions to be required from transportation sources. On the other hand, specific emissions reductions are required from stationary sources as a result of regulations adopted and being adopted by the Board. The difference between the total reductions needed for attainment and those expected from stationary sources is simply a goal to be attained. It is hoped that transportation sources will make as large a contribution toward that goal as can reasonably be attained. The State has dictated neither specific measures nor amounts of reductions required to the 174 agencies.

EPA believes that this response by Virginia adquately addresses the concerns raised in the NPRM; however, the response does raise a question about emission reduction targets for transportation sources. Firm targets for these reductions must be jointly negotiated by the SAPCB and the appropriate Metropolitan Planning Organization (MPO) or Section 174 agency, and submitted to EPA. The lack of firm targets constitutes a SIP deficiency; however, this deficiency will be handled through the Section 175 funding process as it does not represent a failure to meet Part D requirements. Section 175 funding for the appropriate 174 agencies will be conditioned on receiving a firm emission reduction target for transportation sources.

EPA requested further clarification from the Commonwealth on the commitments to implement the identified TCM's and requested public comment on the adequacy of these commitments. Following a reevaluation of the commitments made by each of the 174 agencies. EPA finds them to be acceptable.

EPA considers commitments to use available funds and grants to meet basic transportation needs, described to various degrees in the transportation components of the Virginia submittal, to be adequate at this time. Most notably, endorsements and commitments have come from some transit operating agencies including the Washington Metropolitan Area Transit Authority, the Peninsula Transportation District Commission, and the Tidewater Transportation District Commission.

The Richmond area plan describes the local commitment in terms of current efforts for improving public transportation services. EPA considers these commitments adequate at this time. However, EPA will be issuing additional requirements on basic transportation needs which may necessitate a call for future SIP revisions.

b. *Area Profiles and Evaluation.* As a result of the ozone and carbon monoxide nonattainment designations discussed in the INTRODUCTION section of this Notice, the Governor of Virginia, on March 28, 1978, designated those agencies under Section 174 of the Clean Air Act responsible for the development and implementation of transportation control measures. Under the guidance of the Virginia State Air Pollution Control Board, which is responsible for the overall SIP, as well as for planning, coordination, and general enforcement activities, the designated local agencies developed their portions of the TCP. Detailed area profiles describing the plans were presented in the NPRM and will not be repeated here. Presented here for each of the areas with transportation control requirements is EPA's evaluation of the area's TCP as distinct from the general evaluation presented in subsection a, above.

Richmond Area

The Commonwealth of Virginia requested an extension of the 1982 attainment date for ozone in Richmond based on the .08 ppm ozone standard. EPA's further evaluation (see discussion on attainment date above) indicated that even the revised .12 ppm statistical ozone standard will not be met by December 31, 1982 and thus the extension request can be approved until July 1, 1984. Approval of the extension request necessitates a schedule for implementation of an inspection and maintenance program for motor vehicles; for the implementation of currently planned transportation control measures; and for the analysis, selection, and adoption of additional appropriate transportation control measures.

The TCP for Richmond commits the Richmond Section 174 agency to the assessment of transportation measures identified in Section 108(f) of the Clean Air Act and expresses the intention of local governing bodies to pursue decisions for the "representative implementation" of recommended transportation control measures. A program for the analysis of alternative transportation measures for the 1982 SIP submittal is now being conducted through an Urban Air Quality Planning Grant made on January 28, 1980 by the Mass Transportation Administration under Section 175 of the Clean Air Act. Based on the evaluations contained in the July 30, 1979 NPRM, consideration of all public comments, and the further evaluation outlined above, EPA believes that the transportation control portion of the Virginia nonattainment plan revision for the Richmond area meets the requirements of Part D of the Clean Air Act and therefore approves the Richmond TCP as part of Virginia's SIP.

Southeastern Virginia

The Commonwealth of Virginia requested an extension of the 1982 attainment date for ozone in the independent cities of Suffolk, Portsmouth, Chesapeake, Norfolk, and Virginia Beach based on the .08 ppm ozone standard. EPA's further evaluation (see discussion on attainment date above) indicated that the revised .12 ppm statistical ozone standard will be met by December 31, 1982 and therefore the extension request is no longer necessary. This means that a 1982 SIP submittal is not required for the Southeastern Virginia area; however, transportation control measures are still required for Southeastern Virginia inasmuch as they can be considered reasonably available control measures. The TCP for this area commits the Southeastern Virginia Section 174 agency to the reassessment and local application of transportation control measures necessary for attainment, including the reasonably available measures specified in Section 108(f) of the Clean Air Act.

Based on the evaluations contained in the July 30, 1979 NPRM, consideration of all public comments, and the further evaluation outlined above, EPA believes that the transportation control portion of the Virginia nonattainment plan revision for the Southeastern Virginia area meets the requirements of Part D of the Clean Air Act and therefore approves the Southeastern Virginia TCP as a part of the Virginia SIP. EPA understands that the transportation planning process will continue in Southeastern Virginia in part as a means of assuring implementation of all reasonably available transportation control measures.

Peninsula Area

The Commonwealth of Virginia requested an extension of the 1982 attainment date for ozone in the cities of Hampton and Newport News, based on the .08 ppm ozone standard. EPA's further evaluation (see discussion on attainment date above) indicated that the revised .12 ppm statistical standard will be met by December 31, 1982 and therefore the extension request is no longer necessary. This means that a 1982 SIP submittal is not required for the Peninsula area; however, transportation control measures are still required for the Peninsula area inasmuch as they can be considered reasonably available control measures. The TCP for this area commits the Peninsula Section 174 agency to the implementation of a ride-sharing program to further expand the already active ride-sharing concept in the Peninsula area. The plan identified nine transportation projects to which the FY 1979 Transportation Improvement Program is also committed; these also have an air quality impact. These projects include five highway widening and construction projects, three intersection improvements, and a system for synchronized traffic flow.

The plan also commits the Peninsula Section 174 agency to study and adopt additional measures necessary for attainment including those specified in Section 108(f) of the Clean Air Act as well as measures to improve land use management.

Based on the evaluations contained in the July 30, 1979 NPRM, consideration of all public comments, and the further evaluation outlined above, EPA believes that the transportation control portion of the Virginia nonattainment plan revision for the Peninsula area meets the requirements of Part D of the Clean Air Act and therefore approves the Peninsula area TCP as a part of the Virginia SIP. EPA understands that the transportation planning process will continue in the Peninsula area in part as a means of assuring implementation of all reasonably available transportation control measures.

Northern Virginia

The Commonwealth of Virginia requested an extension of the 1982 attainment date for ozone in Northern Virginia based on the .08 ppm ozone standard. EPA's further evaluation (see discussion on attainment date above) indicated that even the revised .12 ppm statistical standard will not be met by December 31, 1982 and thus the extension request can be approved until December 31, 1987. Approval of such an extension necessitates a schedule for the implementation of an inspection and maintenance program for motor vehicles; for the implementation of currently planned transportation control measures; and for the analysis, selection, and adoption of additional appropriate transportation control measures.

In preparing its plan, the Metropolitan Washington Council of Governments recommended 28 transportation measures as appropriate for consideration in the 1979 SIP submittal. These measures were selected from an initial list of 70 measures identified as having potential for reducing transportation-related emissions. COG is conducting an analysis of alternatives which will review all 70 of the measures to be considered for possible inclusion into the State Implementation Plan.

COG presented the 28 measures to the local governing bodies for endorsement and commitment actions for the 1979 plan. Fairfax City was the only jurisdiction that did not respond. A list of the measures that have received endorsement and a degree of commitment for implementation in the COG plan by one or more jurisdictions was published in the NPRM. EPA is expanding the list in this Notice to clarify and include the additional commitments made by the Virginia Department of Highways and Transportation (VDH&T) in Chapter 10 of the Northern Virginia Plan. For further clarification, the numbers of the COG commitments are shown in parenthesis:

(1) Continue Construction of Metrorail (Completion of presently committed 60 miles) (COG #1): Arlington County, City of Alexandria, City of Falls Church.

(2) Eliminate All-Day On-Street Non-Resident Parking Where Appropriate (COG #3): Arlington County, City of Alexandria, City of Falls Church.

(3) Provide Fringe Parking Lots at Selected Locations (COG #4A): VDH&T—Prince William County; VDH&T—Fairfax County.

(4) Build/Designate Exclusive Lanes for High Occupancy Vehicles (Buses, etc.—COG #6): City of Alexandria, VDH&T—Fairfax County; VDH&T—Arlington County.

(5) Reserve Convenient Parking Spaces for Carpools/Vanpools (COG #7): Arlington County.

(6) Building Additional Bicycle Lanes and Bikeways (COG #8): Arlington County, City of Alexandria, Fairfax County, City of Falls Church.

(7) Provide and Improve Regional and Local Ride-Share Activities (COG #9): City of Falls Church.

(8) Freeway Ramp Metering with Preference for High Occupany Vehicles (COG #11): VDH&T—City of Alexandria; VDH&T—Arlington County; VDH&T—Fairfax.

(9) Install Additional Bicycle Storage Facilities (COG #12): City of Falls Church.

(10) Encourage Specialized Bus Service (COG #15): Loudoun County.

(11) Include Metrobus Information With Carpool/Vanpool Information and vice versa (COG #16): City of Falls Church.

(12) Provide Additional Pedestrian Facilities and Eliminate Barriers (COG #19): Arlington County, City of Alexandria, City of Falls Church.

(13) Provide Free or Discounted Transit Rides in Off-Peak Hours (COG #22): Fairfax County.

(14) Improve Signalization in the Region (COG #23): Arlington County, City of Alexandria.

The Extent of these commitments and other actions are detailed in Appendix E of the COG plan.

Identified below are the transportation measures which were either under construction, committed for implementation, or are actively being studied by the Virginia Department of Highways and Transportation.

(1) I–66 is being constructed with provisions for Metrorail in the median between I–495 and Fairfax Drive (COG #1).

(2) Fringe parking lot construction is planned for in (COG #4A): Prince William County: Minnieville, Route 639, Route 1, Lake Ridge; Fairfax County: West Springfield.

(3) Preferential bus and high occupany vehicles lanes are to be constructed on (COG #6): Duke Street from Jordan Street Longview Drive in Alexandria; I–66 in Fairfax and Arlington Counties.

(4) Preferential bus and high occupany vehicle lanes are planned to be completed at: Four Mile Run Bridge on Route 50 in Arlington; Carlyn Springs Road interchange at Route 50 in Arlington.

(5) Planned bike construction projects (COG #8): A bikeway is to be constructed in the Route 1 corridor between the entrance to Fort Belvoir and the north intersection of Route 235 in Fairfax; A bikeway is to be constructed in the Gallows Road corridor from Routes 29/211 to Route 7 in Fairfax.

(6) Freeway ramp metering is to be studied for feasibility on (COG #11): I–395 in Fairfax, Alexandria and Arlington; I–66 from I–495 to Rosslyn in Arlington and Fairfax.

(7) Sidewalks are to be constructed on various projects in the area (COG #19): A pedestrian overpass is to be

constructed over I–66 in Rosslyn in

enforceability of the VOC regulations

conditionally approves the

becoming federally enforceable;

additional RACT requirements for

later than September 30, 1980. The

constructed over I–66 in Rosslyn in Arlington.

(8) A computerized traffic signal system will be studied and implemented in the City of Alexandria and Arlington County (COG #23).

The above should serve to clarify any confusion that may have arisen over SIP commitments in the Northern Virginia area. The scope of projects and actions behind the local government commitments are detailed in Appendix "E Documentation of Air Quality Control Measure Actions" of the COG plan, and Chapter 10 of the plan for Northern Virginia.

Conclusion: Based on the evaluations contained in the July 30, 1979 NPRM, consideration of all public comments, and the further evaluation outlined above, EPA believes that the transportation control portion of the Virginia nonattainment plan revision for the Northern Virginia area for ozone meets the requirements of Part D of the Clean Air Act and therefore approves the Northern Virginia TCP for ozone as part of Virginia's SIP.

c. *Conformity Commitment Requirement.* A deficiency in the TCM portion of Virginia's SIP common to all four areas is that the plans failed to provide criteria and procedures for determining consistency/conformity of transportation projects, programs and plans with the SIP.

In the absence of specific federal guidance, EPA encourages each designated lead agency and appropriate metropolitan planning organization (MPO) where different from the lead agency, to develop and adopt such criteria and procedures. At a minimum, however, each lead agency (and MPO) in response to Section 176(c) of the Act must affirm its (their) commitment not to approve any project, program, or plan which does not conform to the plan being approved (or conditionally approved) today.

The MPO's and lead agencies in each area have agreed to adopt this commitment, and Virginia has agreed to endorse the commitments; therefore, EPA conditionally approves the transportation SIP element based on the condition that this commitment is to be adopted by each designated lead agency and MPO in the Northern Virginia, Richmond, Peninsula, and Southeastern Virginia areas. The commitments are to be adopted, endorsed by Virginia, and submitted to EPA by September 30, 1980. Elsewhere in today's **Federal Register**, EPA is soliciting public comment on the acceptability of this deadline.

10. *Enforceability.* Numerous deficiencies were noted in the July 30, 1979 **Federal Register** dealing with enforceability of the VOC regulations. Virginia has remedied many of these but a few remain deficient.

One of the deficiencies noted in the proposed rulemaking was Virginia's "bubble" regulation, Section 4.55(b). EPA believes this regulation is not specific nor clear enough to be adequately enforceable. Virginia stated in an August 28, 1979 letter to EPA that its "bubble concept" provision will be redone upon promulgation of final EPA guidelines on the subject. The Commonwealth, however, has chosen to retain section 4.55(b) in the ozone SIP. Therefore, EPA disapproves Virginia's current "bubble" regulation in Section 4.55(b). Since this regulation does not relate to any Part D requirement, this disapproval does not require the disapproval of the nonattainment plan revision. It should be noted that a final EPA policy statement on the "bubble" concept appeared in the **Federal Register** on December 11, 1979, 44 Fed. Reg. 71780.

A comment on the Virginia ozone SIP received by EPA during the public comment period following the notice of proposed rulemaking challenged, on several grounds, Virginia's permit program for major stationary sources located in nonattainment areas, as required by Sections 172(b)(6), 172(b)(11)(A), and 173 of the Clean Air Act. A discussion of each of the issues raised and EPA's response to each of them is contained in the Public Comments section below. One of the comments raised concerns about the definition of reasonable further progress (RFP). EPA agrees with the commenter that the definition is deficient.

Virginia has agreed to remedy the remaining enforceability deficiencies according to the following schedule, which is proposed elsewhere in today's **Federal Register:**

(1) Not later than September 30, 1980, Virginia must submit revised draft regulations that remedy the remaining deficiencies noted below.

(2) Not later than November 30, 1980, Virginia must submit final regulations correcting these deficiencies.

The enforceability deficiencies that must be corrected according to the above schedule are given in (a) and (b) below:

(a) Test methods adequate to determine compliance with the emission limitations contained in Sections 4.54, 4.55, 4.56 and 4.57 must be developed.

(b) The definition of reasonable further progress (RFP) must be changed to require attainment by the applicable date for each nonattainment area.

Virginia has agreed to remedy these deficiencies; therefore, EPA conditionally approves the enforceability portion of the Virginia SIP based on Virginia's meeting the above schedule for all of the enforceability deficiencies. Elsewhere in today's **Federal Register**, EPA is soliciting public comment on the acceptability of the schedule.

The following deficiencies ((c) through (j)) in the enforceability of the Virginia regulations have been corrected by subsequent SIP revisions:

(c) In the proposed SIP revision, Virginia included a provision for repealing Section 4.52 of the VOC regulations. It is contrary to EPA policy to approve the deletion of existing regulations while a source is moving toward compliance with new regulations. Existing regulations are to remain in effect and enforceable. Virginia, in its September 24, 1979 SIP revision, has deleted the provision calling for the repeal of Section 4.52.

(d) Virginia has not supplied an adequate definition of "minor significance" as it relates to the exemption from new source permit requirements contained in Section 2.33(g)(1)(vi). In its September 7, 1979 submittal Virginia replaced the phrase "of minor significance" with the phrase "which have a potential to emit less than one ton per year." This is acceptable.

(e) In the September 24, 1979 SIP revision, Virginia has deleted the wording allowing oral consent agreements. This satisfies the concern raised in the notice of proposed rulemaking.

(f) In Section 2.33(f)(3), Virginia did not require all new sources subject to NSPS to be tested. Virginia remedied this deficiency in its September 24, 1979 SIP revision. As a result of a comment made by an environmental group during the public comment period, EPA wishes to note that it has the authority to require any source to perform an emissions test under Section 114 of the Act, whether or not that source has been granted a waiver under Virginia regulation 2.33(f)(3).

(g) Virginia, in its September 24, 1979 revision, has remedied the wording deficiency concern the clause "will be considered acceptable compliance by the Board."

(h) In the proposed rulemaking EPA noted deficiencies in the definition of "consent order". On September 24, 1979 Virginia submitted a SIP revision which included a definition of "Delayed Compliance Order." While acceptable, EPA notes that any Delay Compliance Order (DCO) issued in accordance with Section 113(d) of the Clean Air Act must be submitted to EPA for approval before becoming federally enforceable; furthermore, all applicable requirements of Section 113(d) must be satisfied before any DCO can be approved.

(i) Categorical compliance schedules were added as a new Appendix N in the September 24, 1979 submittal which are implemented through the provisions of Sections 4.02(f)(1) through 4.02(f)(5). This satisfies the concern raised by EPA in the notice of proposed rulemaking.

(j) A revised definition of "nonattainment areas" was submitted with the September 24, 1979 submittal. This revised definition is acceptable.

EPA therefore approves the following portions of Virginia's later submittals:

September 7, 1979: Section 2.33(g)(1)(vi) of the Regulations.

September 24, 1979: Sections 4.52(a), 2.03(a)(1), 2.33(f)(3), Part I, definitions of "Delayed Compliance Order" and, "Nonattainment Area", 4.02(f)(1) through 4.02(f)(5), Appendix N, and those portions of Sections 4.54, 4.55, and 4.56 where the phrase "will be considered acceptable compliance by the Board" has been modified.

These portions of the later submittals remedy noted deficiencies in the nonattainment plan. Rulemaking on the balance of the September 7 and 24, 1979 submittals will take place in the near future.

In the notice of proposed rulemaking EPA stated that Section 2.33(c)(1)(ii) needs further clarification. Following a more detailed review of the information required for new sources EPA has concluded that this section is adequate. The Virginia State Air Pollution Control Board (VSAPCB) permit forms, that must be completed as part of a permit application, provide ample information to make the required determinations. Also in the notice of proposed rulemaking EPA noted that the definition of "vapor tight" should be expressed in terms of positive pressure as well as negative pressure. While this is still a requirement for Round II CTG's, it will be dealt with in future rulemaking on Virginia's December 18, 1979 submittal and is no longer considered a deficiency of the January 12, 1979 submittal.

11. *State Commitments to Comply With Schedules.* As noted in the General Preamble for Proposed Rulemaking on Approval of Plan Revisions for Nonattainment Areas, 44 FR 20376 (April 4, 1979), the minimum acceptable level of stationary source control for ozone SIPs, such as Virginia's, includes RACT requirements for VOC sources covered by CTGs the EPA issued by January 1978 ("Round I CTGs") and schedules to adopt and submit by each future January additional RACT requirements for sources covered by CTGs issued by the previous January. The submittal date for the first set of additional RACT regulations ("Round II CTGs") was revised from January 1, 1980 to July 1, 1980 by a **Federal Register** notice of August 28, 1979, 44 FR 50371. Virginia has already submitted a SIP revision implementing Round II CTGs, on December 18, 1979. Today's approval of the ozone portion of Virginia's plan is contingent on the following: By each subsequent January beginning January 1, 1981, RACT requirements for sources covered by CTGs published by the preceding January must be adopted and submitted to EPA. This requirement is set forth in the "Approval Status" section of the final rule. If RACT requirements are not adopted and submitted to EPA according to the time frame set forth in the rule, EPA will promptly take appropriate remedial action.

B. Carbon Monoxide

For the carbon monoxide nonattainment areas in Northern Virginia consisting of Arlington County, the City of Alexandria, and portions of Fairfax County, the Commonwealth has indicated that, by using a region-wide analysis of carbon monoxide emissions, the nonattainment areas will be in attainment by 1982. However, EPA requested both by letter dated April 11, 1979 and in the July 30, 1979 NPRM that the Commonwealth reassess this analysis using a localized analysis for carbon monoxide "hot spots". The analysis which had been provided did not include "hot spot" sites together with appropriate transportation control measures at those sites, nor did it agree with the conclusions of the carbon monoxide "hot spot" analysis performed by the Metropolitan Washington Council of Governments.

EPA requested Virginia to clarify the rationale for determining the carbon monoxide design value and to perform an analysis of all "hot spot" sites that conclusively demonstrates the attainment/nonattainment status by 1982. EPA also requested that Virginia construct a line of reasonable further progress (RFP) showing annual incremental reductions for carbon monoxide and submit it with the "hot spot" analysis. Virginia has stated to EPA that this work is being performed by a contractor and has agreed to remedy the noted deficiency. Therefore EPA conditionally approves the carbon monoxide portion of the Virginia nonattainment SIP based on the submittal of a hot spot analysis and RFP line. These items are to be submitted no later than September 30, 1980. The attainment date for carbon monoxide in the nonattainment portions of Northern Virginia is December 31, 1982. If the hot spot analysis shows that the standard cannot be attained by that date, an extension request will be considered when the analysis is submitted. Since an extension until 1987 for attainment of the ozone standard is being approved in this Notice and Virginia has met or is moving towards meeting all requirements for approval of an extension request, EPA believes that it is appropriate to conditionally approve the carbon monoxide portion of the Virginia SIP.

Elsewhere in today's **Federal Register**, EPA is soliciting public comment on the acceptability of the September 30, 1980 deadline for the submittal of the carbon monoxide hot spot analysis and RFP line.

IV. Public Comments on Proposal

In response to the call for public comments in the July 30, 1979 notice of proposed rulemaking for the Virginia nonattainment plan revision, EPA received comments from an automobile manufacturer, a national environmental group, and two State agencies: The Virginia State Air Pollution Control Board (VSAPCB) and the New Jersey Department of Environmental Protection (NJDEP). In addition, another national environmental group co-authored comments with a local environmental group based in the Norfolk, Virginia area.

In addition to these comments specific to the Virginia nonattainment plan revision, EPA received comments from three organizations who requested that their comments be considered with respect to each State's nonattainment plan revision. EPA's responses to the issues raised by these commenters are incorporated herein by reference to the final rulemaking notice that announced EPA's decision regarding the Delaware nonattainment plan revision, 45 FR 14551 (1979). The responses can be found in the section of the Delaware Notice entitled "PUBLIC COMMENTS ON PROPOSAL, (1) National Comments." Complete responses to all three national comments can be found in the Rationale Document referred to at the end of this section.

Due to the large number of comments received, only a summary of the major issues raised and EPA's response is included here. A complete list of all comments and responses can be found in the Rationale Document referenced below. EPA considered all of the comments in making its final decision on

the Virginia nonattainment plan revision.

Summary of Major Issues and EPA Responses

1. Transportation Control Measures. One commenter claimed that transportation control measures have been rejected in the Northern Virginia Plan. No measures have been rejected in the Northern Virginia Plan. The Washington Council of Governments (COG) is reconsidering all 70 measures in the analysis being performed for the 1982 SIP. While the municipalities and counties of Northern Virginia may have deferred commitments on some of the 28 transportation measures COG recommended for the 1979 SIP, they have not been rejected.

The commenter further claimed that the Northern Virginia plan fails to identify other measures necessary for attainment as required by Section 172(b)(11)(C). EPA has carefully examined the Northern Virginia Plan and has concluded that this requirement has been met by inclusion in Chapter IV of COG's plan of a tentative scope and schedule for alternatives analysis.

The commenter also asserted that the Northern Virginia plan that EPA proposed for final rulemaking does not consider nor even mention the requirements to "establish, expand or improve basic transportation needs (BTN) as expeditiously as practicable" and that such BTN plans shall include requirements to use, insofar as necessary, Federal, local and State grants to meet this requirement.

EPA believes that the Northern Virginia plan meets the BTN requirement by, among other things, the inclusion of commitments to metrorail construction expressed by the Washington Metropolitan Area Transit Authority (WMATA) and by the fact that the Washington, D.C. region has been the first region in the country to withdraw uncompleted portions of programmed Interstate Highway Systems and divert the monies for those systems into mass transit alternatives. Additionaly, alterntives to financing Metrorail in Northern Virginia are being considered by the 1980 session of the Virginia Legislature.

2. Inspection and Maintenance (I/M). Several of the commenters supported EPA's identification of basic deficiencies in the I/M portion of Virginia's nonattainment plan revision. Briefly, the deficiencies consist of a lack of a firm commitment on the part of the Commonwealth to consider I/M legislation, lack of a schedule for I/M implementation and the lack of a commitment to achieve a 25% reduction in emissions by 1987. EPA agrees with the comment and is conditionally approving the nonattainment plan revision based on granting an extension until July 1, 1980 for submittal of I/M legislation. The appropriate commitments must be submitted along with the legislation. As noted, above, Virginia submitted I/M legislation to EPA on April 8, 1980.

3. SIP requirements not contained in Part D. Several commenters noted that Virginia did not include regulations implementing certain Sections of the Clean Air Act that are not contained in Part D of the Act. EPA's position on this issue is that the subject sections will be the subject of a future **Federal Register** notice but that failure to implement them at the present has no bearing on the approvability of a nonattainment plan revision.

4. Reasonable Further Progress. The comment was made that the Northern Virginia plan does not provide for adquate Reasonable Further Progress. The commenter recommended that the "objective" line on page 3.5 of the Northern Virginia plan should be revised and identified as the RFP line.

A linear RFP projection is acceptable provided attainment of the NAAQS is achieved by 1987. Also, EPA agrees that the "objective" line in Virginia's plan is the RFP line.

5. RACT as expeditiously as practicable. One commenter, an automobile manufacturer, contended that Virginia's proposed VOC regulations for its Norfolk, Virginia plant constitute RACT even though they are not as stringest as those recommended by EPA. Material was provided by the Company to support this conclusion.

EPA's position on the relationship of the CTG's to the RACT requirement is spelled out in the **Federal Register** notice of September 17, 1979, 44 FR 53761. To summarize this position, a justification for incorporating a regulation less stringest than the recommended RACT can be approved by EPA on a case-by-case basis. In the present case, EPA's evaluation of the material submitted to date shows that this justification cannot be supported. This has resulted in the conditional approval of the Virginia SIP as noted earlier.

6. Common design value for Northern Virginia. A commenter questioned Virginia's use of 0.185 ppm as a design value for the ozone concentration in Northern Virginia, since the Metropolitan Washington Council of Governments (COG) had determined the appropriate design value for the National Capital AQCR to be 0.225 ppm. COG's value was determined as the highest second-high ozone concentration in the AQCR during the last three years, which was the recommended technique prior to February 8, 1979, when the primary and secondary air quality standards for photochemical oxidants were revised (44 FR 8202). At that time, a statistical method was established for determining the "expected" second highest ozone concentration. Using the statistical approach, the Council of Governments determined the design value to be 0.192 ppm. This value has since been accepted by Virginia as the appropriate design value for Northern Virginia and has been used in the demonstration for Northern Virginia contained in the Commonwealth's December 18, 1979 submittal.

7. New Source Review. One commenter noted that the permitting program contained in the Virginia nonattainment plan revision for major sources proposing to locate in nonattainment areas, as required by Section 172(b)(6) of the Act, is deficient in several areas. A summary of the issues and EPA's response to each is given below.

a. The definition of lowest achievable emission rate (LAER) is inadequate in that the definition does not provide specifically that the application of LAER will not allow a new source to emit any pollutant in excess of the amount allowable under an applicable new source performance standard (NSPS).

While Virginia's definition of LAER does not, as pointed out, contain this specific provision, EPA believes that Virginia's regulations as a whole do not exempt any source from meeting any applicable NSPS, and therefore are consistent with Section 171(3) of the Clean Air Act.

b. The definition of reasonable further progress is inadequate in that no definite dates are established by which progress must be made.

EPA agrees that the applicable attainment dates should be reflected in the definition of reasonable further progress. Virginia has agreed to add a reference to these dates, which has resulted in the conditional approval of the nonattainment plan revision (see discussion on this conditional approval above, Section III.10(b)).

c. The apparently unlimited right to a variance from permit requirements is not consistent with the mandate of Section 173 of the Act.

EPA considers a variance to any applicable SIP requirement as a revision to the SIP, and therefore requires Virginia to submit these variances for review and processing as a SIP revision. This, in turn, requires that a variance be consistent with the Clean Air Act, i.e., that an air quality demonstration must accompany the variance, it can be issued only after public notice and hearing, etc. EPA continues to require that variances be submitted for processing as a SIP revision, and that a variance from any permit condition be treated in the same manner. Thus, the right to a variance is by no means unlimited and its issuance can only be accomplished if it is consistent with the requirements of the Clean Air Act.

d. The Virginia regulations do not require offsets to be legally binding prior to operation of the new source.

EPA's review of the permit requirements for new major stationary sources in nonattainment areas contained in the Virginia SIP indicates that there are provisions for making the offsets legally binding, i.e., any source required to reduce emissions in order to provide an offset will be required to meet the lower emission rate as a legally binding permit condition or revised emission limitation. Furthermore, any revised permit/emission limitation for a third party offset must be submitted to EPA as a SIP revision in order to become enforceable under Federal law. The effect of this will be to have an enforceable emission limitation for both the new source and any existing source(s) from which offsets were obtained. That this is, in fact, the way in which the offset provision will work has been confirmed by discussions with VSAPCB staff and by letter dated April 15, 1980. EPA wishes to emphasize that approval of the new source review element of the SIP is based on this interpretation of the offset regulation and that any deviation from this interpretation (as, for example, a case where an offset obtained from a third party is not directly enforceable against that third party) will not be acceptable.

e. The SIP submission contains no explanation of how Virginia will administer the offset program and no specification of what information must be submitted to support a permit application.

A specific explanation of how a program will be administered, and a detailed explanation of the required information for new sources, are not requirements of the Clean Air Act. Virginia has committed adequate resources to carry out the programs described in the SIP, and EPA has no reason to suspect that any of the programs will be administered improperly. As for information required for new sources, Section 2.33(c) of Virginia's regulations adequately addresses this question. In particular, Section 2.33(c)(1)(i) requires that applicable permit forms be filled out. It has been EPA's experience that the forms used by Virginia provide ample information to make the required determinations.

f. The scope of the required review and analysis in Regulation 2.33(k) is far more limited than required by Sections 173 and 172(b)(11) of the Act.

Section 2.33(k) of Virginia's regulation is not intended to meet the requirements for new source review contained in the above-referenced sections of the Act. EPA refers the commenter to Section 2.33(d)(6) of Virginia's regulations which deal with the permit requirements for major stationary sources locating in nonattainment areas.

g. The possible waiver of the testing requirement in Section 2.33(f)(3) for new sources should not be allowed.

In the July 30, 1979 notice of proposed rulemaking, EPA indicated that this possible waiver must be eliminated for sources that are subject to new source performance standards (NSPS). Virginia's September 24, 1979 submittal eliminated the exemption for sources subject to NSPS, which resulted in the conditional approval of this SIP element as noted above. Since granting this waiver would not change any emission limitation that a new source is required to meet, EPA believes that it is not necessary to require the elimination of the waiver provision for sources not covered by NSPS. However, EPA also believes that for most new sources an emissions test is desirable. As a result of the comment, therefore, EPA wishes to make the comment that it has the authority to require any source to perform an emissions test under Section 114 of the Act, whether or not that source has been granted a waiver under Virginia's regulation 2.33(f)(3). The source is still obligated to meet the established emission rate.

h. Oral consent agreements should not be allowed. Virginia has eliminated the reference to oral consent agreements in its September 24, 1979 submittal which has resulted in the conditional approval of the nonattainment plan revision (see the discussion on this conditional approval above, Section III. 10(e)).

8. Commonwealth of Virginia Comments. On August 28, 1979, Virginia submitted extensive comments on EPA's July 30, 1979 notice of proposed rulemaking. Most of the comments dealt with Virginia's response to the deficiencies noted by EPA, and thus responses to most of the comments can be found in the Deficiencies and Remedies section of this Notice. Two issues raised by Virginia are not treated in that section and are thus presented below.

a. Virginia challenged EPA's authority to issue conditional approvals and requested that the Commonwealth be provided with a clear definition of this authority; furthermore, Virginia requested full approval of the Virginia nonattainment plan revision.

EPA's position on conditional approval is explained in **Federal Register** publications dated July 2, 1979, 44 FR 38583, and November 23, 1979, 44 FR 67182. In brief, EPA believes that where a SIP substantially complies with the requirements of Section 172(b), EPA has inherent authority under Section 110(a)(2) and Section 110(a)(3) to approve a SIP on the condition that the State corrects the remaining relatively minor deficiencies in a short period of time. The only available alternative would be to disapprove the SIP and thus invoke the construction moratorium. The construction moratorium was designed by Congress to protect air quality when the State lacks a plan that adequately assures attainment and maintenance of ambient standards. That purpose would not be served when the State plan substantially assures attainment and when remaining deficiencies will be promptly corrected. On the other hand, EPA must assure that all requirements of the Clean Air Act are met. EPA therefore interprets the Act to permit a conditional approval under these circumstances.

In addition, conditional approval is consistent with Section 110(c)(1)(C). That subsection requires the Administrator to promulgate regulations for a State if "the State fails, within 60 days after notification by the Administrator or such later period as he may prescribe, to revise an implementation plan as required pursuant to a provision of its plan referred to in subsection (a)(2)(H)." When the Administrator grants conditional approval, he is essentially notifying the State that further revisions are required to make the plan or regulations fully approvable. If the State fails to satisfy the Administrator's conditions, the Administrator will disapprove the plan or regulations and may then promulgate regulations to correct the deficiency. The State is simply offered the option of correcting the inadequacies itself.

Because the Virginia SIP still contains certain deficiencies, EPA cannot fully approve the SIP at this time.

b. Virginia objected to EPA's incorporation by reference in the July 30, 1979 proposal of an April 4, 1979 **Federal Register** notice entitled "General Preamble for Proposed Rulemaking on Approval of Plan Revisions for Nonattainment Areas." Virginia claims that this material did not meet the requirements of the Administrative

Procedures Act, was not the subject of public hearings in Virginia, and could be construed as "piggybacking" on the Virginia SIP since the material was published three months after Virginia submitted its plan.

EPA believes that Virginia's objections are not supportable. The General Preamble contains a complete description of the general criteria EPA uses to decide whether a SIP meets the requirements of Part D. Notice and comment on these criteria is not necessary because the criteria merely are proposals—interested persons were specifically invited to comment on the validity of the criteria and on the application of those criteria to each SIP in the context of each EPA approval/disapproval rulemaking. Hearings in Virginia also were not necessary, since the hearing requirement of Section 110(a)(2) refers to hearings on the *State* plan, not the federal criteria. Finally, EPA did not intend to "piggyback" the General Preamble on the Virginia SIP; EPA merely announced its criteria so that the public, and Virginia, could comment on them. In this context, it should be noted that many of these criteria were previously published on May 19, 1978, 43 FR 21073.

9. Comments from the State of New Jersey. The Department of Environmental Protection of the State of New Jersey (NJDEP) made a number of comments on Virginia's ozone SIP. In summary, the major issues raised deal with transport (that the influx of ozone precursors from attainment and unclassifiable areas significantly affects New Jersey and therefore control measures should be applied statewide and not just in nonattainment areas); unclassifiable areas (rural areas in Virginia have improperly been designated as unclassifiable); and equity (lax nonattainment designations in Virginia and other States place an undue burden on New Jersey).

The Administrator considered all of New Jersey's objections to the designations and responded in the document entitled "Technical Support Document for Agency Policy Concerning Designation of Attainment, Unclassified, and Nonattainment Areas for Ozone" January 1979. Availability of this document was announced in the February 1, 1979 Federal Register (44 FR 6395). This document and the Administrator's response to New Jersey's comments are incorporated herein by reference. Since Virginia has applied RACT to the CTG sources in the urban nonattainment areas and certified that there are no 100 ton sources to which the CTG's apply in the rural nonattainment areas, Virginia has satisfied the Part D requirements for the ozone SIP and there is no basis for disapproval.

EPA encourages anyone interested in a more complete and thorough discussion of the public comments and EPA's responses to consult the Rationale Document prepared by the Agency for the conditional approval of the Virginia nonattainment plan revision which is available for public inspection at the locations identified in the Addresses section of this notice. The Rationale Document contains a complete discussion of the comments received and EPA's response to them.

V. EPA Actions

In accordance with the procedures described in the "Introduction" Section of this Notice, EPA conditionally approves the nonattainment SIP revision submitted by Virginia for the Roanoke, Stafford County, Richmond, Peninsula, Southeastern Virginia and Northern Virginia nonattainment areas. Those portions of the plan upon which no conditions have been placed are granted final approval and are effective immediately.

The State has committed to satisfying all of the required conditions by the dates outlined below, which are proposed elsewhere in today's Federal Register. The Virginia nonattainment plan revision may be considered for full approval if the following actions are taken by the dates specified. It should be noted that the actions are required for *each* nonattainment area unless specifically noted otherwise.

A. Virginia's Submissions Remedying Noted Deficiencies

As described above in the Deficiencies and Remedies section, Virginia submitted plan revisions on September 7, September 24, and December 18, 1979 intended, among other things, to remedy a number of deficiencies noted in EPA's July 30, 1979 notice of proposed rulemaking.

Those portions of the later submittals that remedy noted deficiencies are hereby approved, and are listed below:

1. September 7, 1979 SIP submittal:
(a) Section 2.33(g)(1)(vi) of the regulations, the exemption of sources with a potential to emit less than one ton per year.

2. September 24, 1979 SIP submittal:
(a) Section 4.57(b)(2)(ii) of the regulations, relating to an exemption from the cutback asphalt requirement.
(b) Section 4.55(f)(4)(i) of the regulations, relating to the emission limitation for end sealing compound coating of cans.
(c) Section 4.56(e) of the regulations, relating to bulk plant vapor control requirements.
(d) Section 4.52(a) of the regulations, deleting the provision for repeal of Section 4.52.
(e) Section 2.03(a)(1) of the regulations, deletion of the wording allowing oral consent agreements.
(f) Section 2.33(f)(3) of the regulations, deleting the source testing waiver for sources subject to NSPS.
(g) Modification of the phrase "will be considered acceptable compliance by the Board" as it appears in Sections 4.54, 4.55 and 4.56 of the regulations.
(h) Part I of the regulations, the definition of "Delayed Compliance Order".
(i) Sections 4.02(f)(1) through 4.02(f)(5) and Appendix N of the regulations, categorical compliance schedules for sources of volatile organic compounds.
(j) Part I of the regulations, the modified definition of "nonattainment area."

3. December 18, 1979 SIP submittal:
(a) Chapter 3, Control Strategy Demonstration, design value for Northern Virginia.

B. Noted Deficiencies That Have Not Been Remedied

1. Margin for Growth. A system for tracking emissions growth is to be submitted by September 30, 1980.

2. RACT as expeditiously as practicable. The RACT deficiencies are to be remedied according to the following schedule:

- Not later than September 30, 1980: Adequate justification or draft revised regulations are to be submitted.
- Not later than November 30, 1980: Final regulations, where applicable, are to be submitted.

The following regulations contain RACT deficiencies that must be remedied:

a. The emission limitation on automobile and light duty truck coating in Section 4.55(e)(2).

b. The exemption from Stage I vapor controls for gasoline service stations with a throughput of less than 20,000 gallons per month, contained in Section 4.56(d)(3)(ii) (For Richmond only).

c. The general exemption for sources of VOC emissions contained in Section 4.54(a)(4)(i), as it applies to Section 4.54(c) dealing with Solvent Metal Cleaning (For Richmond and Northern Virginia only).

d. The regulations covering cutback asphalt paving in Section 4.57(b) must be remedied to correct two deficiencies:
(i) The maximum allowable solvent content of emulsified asphalt of 15 percent is not RACT.

(ii) Allowing the use of cutback asphalt as a tack coat is not allowed under RACT.

3. Inspection and Maintenance (I/M). Adequate I/M legislation is to be submitted by July 1, 1980. The SIP must include, as a minimum, a schedule for implementation of the I/M program and a clear commitment to implement and enforce the program and to reduce emissions by 25% by 1987. Specifically, the SIP should include a commitment to require retesting of vehicles initially failing the annual emissions test, along with a commitment to prohibit registration or provide some equally effective mechanism to prevent vehicles not complying with applicable emission requirements from operating on public roads.

3. Enforceability. a. Acceptable test methods and procedures for determining compliance with Sections 4.54, 4.55, 4.56 and 4.57 are to be submitted by September 30, 1980.

b. An acceptable definition of "reasonable further progress" must be submitted by September 30, 1980.

5. Conformity Requirement. Commitments must be adopted by each lead agency and MPO in the Northern Virginia, Richmond, Peninsula, and Southeastern Virginia areas that no project, program, or plan will be approved that does not conform with the SIP. These commitments must be adopted by the designated lead agencies and MPOs, be endorsed by the State, and be submitted to EPA by September 30, 1980.

6. Carbon Monoxide. A "hot spot" analysis for carbon monoxide, as well as a line of reasonable further progress is to be submitted for the carbon monoxide nonattainment areas by September 30, 1980.

C. Other Actions Being Taken by EPA

1. Virginia's request for an extension for attainment of the ozone standard for the Richmond and Northern Virginia nonattainment areas is approved. Attainment of the .12 ozone standard must be achieved in the Northern Virginia and Richmond areas by December 31, 1987. The request for an extension for attainment of the ozone standard is no longer necessary for all other nonattainment areas in Virginia, and therefore attainment of the .12 ppm ozone standard must be achieved in these other areas by December 31, 1982.

2. The portions of the Virginia nonattainment plan revision dealing with implementation of the "bubble" concept, namely Section 4.55(b), are not adequately enforceable and are therefore disapproved. Since implementation of this concept is not a Part D requirement, disapproval of Section 4.55(b) does not require the disapproval of Virginia's nonattainment plan revision.

3. EPA hereby approves Section 2.33 as submitted on the dates shown below:

	Submittal date	Date of proposed rulemaking
Section 2.33:		
(a) General	Jan. 12, 1979	July 30, 1979.
(b) Applications	Aug. 14, 1975	Nov. 19, 1975.
(c) Information Required.	Jan. 12, 1979	July 30, 1979.
(d) Standards/Conditions for Granting Permits.	Jan. 12, 1979	July 30, 1979.
(e) Action on Permit Application.	Jan. 12, 1979	July 30, 1979.
(f) Emission Testing for Stationary Sources.	Jan. 12, 1979 Sept. 7, 1979	July 30, 1979. July 10, 1979
(g) Exceptions	Jan. 12, 1979 Sept. 7, 1979	July 30, 1979. July 30, 1979
(h) Revocation of Permit.	Aug. 31, 1977	June 8, 1978.
(i) Existence of Permit No Defense.	Aug. 14, 1975	Nov. 19, 1975.
(k) Application Review and Analysis.	Jan. 12, 1979	July 30, 1979.

Federal Register Citations:
November 19, 1975: 40 FR 53595
June 8, 1978: 43 FR 24858
July 30, 1979: 44 FR 44564

Sections 2.33(j) and (i) relate only to Indirect Sources and have not been submitted to EPA for consideration as SIP revisions.

4. Finally, EPA is taking no action in this notice for the Smyth County nonattainment area, which is currently being considered for redesignation to attainment due to the recent change in the NAAQS for ozone to .12 ppm. Until this redesignation undergoes Final Rulemaking, the SIP for Smyth County will not be approve.

EPA finds that good cause exists for making this action immediately effective. EPA has a responsibility to take final action on these revisions as soon as possible in order to lift growth restrictions in those areas for which Virginia has submitted adequate plans in accordance with Part D requirements.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized." I have reviewed this regulation and determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

(42 U.S.C. 7401–642)

Dated: August 6, 1980.

Douglas M. Costle,
Administrator.

Title 40, Part 52 of the Code of Federal Regulations is amended as follows:

Subpart VV—Virginia

1. In Section 52.2420, paragraphs (c)(27) and (c)(28) are added as follows:

§ 52.2420 Identification of plan.

* * * * *

(c) * * *

(27) On January 12, 1979 the Governor submitted the nonattainment area plans for Virginia with respect to ozone and carbon monoxide. On September 7, September 24, and December 18, 1979, the Governor submitted SIP revisions intended in part to remedy deficiencies in the nonattainment area plans.

(28) On August 14, 1975, August 31, 1977, January 12, 1979, September 7, 1979 and September 24, 1979 the Governor submitted SIP revisions relative to § 2.33 of the Virginia Regulations.

2. In § 52.2422 paragraph (c) is added as follows:

§ 52.2422 Extensions.

* * * * *

(c) The Administrator hereby extends to December 31, 1987 the attainment date for ozone in the Virginia portion of the National Capital Interstate AQCR and in the Richmond City, Chesterfield County and Henrico County portions of the State Capital Intrastate AQCR.

3. In § 52.2423, paragraphs (c), (d), (e) and (f) are added as follows:

§ 52.2423 Approval status.

* * * * *

(c) With the exceptions set forth in this subpart, the Administrator approves Virginia's plan for the attainment and maintenance of national standards under Section 110 of the Clean Air Act. Furthermore, the Administrator finds that the plan satisfies all requirements of Part D, Title 1, of the Clean Air Act as amended in 1977, except as noted below in § 52.2431. In addition, continued satisfaction of the requirements of Part D for the ozone portion of the SIP depends on the adoption and submittal, by each subsequent January following January 1980, of additional RACT requirements for sources covered by CTGs issued by the previous January.

(d) The following portions of Virginia's September 7, September 24, and December 18, 1979 submittals are approved:

(1) September 7, 1979 submittal: Section 2.33(g)(1)(vi) of the regulations.

(2) September 24, 1979 submittal, the following Sections of Virginia's

regulations: Sections 4.57(b)(2)(ii);

possible redesignation of the area to

(i) The emission limitation on

6. In § 52.2436, paragraph (b) is added

USEPA has received questions

regulations: Sections 4.57(b)(2)(ii); 4.55(f)(4)(i); 4.56(e); 4.52(a); 2.03(a)(1); 2.33(f)(3); Part I of the regulations, the definitions of "Delayed Compliance Order" and "Nonattainment Area;" Sections 4.02(f)(1) through 4.02(f)(5); Appendix N; and those portions of Sections 4.54, 4.55 and 4.56 where the phrase "will be considered acceptable compliance by the Board" has been modified.

(3) December 18, 1979 submittal: Chapter 3, Control Strategy Demonstration, design value for Northern Virginia.

(e) The portion of the January 12, 1979 SIP submittal pertaining to Smyth County is not approved, pending a possible redesignation of the area to attainment status.

(f) The following portions of Virginia's August 14, 1975, August 31, 1977 and January 12, 1979 submittals as they relate to Section 2.33 are approved:

(1) August 14, 1975 submittal: Sections 2.33(b) and (i).

(2) August 31, 1977 submittal: Section 2.33(h).

(3) January 12, 1979 submittal: Sections 2.33 (a), (c), (d), (e), (f), (g) and (k).

4. Section 52.2429 is revised as follows:

§ 52.2429 Attainment dates for National Standards.

* * * * *

Air quality control region	Pollutant						
	Particulate matter		Sulfur dioxides		Nitrogen oxide	Carbon monoxide	Ozone
	Primary	Secondary	Primary	Secondary			
Eastern Tennessee-Southwestern Virginia Interstate.	a	a	b	b	e	e	e

b. Remainder of AQCR	a	a	b	b	d	d	[2]g

NOTE.—Dates or footnotes which are italicized are prescribed by the Administrator because the plan did not provide a specific date or the date provided was unacceptable.

a. June 1975.
b. June 1972.
c. July 1975.
d. Air quality levels presently below primary standards.
e. Air quality levels presently below secondary standards.
f. December 31, 1982.
g. December 31, 1987.

Sources subject to plan requirements and attainment dates established under Section 110(a)(2)(A) prior to the 1977 Clean Air Act Amendments remain obligated to comply with those requirements by the earlier deadlines. The earlier attainment dates are provided as numeric footnotes in this chart (40 CFR 52.2429, 1979).

[1] Air quality levels previously below secondary standard.
[2] The previous attainment date was January 1975.
[3] The previous attainment date was May 31, 1977.

5. In § 52.2431 the words "photochemical oxidants" should be replaced with "ozone". Paragraph (d) is also added as follows:

§ 52.2431 Control Strategy: Carbon Monoxide and Ozone.

* * * * *

(d) The nonattainment plan for Carbon Monoxide and Ozone is approved provided that the following conditions are satisfied:

(1) *Margin for Growth.* A system for tracking emissions growth must be sumitted.

(2) *RACT as expeditiously as practicable.* The following regulations contain RACT deficiencies that must be remedied:

(i) The emission limitation on automobile and light duty truck coating in Section 4.55(e)(2).

(ii) The exemption from Stage I vapor controls for gasoline service stations with a throughput of less than 20,000 gallons per month, contained in Section 4.56(d)(3)(ii) (For Richmond only).

(iii) The general exemption for sources of VOC emissions contained in Section 4.54(a)(4)(i), as it applies to Section 4.54(c) dealing with Solvent Metal Cleaning (For Richmond and Northern Virginia only).

(iv) The regulations covering cutback asphalt paving in Section 4.57(b) must be remedied to correct two deficiencies: first, the maximum allowable solvent content of emulsified asphalt of 15% is not RACT; second, allowing the use of cutback asphalt as a tack coat is not allowed under RACT.

(3) *Inspection and Maintenance (I/M).* Adequate I/M legislation must be submitted. The SIP must include, as a minimum, a schedule for implementation of the I/M program and a clear commitment to implement and enforce the program and to reduce emissions by 25% by 1987. Specifically, the SIP should include a commitment to require retesting of vehicles initially failing the annual emissions test, along with a commitment to prohibit registration or provide some equally effective mechanism to prevent vehicles not complying with applicable emission requirements from operating on public roads.

(4) *Enforceability.* (i) Acceptable test methods and procedures for determining compliance with Sections 4.54, 4.55, 4.56 and 4.57 must be submitted.

(ii) An acceptable definition of "reasonable further progress" must be submitted.

(5) *Conformity Requirement.* Commitments must be adopted by each lead agency and Metropolitan Planning Organization (MPO) in the Northern Virginia, Richmond, Peninsula, and Southeastern Virginia areas that no project, program, or plan will be approved that does not conform with the SIP. These commitments must be adopted by the designated lead agencies and MPOs, be endorsed by the State, and be submitted to EPA.

(6) *Carbon Monoxide.* A "hot spot" analysis for Carbon Monoxide, as well as a line of reasonable further progress, must be submitted for the Carbon Monoxide nonattainment areas.

6. In § 52.2436, paragraph (b) is added as follows:

§ 52.2436 Rules and regulations.

* * * * *

(b) The requirements of § 51.22 are not met with respect to Section 4.55 (b) of the Virginia regulations, because the regulation is not adequately enforceable. Therefore, Section 4.55(b) is disapproved.

BILLING CODE 6560-01-M

---

40 CFR Part 52

[FRL 1577-4]

Approval and Promulgation of Illinois State Implementation Plan for Ozone

AGENCY: U.S. Environmental Protection Agency.

ACTION: Correction and clarification of final rulemaking.

SUMMARY: On February 21, 1980 (45 FR 11472), the U.S. Environmental; Protection Agency (USEPA) announced final rulemaking on revisions to the Illinois State Implementation Plan (SIP). This notice clarifies USEPA's final actions on Rule 205 of the Illinois Air Pollution Regulations in areas of the State which are attaining the National Ambient Air Quality Standard (NAAQS) for ozone. This notice also corrects an error in the codification of Rule 205. Rule 205 contains statewide controls for stationary sources of volatile organic compounds (VOC).

FOR FURTHER INFORMATION CONTACT: Judy Kertcher, Regulatory Analysis Section, Air Programs Branch, USEPA Region V, 230 S. Dearborn Street, Chicago, Illinois 60604, (312) 886-6038.

SUPPLEMENTARY INFORMATION: On February 21, 1980 (45 FR 11472), USEPA announced final rulemaking on revisions to the Illinois SIP. These revisions were submitted by the State to satisfy Part D of the Clean Air Act, as amended in 1977. Part D contains requirements for areas designated as not attaining the NAAQS. Some of the revisions submitted by the State apply statewide. Therefore, they apply to areas attaining the NAAQS as well as to areas not attaining the NAAQS. Rule 205 of the Illinois Air Pollution Regulations is one of the revisions which applies statewide. It contains reasonably available control technology (RACT) requirements for stationary sources of VOC. Since the February 21, 1980 final rulemaking, USEPA has received questions concerning its final action on Rule 205 particularly as it applies to attainment areas. This Notice clarifies USEPA's final action and corrects an error in the codification.

Clarification of Final Rulemaking

Clarification of USEPA's final rulemaking is necessary because some of the Clean Air Act's requirements differ for attainment and nonattainment areas. Rule 205 is approvable in attainment areas and conditionally approvable in nonattainment areas. The minor deficiencies in Rule 205 relate to the Part D nonattainment area requirement for reasonably available control technology (RACT) on major sources. There is no RACT requirement for attainment areas. Consequently, USEPA approved Rule 205 in designated attainment areas, with the exception of compliance schedule in Rule 205(j) discussed below. This approval is codified at 40 CFR 52.722 (45 FR 11472, 11493) which states that the Administrator approves the plan identified at 40 CFR 52.720 (45 FR 11472, 11493) with the exceptions set forth in the subpart. No exceptions were contained in the subpart. In designated nonattainment areas, USEPA conditionally approved Rule 205. The conditions for approval are codified at 40 CFR 52.726 (45 FR 11472, 11494).

Correction of Final Rulemaking

In its final rulemaking, USEPA disapproved the compliance schedule in Rule 205(j) as it applies to loading rack controls for all emission sources subject to Rule 205(b)(1), as approved by USEPA on May 31, 1972, which required compliance by December 31, 1973. The disapproval applies statewide. In USEPA's final rulemaking, the disapproval of Rule 205(j) was incorrectly listed as a Part D action in the codification section (45 FR 11472, 11494). This notice corrects that error.

Since this rule clarifies regulatory language and does not alter the legal requirements established on February 21, 1980, USEPA finds that notice and comment are unnecessary. See 5 U.S.C. 553(b)(A)(B).

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized". I have reviewed this regulation and determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

Dated: August 12, 1980.

John McGuire,
Regional Administrator.

Title 40 of the Code of Federal Regulations, Chapter I, Part 52 is amended as follows:

(1) Section 52.726(b) is revised as follows:

§ 52.726 Control strategy: Ozone.

* * * * *

(b) Disapproval—USEPA disapproves the compliance schedule in Rule 205(j) as it applies to loading rack controls for all emission sources subject to Rule 205(b)(1), as approved by USEPA on May 31, 1972 which were required to be in compliance by December 31, 1973. This disapproval does not in and of itself result in the growth restrictions of section 110(a)(2)(I).

40 CFR Part 180

[FRL 1578; PP OF2374/R272]

Tetrahydro-5,5-Dimethyl-2(1H)-Pyrimidione (3-(4-(Trifluoromethyl)Phenyl)-1-(2-(4-(Trifluoromethyl)Phenyl)Ethenyl)-2-Propenylidene)Hydrazone

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for residues of the insecticide tetrahydro-5,5-dimethyl-2(1*H*)-pyrimidinone(3-(4-(trifluoromethyl)phenyl)-1-(2-(4-(trifluoromethyl)phenyl)ethenyl)-2-propenylidene)hydrazone in or on pasture and rangeland grass and grass hay at 0.05 part per million (ppm). This regulation was requested by American Cyanamid Co. This rule establishes the maximum permissible level of the residues of the insecticide on pasture and rangeland grass and grass hay.

DATES: Effective on August 19, 1980.

Comments must be submitted on or before September 18, 1980.

ADDRESS: Written comments to: George T. LaRocca, Product Manager (PM) 15, Registration Division (TS-767), Office of Pesticide Programs, Rm. E-329, Environmental Protection Agency, 401 M St. SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT: George T. LaRocca (202-426-9490) at the above address.

SUPPLEMENTARY INFORMATION: On July 23, 1980 a notice was published in the **Federal Register** (45 FR 49147) that American Cyanamid Co., Agricultural

Div., PO Box 400, Princeton, NJ 08540 had filed a pesticide petition (PP OF2374) with the EPA. The petition proposed to amend 40 CFR Part 180 by establishing a tolerance limitation for residues of tetrahydro-5,5-dimethyl-2(1*H*)-pyrimidinone(3-(4-(trifluoromethyl)phenyl)-1-(2-(4-(trifluoromethyl)phenyl)ethenyl)-2-propenylidene)hydrazone in or on forage grasses at 0.05 ppm. No comments were received in response to this notice of filing. Since no residue data were submitted on other than grasses *per se*, American Cyanamid, at our request, revised their initial proposal in terms of "grass" and "grass hay" (pasture and rangeland).

The data submitted in the petition have been evaluated. The toxicology data considered in support of the proposed tolerances included an acute oral toxicity study in rats (both sexes) with an LD_{50} of 1,213 milligrams (mg)/kilogram (kg) of body weight (bw); an Ames test which was negative; a dominant lethal test in rats which was negative at 30 mg/kg of bw/day; a teratology study in rats which was negative at 30 mg/kg of bw/day, and which had a no-observed-effect level (NOEL) of 3 mg/kg of bw/day for fetotoxicity; 90-day feeding studies in rats and dogs with NOEL's of 50 ppm and 3 mg/kg of bw/day, respectively; and, a 26-week feeding study in dogs with a NOEL of 0.33 mg/kg of bw/day.

Desirable toxicology data that are currently lacking from the petition include a 24-month chronic toxicity/oncogenicity study in a mammalian species, an 18-month oncogenicity study in a mammalian species, and a three-generation reproduction study in rats and a second teratology study. However, this petition included interim reports on a three-generation rat reproduction study in progress with a report on the Fo generation which suggests a NOEL of 50 ppm, and six-month status reports for both the 18-month oncogenicity feeding study in mice, and the 24-month chronic toxicity/oncogenicity feeding study in rats, both currently in progress. In a letter of July 18, 1980 the petitioner indicated that the final reports on the three-generation rat reproduction study would be made available to the Agency in October 1981, the 18- and 24-month feeding studies would be made available by May and November 1981, respectively, and the second teratology study would be made available by April 1981. In a letter of July 31, 1980, the petitioner has agreed to withdraw the proposed uses from the label should adverse findings develop from the above studies.

For purposes of the proposed uses, the metabolism of the subject insecticide is considered adequately understood, and an adequate analytical method (gas-liquid chromatography using an electron capture detector) is available for enforcement purposes. Since the proposed use consitutes essentially a "no residue" situation on grass and grass hay (0.05 ppm) it is concluded that there is no reasonable expectation of secondary residues in milk, meat, fat, and meat by-products of cattle, goats, hogs, horses, and sheep. In a July 18, 1980 letter, the petitioner indicated a cattle feeding study is currently in progress that will be made available to the Agency by December 1980, in support of this conclusion.

Whether or not the product will be conditionally registered under Section 3(c)(7)(c) of the Federal Insecticide, Fungicide, and Rodenticide Act as amended will depend on a finding that the registration will be in the public interest. This issue will be addressed in association with the registration review.

The pesticide is considered useful for the purpose for which the tolerances are sought, and it is concluded that tolerances of 0.05 ppm in or on "grass" and "grass hay" (pasture and rangeland) will protect the public health. It is concluded, therefore, that the tolerances be established as set forth below.

Any person adversely affected by this regulation may, on or before September 18, 1980 file written objections with the Hearing Clerk, EPA, Rm. M-3708 (A-110), 401 M Street, SW, Washington, D.C. 20460. Such objections should be submitted in quintuplicate and specify the provisions of the regulation deemed to be objectionable and the grounds for the objections. If a hearing is requested the objections must be supported by grounds legally sufficient to justify the relief sought.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other "specialized" procedures. This regulation has been reviewed and it has been determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

Effective date: August 19, 1980.

(Sec. 408(d)(2), 68 Stat. 514 (21 U.S.C. 346a(e))

Dated: August 12, 1980.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

Therefore, Subpart C of 40 CFR Part 180 is amended by adding § 180.395 to read as follows:

§ 180.395 Tetrahydro-5,5-dimethyl-2(1H)-pyrimidinone(3-(4-trifluoromethyl)phenyl)-1-(2-(4-(trifluoromethyl)phenyl)ethenyl)-2-propenylidene)hydrazone; tolerances for residues.

Tolerances are established for residues of the insecticide tetrahydro-5,5-dimethyl-2(1*H*)-pyrimidinone(3-(4-(trifluoromethyl)phenyl)-1-(2-(4-(trifluoromethyl)phenyl)ethenyl)-2-propenylidene)hydrazone in or on the following raw agricultural commodities:

Commodity:	Parts per million
Grass (pasture and rangeland)	0.05
Grass hay (pasture and rangeland)	0.05

Certain Inert Ingredients in Pesticide Formulations

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes an exemption from the requirement of a tolerance for certain additional inert (or occasionally active) ingredients in pesticide formulations. The regulation was requested by various firms. This rule will permit the use of the exempted inerts in registered pesticide products.

DATES: Effective on August 19, 1980.

Comments must be submitted September 18, 1980.

ADDRESS COMMENTS TO: Gary Burin, Hazard Evaluation Division (TS-769), Office of Pesticide Programs, Environmental Protection Agency, Rm. 816, Crystal Mall No. 2, 401 M St. SW., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Gary Burin, (202/577-3710) at the above address.

SUPPLEMENTARY INFORMATION: Notice was published on May 30, 1980 (45 FR 36438) that several interested persons proposed to amend 40 CFR 180.1001 by exempting certain additional pesticide chemicals which are inert (or occasionally active) ingredients in pesticide formulations from the tolerance requirements. No comments or requests for referral to an advisory committee were received by the Agency with regard to this notice. It has been concluded that the amendment will protect the public health and therefore, that the amendment to the regulation should be adopted as set forth below.

Any person adversely affected by this regulation may on or before September

18, 1980 file written objections with the Hearing Clerk, EPA, Rm. M-3708 (A-110), 401 M Street, SW, Washington, DC 20460. Such objections should be submitted in quintuplicate and specify the provisions of the regulation deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other development procedures. EPA labels these other regulations "specialized". This regulation has been reviewed and it has been determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

Effective date: August 19, 1980.

(Sec. 408(e), 68 Stat. 514, (21 U.S.C. 346a(e))

Dated: August 11, 1980.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

Therefore, Subpart D of 40 CFR Part 180 is amended by alphabetically inserting the items "Charcoal, activated * * *" and "Corn dextrin * * *" in paragraph (c) and by revising the item "Styrene-maleic anhydride copolymer, ester derivative * * *" under limitations in paragraph (d), of § 180.1001 to read as follows:

§ 180.1001 Exemption from the requirement of a tolerance.

* * * * * *

(c) * * *

Inert ingredients	Limits	Uses
Charcoal, activated	Meets specifications in the Food Chemical Codex.	Carrier.
Corn dextrin		Solid diluent, carrier.

(d) * * *

Inert ingredients	Limits	Uses
Styrene-maleic anhydride copolymer, ester derivative.	Limited to 3% of the formulation.	Suspending or dispersing agent. For preemergence use and use prior to formation of edible parts of plant.

Tolerances and Exemptions From Tolerances for Pesticide Chemicals in or on Raw Agricultural Commodities; Oxalic Acid

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This rule establishes an exemption from the requirement of a tolerance for the inert (or ocassionally active) ingredient oxalic acid in pesticide formulations. The regulation was requested by Monsanto Agricultural Products Co. This regulation will permit the registration of pesticide formulations containing oxalic acid.

DATES: Effective on August 19, 1980.

Comments must be submitted by September 18, 1980.

ADDRESS: Comment to Gary Burin, Hazard Evaluation Division (TS-769), Office of Pesticide Programs, Environmental Protection Agency, Crystal Mall No. 2, 1921 Jefferson Davis Hwy., Arlington, VA 20460.

FOR FURTHER INFORMATION CONTACT: Gary Burin (703-557-3710) at the above address.

SUPPLEMENTARY INFORMATION: Notice was published on June 4, 1980 (45 FR 37700) that Monsanto Agricultural Products Co., submitted a proposal requesting to amend 40 CFR 180.1001 by exempting oxalic acid, which is an inert (or occasionally active) ingredient, in pesticide formulations from the requirement of a tolerance. No comments or requests for referral to an advisory committee were received by the Agency with regard to this notice. It has been concluded that the amendment will protect the public health, and therefore, the amendment to the regulation should be adopted as set forth below.

Any person adversely affected by this regulation may, on or before September 18, 1980 file written objections with the Hearing Clerk, EPA, Rm. M-3708 (A-110), 401 M St., SW, Washington, DC 20460. Such objections should be submitted in quintuplicate and specify the provisions of the regulation deemed objectionable and the grounds for the objections. If a hearing is requested, the objections must state the issues for the hearing. A hearing will be granted if the objections are supported by grounds legally sufficient to justify the relief sought.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the Order or whether it may follow other development procedures. EPA labels these other regulations "specialized". This regulation has been reviewed and it has been determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

(Sec. 408(e), 68 Stat. 514 (21 U.S.C. 346a(e))

Dated: August 11, 1980.

Edwin L. Johnson,

Deputy Assistant Administrator for Pesticide Programs.

Therefore, Subpart D of 40 CFR Part 180 is amended by alphabetically inserting "Oxalic acid * * *" in the table in paragraph (c) of § 180.1001 to read as follows:

§ 180.1001 Exemptions from the requirement of a tolerance.

* * * * * *

Effluent Guidelines and Standards, Electroplating Point Source Category, Pretreatment Standards for Existing Sources; Correction

AGENCY: U.S. Environmental Protection Agency.

ACTION: Correction to final rule.

SUMMARY: This document corrects the previous correction to the Agency's Electroplating pretreatment final regulation that appeared in the Federal Register on Tuesday, March 25, 1980, (45 FR 19245).

DATE: This correction is effective August 19, 1980.

FOR FURTHER INFORMATION CONTACT: Dwight Hlustick, Effluent Guidelines Division (WH-552), Environmental Protection Agency, 401 M Street, SW., Washington, D.C. 20460, (202) 426-2582.

SUPPLEMENTARY INFORMATION: The regulation was originally published in final form on September 7, 1979, (44 FR 52590) and first corrected on October 1, 1979, (44 FR 56330). On March 25, 1980, another correction was published in the Federal Register. In this notice, EPA corrected 8413.01(a). However, in doing so EPA inadvertently omitted the letter designating subsection "(a)" of § 413.01 from the correction, implying that the Agency intended to delete subsections (b) and (c). By today's correction, the Agency clarifies that §§ 413.01(b) and 413.01(c) were not deleted by the correction of March 25, 1980. They have not been changed and remain as promulgated on September 7, 1979.

DATE: This correction is effective August 19, 1980.

FOR FURTHER INFORMATION CONTACT: Dwight Hlustick, Effluent Guidelines Division (WH-552), Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460, (202) 426-2582.

Correction

§ 413.01 [Corrected]

1. On page 19246 in the Federal Register for Tuesday, March 25, 1980, the correction for § 413.01 is corrected to read:

"1. Section 413.01(a) has been corrected to read as set forth below."

2. The first sentence of § 413.01 which previously read:

"This part shall apply * * *" has been corrected to read:

"(a) This part shall apply * * *"

Dated: August 5, 1980.

Adopted: August 1, 1980.

Released: August 14, 1980.

In the matter of Spectrum Management: Establishment of First Regional Spectrum Management Center in Chicago, Illinois and Amendment of Parts 1, 2, 21, 74, 89, 91, 93, and 95 of the Commission's Rules Relating to Land Mobile Allocations and Assignments, Docket No. 19150. See 37 FR 28419, December 23, 1972.

1. On February 9, 1970, the Commission approved the establishment of a Spectrum Management Task Force with responsibilities for developing and testing a regional spectrum management program. Chicago, Illinois was selected as the location of the first regional center, and the Spectrum Management Task Force proceeded to develop a program to study techniques which might lead to more efficient and effective frequency assignment and licensing approaches.[1]

2. In 1971 the Commission proposed, and adopted in its First *Report* and *Order* in Docket 19150 rules establishing new systems, techniques, and methodologies in the radio spectrum allocated for Land Mobile purposes.[2] These approaches were confined in applicability to an area of approximately 96,000 square miles with Chicago, Illinois at the approximate center. Among other things, the Commission adopted the use of a new application form—FCC Form 425—to permit the establishment and construction of the data base which was to be used in the spectrum management study. All licensees in the Chicago Region [3] were required to use this form.

The Commission further required all applicants for frequencies in the 470-512 MHz band to also use FCC Form 425.[4]

3. In September of 1975 the responsibility and administration of the Chicago Office and most operational aspects, were transferred to the Safety and Special Radio Services Bureau (now Private Radio Bureau). The Commission also undertook a long-term evaluation of the Chicago Regional program and in June 1976, decided to direct its energies and resources to the development of a national land mobile data base rather than continue with a regional approach.

4. Most applicants and licensees in the Chicago Region still continue, however, to submit the Form 425 when seeking new, modified and renewal applications.[5] Additionally, all

[1] See generally *Notice of Proposed Rule Making, Docket No. 19150, 27 FCC 400 (1971); First Report and Order, Docket No. 19150, 32 FCC 2d 347 (1971).*

[2] Id.

[3] The Chicago Region was defined in rules adopted in the *First Report & Order, supra* and extended approximately 175 miles in radius from Chicago. The region included parts of Illinois, Indiana, Michigan, Wisconsin, Iowa and Ohio.

[4] See First Report & Order at 340.

[5] The rules have since been amended to delete references which require the use of the Form 425 in the Broadcast and Common Carrier Radio Services.

applicants for frequencies in the 470-512 MHz band still use this form.

5. Since the Chicago Regional experiment has terminated, the Commission has decided that continued reference to the Chicago Region in the private land mobile radio services rules (Part 90) is no longer warranted. We also have concluded that a uniform approach to receiving and processing applications is more convenient to all parties, and will reduce the administrative burden of maintaining two separate processing procedures and data bases. Additionally, FCC Form 425 is more complex, and therefore it requires more of the applicant's time to provide the information. The rationale [6] for the complex information having been rendered moot by previous Commission decisions,[7] there is no longer any substantive reasons to require two different forms. Therefore, in the future, all licensees and applicants seeking authorizations under Part 90 of our rules should use standard FCC Form 400.[8]

6. We are, therefore, eliminating all references in our rules to the Chicago Region and the requirement to use FCC Form 425. Use of the FCC Form 400 for affected parties will become optional August 1, 1980, and mandatory September 1, 1980.

7. These amendments are procedural in nature and will impose no burdens on licensees and applicants. Therefore the prior notice and effective date provisions of section 4 of the Administrative Procedure Act, 5 U.S.C. 553, are inapplicable.

8. It is, therefore, ordered pursuant to the authority contained in sections 4(i) and 303(r) of the Communications Act of 1934, as amended, That the rules contained in the attached Appendix are adopted effective August 1, 1980. It is further ordered that the proceeding in Docket No. 19150 is terminated.

(Secs. 4, 5, 303, 48 Stat., as amended, 1066, 1068, 1082; (47 U.S.C. 154, 155, 303))

Federal Communications Commission.

William J. Tricarico,

Secretary.

Appendix

Parts 1, 22, 74, 90 and 95 of the rules are amended as follows.

[6] Tremper, P., Automatic Frequency Assignment Model (*AFAM*); FCC Report No. SMTF-75-01 (1975).

[7] Notice of Inquiry, Docket No. 21229, FCC 77-287, adopted April 27, 1977, Released May 17, 1977, Page 9, Paragraph 21.

[8] Applicants for the 470-512 MHz frequencies, in lieu of the Form 425, should use the Form 400 and append to it necessary information relating to altitude above average terrain (AAT) and effective radiated power (ERP). See Sections 90.301-315 of the Commission's Rules.

A. PART 1—PRACTICE AND PROCEDURE

1. In § 1.61, paragraph (a) is amended to read as follows.

§ 1.61 Procedures for handling applications requiring special aeronautical study.

(a) Antenna surveys are conducted by the Antenna Survey Branch of the Regional Services Division, Field Operations Bureau.

* * * * *

2. In § 1.922, references to FCC Form 425 are deleted and (reserved) is substituted to read as follows.

§ 1.922 Forms to be used.

* * * * *

410-B Application for permit to operate a Canadian General Radio Station in the United States.

[Reserved]

453—B Certificate of Special Temporary Authorization for Operation of Radio Station on Board New Aircraft.

* * * * *

3. In § 1.924, paragraph (b)(2)(iv) is deleted and (reserved) is substituted to read as follows.

§ 1.924 Assignment or transfer of control, voluntary and involuntary.

(a) * * *
(b) * * *
(2) * * *
(iv) [Reserved]

* * * * *

4. In § 1.926 paragraph (b) is amended by the deletion of subparagraph (5) and the substitution of (reserved) to read as follows.

§ 1.926 Application for renewal of license.

(a) * * *
(b) * * *
(5) [Reserved]

* * * * *

5. In § 1.951, the deleted paragraph (d) is reserved to read as follows.

§ 1.951 How applications are distributed.

(a) * * *

* * * * *

(d) [Reserved]

* * * * *

B. PART 90—PRIVATE LAND MOBILE RADIO SERVICES

1. In § 90.119 paragraph (c) is deleted and the word (reserved) is substituted.

§ 90.119 Application forms.

(a) * * *

* * * * *

(c) [Reserved]

* * * * *

2. In Subpart P—§§ 90.491, 90.493, 90.495, and 90.497 are deleted *in toto* and the word (reserved) is adopted to read as follows.

§§ 90.491, 90.493, 90.495, 90.497 Subpart P. [Reserved]

C. PART 95—SUBPART A—GENERAL MOBILE RADIO SERVICE

1. In § 95.15 paragraph (b) is deleted and the word (reserved) is substituted to read as follows.

§ 95.15 Standard forms to be used.

(a) * * *

* * * * *

(b) [Reserved]

* * * * *

2. In § 95.17 paragraph (b) is amended by the deletion of the last sentence to read as follows.

§ 95.17 Filing of applications.

(a) * * *

* * * * *

(b) Applications for station authorizations, applications for consent to transfer of control of a corporation holding a radio station authorization, requests for special temporary authority or other special requests, and correspondence relating to an application for a radio station authorization shall be submitted to the Commission's Office at Washington, D.C. 20554, and should be directed to the attention of the Secretary.

Radio Broadcast Services; FM Broadcast Station in Lake Havasu City, Ariz., Changes Made in Table of Assignments; Correction

AGENCY: Federal Communications Commission.

ACTION: Correction.

SUMMARY: On July 23, 1980, a Report and Order in Docket No. 80-4 was adopted concerning FM broadcast station in Lake Havasu City, Arizona. Inadvertently, the rule section number in the heading and in paragraph 6 was marked as section 73.202(b). The correct rule section is § 73.504(a).

EFFECTIVE DATE: September 8, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:
Mark N. Lipp, Broadcast Bureau, (202) 632–7792.

SUPPLEMENTARY INFORMATION:

Released: August 5, 1980.

By the Chief, Policy and Rules Division.

1. On July 23, 1980, a *Report and Order* in the above-captioned proceeding was adopted. Inadvertently, the rule section number in both the heading and in paragraph 6 was listed as § 73.202(b). The correct section number is § 73.504(a).

Federal Communications Commission.

[BC Docket No. 80–27; RM–3275]

Radio Broadcast Services; FM Broadcast Station in Snowmass Village, Colo.; Changes Made in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Report and Order.

SUMMARY: This action assigns Channel 280A to Snowmass Village, Colorado, as its first FM channel assignment in response to a petition filed by Pitkin County Broadcasters.

DATE: Effective September 22, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:
Mark N. Lipp, Broadcast Bureau, (202) 632–7792.

SUPPLEMENTARY INFORMATION:

Adopted: August 6, 1980.

Released: August 14, 1980.

By the Chief, Policy and Rules Division.

1. The Commission has before it the *Notice of Proposed Rule Making* adopted January 22, 1980, proposing the assignment of a first Class A FM channel, 280A, to Snowmass Village, Colorado. Supporting comments were filed by petitioner, Pitkin County Broadcasters, and by William Lippman, Jack D. Gabow and Robert E. Lyon. An opposition was filed by Recreation Broadcasting of Aspen, Inc. ("RBA"), licensee of FM station KSPN, Aspen, Colorado. RBA also filed a reply.

2. Snowmass Village (pop. 1,500), in Pitkin County (pop. 6,185), is located in the western part of Colorado, approximately 24 kilometers (15 miles) from Aspen, Colorado.

3. RBA, in opposition, contends that there are already sufficient aural services for the Aspen area in which Snowmass Village is one of several resort communities. It also notes that growth potential is limited by controls and that preclusion would be significant. In its reply, RBA argues that the supporting parties have not demonstrated that Snowmass Village can support a local station.

4. We have carefully considered the proposal herein and conclude that it would be in the public interest to assign Channel 280A to Snowmass Village, Colorado. The arguments raised by RBA concern economic matters that are more appropriate for consideration at the application stage. As for the preclusion impact, that factor is not an obstacle to a first Class A assignment to a non-suburban community. Therefore, in view of the provision of a first local aural service, we shall assign Channel 280A to Snowmass Village.

5. Authority for the action taken herein is contained in Sections 4(i), 5(d)(1), 303 (b) and (r) and 307(b) of the Communications Act of 1934, as amended, and Section 0.281 of the Commission's Rules.

6. In view of the foregoing, IT IS ORDERED, That effective September 22, 1980, Section 73.202(b) of the Commission's Rules, the FM Table of Assignments, is amended for the community listed below as follows:

City and Channel No.
Snowmass Village, Colorado—280A.

7. For further information concerning this proceeding, contact Mark N. Lipp, Broadcast Bureau, (202) 632–7792.

(Secs. 4, 303, 307, 48 Stat., as amended, 1066, 1082, 1083; 47 U.S.C. 154, 303, 1307.)

[BC Docket No. 80–40; RM–3349]

FM Broadcast Stations in Blue Ridge, Ga., and Murphy, N.C.; Changes Made in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Final rule (Report and Order).

SUMMARY: Action herein would reassign Channel 280A from Murphy, North Carolina, to Blue Ridge, Georgia, to reflect its actual use. This action is taken in response to a petition filed by the Cherokee Broadcasting Company.

DATE: Effective September 18, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:
John Kamp, Broadcast Bureau, (202) 632–9660.

SUPPLEMENTARY INFORMATION:

Report and Order—Proceeding Terminated

Adopted: August 4, 1980.

Released: August 14, 1980.

In the matter of amendment of section 73.202(b), Table of Assignments, FM Broadcast Stations. (Blue Ridge, Georgia, and Murphy, North Carolina), BC Docket No. 80–40, RM–3349.

1. The Commission herein considers the *Notice of Proposed Rule Making*, adopted February 1, 1980, 45 FR 9023, in the above-entitled proceeding, instituted in response to a petition filed by Cherokee Broadcasting Company ("petitioner"). Petitioner proposed the deletion of FM Channel 280A from Murphy, North Carolina, and its reassignment to Blue Ridge, Georgia, to reflect its use there. Supporting comments were filed by petitioner. No oppositions were filed.

2. Murphy (pop. 2,062)[1] in Cherokee County (pop. 16,300) is located in the southwestern part of North Carolina. It has one FM assignment, Channel 280A. Blue Ridge (pop. 1,602), in Fannin County (13,357), is located approximately 35 kilometers (22 miles) southwest of Murphy. Local service is provided by Station WPPL (Channel 280A) which is assigned to Murphy and used at Blue Ridge pursuant to § 73.203(b) which, when the station was first licensed, permitted its use within 25 miles of the community to which it was assigned. Since then, the 25 mile limit has been decreased to 10 miles for Class A stations.

3. Petitioner states that Station WPPL is located approximately 22 miles from Murphy, and both terrain and distance prohibit it from providing FM service to Murphy. Petitioner in supporting comments listed attempts to obtain a new FM assignment to Murphy that could provide a first local FM service to 35,000 persons. Petitioner believes that the existence of an assignment at Murphy has been a factor in these denials. The previous attempts have failed in our reading of the cases because the requests either involved short spaced channels or did not

[1] Population figures are taken from the 1970 U.S. Census.

otherwise comply with the Commission's rules.

4. Although petitioner does not seek a channel assignment herein for Murphy, the Commission believes that the public interest would be served by the reassignment of Channel 280A Blue Ridge, Georgia, to reflect its current use there.

5. Accordingly, it is ordered, that effective September 18, 1980, the FM Table of Assignments, § 73.202(b) of the Commission's rules, is amended with regard to the communities listed below:

City and Channel No.
Blue Ridge, Georgia, 280A.
Murphy, North Carolina——.

6. Authority for the action taken herein is found in Sections 4(i), 5(d), 303 (g) and (r), and 307(b) of the Communications Act of 1934, as amended, and § 0.281 of the Commission's rules.

7. It is further ordered, that this proceeding is terminated.

8. For further information concerning this proceeding, contact John Kamp, Broadcast Bureau, (202) 632–9660.

(Secs. 4, 303, 307, 48 Stat., as amended, 1066, 1082, 1083; (47 U.S.C. 154, 303, 307))

[BC Docket No. 80–5; RM–3449]

TV Broadcast Station in LaGrande, Ore.; Changes Made in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Final rule (Report and Order).

SUMMARY: This action reserves VHF–TV Channel *13 for noncommercial educational use and makes UHF–TV Channel 16 available for commercial use at LaGrande, Oregon, in response to a petition from the Oregon State Board of Higher Education. The reservation of Channel *13 reflects the actual use of TV Station KTVR there.

DATE: Effective September 22, 1980.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:
Mark N. Lipp, Broadcast Bureau, (202) 632–7792.

SUPPLEMENTARY INFORMATION:

Report and Order—Proceeding Terminated

Adopted: August 4, 1980.

Released: August 14, 1980.

In the matter of amendment of § 73.606(b), *Table of Assignments*, Television Broadcast Stations. (LaGrande, Oregon), BC Docket No. 80–5, RM–3449.

1. The Commission has before it the *Notice of Proposed Rule Making*, adopted January 9, 1980, 45 FR 3939, in response to a petition filed by the Oregon State Board of Higher Education ("petitioner") acting on behalf of the Oregon Educational and Public Broadcasting Service. Petitioner requests the reservation of VHF–TV Channel 13, LaGrande, Oregon, for noncommercial educational use to reflect the actual use of satellite Station KTVR there. It also proposes to delete the reservation on UHF–TV Channel *16 at LaGrande in order to continue to provide a channel for commercial use. No comments were filed in response to the petition.

2. LaGrande (pop. 9,645), in Union County (pop. 19,377) [1], is located in the northeastern part of the State. Television Channels 13 and *16 are assigned to LaGrande, Oregon. At present Channel 13 is operated primarily as a satellite of the affiliated Portland, Oregon, noncommercial station, KOAP–TV.

3. Petitioner states that the reservation of Channel 13 for noncommercial educational use would reflect its current use as well as provide the necessary assurances to warrant the investment of time and resources to make KTVR the full-fledged educational operation envisioned by the 1965 State plan. This plan calls for a LaGrande facility with studio and production facilities operating in conjunction with Eastern Oregon College; the facility would also provide material for broadcast over the Portland and Corvallis stations.

4. We have carefully considered the proposal and conclude that it would be in the public interest to reserve television Channel 13 (KTVR) for noncommercial educational use. The reservation reflects the use of the channel by the Oregon State Board of Higher Education for its satellite Station KTVR, and preserves its availability for noncommercial educational use. In order to provide a channel for future commercial use, we shall also delete the reservation on Channel *16.

[1] Population figures are taken from the 1970 U.S. Census.

5. Accordingly, pursuant to authority contained in Sections 4(i), 5(d)(1), 303 (g) and (r) and 307(b) of the Communications Act of 1934, as amended, and § 0.281 of the Commission's rules, it is ordered, that effective September 22, 1980, the Television Table of Assignments, § 73.606(b) of the Commission's rules, is amended for the city listed below, to read as follows:

City and Channel No.
LaGrande, Oregon, *13+, 16.

6. It is further ordered, that this proceeding is terminated.

7. For further information concerning this proceeding, contact Mark N. Lipp, Broadcast Bureau, (202) 632–7792.

(Secs. 4, 303 307 48 Stat., as amended 1066, 1082, 1083; (47 U.S.C. 154, 303, 307))

BILLING CODE 6712-01-M

47 CFR Part 73

[BC Docket No. 80–45; RM–3491]

TV Broadcast Station in Lexington, KY; Changes made in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Report and order.

SUMMARY: As a result of a petition for rule making filed by Frederick Gregg, Jr., Channel 62 has been assigned to Lexington, Kentucky, as its fourth commercial TV assignment.

DATE: Effective September 22, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:
Mark N. Lipp, Broadcast Bureau, (202) 632–7792.

SUPPLEMENTARY INFORMATION:

Report and Order—Proceeding Terminated

Adopted: August 4, 1980.

Released: August 14, 1980.

In the matter of amendment of § 73.606(b), *Table of Assignments*, Television Broadcast Stations. (Lexington, Kentucky), BC Docket No. 80–45, RM–3491.

1. The Commission has before it the *Notice of Proposed Rule Making*, adopted February 6, 1980, 45 FR 12453, in response to a petition filed by Frederick Gregg, Jr., in connection with

Docket 21392 which deleted UHF Channel 62 from Lexington, Kentucky, *Report and Order*, released April 26, 1979. This petition proposes the reinstatement of Channel 62 to Lexington as its fourth commercial TV assignment. Kentucky Family Broadcasting and Fantel, Inc., filed supporting comments each asserting that they would file an application if Channel 62 is reassigned.

2. Lexington (pop. 108,137), in Fayette County (pop. 174,323)[1], is located approximately 115 kilometers (70 miles) east of Louisville.

3. Petitioner states that the commercial facilities in the Lexington market only provide viewers with network programming. He, as well as Kentucky Family Broadcasting, Inc., asserts that the proposed channel would provide for a station which could render a new and diversified source of television programming, thus maximizing diversity of viewpoints available in the broadcast marketplace, and providing a choice between or among competing applicants.

4. We have carefully considered the proposal and conclude that it would be in the public interest to reassign UHF television Channel 62 to Lexington, Kentucky. Leaving Channel 62 in place would maximize utilization of the UHF spectrum in the Lexington market. Channel 62 can be reassigned to Lexington in compliance with the minimum distance separation requirements and other technical criteria.

5. Accordingly, pursuant to authority contained in Sections 4(i), 5(d)(1), and 303 (g) and (r) and 307(b) of the Communications Act of 1934, as amended, and § 0.281 of the Commission's rules, it is ordered, That effective September 22, 1980, the Television Table of Assignments, § 73.606(b) of the Commission's rules is amended for the city listed below, to read as follows:

City and *Chanel No.*

Lexington, Kentucky, 18+, 27−, 36, *46, 62.

6. It is further ordered, that this proceeding is terminated.

7. For further information concerning this proceeding, contact Mark N. Lipp, Broadcast, Bureau, (202) 632–7792.

(Secs. 4, 303, 307, 48 Stat., as amended, 1066, 1082, 1083; (47 U.S.C. 154, 303, 307))

[1] Population figures are taken from the 1970 U.S. Census.

Federal Communications Commission.

47 CFR Part 73

[BC Docket No. 78-313; RM-3052]

TV Broadcast Station in San Diego, Calif.; Changes Made in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Report and order.

SUMMARY: This action assigns UHF–TV Channel 69 to San Diego, California, as its sixth television channel assignment in response to a petition filed by Center City Complex, Inc. Oppositions submitted by groups representing land mobile operators and by the translator operator on an adjacent channel were held not to be obstacles to the assignment.

DATE: Effective September 22, 1980.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Myra G. Kovey, Broadcast Bureau, (202) 632–7792.

SUPPLEMENTARY INFORMATION:

Report and Order

Adopted: August 4, 1980.

Released: August 13, 1980.

In the matter of amendment of § 73.606(b), *Table of Assigments*, Television Broadcast Stations. (San Diego, California), BC Docket No. 78–313, RM–3052.

1. The Commission has under consideration the *Notice of Proposed Rule Making*, 43 FR 46049, released October 3, 1978, proposing assignment of UHF–TV Channel 69 to San Diego, California, in response to a request by Center City Complex, Inc. ("petitioner").[1] Comments supporting the proposal were filed by the petitioner and by Frank M. Goldberg; comments opposing it were filed by the Board of Trustees, The California State University and Colleges for San Diego State University ("Board of Trustees"),[2] the Land Mobile Communications Council ("LMCC") and Palomar Communications Co., Inc. ("Palomar"). Petitioner filed reply comments to which the Association of Maximum Service Telecasters, Inc. ("MST") responded.

2. San Diego (pop. 697,027, 1970 U.S. Census), seat of San Diego County (1970 pop. 1,357,854), is located in the extreme southwest corner of California at the United States-Mexican border. Five television channels are presently assigned to the city: Channel 8 (KFMB–TV), Channel 10 (KGTV), Channel *15 (KPBS–TV), Channel 39 (KCST–TV) and Channel 51 (construction permit granted to Gross Broadcasting Co. (KJOG–TV), BPCT–3842).

3. In issuing the *Notice*, the Commission's staff undertook an analysis of possible UHF assignments to San Diego. Channel 69 was the only channel that was not subject to transmitter site restrictions, and therefore could be used either at the city reference point or on San Manuel mountain, the site of two existing and one proposed UHF stations. The need for a sixth television assignment to San Diego had been established. Board of Trustees, LMCC and Palomar question the suitability of a Channel 69 allocation, citing various problems of potential interference.

4. As a preliminary matter, the concern of the Board of Trustees that interference to its existing translator Station at La Jolla, California, should be considered is not a legitimate matter. Changes in the Television Table of Assignments may be made without regard to existing translator stations. See § 74.702(c)(3) of the Commission's rules. Furthermore, protection is not in any event necessary, it being apparent from the pleadings that petitioner's proposed transmitter site will be separated from the Board of Trustee's translator by more than the 20 miles specified in § 74.702(c)(2)(iii) of the Commission's Rules.[3]

5. LMCC and Palomar both complain of potential interference on land mobile radio frequencies adjacent to Channel 69.[4] When UHF Channels 70–83 were set aside for land mobile usage, no restrictions on the use of Channel 69 were imposed to avoid adjacent channel interference problems. See Docket 18262, 35 FR 8644; *recons. den.*, 25 F.C.C. 2d 764 (1970); *Second Report and Order*, 46 F.C.C. 2d 752 (1974), 51 F.C.C. 2d 936, 55 F.C.C. 2d 771 (1975). Land mobile stations have been operating for some time in the band immediately adjacent to UHF–TV Channel 14, using techniques such as vertical isolation, cross-polarization isolation and filtering to meet or minimize problems that arise. We are confident that the band adjacent to Channel 69 can be used on the same terms with equal success. Reservation of Channel 69 as, in effect, a guard band separating UHF television operations from the land mobile radio operations, the practical effect of opponent's position, is not contemplated by our Rules. Given the availability of alternative methods for handling interference, it is unnecessary and inappropirate on operational grounds as well.[5] Therefore, we do not view the potential for interference as a sufficient obstacle to bar the assignment of Channel 69 to San Diego.

6. Petitioner submitted lengthy comments in which it complained that UHF TV Channel 27 should not have been "lost" to the Mexican government. However, after reviewing the remaining channels for possible assignment, it supports the assignment of Channel 69 to San Diego.

7. The concurrence of the Mexican government in the assignment of Channel 69 to San Diego has been obtained.

8. Accordingly, pursuant to authority contained in Sections 4(i), 5(d)(1), 303 (g) and (r) and 307(b) of the Communications Act of 1934, as amended, and Section 0.281 of the Commission's rules, it is ordered, that effective September 22, 1980, the Television Table of Assignments, § 73.606(b) of the Commission's rules, is amended to read as follows for the city listed below:

City and Channel No.

San Diego, California, 8, 10, *15, 39, 51, 69.

9. It is further ordered, that this proceeding is terminated.

10. For further information concerning this proceeding, contact Myra G. Kovey, Broadcast Bureau, (202) 632–7792.

(Secs. 4, 303, 307, 48 Stat., as amended, 1066, 1082, 1083; (47 U.S.C. 154, 303, 307))

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division, Broadcast Bureau.

[FR Doc. 80-25237 Filed 8-18-80; 8:45 am]

BILLING CODE 6712-01-M

[1] Petitioner previously requested Channel 27 which was assigned to Tijuana, Mexico, subsequent to the filing of the petition. Channel 69 was substituted for the original proposal.

[2] While somewhat late, these comments were not so untimely as to preclude their examination by all parties concerned. Hence, we will consder them on their merits.

[3] Were this not the case, the Board of Trustees would bear the burden of achieving compliance with the required separation. Section 74.702(c)(3) of our rules.

[4] Channel 69 occupies 800 to 806 MHz in the frequency spectrum; 806 to 821 MHz are allocated for land mobile radio use.

[5] This would be true even if channels other than Channel 69 were available for use in San Diego.

47 CFR Part 73

[BC Docket No. 80-46; RM-3483]

Radio Broadcast Services; FM Broadcast Station in Bethel, Alaska; Changes Made in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Report and order.

SUMMARY: This action assigns Channel 261A to Bethel, Alaska, as its first FM channel in response to a petition filed by Tundra Broadcasting, Inc.

DATE: Effective September 18, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Mark N. Lipp, Broadcast Bureau, (202) 632–7792.

SUPPLEMENTARY INFORMATION:

Adopted: August 4, 1980.

By the Chief, Policy and Rules Division, Report and Order (Proceeding Terminated).

1. The Commission has under consideration a *Notice of Proposed Rule Making*, adopted February 6, 1980, 45 FR 12448, proposing the assignment of FM Channel 261A to Bethel, Alaska, as a first FM assignment. The *Notice* was issued in response to petition filed by Tundra Broadcasting, Inc. ("petitioner"). Petitioner has reaffirmed its intention to apply for the channel, if assigned.

2. Bethel (pop. 2,416)[1], is located in the Bethel Division (pop. 7,579) in the southwestern portion of the State, approximately 450 kilometers (280 miles) south of Nome and 660 kilometers (410 miles) west of Anchorage. It is served by full-time AM Station KYUK.

3. Petitioner has provided sufficient information concerning the need for a first local FM service.

4. We believe that the public interest would be served by the assignment of Channel 261A to Bethel, Alaska. An interest has been expressed for its use, and such an assignment could provide the community with its first local FM broadcast service.

5. Accordingly, pursuant to authority contained in Sections 4(i), 5(d)(1), 303 (g) and (r) and 307(b) of the Communications Act of 1934, as amended, and § 0.281 of the Commission's Rules, it is ordered, that effective September 18, 1980, the FM Table of Assignments, § 73.202(b) of the rules, is amended with respect to the following community:

City and Channel No.

Bethel, Alaska—261A

6. It is further ordered, that this proceeding is terminated.

7. For further information concerning this proceeding, contact Mark N. Lipp, Broadcast Bureau, (202) 632–7792.

(Secs. 4, 303, 307, 48 Stat., as amended, 1066, 1082, 1083; 47 U.S.C. 154, 303, 307)

Federal Communications Commission.

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1120A

[Finance Docket No. 28990F]

Common Carrier Status of States, State Agencies and Instrumentalities, and Political Subdivisions

Decided July 23, 1980.

AGENCY: Interstate Commerce Commission.

ACTION: Notice of final rules and exemptions.

SUMMARY: We are exempting the acquisition by a State of rail lines approved for abandonment, when the abandonment has not been consummated. Further, we are exempting from our regulation the start up and termination of operations over lines abandoned or approved for abandonment, which have been acquired by a State. We are also adopting rules for a modified certificate of public convenience and necessity for these operations. This will insure that our regulations do not prevent a State or political subdivision from initiating programs to continue rail service, and will encourage operators to provide service over State acquired lines.

EFFECTIVE DATE: September 18, 1980.

FOR FURTHER INFORMATION CONTACT: Richard Kelley, (202) 275–7564.

SUPPLEMENTARY INFORMATION: On March 28, 1980, a notice of proposed rulemaking and proposed exemptions was served and published at 45 FR 19585. These proposals were in response to petitions filed by States concerned about the effect regulation might have on their programs to continue rail service. In that notice, we proposed to exempt from our approval, under 49 U.S.C. 10901, the acquisition by a State of a rail line which had been abandoned or approved for abandonment. In addition, we proposed to exempt the

operators who provide service over these lines, from our regulatory requirements concerning start up and termination of operations. (49 U.S.C. 10901 and 10903). We also proposed special rules which would apply to the States and to the operators of these lines.

The purpose of these proposals is to promote continuation of rail service by removing certain regulatory constraints from the States and thus encouraging rail continuation programs. In addition, it will remove regulatory contraints which might discourage new operators from initiating service over marginal lines. Within the last year two major rail systems, the Chicago, Rock Island and Pacific Railroad Company, and the Chicago, Milwaukee, St. Paul and Pacific Railroad Company have terminated either all or a substantial portion of their operations. In response to the threat of losing rail service that the States find vital to their economic well being, several States have developed programs to continue service. These programs include plans by States to purchase rail lines and contract with operators to provide service. Also, new businesses have been organized to provide service over these lines. This proposal is designed to facilitate these efforts.

Comments on the notice were filed by five States: the State of Michigan, Department of Transportation (MI–DOT), the State of Wisconsin, Department of Transportation (WI–DOT), the Commissioner of Transportation of the State of New York (NY), the State of South Dakota (SD), the State of Iowa, Department of Transportation, the United States Department of Transportation (DOT, Railway Labor Executives' Association (RLEA), the Illinois Legislative Director for the United Transportation Union (UTU), the Association of American Railroads (AAR) and the Freight User Association of Long Island, Inc. Generally, the States and DOT favored the proposals but raised several questions about them. The labor and shipper organizations opposed the proposals.

NY filed a petition to be considered a party and moved to dismiss the proceeding, on the ground that this Commission has no jurisdiction over a State. NY is a proper party to the proceeding. The motion to dismiss is denied. It is well established that when a noncarrier, including a State, acquires a railroad, it must seek our approval under section 10901. See *United States* v. *California*, 297 U.S. 175 (1936); *Iowa Term. R. Co. Acquisition and Operation*, 312 I.C.C. 546, 549 (1961).

Discussion and Conclusions of Issues

1. *Exemptions.*—RLEA and UTU contend that the proposed exemptions are beyond the scope of section 10505 and that the Commission has not met the statutory burdens of this section. The unions' concern is that these proposed rules and exemptions will be used to avoid the labor protective provisions of 49 U.S.C. subtitle IV. They contend that the Commission cannot act as a superlegislature and exempt a class from important statutory provisions.

The language of section 10505 and the legislative history [1] give the Commission broad discretion concerning exemptions. We can exempt not only a transaction, but transactions. The Senate report explained the scope of the Commission's exemption authority as follows:

> The requirement of full proceedings before exemption can be granted * * *, as well as the findings which must be made, assure that the Commission will not act in such a manner as to contravene its Congressional mandate to regulate interstate commerce. At the same time, the power to exempt from regulation in whole or in part will enable the Commission to commit its limited resources in areas where they are most needed, by enabling it to deregulate those areas which have no significant bearing on the overall regulatory scheme. [S. Rept. 94–499, p. 53 (November 26, 1975).]

See also H. Rept. 94–725, p. 75 (December 12, 1975) which stated:

> The Committee has given the Commission the [exemption] power to study and review the areas of its regulation so as to eliminate from regulation those areas where regulation is not required to effectuate the national transportation policy or where the removal of the regulation would be no undue burden on persons or class of persons in interstate or foreign commerce, or where such regulation would serve little or no useful public purpose.

Additional legislative history indicates that the exemption power is to be used where regulation is not necessary to carry out the statutory criteria. See H. Rept. 94–768, p. 125 (December 10, 1975) and H. Rept. 94–781, p. 153 (January 23, 1976). Based on the clear legislative history of our exemption power and its precise wording as enacted in the Railroad Revitalization and Regulatory Reform Act of 1976, we can clearly exempt a class of transactions.

Under section 10505, we are authorized to exempt from our regulation a class of persons, or a transaction or service where appropriate "because of the limited scope of the transaction or service." This exemption is available when we find that continued regulation:

(1) Is not necessry to carry out the transportation policy contained in section 10101 of the act;

(2) Would be an unreasonable burden on a person, class of persons, or interstate and foreign commerce; and

(3) Would serve little or no useful public purpose.

We will now apply these statutory requirements to the two exemptions proposed here. The scope of the exempted transactions is limited. Both exemptions will apply only to rail lines which have been approved for abandonment. Out of a national rail system totaling approximately 325,000 miles of main and branch lines, we approved the abandonment of only 2,873 miles in 1979, 2,417 miles in 1978, 2,500 miles in 1977, and 1,789 miles in 1976. The average length of the lines approved for abandonment is short: 23 miles in 1979, 22 miles in 1978, 17 miles in 1977, and 18 miles in 1976. In addition, States have shown interest in acquiring only a small fraction of these abandoned lines. Also, lines approved for abandonment generally have relatively sparse traffic, and have been either not profitable or only marginally profitable.

a. *Acquisition by State of a rail line approved for abandonment.*—When a rail line has been fully abandoned,[2] it is no longer rail line and the transfer of the line is not subject to our jurisdiction. However, when a line has not been fully abandoned, the transfer of the line is subject to our juridiction. We are exempting States from our regulatory requirements concerning acquisition of lines not fully abandoned. When a State wishes to acquire a line approved for abandonment by the Commission or a Bankruptcy Court, and the line has not been fully abandoned we will not require the filing of an application. This is a narrow class of transactions which does not require review by this Commission to protect the public interest.

We are requiring States to notify the Commission of the acquisition of these rail lines and whether operations will be continued over them.

The fact that the abandonment has not been consummated will not result in any change in employee protective conditions which may have been imposed in the abandonment proceeding. In acquisition proceedings where the vendor had filed abandonment applications for the involved line, but the application was dismissed when the acquisition was granted, the Commission has required the selling railroad to assume the costs of labor protection. See *Prairie Trunk Railway—Acquisition and Operation*, 348 I.C.C. 832 (1977) and *Cadillac & Lake City Ry. Co. Acquisition and Operation*, 320 I.C.C. 617 (1964).

SD requests that this exemption proposal be modified to include nonabandoned lines of bankrupt railroads purchased by a State with the approval of the Bankruptcy Court. We see no justification for abdicating our concurrent jurisdiction. Under the Milwaukee Railroad Restructuring Act, section 5(b)(2) (MRRA), a Bankruptcy Court may not authorize a sale or transfer *until* an application has been filed with the Commission. To comply with the requirements of MRRA, we have adopted special procedures in Ex Parte No. 282 (Sub-No. 4), *Acquisition Procedures for Lines of Railroads*, 360 I.C.C. 623 (1980). These procedures streamline the information filed by applicants; yet enable the Commission to rule quickly and knowledgeably on the acquisition. We have ruled upon an acquisition under these procedures with a 30-day court imposed time limit. See, Finance Docket No. 29237, *State of Wisconsin—Acquisition of Certain Lines of Chicago Milwaukee, St. Paul and Pacific Railroad Company* (not printed), decided January 30, 1980. However, transfers to States of those lines abandoned or approved for abandonment will fall within the scope of this exemption.

b. *Operators exempt from filing start up and abandonment applications.*—(49 U.S.C. 10901 and 10903.) The lines involved under this exemption are lines that have been approved for abandonment, or have been fully abandoned; as discussed above, the scope of the transaction is limited.

In acquiring these lines the States may be contracting with new operators for service over lines which have proven uneconomical to operate. Service over these lines may be in danger of immediate termination. Requiring an application under section 10901 to start up operations may result in temporary cessation of service to shippers. The new carriers may also be concerned with the necessity of continuing operations for months should another abandonment application be required. To require applications for the start up and termination of service over these lines serves no public purpose, is an unreasonable burden, and is not necessary to carry out the transportation policy.

We recognize the concern of RLEA and UTU regarding the Commission's statutory duty to impose employee protective conditions. However, these exemptions will not affect the labor protective conditions imposed by the Bankruptcy Court or the Commission in abandonment proceedings. All rail lines exempted here will have been approved for abandonment and employees protective conditions will have been imposed on the abandoning carrier.

The purpose of this proceeding is to facilitate the acquisition and operation of lines for which service by the current carrier will in all likelihood not be continued. This purpose clearly fulfills our most fundamental congressional mandate: to ensure the development, coordination, and preservation of a transportation system. This proposal should increase employment opportunities for railroad employees. However, employees of the new operators will be on notice from the beginning that this is an enterprise that may go out of business, and as with most business enterprises, the employees will have no protections other than those provided by the original abandoning carrier imposed if the new operations terminate.

2. *Common carrier status of states.*—In our March 28 notice, we suggested that both the State and the operator would become common carriers, even though certain transactions would be exempt from our jurisdiction. The States argue strenuously that no common carrier status should attach when they acquire rail line and contract for the operations over the line. They contend that a State should be required to file an application for a common carrier certificate only if it operates a rail line. Further, where the operator has assumed the entire burden of operating the line, no purpose is served by requiring a State to become a common carrier. WI–DOT explained:

> These Wisconsin counties and cities do not provide any rail service for compensation. They simply permit an operator on their track and WISDOT land and hope the operator can break even or turn a profit with a minimum contribution of public moneys for track maintenance and rehabilitation. [WI–DOT comment, p. 1.]

In addition, they contend that a finding that States incur a common carrier obligation merely by owning a rail line is contrary to established Commission policy and contrary to the purpose of 49 U.S.C. subtitle IV. They argue that the fundamental test for determining common carrier status is whether there has been a "holding out to the public as a common carrier." *Status of Bush Universal, Inc.*, 342 I.C.C. 550, 564 (1973). See also *State of Okla. Ex Rel., Dept. of Highways, Abandonment*, 324 I.C.C. 666 (1965), where the State paid the construction cost of a rail line, but was not considered a "carrier" under 49 U.S.C. 10901. Further, in *State of Vt. and Vermont Ry., Inc., Acquisition and Op.*, 320 I.C.C. 609, 610 (1964), the Commission, Division 3, ruled that a State, which acquired a rail line authorized to be abandoned, was not considered a common carrier when it never performed, or held itself out to perform transportation service.

WI–DOT notes that many State constitutions prohibit a State from becoming a common carrier. WI–DOT also asks the Commission to consider the additional burden common carrier status would impose on States insofar as employee protective arrangements under 49 U.S.C. 11347 and liability under the Federal Employee's Liability Act.

We are persuaded by the States' arguments. The purpose of this proposal is to promote continuation of rail service and to remove obstacles which might inhibit States from acquiring lines so that service can be continued. Our mandate to promote transportation is best served by following the policy that mere ownership of a rail line by a State does not create common carrier status. When a State has not held itself out to be the operator of a line and thus has not incurred a duty to the public, the common carrier duty to provide and maintain service should be only on the operator. Therefore, we have modified our proposal, and we will not require the State to file jointly with the operator of a notice for a modified certificate.[3] A State will be considered a common carrier if it operates a rail line itself. *United States* v. *California, supra.*

3. *Modified certificate of public convenience and necessity.*—The operators, whether a State or its contractor, which would be exempted from our regulatory requirements concerning start up and termination of operations, must however, file a notice for a modified certificate of public convenience and necessity under 49 CFR Part 1120A. See apendix. This notice will provide the Commission with essential information concerning the financial condition of the operator, liability insurance coverage, and the nature of the operations. An operator may commence operations immediately

[1] See H. Rept. 94–725, p. 75 (December 12, 1975), H. Rept. 94–781, p. 153 (January 23, 1976), and S. Rept. 94–499, p. 53 (November 26, 1975).

[2] A line is fully abandoned after a certificate of public convenience and necessity has been issued, and when operations have ceased, tariffs have been canceled and a letter has been filed with the Commission that the abandonment has been consummated.

[3] In our original notice, we had proposed exempting the States from the securities requirements of section 11301. Under that proposal the State, as the nonoperating owner of a rail line was required to join in the application for a modified certificate. Since, we have ruled here that only the operator of a line is a common carrier, this exemption for the States is not needed.

upon the filing of a completed notice under 49 CFR Part 1120A. Service can be terminated after providing 60 days' notice to the State, the Commission, and shippers on the line.

The operators under the modified certificate incur full common carrier obligations (within any limitations contained in the certificate such as shipper subsidy) and may subscribe to existing industrywide agreements and rules pertaining to the joint movement and interchange of freight cars and traffic, and arrangements for accounting, billing, and settlements.

DOT questions whether an operator under this type of certificate should be eligible for antitrust immunity under section 10706. The issue of rate bureau antitrust immunity is being considered in other proceedings before the Commission [4] and in legislation pending in Congress. DOT has not shown how granting the immunity to these operators would promote uneconomical transportation. It is our view, that insofar as operations are concerned, the operators under modified certificates are the same as other common carriers—they differ only in the requirements for start up and termination of service. To the extent that these carriers join rate bureaus for the purpose of discussing collective rates, they will be held to the same standards applicable for rail carrier antitrust immunity generally.

We should also clarify the limitation of service under the modified certificate. The State through its operational agreement and/or the operator of the line may determine certain preconditions, such as payment of a subsidy, which must be met by shippers to obtain service over a line. All shippers must be notified of the precondition and any shipper who meets the requirements must be served. The modified certificate will authorize service only to the shippers who meet these preconditions and the operator's common carrier duty will extend only to those shippers.

4. *Other issues.*—DOT suggests that the exemptions apply only to rail lines which carried traffic of 5 million gross ton-miles or less during its last year of operation. This limitation is needed, DOT contends, because States may acquire abandoned main line and these State-owned lines could achieve "unfair competitive advantages." This limitation is not necessary. DOT has not shown what "unfair competitive advantages" may result from this proposal. Also, shippers along lines served served by these operators are on notice that service may be terminated after providing 60 days' notice. If the operations become profitable enough, a carrier would, in all likelihood, apply for a common carrier certificate so that shippers would know the service was long term and would be willing to expand or locate on the line.

DOT is authorized, under 49 U.S.C. 1654 (f) and (k), with certain limited exceptions, to grant assistance to States for *subsidizing* service over lines previously authorized for abandonment by this Commission, and to grant assistance for *rehabilitating* light density lines that have not been abandoned or authorized for abandonment. Thus, the type of assistance which DOT is authorized to provide varies depending on whether the line for which a State seeks assistance has been abandoned or authorized for abandonment.

DOT requests that we clarify whether the line operated under a modified certificate of public convenience and necessity is a line authorized for abandonment and therefore eligible only for operating subsidies, or is a line operated under a common carrier certificate and thus eligible for rehabilitation assistance. Since all the rail lines that will be covered by this exemption would have been abandoned pursuant to our regular procedures but for this exemption, we conclude that they would not be eligible for rehabilitation assistance. If a carrier wishes to take advantage of Federal rehabilitation assistance programs, it will have to apply for a full-fledged certificate of public convenience and necessity pursuant to section 10901 of the act.

UTU asks why States should be treated differently than private sector railroads. Our statutory mandate requires us "to cooperate with each State and the officials of each State on transportation matters." 49 U.S.C. 10101(a)(15). In addition, Congress has clearly enunciated its view that States should take an active role in maintaining rail service. See the Regional Rail Reorganization Act of 1973 and the Railroad Revitalization and Regulatory Reform Act of 1976.

We adopt the exemptions discussed in this notice and the rules set forth in the appendix.

This action does not affect significantly the quality of the human environment or conservation of energy resources.

[4] Section 5(b) Application No. 2, Western Railroads—Agreement; Section 5(b) Application No. 3, Eastern Railroads—Agreement; and Section 5(b) Application No. 6, Southern Railroads—Agreement.

Issued under the authority of 5 U.S.C. 553 and 49 U.S.C. 10321 and 10505.

By the Commission, Chairman Gaskins, Vice Chairman Gresham, Commissioners Stafford, Clapp, Trantum, Alexis, and Gilliam. Commissioner Trantum concurring with a separate expression.

Agatha L. Mergenovich,

Secretary.

Commissioner Trantum, concurring:

In his comments, the Illinois Legislative Director for the United Transportation Union observes:

> The fact that a carrier may be financially assisted by a State should not accord that carrier preferential regulatory treatment vis-a-vis other carriers not connected with a State.

Although I am not persuaded by his arguments against the exemptions and rules adopted by the Commission in this proceeding, I too oppose inconsistent application of regulations.

We have found valid reasons to lessen regulatory burdens on State and local governments that acquire abandoned rail lines, and on those who operate such lines for them. But we are not being consistent unless we provide comparable relief for private-sector railroad companies that may wish to acquire and operate abandoned lines. In fact, we are creating a strong incentive for expanding government involvement. While the majority has cited the Congressional policy favoring cooperation with the States, Section 101(a) of the Railroad Revitalization and Regulatory Reform Act of 1976 declared the goal of allowing the railroad industry to "remain viable in the private sector of the economy." I call on the Commission to institute another proceeding to investigate extending to private-sector companies the same exemptions and rules adopted today.

Appendix

The following rules are added as 49 CFR Part 1120A:

PART 1120A—MODIFIED CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

Sec.

1120A.1 Scope of rules.
1120A.2 Exemptions and common carrier status.
1120A.3 Modified certificate of public convenience and necessity.
1120A.4 Termination of service.

Authority. 5 U.S.C. 553 and 49 U.S.C. 10321 and 10505.

§ 1120A.1 Scope of rules.

These special rules apply to the operations over abandoned rail line, which has been acquired (through purchase or lease) by a State. The rail line must have been fully abandoned, or approved for abandonment by the Commission or a Bankruptcy Court. As used in these rules, the term "State" includes States, political subdivisions of States, and all instrumentalities through which the State can act. An operator has the option of applying for a modified certificate of public convenience and necessity under this section or a common carrier certificate under 49 U.S.C. 10901 and 49 CFR Part 1120.

§ 1120A.2 Exemptions and common carrier status.

The acquisition by a State of a fully abandoned line is not subject to the jurisdiction of the Interstate Commerce Commission. The acquisition by a State of a line approved for abandonment and not yet fully abandoned is exempted from the Commission's jurisdiction. If the State intends to operate the line itself, it will be considered a common carrier. However, when a State acquires a rail line described under section 1120A.1 and contracts with an operator to provide service over the line, only the operator incurs a common carrier obligation. The operators of these lines are exempted from 49 U.S.C. 10901 and 10903 to which are the statutory requirements governing the start up and termination of operations. Operators exempted from these requirements must comply with the requirements of this part and must apply for a modified certificate of public convenience and necessity. The operator is a common carrier and incurs all benefits and responsibilities under 49 U.S.C. subtitle IV; however, the State through its operational agreement or the operator of the line may determine certain preconditions, such as payment of a subsidy, which must be met by shippers to obtain service over the line. The operator must notify the shippers on the line of any preconditions. The modified certificate will authorize service to shippers who meet these preconditions and the operator will be required to provide complete common carrier service under this certificate only to those shippers. (See 363 I.C.C. 132.)

§ 1120A.3 Modified certificate of public convenience and necessity.

(a) The operator must file a notice with the Commission for a modifed certificate of public convenience and necessity. Operations may commence immediately upon the filing; however, the Commission will review the information filed, and if complete, will issue a modified certificate notice. If an operator has an application pending under section 10901 at the time the rules become effective, it may file a request to convert the application to a modified certificate within 60 days of the effective date of these rules.

(b) A notice for a modified certificate of public convenience and necessity shall include the following information:

(1) The name and address of the operator and, unless the operator is an existing rail carrier:

(i) Its articles of incorporation or, if it is unincorporated, the facts and organizational documents relating to its formation;

(ii) The names and addresses of all of its officers and directors and a statement indicating any present affiliation each may have with a rail carrier; and

(iii) Sufficient information to establish the financial responsibility of the operator.

(2) The exact dates of the period of operation which have been agreed upon by the operator and the State which owns the line (if there is any agreement, it should be provided);

(3) A description of the service to be performed including, where applicable, a description of:

(i) The line over which service is to be performed;

(ii) All interline connections, including the names of the connecting railroads;

(iii) The nature and extent of all liability insurance coverage, including binder or policy number and name of insurer; and

(iv) Any preconditions which shippers must meet to receive service.

(4) The name and address of any subsidizers, and,

(5) Sufficient information to establish the financial responsibility of any subsidizers (if the subsidizer is a State, the information should show that it has authority to enter into the agreement for subsidized operations).

(c) The service offered and the applicable rates, charges, and conditions must be described in tariffs published by the operator pursuant to the Commission's rules.

§ 1120A.4 Termination of service.

The duration of the service may be determined in the contract between the State and the operator. An operator may not terminate service over a line unless it first provides 60 days' notice of its intent to terminate the service. The notice of intent must be: (a) Filed with the State and the Commission, and (b) mailed to all persons that have used the line within the 6 months preceding the date of the notice.

[FR Doc. 80-25081 Filed 8-18-80; 8:45 am]

BILLING CODE 7035-01-M

49 CFR Part 1249

[No. 37211]

Revision of Annual Report Form M–3

AGENCY: Interstate Commerce Commission.

ACTION: Discussion of comments of final rule.

SUMMARY: On January 18, 1980, the Commission issued a final rule which modified Form M–3 the annual report form for Class III motor carriers of property (see 45 FR 3588). Form M–3 was modified to reduce the amount of information which carriers were required to file. This action was taken because the Commission determined that it did not need most of the information contained in the form.

This notice discusses comments received as a result of that final rule. The Commission has considered that rule, in light of the information contained in the comments, and has concluded that there is no need to modify the rule.

FOR FURTHER INFORMATION CONTACT: Bryan Brown, Jr., Chief, Section of Accounting and Reporting, (202) 275–7448.

SUPPLEMENTARY INFORMATION: On January 18, 1980, the Commission issued a final rule which modified Form M–3 the annual report form for Class III motor carriers of property (see 45 FR 3588). Form M–3 was modified to reduce the amount of information which carriers were required to file. This action was taken because the Commission determined that it did not need most of the information contained in the form.

As a result of our action, we received a number of comments from insurance companies which claimed that we had eliminated data from Form M–3 which the insurance industry needs. The comments indicated that the lack of this information would make it more difficult for Class III motor carriers to obtain and to renew their insurance policies. Furthermore, the insurance companies predicted that it would cost them more to obtain the information elsewhere and that this increased cost might result in higher premiums for the carriers. The National Association of Regulatory Utility Commissioners, the National Small Shipments Traffic Conference, and the Drug and Toilet Preparation Traffic Conference, Inc. also claimed that the loss of financial information previously required, is necessary for insurance companies to determine the financial health of motor carriers. They expressed the concern that since

insurance companies depend on Form

expression. Commissioner Clapp

Parkmont Lane, Olympia, Washington

A. In Marsh Unit I hunting is allowed

Ridgefield National Wildlife Ref

insurance companies depend on Form M–3 in assessing the risks of carriers, they would become unwilling to provide coverage at previous rates. They also expressed concern that many states require Form M–3 for their regulatory agencies, which have come to depend on this information.

We recognize that the data previously included in Form M–3 was useful to the insurance industry, but we believe that the Commission should only require the carriers it regulates to report information that the Commission needs and uses itself. We believe that there are other means by which the insurance companies can obtain the information which they need; in fact, they should be able to obtain it directly from the carriers themselves. If the result is an increase in the administrative costs of the insurance companies which leads to an increase in the premium paid by the carriers, this increased cost will be offset by the reduction in the costs the carrier incurs complying with the Commission's data filing requirements.

State regulatory agencies, having the need for financial information no longer required in Form M–3 should required such data directly for themselves. The reliability of this information should not be impaired. Previous Commission policy has not been to audit Class III carriers. State regulatory agencies should have authority to require such data, and should do so if needed.

The American Trucking Association (ATA) also filed comments in opposition to the revision of Form M–3. However, the issues raised by ATA were not relevant to the changes made to Form M–3. They questioned the reporting requirements of carriers covered in Commission Decision Ex Parte No. MC–118. These requirements have not been changed by this proceeding, and this proceeding is not the proper place for their comments or suggestions.

Having thoroughly reviewed the comments filed in response to the final rule, we conclude that the respondents have not raised any issues which require any modification of the action which we took in this proceeding on January 18, 1980.

This action does not affect significantly the quality of the human environment or the conservation of energy resources.

Decided June 24, 1980.

By the Commission, Chairman Gaskins, Vice Chairman Gresham, Commissioners Stafford, Clapp, Trantum, Alexis and Gilliam. Vice Chairman Gresham concurs in the result, but would have preferred a notice and comment period before adopting final rules, as noted in his prior separate expression. Commissioner Clapp concurring with a separate expression.

Agatha L. Mergenovich,

Secretary.

Commissioner Clapp, Concurring:

I support simplification and reduction in filing requirements for small motor carriers. Therefore, I agree that filing requirements should be lessened (as the Revised Form M–3 would do). On the other hand, I recognize that the revision may not be without cost to small carriers and ultimately to consumers. I am concerned about the revised form's effect on a small carrier's ability to obtain insurance. I foresee added costs and difficulties for insurance companies in obtaining, and in ascertaining reliability of, data submitted not to the Commission in verified form, but rather to the insurance companies directly or to them through some data collection company. For this reason I would monitor the situation closely and should the shortened reporting form prove detrimental to small carriers' services or to the public interest at large, I would favor return to a longer form in order to obtain the information necessary to insurers.

BILLING CODE 7035–01–M

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

50 CFR Part 32

National Wildlife Refuges in Washington; Hunting

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Special Regulations.

SUMMARY: The Director has determined that the opening to hunting of certain National Wildlife Refuges in Washington is compatible with the objectives for which these areas were established, will utilize a renewable natural resource, and will provide additional recreational opportunity to the public. This document establishes special regulations effective for the upcoming hunting seasons for migratory game birds, upland game, and big game.

DATES: September 1, 1980 to June 30, 1981.

ADDRESSES: Contact the Refuge Manager at the address and/or telephone number listed below in the body of Special Regulations.

FOR FURTHER INFORMATION CONTACT: Joseph R. Blum, Area Office Manager, U.S. Fish and Wildlife Service, 2625 Parkmont Lane, Olympia, Washington 98502, Telephone: FTS, 434–9578 or 9579, Com'l., (206) 753–9578 or 9579.

SUPPLEMENTARY INFORMATION: The Refuge Recreation Act of 1962 (16 U.S.C. 460k) authorizes the Secretary of the Interior to administer such areas for public recreation as an appropriate incidental or secondary use only to the extent that it is practicable and not inconsistent with the primary objectives for which the area was established. In addition, the Refuge Recreation Act requires (1) that no area of the refuge system is used for forms of recreation not directly related to the primary purposes for which the area was established; and (2) that funds are available for the development, operation, and maintenance of the permitted forms of recreation.

The recreational use authorized by these regulations will not interfere with the primary purposes for which the National Wildlife Refuge(s) were established. This determination is based upon consideration of, among other things, the Service's Final Environmental Statement on the Operation of the National Wildlife Refuge System published in November 1976. Funds are available for the administration of the recreational activities permitted by these regulations.

Hunting is permitted on the National Wildlife Refuges indicated below in accordance with 50 CFR Part 32 and the following Special Regulations. Portions of refuges which are open to hunting are designated by signs and/or delineated on maps. No vehicle travel is permitted except on maintained roads and trails. Special conditions and maps applying to individual refuges are available as pamphlet handouts at refuge headquarters and from the office of the Regional Director, U.S. Fish and Wildlife Service, Lloyd 500 Building, 500 N.E. Mulnomah Street, Portland, Oregon 97232. Hunting shall be in accordance with all applicable State regulations subject to the following conditions:

§ 32.12 Special regulations; migratory game birds; for individual wildlife refuge areas.

1. Doves, pigeons, ducks, geese, coots and common snipe may be hunted on the following refuge areas: *Conboy Lake National Wildlife Refuge,* Box 5, Glenwood, Washington 98619. Contact Refuge Manager at 509–364–3410.

2. Ducks, geese, coots and common snipe may be hunted on the following refuge areas; *Columbia National Wildlife Refuge,* P.O. Drawer F, Othello, Washington 99344. Contact Refuge Manager at 509–488–2668. Special Conditions:

A. In Marsh Unit I hunting is allowed by permit only within 50 feet of designated blind sites on Wednesdays, Saturdays and Sundays until 12:00 noon. No more than four hunters may hunt at a blind site. After noon on Wednesdays, Saturdays and Sundays the area is open to general hunting without a permit.

B. In Farm Unit 226–227 hunting is allowed by permit only from designated pit blinds on Wednesdays, Saturdays and Sundays. Mo more than two hunters may hunt from each blind.

C. Permit applications will be accepted only on standard post cards and must provide:

(a) name, address and telephone number;

(b) desired hunt area (one only, MU–I or FU226–227); and

(c) desired date (one only).

No more than one application is allowed per hunter for a specific hunt date. Applications must be received at the refuge office at least two weeks before the desired hunt. Public drawings will be held at 10:00 a.m. of the first workday of the week before the hunt. Any remaining vacancies will be filled on a first come, first-serve basis at the Othello office until 3:00 p.m. of the last workday before the hunt. Permits are not transferable.

D. Temporary blinds may be constructed but must be available for general use on a first-come, first-serve basis.

E. Decoys may not be left, set up for hunting, on the refuge overnight.

F. Dogs may be used to retrieve birds but must be kept leashed when not hunting.

G. Parking is allowed only in designated areas; camping and overnight parking are permitted only in Soda Lake Campground.

H. Fires are allowed in camp stoves only.

Toppenish National Wildlife Refuge, Route 1, Box 1300, Toppenish, Washington 98948. Contact Refuge Manager at (509) 865–2405.

Special Conditions: Hunters using the Pumphouse Road and Robbins Road areas must register at respective parking areas and shoot from designated sites only.

Umatilla National Wildlife Refuge, P.O. Box 239, Umatilla, Oregon 97882. Contact Refuge Manager at (503) 922–3232.

Columbian White-Tailed Deer National Wildlife Refuge, Route 1, Box 378C, Cathlamet, Washington 98612. Contact Refuge Manager at (206) 795–4915.

3. Ducks, geese and coots may be hunted on the following refuge areas:

Ridgefield National Wildlife Refuge, P.O. Box 457, Ridgefield, Washington 98642. Contact Refuges Manager at (206) 887–4071. Special conditions: (1) Hunting will be allowed every other day during the regular waterfowl season, except for Thanksgiving, Christmas and New Years Days. (2) A federal permit, available from the refuge office, is required to enter the public hunting area before 10:00 a.m. Permit applications will be accepted only from September 15 through October 1 for the first half of the regular waterfowl season (opening day to November 30), and only from November 1 through November 15 for the second half of the regular waterfowl season (December 1 to closing day). Permits will be issued only by mail. (3) Hunters may shoot only from blinds selected by drawing at the check station. A recreational use fee of $5.00 will be charged for each hunter's use of a blind. Fee for holders of Golden Age Passport is $2.50. (4) Only steel shot may be possessed or used on the refuge hunting area.

Willapa National Wildlife Refuge, Ilwaco, Washington 98624. Contact Refuge Manager at (206) 484–3482.

Lewis and Leadbetter Point Units, Special conditions: Hunter registration is required. Leadbetter Point is the only refuge unit open to black brant hunting after the close of the general season.

Riekkola Unit, Special conditions: (1) Hunters will be permitted only on Wednesdays and Saturdays, except for Christmas and New Years Days, during the regular waterfowl season. (2) Hunter registration is required. (3) Hunters may shoot only from blinds selected by drawing at the check station. A recreational use fee of $5.00 will be charged for each hunter's use of a blind. Fee for holders of Golden Age Passport is $2.50.

McNary National Wildlife Refuge, P.O. Box 308, Burbank, Washington 99323. Contact Refuge Manager at (509) 547–4942. Special Conditions: (1) Hunters are required to park vehicles in designated parking areas only. (2) On Burbank Slough, hunting will be permitted on Wednesday, Saturday, Sunday and Thanksgiving Day only. No additional hunting will be permitted during the State extended goose hunting season. In the north and south one-thirds of hunting area, hunting is from marked sites only. Reservations are required for use of goose hunting sites in fields 5 and 6. (3) On the Hanford Island Division, hunting is permitted only on the five upstream islands from opposite the Hanford 300 area-Sagemoore Road upstream to BPA power line crossing. The Hanford Island offshore from the Graduate Center, Sprout Road is closed to hunting. (4) All public use on the Strawberry Island Division and the two Columbia River islands within the Richland city limits is prohibited.

§ 32.22 Special regulations; upland game; for individual wildlife refuge areas.

Upland game birds and rabbits may be hunted on the following refuge areas:

Columbia National Wildlife Refuge, P.O. Drawer F, Othello, Washington 99344. Contact Refuge Manager at (509) 488–3831. Special Conditions: Rabbits and upland game birds may be hunted only during that part of the State season concurrent with the waterfowl hunting season. Hunting is allowed only in those areas open to waterfowl hunting subject to the permit requirements of Marsh Unit I and Farm Unit 226–227.

Umatilla National Wildlife Refuge, P.O. Box 239, Umatilla, Oregon 97882. Contact Refuge Manager at (503) 922–3232. Special Condition: No rabbit hunting permitted.

Conboy Lake National Wildlife Refuge, Box 5, Glenwood, Washington 98619. Contact Refuge Manager at (509) 383–3410. Special Condition: Rabbits and upland game may only be hunted during the part of the State season concurrent with the waterfowl hunting season.

Toppenish National Wildlife Refuge, Route 1, Box 1300, Toppenish, Washington 98948. Contact Refuge Manager at (509) 865–2405. Special Condition: Rabbits and upland game may only be hunted during that part of the State season concurrent with the waterfowl hunting season.

Willapa National Wildlife Refuge, Ilwaco, Washington 98624. Contact Refuge Manager at (206) 484–3482.

Long Island Unit, Special conditions: (1) Archery hunting for blue and ruffed grouse only. (2) Hunters must register and possess hunting permit. Permits available at refuge headquarters and at the Nahcotta dock.

McNary National Wildlife Refuge, P.O. Box 308, Burbank, Washington 99323. Contact Refuge Manager at (509) 547–4942. Special Conditions: (1) Pheasants only may be hunted during the first half of the State's split season or through November 6, whichever is earlier. (2) Pheasant hunting will be restricted to Wednesday, Saturday, and Sunday. (3) Hunters are required to park vehicles in designated parking areas only.

§ 32.32 Special regulations; big game; for individual wildlife refuge areas.

1. All big game hunting regulated by the State is permitted on the following refuge area:

Little Pend Oreille National Wildlife Refuge, Route 1, Colville, Washington 99114. Contact Refuge Manager at (509) 684–2824.

2. Deer hunting only is permitted on the following refuge areas;

Columbia National Wildlife Refuge, P.O. Drawer F, Othello, Washington 99344. Contact Refuge Manager at (509) 488–3831. Special conditions: Deer may be hunted only in those areas open to waterfowl hunting subject to the permit requirements of Marsh Unit I and Farm Unit 226–227.

Umatilla National Wildlife Refuge, P.O. Box 239, Umatilla, Oregon 97882. Contact Refuge Manager at (503) 922–3232.

3. Bear, deer, and elk may be hunted on the following refuge areas;

Willapa National Wildlife Refuge, Ilwaco, Washington 98624. Contact Refuge Manager at (206) 484–3482.

Long Island Unit, Special conditions: (1) Archery hunting only is permitted. (2) Hunters must register and possess hunting permit. (3) Permits available at refuge headquarters and at the Nahcotta Dock. (4) Use of bait or baiting for bears is prohibited. (5) All garbage must be removed from the island.

The provisions of these special regulations supplement the regulations which govern hunting on wildlife refuge areas generally and which are set forth in Title 50 Code of Federal Regulations, Part 32. The public is invited to offer suggestions and comments at any time.

Note.—The Fish and Wildlife Service has determined that this document does not contain a major proposal requiring preparation of an Economic Impact Statement under Executive Order 11949 and OMB Circular A–107.

The primary author of this document is John H. Doebel, Area Office Staff Specialist (Wildlife): Telephone FTS 434–8578 or 9579, Com'l (206) 753–8578 or 9579.

Dated: August 7, 1980.

Joseph R. Blum,

Area Manager, U.S. Fish and Wildlife Service.

[Docket No. AO–86–A39–R01

Milk in the Nebraska-Western Iowa Marketing Area; Extension of Time for Filing Exceptions to the Revised Recommended Decision on Proposed Amendments to Tentative Marketing Agreement and to Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Extension of time for filing exceptions to proposed rule.

SUMMARY: This action extends the time for filing exceptions to a revised recommended decision concerning a proposed amended order regulating the handling of milk in the Nebraska-Western Iowa marketing area. Counsel for Associated Milk Producers, Inc., requested additional time to complete an analysis of the decision.

DATE: Exceptions now are due on or before September 15, 1980.

ADDRESS: Exceptions (four copies) should be filed with the Hearing Clerk, Room 1077, South Building, U.S. Department of Agriculture, Washington, D.C. 20250.

FOR FURTHER INFORMATION CONTACT: Maurice M. Martin, Marketing Specialist, Dairy Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, D.C. 20250 (202–447–7183).

SUPPLEMENTARY INFORMATION: Prior documents in this proceeding:

Notice of hearing: Issued September 29, 1978; published October 4, 1978 (43 FR 45881).

Extension of time for filing briefs: Issued January 15, 1979; published January 19, 1979 (44 FR 3989).

Recommended Decision: Issued July 24, 1979; published July 30, 1979 (44 FR 44523).

Extension of time for filing exceptions: Issued August 13, 1979; published August 16, 1979 (44 FR 47950).

Notice of reopening of hearing: Issued October 1, 1979; published October 4, 1979 (44 FR 57103).

Revised recommended decision: Issued July 24, 1980; published July 31, 1980 (45 FR 50773).

Notice is hereby given that the time for filing exceptions to the above listed revised recommended decision is hereby extended to September 15, 1980.

This notice is issued pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 *et seq.*), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900).

Signed at Washington, D.C., on: August 13, 1980.

FARM CREDIT ADMINISTRATION

12 CFR Ch. VI

Proposed Statement of Policy—National Environmental Policy Act

AGENCY: Farm Credit Administration.

ACTION: Proposed Statement of Policy.

SUMMARY: The National Environmental Policy Act (NEPA), (42 U.S.C. 4321 *et seq.*) requires Federal agencies to include environmental concerns in their decisionmaking. Under Executive Order 11991, May 24, 1977 (42 FR 26967), the Council on Environmental Quality (CEQ) was directed to issue regulations to Federal agencies for the implementation of the procedural provisions of NEPA. The Executive Order also required Federal agencies to comply with CEQ's regulations "except where * * * inconsistent with statutory requirements." On November 29, 1978, CEQ published (43 FR 55978) final regulations for implementing the procedural provisions of NEPA. CEQ's regulations (40 CFR Parts 1500–1508) require that "* * * each agency shall as necessary adopt procedures to supplement these regulations" (40 CFR 1507.3(a)). This policy statement constitutes compliance by FCA with this requirement.

DATES: Written comments must be received on or before October 20, 1980.

ADDRESSES: Submit any comments or suggestions in writing to Donald E. Wilkinson, Governor, Farm Credit Administration, Washington, D.C. 20578. Copies of all communications received will be available for examination by interested persons in the Office of Director, Public Affairs Division, Office of Administration, Farm Credit Administration.

FOR FURTHER INFORMATION CONTACT: Larry H. Bacon, Acting Deputy Governor, Office of Administration, 490 L'Enfant Plaza, S.W., Washington, D.C. 20578, (202–755–2181).

Statement of Policy—

The Farm Credit Administration (FCA) is required, pursuant to 40 CFR 1507.3(a), to adopt, as necessary, procedures to supplement regulations issued by the Council on Environmental Quality (CEQ) (40 CFR Parts 1500–1508). Those regulations were adopted by CEQ to implement the procedural provisions of the National Environmental Policy Act (NEPA) (42 U.S.C. 4321 *et seq.*).

The FCA has responsibility for supervising, regulating and examining the lending institutions of the cooperative Farm Credit System under the provisions of the Farm Credit Act of 1971, 12 U.S.C. 2001 *et seq.* in carrying out those responsibilities, the Agency attempts to assure that the stated statutory objective is achieved. That objective is: "to continue to encourage farmer- and rancher-borrowers participation in the management, control, and ownership of a permanent system of credit for agriculture which will be responsive to the credit needs of all types of agricultural producers having a basis for credit and to modernize and improve the authorizations and means for furnishing such credit and credit for housing in rural areas made available through the institutions constituting the Farm Credit System * * *" 12 U.S.C. 2001(b).

Because the activities of the FCA ordinarily do not, either individually or cumulatively, have a significant effect on the human environment, it is not necessary for FCA to set forth separate procedures to provide early involvement in action requiring FCA approval (40 CFR 1501.2(d)); nor to adopt procedures for introducing supplemental environmental impact statements into formal administrative records (40 CFR

1502.9(c)(3)); nor to provide procedures where interested persons can get information or status reports on environmental impact statements (40 CFR 1506.6(e)). In accordance with 40 CFR 1507.3(b)(2) and 1508.4, FCA believes that none of its actions will normally require the preparation of environmental assessments or environmental impact statements.

However, where it appears that, due to extraordinary circumstances, a particular action may have a significant effect on the human environment, FCA will determine whether NEPA requires additional consideration of the environmental impact of a particular action. An official will be designated at the FCA Headquarters to review such considerations prior to FCA action. Where a particular action requires environmental analysis, the relevant environmental documents will be prepared and placed in the administrative record. The documents shall accompany the proposal through the existing agency review process so that agency officials will use those documents in making their decision, and the decisionmaker will consider the alterntives presented in those environmental documents. In addition, interested members of the public may raise objections to proposed actions by FCA based upon environmental considerations.

Interested persons may submit comments and views on the effect of FCA's actions on the human environment, and may seek information concerning FCA's compliance with the National Environmental Policy Act, by writing to Frederick R. Medero, General Counsel of the Farm Credit Administration at the address stated above.

Donald E. Wilkinson,
Governor.

NATIONAL CREDIT UNION ADMINISTRATION

12 CFR Ch. VII

Month-End Financial Statements for Credit Unions

AGENCY: National Credit Union Administration.

ACTION: Request for comment on Proposed Statement of Financial Condition and Statement of Income and Expense.

SUMMARY: Federal credit unions are required to complete certain financial statements at the end of each month and to post these statements in the credit union office for review by members and other interested parties. The most important of these financial statements are the Statement of Financial Condition and the Statement of Income and Expense.

Suggested forms to be used for this purpose are contained in the *Accounting Mannual For Federal Credit Unions.* The proposed forms would replace these existing forms: FCU 109A, Statement of Financial Condition, FCU 109B, Statement of Income, FCU 109F, Statistical Report, and FCU 109 (COMB 75), Report of Operations. The forms would also serve as the basis for any periodic call reports requested by the Administration; as such it would replace the major portion of form NCUA 5300, Financial and Statistical Report.

The development of this multipurpose form is an effort to reduce the overall reporting burden on credit unions. The data which would be reported on the proposed form should meet the needs of the credit unions for financial reporting purposes and the Agency's data needs for statistical and analytical purposes.

DATE: Comments must be received by September 15, 1980.

ADDRESS: Robert S. Monheit, Regulatory Development Coordinator, Office of General Counsel, National Credit Union Administration, 1776 G Street, NW; Washington, D.C. 20456.

FOR FURTHER INFORMATION CONTACT: Mike Fischer, Chief Accountant, Office of Examination and Insurance, at the above address. Telephone (202) 357-1065.

SUPPLEMENTARY INFORMATION: In accordance with Article VIII of the *Federal Credit Union Bylaws,* Federal credit unions are required to complete certain financial statements at the end of each month and to post these statements in the credit union office for review by members and other interested parties. The most important of these financial statements are the Statement of Financial Condition and the Statement of Income and Expense. Suggested forms to be used for this purpose are contained in the *Accounting Manual for Federal Credit Unions.* The existing forms are: FCU 109A, Statement of Financial Condition, FCU 109B, Statement of Income, FCU 109F, Statistical Report, and FCU 109 (COMB 75), Report of Operations.

In addition under Sections 106 and 202 of the Federal Credit Union Act (12 U.S.C. 1756 and 1782), Federal and Federally Insured credit unions are required to file periodic reports with the National Credit Union Administration. The form currently used for this purpose is form NCUA 5300, Financial and Statistical Report.

Set forth below are preliminary copies of the Statement of Financial Condition and Statement of Income and Expense which are proposed as replacements for existing forms: FCU 109A, Statement of Financial Condition, FCU 109B, Statement of Income, FCU 109F, Statistical Report, and FCU 109 (COMB 75), Report of Operations. The forms contain certain changes which reflect credit unions' expanded powers and other changes which provide the use of the statements with more information regarding the liquidity position of the credit union.

The revised forms are multipurpose forms which not only provide more useful information to credit union members and management but also serve the National Credit Union Administration's needs for data gathering for statistical and analytical purposes. Credit unions which use the proposed forms for reporting to members on a monthly basis would be able to meet the basic reporting requirements of this Agency by furnishing a photocopy of the form which is prepared on a monthly basis. These credit unions would only need too prepare an additional form when supplementary data is requested. The basic call report would be identical to the monthly financial reports.

The Administration intends to consolidate existing, credit union reporting forms and to improve the usefulness and timeliness of credit union data. To that end the forms have been highly structured so that they may serve as source documents for data entry into computer systems. The structured approach will also facilitate comparability between credit unions.

Comments are requested on the clarity of instructions and the extent to which the forms meet the needs of users. Specific suggestions to improve the readability and ease of preparation will be appreciated.

(Sec. 506, 92 Stat. 3683 (12 U.S.C. 1756); sec. 1 (3), 84 Stat. 995 (12 U.S.C. 1782))

Rosemary Brady,
Secretary of the Board.

Instructions for Completing FCU 109

Item and Assets

1a—Outstanding Balances of Lines of Credit Loans to Members. (Acct. 702). Report the outstanding balances as of the report date in all approved line of credit accounts to members.

1b—Real Estate Loans. (Acct. 703). The total amount of first lien real estate loans to members outstanding as of the report date should be recorded in this account. Only those loans with original maturities in excess of 12 years should be reported on this line.

1c—Loan Balances Fully Secured By Shares. Report the amount of loans to members outstanding as of the report date that are completely secured by shares.

1d—All Other Loans to Members. This amount should be the residual of loans to members after lines of credit, real estate loans, and loan balances fully secured by shares have been deducted.

1e—Total Loans to Members. Include all loans to members (including Lines of Credit, Real Estate Loans and Loans fully secured by shares) outstanding as of the report date. Do not include loans to other credit unions which are reported in the investment section.

2—All Other Loan Accounts. Represents all other loan accounts of the credit union such as loans involving repossession of collaterial, any note or contract receivable resulting from the sale of assets acquired in liquidation of loans and similar accounts, if any. Do not include loans to other credit unions which are reported in the investment section.

3—(Less) Allowance for Loan Losses. (Acct. 719). This item, if applicable to your credit union, represents the amount set aside by the credit union which is necessary to absorb possible losses on loans. This should not include amounts reported in items 29 through 32 as reserves.

4—Net Loans Outstanding. This represents the value of loans outstanding net of the allowance for loan losses. Add items 1e and 2 and subtract item 3.

5—Cash. (Acct. 730). This account represents cash on hand, petty cash, checking accounts, etc.

6—U.S. Government Obligations. (Acct. 741). Represents the "book value" of credit union funds invested in obligations of the united States which are fully guaranteed as to both principal and interest. The amounts reported in 6A plus 6B must equal the amount in 6C.

7—Federal Agency Securities. (Acct. 742). Represents the "book value" of credit union funds invested in agency securities and participation certificates which are secured by collateral owned by these agencies. The amount reported in 7A plus 7B must equal the amount in 7C.

8—Common Trust Investments. (Acct. 743). Represents the "book value" of credit union funds placed in common trust fund investments such as ICU, NIFCUS, etc. The amounts reported in 8A plus 8B must equal the amount in 8C.

9—Shares, Deposits and Certificates Invested in Corporate Central Credit Unions. Report the total amount of shares, deposits and certificates invested in Corporate Central Credit Unions as of the report date. The amounts reported in 9A plus 9B must equal the amount in 9C.

10—Shares, Deposits and Certificates in Banks, S&L's and Mutual Savings Banks. (Acct. 746). Represents the amounts of outstanding shares, deposits and certificates invested in Banks, S&L's and MSB's as of the report date. The amounts reported in 10A plus 10B must equal the amount in 10C.

11—Shares, Deposits and Certificates in Other Credit Unions. Represents the amount as of the report date of credit union funds invested in shares, deposits and certificates of other credit unions, excluding corporate central credit unions. The amounts reported in 11A plus 11B must equal the amount in 11C.

12—Loans to Other Credit Union. (Acct. 747). Represents the amount outstanding of loans made to other credit unions as of the report date. The amounts reported in 12A plus 12B must equal the amount in 12C.

13—Total Shares in the Central Liquidity Facility. Represents the total amount of shares invested directly in the Central Liquidity Facility as of the report date.

14—All Other Investments. This amount should reflect all other investments other than those listed above, as of the report date.

15—(Less) Allowance for Investment Losses. (Acct. 749). This items, if applicable to your credit union, represents the amount set aside to absorb possible losses in the liquidation of investments.

16—Net Investments. This represents the sum of items 6 through 14 less 15.

17—Land and Building (Net). Represents the amount of land and building less depreciation on building, if any.

18—Other Fixed Assets. Represents all other fixed assets of the credit union such as furniture and fixtures, leasehold improvements, less related depreciation items, if any.

19—All Other Assets. Represents all other assets of the credit union not included in the above items. Includes such items as prepaid expenses and insurance, accounts receivable, accrued income, etc.

20—Total Assets. Represents the sum of items 4, 5, 16, 17, 18, and 19 (total columns).

Item and Liabilities/Savings/Equity

21—Promissory Notes (Certificates of Indebtedness). Report the amount of funds borrowed by your credit union from individuals for which you issued a promissory note (CI). The amounts reported in items 21A plus 21B must equal the amount in 21C.

22—Reverse Repurchase Agreements. Report the outstanding balance of funds borrowed by the credit union from any source, using its securities as collateral on the loans.

23—Other Notes/Interest Payable. Represents the amount of liability of the credit union for borrowed funds, other than those reported in items 21 and 22. The amounts reported in items 23A plus 23B must equal the amount in item 23C.

24—Accounts Payable. (Acct. 800). Represents all accounts payable of the credit union such as undistributed payments, undistributed payroll deductions, etc.

25—Dividends/Interest on Shares/Deposits Payable. (Acct. 820). This account should reflect the total amount of dividends/interest on shares/deposits payable that are declared for the last dividend period and not paid.

26—All Other Liabilities. This is a balancing item and represents all other liability accounts that are not shown separately. Include such items as taxes payable, accrued expenses, deferred income, etc.

27—Total Liabilities. This represents the sum of items 21 through 26 (Total Column).

28a—Share Certificates. Represents the total amount of regular, Money Market, Jumbo and other share certificates held by your credit union members, if any. The sum of the amounts in the two maturity categories for share certificates must be equal to the total.

28b—Share Draft Accounts. Represents the total amount outstanding of share draft accounts held by your credit union members.

28c—Other Member Savings/Deposits. The amount represents the total member savings in the credit union, excluding share draft accounts and share certificates.

28d—Non-member Savings. This represents the total amount of non-member savings in the credit union.

V 45 A G 1980 UMI

28e—Total Savings/Shares/Deposits. Represents the sum of amounts held in all savings/shares/deposits accounts of members and non-members. Includes Share Certificates, Share Draft Accounts, Public Unit Accounts, Retirement Plans and special share accounts such as Christmas and Vacation accounts, if any. The sum of the Total Columns of items 28a, 28b, 28c, and 28d must equal 28e.

29—Regular/Statutory Reserve. (Acct. 931). Represents the statutory (regular) reserve balance as of the report date.

30—Investment Valuation Reserve (SCU's only). Represents the reserves to cover the excess of Book Value over Market Value for investments other than those authorized for Federal credit unions by Section 107 of the Federal Credit Union Act.

31—Special Reserves. This represents any other reserves required by regulation, special agreement or order of the credit union's supervisory authority.

32—Other Reserves. Represents the sum of other reserve accounts (excluding amounts in items 29, 30 and 31) such as reserve for contingencies, additional reserves for losses, insurance reserves, etc.

33—Undivided Earnings. (Acct. 940). Represents the total amount of accumulated income or suplus of the credit union. Should not include the amount of dividends and interest on deposits paid or payable which are reported in item 25.

34—Net Income (Loss). Represents the net income (loss) from operations.

Item and Liabilities/Savings/Equity

35—Total Liabilities, Savings, and Equity. Represents the sum of amounts in items 27, 28e and 29 through 34.

Item and Classification of Loans Outstanding

36–40—Classification of Loans Outstanding. This section calls for the reporting of the number and amount of delinquent loans, current and less than two months delinquent, and the total number and amount of loans outstanding including line of credit balances, if any. Information on loans delinquent should be taken from a schedule of delinquent loans as of the report date.

The following income and expense items should reflect totals for the periods.

Item and Operating Income

41—Interest on loans (Gross). (Acct. 110–118). Represents the total amount of income from interest on loans.

42—(Less) Interest Refunded. (Acct. 119). Represents the total amount of interest refunded.

43—Income from Investments. Represents the total amount of income earned on investments.

44—Other Operating Income. Represents all operating income other than income on loans and income from investments received by the credit union.

45—Total Gross Income. Represents the sum of items 41, 43, 44 minus item 42.

Item and Operating Expenses

46—Employee Compensation. (Acct. 210–219). Represents the total amount of salaries paid to employees of the credit union, including the treasurer, if paid. Also includes reimbursement to sponsor when credit union employees are on the sponsor company's payroll.

47—Employee Benefits. (Acct. 220–229). Represents all expenses of the credit union that relate to employee benefits. Includes such items as pension plan costs, employer's social security taxes, unemployment compensation taxes, and other benefits provided to employees.

48—Travel and Conference Expense. (Acct. 230–239). Represents the amount of authorized expenses incurred by employees and officers (including the treasurer) for travel and attendance at conferences and other meetings.

49—Association Dues. (Acct. 240–249). Represents membership dues and other fees paid to credit union organizations of which the credit union is a member.

50—Office Occupancy Expense. (Acct. 250–259). Represents all expenses relating to occupying an office including rent, utilities (except telephone depreciation of building if owned by the credit union, real estate taxes, and if renting, amortization of leasehold improvements, if any.

51—Office Operation Expense. (Acct. 260–269). Represents all expenses relating to the operation of an office including communications, stationery and supplies, insurance, furniture rental and/or maintenance, depreciation, bank service charges, etc.

52—Educational and Promotional Expense. (Acct. 270–279). Represents expenses incurred for advertising in newspapers, periodicals, radio or television and publicity and promotions in education of members.

53—Loan Servicing Expense. (Acct. 280–289). Represents all expenses incurred in the servicing of loans such as collection expense, credit reports, recording fees, chattel lien insurance, etc.

54—Professional and Outside Services. (Acct. 290–299). Represents expenses incurred by the credit union for such items as legal fees, audit fees, accounting services, and management and consultant fees.

55—Provision for Loan Losses. (Acct. 300–309). Represents the current period provision for all losses and related costs on loans and other receivables.

56—Member Insurance. (Acct. 310–319). Represents the cost of members' insurance, including premiums paid for life savings insurance, annual share insurance premium and borrowers protection insurance.

57—Operating Fees. (Acct. 320–329). Represents the NCUA annual operating fee, state supervision fee and the cost of periodic examinations assessed by NCUA or the State Supervisory Agency, if any.

58—Cash Over and Short. (Acct. 330–339). Represents the amount of tellers' cash overages and shortages where cash received vouchers for a day's business did not balance with the total cash receipts for that day.

59—Interest on Borrowed Money. (Acct. 340–349). Represents the interest cost to the credit union for borrowed money. Interest paid on member and non-member deposits (if authorized in your State) should be included in code 380, Dividends and Interest on Deposits.

60—Annual Meeting Expense. (Acct. 350–359). Represents all costs incurred by the credit union in connection with the annual meeting of shareholders; includes costs of hall rental, printing of notices, etc.

61—Miscellaneous Operating/ Expense. (Acct. 360–369). Includes all miscellaneous operating expenses for which no separate expense categories are listed.

62—Total Operating Expenses Before Dividends and Interest on Deposits. Represents the sum of all expense items listed above. (Items 46 through 61).

63—Net Income (Loss) Before Dividends and Interest on Deposits. Represents the total amount of income or loss resulting from operations (operating income less operating expenses). (Item 45 less item 62).

Item and Non-Operating Income and Expenses

64—Gain (Loss) on Investments. (Acct. 420). Report the amount of non-operating income or expense resulting from the gain or loss on investments.

65—Gain (Loss) on Disposition of Assets. (Acct. 430). Report the amount of non-operating income or expense resulting from the disposition of assets.

66—Other Non-Operating Income (Expense). (Acct. 440). Represents miscellaneous non-operating income or expenses.

67—Total Non-Operating Gains and Losses. The sum of items 64, 65, and 66.

68—Total Net Income (Loss) Before Dividends/Interest on Deposits. Represents the total amount of operating and non-operating income or loss before the deduction of dividends and interest on deposits. (Total of items 63 and 67).

Item and Allocation of Income

69—Dividends and Interest on Deposits. Report the total amount of dividends and interest on deposits paid or declared on all savings accounts. If dividends have not been declared enter the estimated amount which will be required based upon the anticipated dividend rate.

Item and Non-Operating Income, and Expenses

70—Net Income (Loss) After Dividends and Interest on Deposits. Item 68 less item 69.

71—Transfer to Regular or Statutory Reserve. Report the amount transferred from gross income to regular or statutory reserves.

72—Provision for Loan Losses Adjustment. Enter the lesser of the amount shown in the Provision for Loan Losses Expense (Item 55) or the Required Reserve transfer (item 71).

73—Change to Undivided Earnings as a Result of Operations. Item 70 less 71 plus 72.

Item and Miscellaneous Information

74—Maximum Unsecured Loan Limit. Represents the maximum loan amount given by your credit union that is unsecured.

75—Interest Refund Rate. Report the most common interest refund rate paid on refunds by your credit union during the current period.

76—Dollar Amt. of Forward Commitments to Purchase if your credit union is committed to purchase U.S. Government obligations or Federal agency securities at a future date, report the total commitment as of the report date.

77—Number of Members at End of Month. Enter the actual number of members of record as of the month end. Do not enter the number of accounts.

78—Number of Potential Members. Represents the number of actual members plus persons in the field of membership who have not yet joined the credit union. If the field of membership is stated in terms of the number of families, use an average of 3 persons per family to estimate the total potential membership.

79—Effective Date of Most Recent Supervisory Committee Verification of Members' Accounts. For example, report September 1980 as 09 80.

80—Effective Date of Most Recent Supervisory Committee Annual Audit. For example, report September 1980 as 09 80.

81—Balance of Share and Loan ledgers. Indicate whether or not your share and loan ledgers balance with their respective general ledger control.

Item and Other Loan Information

82—Total Loan Made During Current Year. Report the total number and amount of loans made during the current year.

83—Real Estate Loans Made During Current Year. Record the number and the outstanding dollar amount of loans sold to others which the credit union continues to service.

84—Loans Sold and Being Serviced by the Credit Union. Record the number and the outstanding dollar amount of loans sold to others which the credit union continues to service.

85—Total Loans Made Since Organization. Report the total number and amount of loans made since the organization of the credit union.

86—Loans Charged Off Since Organization. Represents the total amount of loans charged off since the credit union was organized. Loans charged off during the current year should be added to the amount reported on last year's year-end form to obtain the total charged off since organization as of the report date.

87—Recoveries on Loans Charged Off Since Organization. Represents the total amount of recoveries on previously charged off loans since the organization of the credit union. Add the amount recovered during the current year to last year's year-end total.

88—Net Loans Charged Off Since Organization. Represents items 86 less item 87.

BILLING CODE 7535-01-M

FEDERAL TRADE COMMISSION

16 CFR Part 13

[File No. 802 3168]

Universal Bodybuilding, Inc., et al.; Consent Agreement With Analysis To Aid Public Comment

AGENCY: Federal Trade Commission

ACTION: Consent agreement.

SUMMARY: In settlement of alleged violations of federal law prohibiting unfair acts and practices and unfair methods of competition, this consent order, accepted subject to final Commission approval, would require, among other things, a Redford, Mich. seller of various bodybuilding and self-improvement courses and products to cease from using adult models and testimonials in advertisments directed to non-adults; and advertising or promoting the sale of bodybuilding products or courses, unless it has tests or studies available which indicate that unsupervised use of its products will not be harmful to non-adults. The firm would be further prohibited from making any unfair, deceptive or unsubstantiated product claim in advertising or other promotional material; and required to maintain specified records for a particular period.

DATE: Comments must be received on or before October 20, 1980.

ADDRESS: Comments should be directed to: Office of the Secretary, Federal Trade Commission, 6th St. and Pennsylvania Ave., NW., Washington D.C. 20580.

FOR FURTHER INFORMATION CONTACT: Thomas C. Armitage, Director, 10R Seattle Regional Office, Federal Trade Commission, 28th Floor, Federal building, 915 Second Ave., Seattle, Wash. 98174. (206) 442–4655.

SUPPLEMENTARY INFORMATION: Pursuant to Section 6(f) of the Federal Trade Commission Act, 38 Stat. 721, 15 U.S.C. 46 and § 2.34 of the Commission's rules of practice (16 CFR 2.34), notice is hereby given that the following consent agreement containing a consent order to cease and desist and an explanation thereof, having been filed with and accepted, subject to final approval, by the Commission, has been placed on the public record for a period of sixty (60) days. Public comment is invited. Such comments or views will be considered by the Commission and will be available for inspection and copying at its principal office in accordance with Section 4.9(b)(14) of the Commission's rules of practice (16 CFR 4.9(b)(14)).

[Docket No. 802 3168]

Universal Bodybuilding, Inc., et al; Agreement Containing Consent Order To Cease and Desist

The Federal Trade Commission has initiated an investigation of certain acts and practices of Universal Bodybuilding, Inc., a corporation, and Morris Mitchell, an individual. It now appears that Universal Bodybuilding, Inc. and Morris Mitchell, sometimes referred to as respondents, are willing to enter into an agreement containing an order to cease and desist from the use of the acts and practices being investigated.

It is hereby agreed by and between

in disposition of the proceeding. The

years of age. Advertisements directed to

reasonably be expected to result from

product in a manner which differs from

products. In addition, for a period of 10

It is hereby agreed by and between Universal Bodybuilding, Inc., a corporation, and Morris Mitchell, an individual, and their attorney, and counsel for the Federal Trade Commission that:

1. Proposed Universal Bodybuilding, Inc., is a Michigan corporation with its office and principal place of business located at 26903 West Eight Mile Road, Redford, Michigan 48240.

2. Proposed respondent Morris Mitchell is President of Universal Bodybuilding, Inc. and his address is the same as that of Universal Bodybuilding, Inc. He formulates, directs and controls the policies, acts and practices of Universal Bodybuilding, Inc. In particular, he is responsible for all advertising for Universal Bodybuilding, Inc.

3. Proposed respondents admit all the jurisdictional facts set forth in the draft of complaint here attached.

4. Proposed respondents waive:

(a) Any further procedural steps;

(b) The requirement that the Commission's decision contain a statement of findings of fact and conclusions of law; and

(c) All rights to seek judicial review or otherwise to challenge or contest the validity of the order entered pursuant to this agreement.

5. This agreement shall not become a part of the official record of the proceeding unless and until it is accepted by the Commission. If this agreement is accepted by the Commission it, together with the draft of complaint and related material pursuant to Rule 2.34, will be placed on the public record for a period of sixty (60) days. The Commission thereafter may withdraw its acceptance of this agreement and so notify the proposed respondents. In this event it will take such action as it may consider appropriate. The Commission also may issue and serve its complaint (in such form as the circumstances may require) and decision, in disposition of the proceeding.

6. This agreement is for settlement purposes only and does not constitute and admission by respondents that the law has been violated as alleged in the draft of the attached complaint.

7. If this agreement is accepted by the Commission, and if such acceptance is not subsequently withdrawn by the Commission pursuant to the provisions of § 2.34 of the Commission's rules, the Commission may, without further notice to proposed respondents, issue its complaint corresponding in form and substance with the draft of the attached complaint and its decision containing the following order to cease and desist in disposition of the proceeding. The Commission may also make public information pursuant to Rule 2.34. When so entered, the order to cease and desist shall have the same force and effect and may be altered, modified or set aside in the same manner and within the same time provided by statute for other orders. The order shall become final upon service. Delivery by the U.S. Postal Service of the complaint and decision containing the agreed-to order to proposed respondents' address as stated in this agreement shall constitute service. Proposed respondents waive any right they might have to any other manner of service. The complaint may be used in construing the terms of the order, and no agreement, understanding, representation, or interpretation not contained in the order or the agreement may be used to vary or contradict the terms of the order.

8. Proposed respondents have read the proposed complaint and order. They understand that once the order has been issued, they will be required to file one or more compliance reports showing that they have fully complied with the order. Proposed respondents further understand that they may be liable for civil penalties in the amount provided by law for each violation of the order after it becomes final.

Order

This order applies to respondent Universal Bodybuilding, Inc., a corporation, its successors and assigns and its officers, agents, representatives and employees, in connection with offering for sale, sale or distribution of any bodybuilding, muscle-building or other self-improvement products, devices or courses directly or through any corporation, subsidiary, division, or other device in or affecting commerce, as commerce is defined in the Federal Trade Commission Act, as amended. This order applies to respondent Morris Mitchell in connection with advertising, offering for sale, sale or distribution of any bodybuilding, muscle-building or other self-improvement products, devices or courses in or affecting commerce, as commerce is defined in the Federal Trade Commission Act, and amended. This order shall not apply to Morris Mitchell insofar as he is involved only in the bona fide sale of advertising services to businesses which are not involved in the sale or offering for sale of any bodybuilding, muscle-building, or other self-improvement products, devices or courses and in which he or members of his immediate family have no financial interest.

For purposes of this order "non-adults" shall mean persons under 17 years of age. Advertisements directed to non-adults shall mean all advertisements and promotional material:

1. Whose dominant appeal is to non-adults;

2. Mailed directly to a person who respondent has reason to believe is a non-adult; or

3. Disseminated in publications whose audience for the prior 12 months was composed of a majority of non-adults. Such publications shall include all comic books, *Mad Magazine, Boy's Life, Children's Digest* and *Jack and Jill.* This list is intended to be representative of publications covered by this order but not exclusive.

It is ordered, That in all advertisements directed to non-adults respondents cease and desist from:

A. Advertising or in any way promoting the sale of body-building or muscle-building products, devices or courses (hereafter referred to as products) until respondents have available and rely on competent scientific or medical tests or studies adequate to show that use of the products without appropriate supervision will not be harmful to non-adult consumers.

B. Using pictures or drawings of adults or professional models to promote the sale of bodybuilding or musclebuilding products.

C. Making any representation, directly or by implication, unless, at the time the representation is made, respondents have, and rely on, substantiation sufficient to provide a reasonable basis to believe that the representation is true for the typical non-adult consumer of respondent's products. In interpreting this provision, respondents shall not represent that a consumer can achieve any result unless and until respondents can substantiate by competent tests or studies that the result can be attained by a typical non-adult who uses the product in the manner depicted in the advertisement. The original data collected for any such studies performed at the request of or with the financial assistance of respondents and a detailed description of how the test or study was performed must be available for inspection by the Federal Trade Commission for at least two years following the final use of the representation.

D. Using any testimonial which does not represent the typical experience of non-adult consumers of respondents' products.

E. Making any representation, directly or indirecly, which exaggerates or overstates the results which may

reasonably be expected to result from use of any product by a non-adult.

II

It is further ordered, That in all advertisements respondents cease and desist from:

A. Representing in any manner, directly or by implication, including through the use of testimonials, that a typical consumer who uses respondents' products will attain rapid improvement in his physical appearance, add muscles, lose fat or gain respect from his peers unless the representation is, in fact, true.

B. Representing in any manner, directly or by implication, that any product:

(1) Makes muscles appear quickly and easily, with little effort;

(2) Is more effective than isometrics or any other form of muscle building, body building or self-improvement products;

(3) Is the fastest muscle-building system in the world, unless the representation is, in fact, true.

C. Disseminating any advertisement or promotional material which contains unfair or deceptive representations or fails to disclose material facts regarding the facts regarding the advertised product(s).

D. Making any representation, directly or by implication, unless at the time the representation is made, respondents have, and rely on, substantiation sufficient to provide a reasonable basis to believe that the representation is true for the typical consumer of respondents' products. In interpreting this provision, respondents shall not represent that a consumer can achieve any result unless and until respondents can substantiate by competent tests or studies that the result can be attained by a typical consumer who uses the product in the manner depicted in the advertisement. The original data collected for any such studies performed at the request of or with the financial assistance of respondents and a detailed description of how the test or study was performed must be available for inspection by the Federal Trade Commission for at least two years following the final use of the representation.

Provided, That respondents may use testimonials which do not represent the typical experience of consumers of respondents' product(s) if (1) the testimonial itself is truthful; and (2) all conditions which contributed to the atypical results are clearly and conspicuously disclosed. Such conditions shall include, but shall not be limited to, the prior physical condition of the user, use of a special diet, use of bodybuilding products in addition to the advertised products and use of the product in a manner which differs from that depicted in the advertisement (e.g., use of the product for a longer period of time each day than advertised).

E. Representing in any manner, directly or by implication, that the physical stature of any model used in an advertisement is attainable by typical consumers who use the product unless it is, in fact, attainable.

III

It is further ordered, That respondents maintain complete business records relative to the manner and form of their compliance with this order. Respondents shall retain each such record for at least three years, and shall retain substantiation and other documentation at least two years beyond the last dissemination of any representation or testimonial which relies on the substantiation under the provisions of this order. Upon reasonable notice, respondents shall make any and all such records avalable for inspection and photocopying by authorized representatives of the Federal Trade Commission at respondents' place of business or other properly designated location.

IV

It is further ordered, That respondent Univeral Body Building, Inc., shall immediately deliver a copy of this order to each operating division and affiliated business. Respondent Universal Body Building, Inc., shall also immediately deliver a copy of this order to all personnel now or hereafter engaged in the sale or offering for sale of respondents' services or in any aspect of the preparation, creation or placing of advertising on behalf of respondents. Respondents shall secure from each such person a signed statement acknowledging receipt of the order.

V

It is further ordered, That respondents notify the Commission at least thirty days prior to any proposed change in a corporate respondent, such as dissolution, assignment or sale resulting in the emergence of a successor corporation or corporations, the creation or dissolution of subsidiaries, or any other change in the corporations which may affect compliance obligations arising out of the order.

It is further ordered, That Morris Mitchell promptly notify the Commission of the discontinuance of his present business or employment and of his affiliation with a new business or employment relating to the promotion or sale of body building, muscle building or self-improvement course, devices or products. In addition, for a period of 10 years from the date of service of this order, he shall promptly notify the Commission of each affiliation with such a new business of employment. Each such notice shall include his new business or employment. Each such notice shall include his new business address and a statement of the nature of the business or employment in which he is newly engaged as well as a description of his duties and responsibilites in connection with the business or employment. The expriration of the notice provision of this paragraph shall not affect any other ogligation arising under this order.

VI

It is further ordered, That the respondents herein shall, within sixty days after service of this order, file with the Commission a written report setting forth in detail the manner and form of their compliance with this order.

Analysis of Proposed Consent Order to Aid Public Comment

The Federal Trade Commission has accepted an agreement to a proposed consent order from Universal Bodybuilding, Inc., a corporation, and Morris Mitchell, an individual. The proposed consent order has been placed on the public record for 60 days for reception of comments by interested persons. Comments received during this period will become part of the public record. After 60 days, the Commission will again review the agreement and the comments received and will decide whether it should withdraw from the agreement or make final the agreement's proposed order. Universal Bodybuilding advertises and sells various bodybuilding and self-improvement courses and products. A significant portion of their previous advertising was directed to non-adults (persons under 17 years old) through publication in various comic books. Morris Mitchell, as president of Universal Bodybuilding, is personally in charge of much of this advertising.

The complaint which was issued by the Commission along with the proposed consent order alleges that Universal and Mitchell distributed advertisements and other promotional material which contained unfair and deceptive representations about these products. The principal allegations of the complaint focus on various ways respondents exaggerated the improvement of physique and muscle development that would be achieved and the amount of effort necessary to obtain body building results.

Unfortunately, the order contains additional

The complaint alleges that respondents failed to substantiate claims which they made about their products. The complaint also alleges that by promoting the unsupervised use of bodybuilding courses and products to non-adults, respondents falsely represented that they had reason to believe that such use was safe and non-harmful. Finally, the complaint alleges that respondents unfairly and deceptively used adult models and testimonials in advertising to non-adults in a manner which misrepresented muscle development which the typical non-adult could achieve by using respodents' products.

The proposed consent order separates respondents' advertising into two parts: Advertising directed to adults and advertising directed to non-adults. In advertising to non-adults, respondents are prohibited from making any claim which promotes the unsupervised use of bodybuilding courses or products unless they have reason to believe that such use will not be harmful to non-adults. Respondents are also prohibited from using adult models or testimonials, or any testimonial which does not represent the typical experience of non-adults. Finally, respondents are prohibited from using any advertisement which exaggerates or overstates the expected results of using respondents' products.

In advertising directed to adults, respondents are prohibited from making certain specific claims about the ease and effectiveness of their products in building up bodies unless they are true. In addition, respondents are prohibited from making any unfair or deceptive representations or failing to disclose material facts regarding their products. They are also prohibited from making any unsubstantiated claims in advertising or other promotional material. The order allows respondents to use true testimonials that do not represent the typical experience of users of respondents' products in advertising directed to adults if all conditions which contributed to the atypical results are clearly and conspicuously disclosed.

We believe that this order will effectively eliminate any deception or other possible injury which might have resulted from respondents' previous advertising. There is reason to believe that the unsupervised use by non-adults of certain types of products or exercises might be physically harmful. For this reason the order requires respondents to substantiate the safety of any bodybuilding courses or products they promote to non-adults. In addition, we believe that consumers, especially non-adults, are especially susceptible to exaggeration and misrepresentation of the likely effects of this type of product. By requiring that respondents use only advertising techniques which promise results which are attainable by the average member of the audience, we hope that this sort of misrepresentation can be avoided. At the same time, the Commission recognizes that such a restriction will not always be the most appropriate remedy for this type of misrepresentation. In many cases it is entirely possible that affirmative disclosure of the unusual circumstances necessary to achieve the promised results also could serve to cure the misrepresentation. We do not believe that compliance with this order will impose a great burden on these respondents or on other sellers and advertisers of bodybuilding courses or products. The order places no affirmative obligation on respondents which did not already exist for all advertisers under established Commission precedent.

The purpose of this analysis is to facilitate public comment on the proposed order. It is not intended to constitute an official interpretation of the agreement and proposed order or to modify their terms.

James A. Tobin,
Acting Secretary.

Dissenting Statement of Commissioner David A. Clanton

While I support the other provisions of the order, I am opposed to Paragraph I.B., which would prohibit the use of adult models in advertisements directed primarily to non-adults. It is difficult to assume that children reading such ads would be deceived into thinking that Universal Bodybuilding's program would transform them into replicas of the pictured models (who plainly appear to be adults, and not adolescents). While it might be argued that the use of heavily-muscled adult models prompts children to overexert themselves, I think that other provisions in the order, such as Paragraph I.A., are sufficient to assure that the advertisements do not encourage such results.

Dissenting Statement of Commissioner Robert Pitofsky

Universal Body Building sells body building devices and body building and self improvement courses. Among its products are weight lifting supporting belts and several books and pamphlets on body building. In the past, it advertised these products in comic books as well as other publications.

Some of its advertising claims appear to be highly unlikely—for example, claims that by using its body building method, "muscles will appear * * * almost like magic." Staff and the company have negotiated a cease and desist order covering false claims. Unfortunately, the order contains additional provisions which are entirely unsupportable.

Two order provisions seem to me particularly unfounded. Staff alleges that it is deceptive advertising to use adult models in physical self improvement ads in comic books because it will lead young readers to think they can achieve the physical stature of the models. The order addresses that problem by directing that the company in the future not use pictures or drawings of adults or professional models to promote the sale of body building or muscle building products in publications likely to reach non-adults—i.e., people under 17. The theory apparently is that kids reading these comic-book ads will be induced to believe that by following the body building program, they will soon look like the models. I just don't think kids are that dumb. At most, they may believe that the models followed weight lifting or body building programs like those described for sale, and if they follow the recommended program, they too will come to look more like the models than they do now. Muscle building ads have been using adult models as long as I can remember and I haven't noticed any serious consumer harm as a result. In any event, the staff has offered no evidence to support these unusual complaint and order provisions.

The staff's second concern relating to sale of these products and programs to non-adults has to do with the dangers of unsupervised use. The complaint alleges that Universal Body Building in its advertisements impliedly represents that it is relying on "competent scientific tests or studies" to provide a reasonable basis to believe its products can be used by non-adults "without appropriate supervision." The ads say nothing of the kind, but the theory underlying the Order is that the promotion of muscle building products or programs to kids create an implied claim of safe use. The proposed remedy is to require that such ads be run in publications designed to reach non-adults only if the company has studies to show the products "can be used without appropriate supervision * * * [and] * * * will not be harmful."

Obviously, any body building regime could be harmful if done to excess or with improper technique. The same could be said about riding a bicycle or roller-skating. The Commission has no evidence that unsupervised body building is a dangerous activity and I am simply not willing to assume that advertising these products and programs, without some sort of scientific study relating to safety, is a violation of law, when no claims about safety are made. Since a scientific study to demonstrate that unsupervised muscle building is safe under all circumstances will be impossible to develop, the real result here will be to exclude all muscle building ads from comic books and other magazines read mainly by non-adults. I don't see that as a sensible Commission goal.

I believe these two provisions should be eliminated and the Order limited to covering instances of fraud.

BILLING CODE 6750-01-M

FEDERAL TRADE COMMISSION

16 CFR Part 406

Deceptive Advertising and Labeling of Previously Used Lubricating Oil

AGENCY: Federal Trade Commission.

ACTION: Statement of Enforcement Policy and invitation to comment.

SUMMARY: On April 15, 1980, the Association of Petroleum Re-Refiners filed a petition with the Commission concerning its Trade Regulation Rule on Deceptive Advertising and Labeling of Previously Used Lubricating Oil (Used Oil Rule). The relief sought by the petition is the repeal of the rule or, in the alternative, a modification of its requirements to permit sellers of used oil to satisfy the rule by referring to their products as "recycled" rather than "used." The Commission has tentatively concluded that the use of the term "recycled oil product" to describe lubricants that have been re-refined from used oil would satisfy the disclosure requirement of the Used Oil Rule, and has therefore issued this Enforcement Policy Statement. Public comments on the Statement are being solicited for a period of 30 days. Unless the Commission subsequently determines, in light of the public comments, to alter or revoke the Statement, it will automatically take effect 60 days from the date of this notice.

DATE: Comments will be accepted until September 18, 1980.

ADDRESSES: Comments should be sent to: Secretary, Federal Trade Commission, 6th Street and Pennsylvania Avenue, NW., Washington, D.C. 20580. They should be designated as "Comment on Used Oil Rule Enforcement Policy Statement." Copies of the petition filed by the Association of Petroleum Re-Refiners and of the Used Oil Rule can be obtained from the Public Reference Branch at the above address (202/523–3598). The record of the Used Oil Rule proceeding is available for inspection at the Public Reference Branch.

FOR FURTHER INFORMATION CONTACT: Charlie Donaldson, Attorney, Division of Energy and Product Information, Bureau of Consumer protection, Federal Trade Commission, Washington, D.C. 20580. Telephone number: 202/724–1537.

SUPPLEMENTARY INFORMATION: On August 14, 1964, The Federal Trade Commission, pursuant to the Federal Trade Commission Act, as amended, 15 U.S.C. Section 41 *et seq.*, promulgated "16 CFR Part 406—Deceptive Advertising and Labeling of Previously Used Lubricating Oil" (29 FR 11650). The Commission's rule is founded on the conclusion that whether a lubricant has been made from crude oil or from used oil is material to consumers. Accordingly, the Commission's rule requires that containers of lubricant that has been made from used oil disclose the origin of the product to consumers. While the Used Oil Rule does not prescribe specific language to be employed in making this disclosure, the term in common use since promulgation of the rule has been "made from used oil."

On April 15, 1980, the Association of Petroleum Re-Refiners petitioned the Commission to repeal the Used Oil Rule, or to modify it to permit the use of the terms "this is a recycled petroleum product" or "this is a combination of virgin oil and recycled petroleum products" to satisfy the requirements of the rule. The Association believes that the phrase "used oil" conflicts with the Congressional policy favoring the recycling of used oil, by disparaging the quality of lubricants made from used oil. In their view, the terms suggested in their petition are not discriminatory and satisfy the purposes of the rule.

It is unclear whether consumers, in fact, derive a disparaging meaning from the phrase "used oil." As noted above, however, the Used Oil Rule does not specifically require the use of this term, so long as the used origin of such a lubricant is adequately conveyed to consumers. Thus, the Commission believes that it is unnecessary to consider repeal or modification of its rule, if the terms suggested by the Association adequately convey this message to consumers.

While empirical evidence is lacking as to perception of the word "recycled", the Commission is of the view that the term "recycled oil product" would convey two things to consumers: (1) that the product has been made from previously used oil; and (2) that the processing of the used oil has made it suitable once again for ordinary consumer use. As a result, the Commission has tentatively concluded that this term is an acceptable phrase for making the disclosure required by the Used Oil Rule, for those lubricants which have been re-refined from used oil. This latter limitation is consistent with the Used Oil Rule, which draws a distinction between lubricants that are made from used oil which has been subjected to a re-refining process and those made from used oil which has not been subjected to such a process. The former have been subjected to a process that removes virtually all contaminants, while the latter have not and are therefore inappropriate for ordinary consumer use. Since the APR's petition is concerned only with re-refined oil, our interpretation permitting use of "recycled oil product" applies only to lubricants whose used oil components have been subjected to a complete re-refining process.

Another limitation is that the Commission expressly endorses only the phrase "recycled oil product" as complying with the rule. The Commission is encouraging the use of that wording to maintain a reasonably uniform disclosure scheme and to minimize any consumer confusion in this area. By this action, the Commission takes no position on whether other references to "recycled" would also be in compliance.

Although the Commission believes that this Enforcement Policy Statement is consistent with the purposes of its rule, the Commission wishes to receive and consider the comments of interested parties regarding this interpretation. The Commission is particularly interested in comments on the question whether the phrase "recycled oil product" adequately informs consumers of the used origin of re-refined lubricants.

Comments on the Statement will be accepted for a period of 30 days. Unless the Commission subsequently determines, in light of the public comments, to alter or revoke the Enforcement Policy Statement, it will automatically become effective 60 days after publication of this notice.

By direction of the Commission.

James A. Tobin,
Acting Secretary.

BILLING CODE 6750-01-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Secretary

24 CFR Part 51

[Docket No. R-80-709]

Siting of HUD-Assisted Projects Near Hazardous Operations Handling Conventional Fuels or Chemicals of an Explosive or Flammable Nature

AGENCY: Department of Housing and Urban Development.

ACTION: Notice of Proposed Rulemaking.

SUMMARY: HUD proposes to adopt a new regulation establishing Departmental standards, requirements and guidelines delineating danger zones around hazardous operations so that

generated by an explosion. The very

Subpart are satisfied. Mitigating

government on hazard implications and

HUD-assisted projects can be located at acceptable separation distances from specific hazardous operations handling materials of an explosive nature or flammable materials with a high thermal radiation output.

The purpose of the proposed regulation is to assure that a HUD assisted project is located at an acceptable separation distance (ASD) from such potentially hazardous facilities. The regulation proposes to establish explosion and thermal radiation (fire) safety standards, which will be used to determine an ASD for a given project.

DATES: Interested persons may comment by submitting written data, opinions or recommendations to the Department by October 20, 1980. Each person submitting a statement should include name, address and a reference to this policy document by the docket number indicated in the heading. All statements should be accompanied by reasons and substantiating data. All statements will be considered before final action is taken on the proposed rule.

ADDRESSES: Statements should be submitted to the Rules Docket Clerk, Office of the Secretary, Room 5218, Department of Housing and Urban Development, 451 7th Street, SW., Washington, D.C. 20410. Copies of all correspondence received will be available for examination by any interested persons during usual business hours in the Office of the Rules Docket Clerk at the above address.

FOR FURTHER INFORMATION CONTACT: James L. Christopulos, Office of Environmental Quality, Department of Housing and Urban Development, 451 7th Street, SW., Washington, D.C. 20410, telephone number 202–755–8909 (this is not a toll free number).

SUPPLEMENTARY INFORMATION: An Advance Notice of Proposed Rulemaking (ANPR), concerning this proposed regulation, was published in the **Federal Register** on September 10, 1979, 44 FR 52695. The ANPR resulted from the discovery, during the environmental review of proposed HUD projects, that many such projects were too often being located near hazardous operations of an explosive or fire prone nature. For example, in 1975, during the environmental review process, the Department learned about the proposed construction of 1,250 units of public housing which were to be located within 120 feet of a public utility facility containing forty 60,000 gallon liquid propane storage tanks. An engineering analysis determined that an explosion of just one of the tanks would emit a force capable of destroying 00 percent of the project.

The Department's concern with proposals to locate HUD-assisted projects in the vicinity of operations which include large quantities of explosive or flammable materials dates from that time. During the past four year period, Departmental staff and local officials have been using interim guidelines contained in HUD guidebook PD&R–161 (December 1975) entitled "Safety Considerations in Siting Housing Projects", to identify potentially hazardous operations and to determine acceptable separation distances for Community Development Block Grant (CDBG) projects and HUD-assisted housing in the vicinity of such operations. The guidebook is being revised concurrently with the development of this rule. It compiles formulae, nomographs, tables and other data which can be used to identify potential hazards and to determine acceptable separation distances from such hazards. The one substantive change between the original and the revised guidebook is that the standard for the safety of people in areas exposed to thermal radiation has been revised in accordance with the latest findings of current research. A draft of this guidebook is available for inspection in the Environmental Planning Division, Room 7266, at the above address.

Specific hazards considered in the proposed regulation are those of explosion and fire. The proposed regulation applies to any stationary or site specific operation or activity involved in handling quantities of explosive or flammable material(s). Operations covered by the regulation include the manufacture, storage, processing and transfer of certain chemicals and ordinary flammable fuels, e.g., kerosene, gasoline and naptha; liquid petroleum gases (LPG), e.g., liquid propane and liquid butane; and liquefied natural gas (LNG).

The Appendix, included as part of the proposed regulation, contains formulae taken from the guidebook to serve as an example for applying the standards.

This proposed rule appeared as Item CPD–32–78 in the January 4, 1980 Agenda of Significant Rules published in accordance with Executive Order 12044.

The Department has determined that the proposed regulation may significantly affect the quality of the human environment. Therefore, a Draft Environmental Impact Statement has been prepared for agency and public comment in accordance with the National Environmental Policy Act of 1969 (U.S.C. 4321), Council on Environmental Quality Regulations (40 CFR Part, 1500–1508) and HUD's Regulations (24 CFR Part 50).

Accordingly, the Department proposes to amend 24 CFR Part 51 by adding a new Subpart C to read as follows:

Subpart C—Siting of HUD-Assisted Projects Near Hazardous Operations Handling Conventional Fuels or Chemicals of an Explosive or Flammable Nature

Sec.
51.200 Purpose.
51.201 Definitions.
51.202 Policy.
51.203 Safety Standards.
51.204 Responsibilities.
51.205 Exceptions.
51.206 Mitigating Measures.
51.207 Reservation of Administrative and legal Rights.

APPENDIX:

1. Background Information Concerning the Standards
2. Examples

Authority: Sec. 7(d) Department of Housing and Urban Development Act (42 U.S.C. 3535 (d)); and 42 U.S.C. 1441.

Subpart C—Siting of HUD-Assisted Projects Near Hazardous Operations Handling Conventional Fuels or Chemicals of an Explosive or Flammable Nature

§ 51.200 Purpose

It is the purpose of this regulation to:

(a) Alert those responsible for the siting of HUD-assisted projects to the inherent potential dangers when such projects are located in the vicinity of hazardous operations of an explosion and/or fire prone nature;

(b) Provide guidance for identifying those harardous operations which are the most prevalent;

(c) Provide the technical guidance required to evaluate the degree of danger anticipated from explosion and thermal radiation (fire);

(d) Establish safety standards which can be used as a basis for calculating acceptable separation distances from potential fire and/or explosion hazards thereby assuring the location of HUD-assisted projects at acceptable distances from such hazardous operations; and

(e) Provide technical guidance required to determine acceptable separation distances from such hazards.

§ 51.201 Definitions.

Acceptable Separation Distance—(ASD) from a particular hazard is the distance beyond which it is not likely to cause more than minimal injury to people or damage to property. The ASD is also the distance beyond which HUD assisted projects may generally be constructed.

Blast Overpressure—that physical phenomenon that is characteristically generated by an explosion. The very rapid combustion or decomposition of an explosive reaction which produces very large volumes of super heated gases which exert pressure on the surrounding medium in excess of normal atmospheric pressure.

BTU—British Thermal Unit, a quantity of heat required to raise one pound of water one degree fahrenheit; a unit of heat measurement.

Danger Zone—That land area between the hazard and a perimeter defined by the ASD is the danger zone. For example, if the ASD is determined to be 200 feet, all land area beyond 200 feet is considered acceptable for construction of a HUD project; and that land located in the area between the hazard and the 200 feet perimeter is the "Danger Zone", and generally not acceptable for construction of a HUD assisted project.

Department—The Department of Housing and Urban Development

Secretary—The Secretary of Housing and Urban Development

HUD—The Department of Housing and Urban Development

HUD Assisted Project—The development, construction, rehabilitation, modernization or conversion with HUD subsidy, grant assistance, loan, loan guarantee, or mortgage insurance, of any project which is intended for human occupancy or use, i.e., for residential, institutional, recreational or other such use.

psi—Pounds per square inch, an abbreviation for the unit commonly used to measure compression pressure or blast overpressure.

Thermal Radiation Flux Level—The emission and propagation of heat energy through space or a material medium in the form of waves in a quantity proportional to the surface integral of the normal force field intensity over a given area. In simple terms, the amount of heat emitted from a fire. Normally expressed in BTU per square foot per hour (BTU/ft.^{2} hr.)

§ 51.202 Policy.

(a) It is HUD's policy that projects receiving HUD assistance will be located in a safe and healthful environment. Therefore, any HUD-assisted project which is intended for human occupancy or use, i.e., for employment, residential, institutional, recreational or other functions, whether part-time or full-time, shall be situated at an Acceptable Separation Distance (ASD) from a potential hazard of an explosion or fire prone nature. The Department will withhold assistance for any proposed project unless the safety considerations and standards of this Subpart are satisfied. Mitigating measures may be applied wherever feasible in order to minimize any potential hazard to the occupants or users of a proposed HUD assisted project in accordance with Section 51.206 of this regulation. An exception to this rule would be HUD projects of an industrial or commercial nature, which may have fire or explosive potential, e.g., gasohol plants, industrial parks, etc. However, the safety standards will apply in determining the proximity of projects of this nature to other land areas such as residential.

(b) The fundamental intent of this regulation is to safeguard community inhabitants by directing the growth patterns and development of densely inhabited areas away from such danger zones of flammable and explosive chemicals and fuels. Before such assistance is approved, HUD will evaluate the area zoning classification to establish whether a hazardous operation could at some time in the future be installed in close proximity to a proposed project to be constructed or rehabilitated with HUD assistance.

(c) The provisions of this regulation apply to all HUD assisted projects, with the exception noted in § 51.202(a). This includes any type of HUD assistance, i.e., grants, loans, mortgage guarantees, etc.

(1) Applicants for assistance under Title I, Housing and Community Development Act of 1974, will implement the policy, safety standards and criteria set forth in this Subpart during the environmental review process and must provide for appropriate mitigating measures such as barriers when sensitive land development is proposed for or will attract development to locations exposed to hazardous materials operations.

(2) This policy and its intended purposes of safety with regard to hazardous material operations shall be applied to all new construction, except as indicated in Paragraph 51.202(a), and to rehabilitation or modernization when such work wold substantially increase the number of people exposed to the hazards by increasing residential densities or through the conversion of a building or facility from non-residential to residential use.

(d) Grantees or sponsors of projects which have received HUD approval must notify the Department if they learn of any planned hazardous operation, covered by this regulation, which is to be located in the vicinity of their project. HUD will use this information to advise the appropriate entity of local government on hazard implications and remedial measures.

§ 51.203 Safety Standards.

There are two types of potential hazards covered by this regulation: (a) Fire (thermal radiation), and (b) explosion. Therefore, the safety standards to be established are for these two hazards. Based upon the background information contained in the Appendix of the regulation it has been determined that the fire safety standards will be 10,000 BTU/ft^{2}hr for buildings, and 450 BTU/ft^{2}hr for people in unprotected (outdoor) areas, such as playgrounds, parks, yards and open spaces within the property lines of the proposed development; and the standard for explosion will be 0.5 psi overpressure. These standards will be used to determine the Acceptable Separation Distance (ASD) from a potential explosive or fire prone hazard as illustrated by the examples in the Appendix. Any distance beyond the ASD will be considered acceptable for construction. That distance between the hazard source and the ASD delineates the "Danger Zone" and is unacceptable for the location of HUD-assisted projects, unless mitigating measures are taken. See § 51.206, Mitigating Measures. The Acceptable Separation Distances for building construction, which are computed for fire and for explosion will always differ. For some materials the ASD for fire will be the greatest, while for others the explosion ASD will predominate. In any event, the hazard requiring the greatest separation distance will prevail in determining the siting of buildings in HUD assisted projects.

Note.—Computation of an ASD is predicated on level topography and no intervening object(s) between a potential hazard and a proposed project. A permanent intervening structure or shielding topography can constitute a mitigating measure.

The Annex contains detailed information concerning the Safety Standards for determining acceptable separation distances (ASD's) for construction of buildings and location of outdoor recreational facilities.

§ 51.204 Responsibilities.

(a) Assistant Secretaries' duties:

(1) Assistant Secretaries shall implement the Department Policy regarding the required siting considerations of HUD assisted projects through guidance documents, and administrative forms and procedures for progams under their jurisdication.

(2) The Assistance Secretaries shall evaluate the effectiveness of the Departmental Policy and compliance

with its provisions. All significant issues and problems or suggested revisions or additions to the policy should be directed to the Assistant Secretary for Community Planning and Development.

(b) Regional Administrators, Area Office Managers and other Office Supervisors duties:

(1) *General Policy Implementation.* Regional Administrators, Area Office Managers, Insuring Office Supervisors and Service Office Supervisors shall assure that this policy is implemented.

(2) *Notice to Applicants.* As soon as practicable, these supervisors indicated in § 51.204(b)(1) above shall:

(i) Assure all present and prospective applicants are apprised of the Department's hazards policy and its provisions so that current and future site selections will be in accordance with HUD policy standards and guidelines.

(ii) Determine the suitability of proposed residential development with regard to potential danger zones and promptly notify applicants of any adverse or questionable conditions and state the factors leading to a HUD decision of adverse or questionable conditions.

(iii) Review mitigating measures submitted by the applicant to offset a potential hazard, and notify applicant of their acceptability.

§ 51.205 Exceptions.

There will be no exceptions, beyond that noted in § 51.202(a). Any project coming under the purview of this policy will comply with the prescribed Acceptable Separation Distance (ASD) as related to a specific hazard unless appropriate mitigating measures (see § 51.206) are incorporated into the project.

§ 51.206 Mitigating Measures.

There are two very effective measures which can be employed to minimize or off-set the effect of a potential explosion or thermal radiation (fire) hazard. The most positive and effective mitigating measure, which can be taken when siting a HUD project in the immediate vicinity of a fire or explosion prone operation, is the establishment of and adherence to an acceptable separation distance (ASD). This, as a matter of policy, should be the first recourse whenever HUD projects are proposed near hazardous operations of the type previously described. Another very effective measure is the construction of a barrier between the potential hazard and the proposed project site. This can dramatically reduce the danger zone and increase the availability of usable land area. Use of a barrier is recommended wherever the ASD cannot be achieved and it is feasible economically and acceptable environmentally. And as previously stated in § 51.203 above a permanent intervening structure or shielding topography can also constitute a mitigating measure.

§ 51.207 Reservation of Administrative and Legal Rights.

Publication of these standards does not constitute a waiver of any right (a) of HUD to disapprove a project proposal if the siting is too close to a potential hazard not covered by this subpart, and (b) of HUD or any person or other entity to seek to abate or to collect damages occasioned by a nuisance, whether or not covered by the Subpart.

Appendix

The Appendix is comprised of two parts. The first part contains background information concerning the fire and explosion safety standards, and the second part illustrates the application of the standards.

1. *Background Information Concerning the Standards*

(a) *Fire.* (1) *Introduction.* Flammable products stored in above ground tanks represent a definite potential threat to human life and structures in the event of fire. Even though it may not impinge directly on neighboring structures, the resulting flame emits thermal radiation which is absorbed by the surroundings. If another tank is in the same area and is exposed to high levels of thermal radiation or to the flame itself, its walls may fail and its contents may ignite and burn. Similarly, combustible structures such as wooden houses and trees, may be ignited by the thermal radiation being emitted. The radiation can cause severe burn injuries and even death to exposed persons at some distance away from the site of the fire.

(2) *Criteria for Acceptable Separation Distance.* (ASD) Wooden buildings, window drapes and trees generally ignite spontaneously when exposed for a relatively long period of time (15–20 minutes) to thermal radiation flux levels of approximately 10,000 BTU/hr. sq. ft., and structural steel loses its strength when its temperature reaches approximately 650 F after about 15 minutes of continuous exposure at that intensity. Since the reasonable response time for fire fighting units in urbanized areas is approximately five to ten minutes, 10,000 BTU/hr. sq. ft. is considered an acceptable level of thermal radiation for buildings, since it will take 15 to 20 minutes for a building to ignite at that degree of thermal intensity. Therefore, this will be the standard for calculating the acceptable separation distance for a proposed HUD building project from the site of a potential thermal radiation (fire) hazard. People who are in an outdoor area and are exposed to a thermal radiation level of approximately 450 BTU/ft²hr will suffer pain after about two minutes and receive a burn comparable to a second degree burn. Longer exposure causes blistering. Since it is assumed that people will take refuge behind walls or run away from the fire well within the two-minute time period, and before skin blistering occurs, 450 BTU/hr. sq. ft. thermal radiation is established as the standard for determining the ASD for people in unsheltered locations. Therefore, exposed outdoor recreation areas such as playgrounds, and parks must be placed at such a distance from a potential fire hazard so that the radiation flux does not exceed 450 BTU/hr. sq. ft. This includes open space ancillary to residential structures, such as yard areas and vehicle parking areas, unless such space is protected (shielded) from the potential source of thermal radiation by the structure being served or by other means to such a degree that the thermal radiation would be reduced to an acceptable level.

(3) *Acceptable Separation Distance From a Potential Fire Hazard.* This is the actual setback required for the safety of occupied buildings and their inhabitants and people in open spaces (exposed areas) from a potential fire hazard, if there are no mitigating measures. The specific distance required for safety from such a hazard depends upon the nature and the volume of the substance. The Technical Guidebook, which supplements this regulation, contains the technical guidance required to compute Acceptable Separation Distances (ASD) for those flammable substances most often encountered. Section 2 of the appendix has an example for computing ASD from a potential fire. Liquid propane is the substance used in the example, since it is one of the flammable products most often encountered.

(b) *Explosion.* (1) *TNT Equivalent:* The range of sensitivity of the explosion tolerance of a material and the magnitude of the violent sudden release of energy can vary widely between one material and another. Therefore, for the sake of simplicity, the blast effect of an explosive material is compared to TNT, whose blast energies are well known. This method of comparison is known as "TNT Equivalent." The term "TNT Equivalent" refers to the amount of material (other than TNT) it would take to have the same blast effect as one pound of TNT. Appropriate tables, nomographs and other technical guidance are provided in the Technical Guidebook to assist in determining a TNT equivalent.

(2) *Acceptable Separation Distance.* The Acceptable Separation Distance (ASD) for people and structures from materials prone to explosion is dependent upon the resultant blast measured in pounds per square inch (PSI) overpressure. The military services have determined that 0.5 PSI is the acceptable level of blast overpressure for both buildings and occupants, because a frame structure can normally withstand that level of external exertion with no serious structural damage and it is unlikely that human beings inside the building would normally suffer any serious injury. Using this standard and after determining the TNT equivalent for the material concerned, the ASD can be mathematically computed by determining the distance at which the blast overpressure will be 0.5 PSI. That distance is the ASD or the maximum radius of the danger zone. A special table and a nomograph are included in the Technical Guidebook from which the ASD can be extrapolated, thereby eliminating that portion of the calculation. An example for determining TNT equivalent and ASD are included below.

(c) *Hazard evaluation.* The Acceptable Separation Distances for buildings, which are computed for fire and explosion, delineate separate identifiable danger zones for each potential accident source. For some materials the fire danger zone will have the greatest radius, and cover the largest area, while for others the explosion danger zone will be the greatest. In any event the hazard requiring the greatest separation distance will prevail in determining the location of buildings for HUD-assisted projects.

The standards proposed for the protection of public health and welfare are given in the following table.

	Thermal radiation	Blast overpressure
Amount of acceptable exposure allowed for building structures.	10,000BTU/ft²-hr[a].....	0.5 psi
Amount of acceptable exposure allowed for people in open areas.	450BTU/ft²-hr[b].....	0.5 psi

Note a.—Duration of exposure should not exceed 20 minutes.

Note b.—Duration of exposure should not exceed 2 minutes.

2. *Examples*

The following examples are given as guides so that anyone reviewing this policy can understand how the procedures are used in determining acceptable separation distances. Liquid propane has been selected to be used in the examples since it is both an explosion and a fire hazard.

In this hypothetical case, the hazard is 30,000 gallons of liquid propane stored in one tank at a storage pressure of 200 PSI. The objective is to determine the ASD (a) in event of explosion and (b) in event of fire. There is no dike around the tank in this example.

(a) *Calculation of ASD in Event of Explosion:*

1. *Procedure for Calculating ASD.* (i) Identify the material, the storage or operating pressure, the quantity in pounds, the specific gravity, and the molecular weight. If quantity is given in gallons, convert to cu. ft. by dividing by 7.48 gal./cu. ft. Multiply specific gravity by 62.4 to obtain density in lb./cu. ft. Multiply density by number of cubic feet in the tank to obtain total content in pounds.

(ii) From molecular weight of contents and operating pressure determine TNT_{eq}. This can be extrapolated from a nomograph in the Technical Guidebook for liquid propane. Multiply TNT_{eq} by mass of tank contents in pounds to obtain totlal TNT equivalent.

(iii) If the total TNT equivalent is less than 30,000 lbs. a nomograph is included in the Technical Guidebook from which the acceptable separation distance (ASD) can be obtained.

(iv) If the total TNT equivalent is more than 30,000 lbs. the ASD can be obtained from a table in the Technical Guidebook.

(2) *Sample Calculation* (for explosion):

Chemical or fuel: Liquid Propane.
Amount of Material: 30,000 gallons.
Specific Gravity: 0.59.
Molecular Weight: 44 (commercial propane).
Storage Pressure: 200 PSI.
TNT_{eq} for Propane = .044 lb_{TNT}/ lb. propane.
Density of propane = 0.59 x 62.4 = 36.8 lb./cu. ft.
Mass of propane in tank = 30,000 gal. x 1 cu. ft./7.48 gal. x 36.8 lb./cu. ft. = 147,590 lb.
Total TNT Equivalent = 0.044 x 147,590 = 6494 lb TNT.

Since the total TNT_{eq} is less than 30,000 lb. the nomograph in the technical document is consulted and it is found that the ASD is *660 feet.*

(b) *Calculation of ASD in Event of Fire:*

(1) *Procedure for Calculating ASD.* (i) Determine the expected spill fire diameter, D:

(A) Storage tank in circular dike: Dike diameter = D.
(B) Storage tank in rectangular dike: D = 4 (area of dike) ÷ perimeter of dike.
(C) For an undiked tank the spill diameter (D) is

$D = 2\sqrt{\text{volume (gallons)}}$

(ii) Using the spill fire diameter proceed to the appropriate nomograph in the Technical Guidebook and read off the acceptable separation distance (ASD).

(2) *Sample Calculation* (for fire):

Chemical or Fuel: Liquid Propane.
Amount of Material: 30,000 gallons.
Type of Dike: Undiked.
$D = 2\sqrt{\text{volume (gallons)}}$
$D = 2\sqrt{30{,}000} = 346$ ft.

Using the appropriate nomograph for propane in the Technical Guidebook it is found that the acceptable separation distance is 880 feet for playgrounds or open space associated with residential buildings and 300 feet for buildings.

Since the 660 feet ASD for explosion is greater than the 300 feet for fire it will prevail. Therefore, the Acceptable Separation Distance for inhabited buildings from this particular 30,000 gal. liquid propane tank is *660* feet; and playgrounds, and other recreational facilities or open space for human use must be located at least *880* feet from the tank.

Issued at Washington, D.C., August 12, 1980.

Ronald P. Laurent,

Acting Secretary, Department of Housing and Urban Development.

BILLING CODE 4210-01-M

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[FRL 1577-2]

Approval and Promulgation of Implementation Plans, Minnesota; Receipt

AGENCY: U.S. Environmental Protection Agency.

ACTION: Notice of Receipt and Availability.

SUMMARY: This notice is to announce receipt and availability for public review of proposed revisions to the Sulfur dioxide (SO_2) portion of the Minnesota State Implementation Plan (SIP) for the Twin Cities and Rochester nonattainment areas.

Under the requirements of Part D of the Clean Air Act, the State of Minnesota on May 7, 1980, June 17, 1980,

July 14, 1980 and August 4, 1980 submitted to the U.S. Environmental Protection Agency (USEPA) the above mentioned proposed revisions to its SIP. These proposed revisions are designed to implement new measues for decreasing the ambient concentrations of SO_2 in the Twin Cities and Rochester nonattainment areas. A Notice of Proposed Rulemaking describing the proposed revisions and USEPA's intended rulemaking action will be published in a subsequent Federal Register.

DATES: See Supplementary Information.

ADDRESSES: The submittal may be examined during normal business hours at the following USEPA offices:

Public Information Reference Unit, Library Systems Branch, U.S. Environmental Protection Agency, 401 M Street, SW., Washington, D.C. 20460.

U.S. Environmental Protection Agency, Region V, Air Programs Branch, 230 South Dearborn Street, Chicago, Illinois 60604.

In addition the revisions may be examined at the office of the: Minnesota Pollution Control Agency, 1935 W. County Road B–2, Roseville, Minnesota 55113.

WRITTEN COMMENTS SHOULD BE SENT TO: Mr. Gary Gulezian, Chief Regulatory Analysis Section, Air Programs Branch, Region V, U.S. Environmental Protection Agency, 230 South Dearborn Street, Chicago, Illinois 60604.

FOR FURTHER INFORMATION CONTACT: Mr. Richard Clarizio, Regulatory Analysis Section, U.S. Environmental Protection Agency, Region V, Air Programs Branch, 230 South Dearborn Street, Chicago, Illinois 60604 (312) 886–6052.

SUPPLEMENTARY INFORMATION: USEPA is currently reviewing the above mentioned proposed revisions to the Minnesota SIP. At the completion of this review a notice will be published in the Federal Register proposing rulemaking action on these proposed revisions. All interested persons are advised that the proposed revisions are available for review at the locations listed above. The proposed rulemaking notice referred to above will announce the last day for public comment. This public comment period will extend for 30 days from the date of publication in the Federal Register of USEPA's proposed rulemaking action.

Dated: August 8, 1980.

John McGuire,

Regional Administrator.

BILLING CODE 6560-01-M

40 CFR Part 52

[FRL 1576–5]

Commonwealth of Virginia; Proposed Deadlines for Correcting Deficiencies in Virginia's SIP Revision for Nonattainment Areas; Proposed Change in Northern Virginia Urbanized Area Boundary

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: Elsewhere in today's Federal Register, EPA is conditionally approving the Virginia State Implementation Plan (SIP) in instances where the plan is deficient and the State has assured EPA that it will submit corrections. Conditional approvals mean that restrictions under Sections 110, 176 and 316 of the Clean Air Act will not apply unless Virginia fails to submit the necessary corrections or EPA fails to approve them. This notice solicits comments on the adequacy of the deadlines established for conditionally approved items. Furthermore, this notice proposes, and solicits comments on, a change in the boundary of the urbanized area in Northern Virginia to exclude Loudon County.

DATE: Comments must be submitted on or before September 18, 1980.

ADDRESSES: Copies of the materials submitted by the Commonwealth of Virginia are available for public inspection during normal business hours at the following locations:

U.S. Environmental Protection Agency, Region III, Curtis Building, Tenth Floor, Sixth and Walnut Streets, Philadelphia, PA 19106. Attn.: Patricia Sheridan.

Public Information Reference Unit, EPA Library, Room 2922, U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, D.C. 20460.

All comments on the proposed revision submitted on or before September 18, 1980, will be considered and should be addressed to: Howard Heim, Chief (3AH10), Air Programs Branch, U.S. Environmental Protection Agency, Region III, Curtis Building, Sixth and Walnut Streets, Philadelphia, PA 19106. Attn: AH300aVA

FOR FURTHER INFORMATION CONTACT: Mr. Mark E. Garrison (3AH13), Air Programs Branch, U.S. Environmental Protection Agency Region III, Curtis Building, Sixth and Walnut Streets, Philadelphia, PA 19106, Telephone: (215) 597–2745.

SUPPLEMENTARY INFORMATION: Elsewhere in today's Federal Register, EPA has published a notice approving, with certain conditions, Virginia's State Implementation Plan (SIP) revision for attaining the national ambient air quality standards (NAAQS) for ozone and carbon monoxide. The conditions and deadlines EPA has established for correcting the deficiencies in this revision, are:

1. *Margin for Growth.*—A system for tracking emissions growth must be submitted by September 30, 1980.

2. *RACT as expeditiously as practicable.*—The RACT deficiencies must be remedied according to the following schedule:

Not later than September 30, 1980: Adequate justification or draft revised regulations must be submitted.

Not later than December 30, 1980: Final regulations, where applicable, must be submitted.

The following regulations contain RACT deficiencies that must be remedied:

a. The emission limitation on automobile and light duty truck coating in § 4.55(e)(2).

b. The exemption from Stage I vapor controls for gasoline service stations with a throughput of less than 20,000 gallons per month, contained in § 4.56(d)(3)(ii) (for Richmond only).

c. The general exemption for sources of VOC emissions contained in § 4.54(a)(4)(i), as it applies to § 4.54(c) dealing with Solvent Metal Cleaning (for Richmond and Northern Virginia only).

d. The regulations covering cutback asphalt paving in § 4.57(b) must be remedied to correct two deficiencies:

(i) The maximum allowable solvent content of emulsified asphalt of 15 percent is not RACT.

(ii) Allowing the use of cutback asphalt as a tack cost is not allowed under RACT.

3. *Inspection and Maintenance (I/M).*—Adequate I/M legislation must be submitted by July 1, 1980. The legislation must include, as a minimum, a schedule for implementation of the I/M program and a clear commitment to implement and enforce the program and to reduce emissions by 25 percent by 1987. Specifically, the SIP should include a commitment to require retesting of vehicles initially failing the annual emissions test, along with a commitment to prohibit registration or provide some equally effective mechanism to prevent vehicles not complying with applicable emission requirements from operating on public roads.

4. *Enforceability:*

a. Acceptable test methods and procedures for determining compliance with §§ 4.54, 4.55, 4.56, and 4.57 must be submitted by September 30, 1980.

b. An acceptable definition of "reasonable further progress" must be submitted by September 30, 1980.

5. *Conformity Requirement.*—Commitments must be adopted by each lead agency and Metropolitan Planning Organization (MPO) in the Northern Virginia, Richmond, Peninsula, and Southeastern Virginia areas that no project, program, or plan will be approved that does not conform with the SIP. These commitments must be adopted by the designated lead agencies and MPOs, be endorsed by the State, and be submitted to EPA by September 30, 1980.

6. *Carbon Monoxide:*

A "hot spot" analysis for carbon monoxide in the carbon monoxide nonattainment portions of the National Capital Interstate AQCR, as well as a line of reasonable further progress for carbon monoxide, must be submitted by September 30, 1980.

The conditions apply to all ozone nonattainment areas unless indicated otherwise. "Richmond" refers to the Richmond City, Henrico County and Chesterfield County portions of the State Capital Intrastate AQCR. "Northern Virginia" refers to the Virginia portions of the National Capital Interstate AQCR.

The Commonwealth of Virginia has requested that the boundary of the urbanized area in Northern Virginia be modified to exclude Loudoun County, since this is primarily a rural area which accounts for only 5.0 percent of the light duty vehicle registrations in the Northern Virginia Region. The effect of this modification, if approved, would be to exclude Loudoun County from the requirement to implement I/M. It would not change Loudoun County's designation, under Section 107 of the Clean Air Act, as nonattainment for ozone. In addition, if the modification were approved, Loudoun County would no longer be eligible to receive funds under Section 175 of the Act.

EPA invites the public to submit comments on whether the deadlines and the change in urbanized area boundaries discussed above are acceptable and should be approved as a revision of the Virginia State Implementation Plan. Comments should be submitted to the address given above.

The Administrator's decision to approve or disapprove the proposed revision will be based on the comments received and on a determination of whether the revision conforms to the requirements of Section 110(a)(2) of the Clean Air Act and of 40 CFR Part 51, Requirements for Preparation, Adoption, and Submittal of Implementation Plans.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the Procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized." I have reviewed this regulation and have determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

(42 U.S.C. 7401–642)

Dated: June 6, 1980.

Alvin R. Morris,

Acting Regional Administrator.

[FR Doc. 80-25151 Filed 8-18-80; 8:45]

BILLING CODE 6560-01-M

40 CFR Part 52

[FRL 1576–6]

Commonwealth of Virginia; Receipt of State Implementation Plans for Virginia

AGENCY: Environmental Protection Agency.

ACTION: Notice of Availability of State Implementation Plan.

SUMMARY: On January 11, 1979, the Commonwealth of Virginia submitted a revision to its State Implementation Plan (SIP) in accordance with Part D of the Clean Air Act. The purpose of the SIP revision was to implement the measures necessary to attain the ozone and carbon monoxide air quality standards in areas of Virginia not currently attaining those standards.

After submittal of the above-mentioned plan revision, EPA revised the ozone standard to 0.12 ppm. Subsequently, Virginia submitted a revision on December 17, 1979, reflecting this change in the ozone standard.

Air quality analysis based upon the new ozone air quality standard indicated that all areas, except the Richmond Area and Northern Virginia Area, can achieve attainment by December 31, 1982. Virginia requested that an extension of the attainment date until December 31, 1987 be withdrawn for all nonattainment areas except Richmond and Northern Virginia.

As required by Section 172(b)(11)(A) of the Clean Air Act, Virginia submitted, on May 15, 1980, revisions for a motor vehicle inspection and maintenance (I/M) program. The program is to be applicable in the two nonattainment areas (Richmond and Northern Virginia) for which attainment of the ozone standard by December 31, 1982 cannot be demonstrated.

The purpose of this notice is to announce the availability of the December 17, 1979 and May 15, 1980 submittals. Interested persons are invited to inspect these SIP submittals at one of the locations listed below.

ADDRESS: The December 17, 1979 and May 15, 1980 SIP submittals are available for inspection at:

U.S. Environmental Protection Agency, Region III, Curtis Building, Tenth Floor, Sixth and Walnut Streets, Philadelphia, PA 19106, Attn: Patricia Sheridan.

Virginia State Air Pollution Control Board, Room 1106, Ninth Street Office Building, Richmond, VA 23219. Attn: Mr. William R. Meyer.

Public Information Reference Unit, EPA Library, Room 2922, U.S. Environmental Protection Agency, 401 M Street, S.W., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Eileen M. Glen (3AH11), Air Programs Branch, U.S. Environmental Protection Agency, Region III, Curtis Building, Sixth and Walnut Streets, Philadelphia, PA 19106, Telephone: (215) 597–8187.

SUPPLEMENTARY INFORMATION:

A separate area plan was developed for each nonattainment area in the submittal of December 17, 1979. The area plans include information concerning introduction, air quality data analysis, control strategy, new source review program, regulations, emission inventory, compliance schedules, inspection/maintenance, transportation measures and intergovernmental responsibilities/legal authority/consultation.

The May 15, 1980 submittal included the legislation recently enacted by the Virginia General Assembly and a proposed revision to Chapter 9, Inspection/Maintenance, of the Virginia Implementation Plan. The revision to Chapter 9 includes a schedule for the implementation of the I/M program. This submittal was made to satisfy conditions specified in the Rulemaking relative to the Virginia Part D SIP which appears elsewhere in today's Federal Register.

This Notice of Availability incorporates by reference and is published in accordance the General Preamble published by EPA on April 4, 1979 (44 FR 20372) and supplements thereto published on July 2, 1979 (44 FR 38471) and November 23, 1979 (44 FR 67182).

(42 U.S.C. 7401–7642)

Dated: July 15, 1980.

Alvin R. Morris,

Regional Administrator.

[FR Doc. 80-25150 Filed 8-18-80; 8:45 am]

BILLING CODE 6560-01-M

40 CFR Parts 52 and 81

[FRL 1577-3]

Approval and Promulgation of Implementation Plan; Designation of Areas for Air Quality Planning Purposes; Ozone and Carbon Monoxide, Wisconsin

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rulemaking: Correction notice.

SUMMARY: On June 17, 1980, the EPA erroneously proposed to designate Crawford County instead of LaCrosse County attainment/unclassifiable for the ozone ambient air quality standard (45 FR 41018). The EPA is today correcting the error and proposing rulemaking on LaCrosse County.

DATE: Comments on the changes included in this correction notice are due September 18, 1980.

ADDRESSES: Written comments should be sent to: Gary Gulezian, Chief, Regulatory Analysis Section, Air Programs Branch, Region V, U.S. Environmental Protection Agency, 230 South Dearborn Street, Chicago, Illinois 60604.

FOR FURTHER INFORMATION CONTACT: Robert B. Miller, Air Programs Branch, Region V, U.S. Environmental Protection Agency, 230 South Dearborn Street, Chicago, Illinois 60604, (312) 886-6031.

SUPPLEMENTARY INFORMATION: On June 17, 1980, the EPA proposed to redesignate under Section 107 of the Clean Air Act, Grant, Douglas, and Crawford Counties, Wisconsin to attainment/unclassifiable for the ozone standard (45 FR 41018). Crawford County was erroneously listed. Crawford County is presently designated attainment/unclassifiable (March 3, 1978, 43 FR 8961, 40 CFR 81.350). The EPA intended to propose redesignating Grant, Douglas, and LaCrosse Counties to attainment/unclassifiable because of the February 8, 1979 change in the ozone standard (44 FR 8220).

The EPA today is correcting the error by withdrawing the proposed change in Crawford County's ozone designation and by proposing to redesingate LaCrosse County, Wisconsin from "Does not meet the primary standards" for oxidants to "Cannot be classified or better than national standards" for ozone. If the EPA redesignates LaCrosse County to attainment/unclassifiable, Part D of the Clean Air Act does not require an ozone plan to be developed for the County. In the June 17, 1980 **Federal Register**, the EPA proposed to approve the Part D ozone plan for LaCrosse County. If the EPA does ot redesignate the County, the EPA is planning to approve the Part D ozone plan for LaCrosse County.

Interested persons are invited to comment on these changes to the June 17, 1980 **Federal Register** Notice and on EPA's proposed actions. Comments should be submitted to the address listed in the front of this Notice. All comments received will be available for inspection at the Region V Office, Air Programs Branch, 230 South Dearborn Street, Chicago, Illinois 60604.

Under Executive Order 12044 (43 FR 12661), EPA is required to judge whether a regulation is "significant" and, therefore, subject to certain procedural requirements of the Order or whether it may follow other specialized development procedures. EPA labels these other regulations "specialized." I have reviewed this proposed regulation pursuant to the guidance in EPA's response to Executive Order 12044, "Improving Environmental Regulations," signed March 29, 1979 by the Administrator, and I have determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

(Secs. 107, 110, 172, and 301(a) of the Clean Air Act as amended)

Dated: August 11, 1980.

John McGuire,

Regional Administrator.

[FR Doc. 80-25153 Filed 8-18-80; 8:45 am]

BILLING CODE 6560-01-M

40 CFR Part 58

[FRL 1575-3]

Approval and Promulgation of State Implementation Plans; Pennsylvania, Philadelphia and Allegheny County; State and Local Air Monitoring Stations

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve revisions to Pennsylvania's, Philadelphia's and Allegheny County's SIP, to meet Federal Monitoring Regulations, 40 CFR Part 58, Subpart C, Paragraph 58.20, Air Quality Surveillance plan content.

DATE: Comments due September 18, 1980.

ADDRESSES: Comments on this modification should be directed to:

Mr. Robert J. Blanco, Acting Chief, Air Programs Branch (3AH12), Air, Toxics and Hazardous Materials Division, EPA—Region III, 6th & Walnut Streets, Curtis Building, Philadelphia, PA 19106, Attn.: AH500PA, AH500APA, AH500BPA.

Copies of the materials submitted by the State of Pennsylvania; the City of Philadelphia and Allegheny County and comments received on this proposal may be examined during normal business hours at:

U.S. EPA Region III, Air Programs Branch, 6th & Walnut Streets, Curtis Building, Philadelphia, PA 19106, Attn.: Patricia Sheridan.

FOR FURTHER INFORMATION CONTACT:

Mr. Joseph Paparella, U.S. EPA—Region III, 6th & Walnut Streets, Curtis Building, Philadelphia, PA 19106, Phone: 215-597-8184.

SUPPLEMENTARY INFORMATION: In a May 10, 1979, **Federal Register** Notice, (44 FR 27571) EPA required that by January 1, 1980, the States shall adopt a Revision to their SIP which meets the requirements of 40 CFR Part 58, subpart C, paragraph 58.20. On January 25, 1980, December 21, 1979 and June 18, 1979, Pennsylvania, Philadelphia and Allegheny County, respectively, submitted revisions to their SIPs concerning compliance with these Federal Monitoring Regulations. EPA has reviewed the revisions and finds that they meet the requirements of Part 58.

The public is invited to submit to the address stated above comments on whether the above listed modifications should be approved as revisions to the Pennsylvania and Philadelphia and Allegheny County SIPs.

The Administrator's decision to approve or disapprove this proposed SIP revision will be further based on a final determination as to whether it meets the requirements of section 110(a)(2) of the Clean Air Act and 40 CFR Part 51, Requirements for Preparation, Adoption, and Submittal of Implementation Plans.

Under Executive Order 12044, EPA is required to judge whether a regulation is "significant" and therefore subject to the procedural requirements of the order or whether it may follow other specialized development procedures. EPA lables these other regulations "specialized." I have reviewed this regulation and determined that it is a specialized regulation not subject to the procedural requirements of Executive Order 12044.

This notice of proposed rulemaking is issued under the Authority of section 319 of the Clean Air Act as amended.

(42 U.S.C. 7401-7642)

Dated: July 24, 1980.

Alvin R. Morris,

Acting Regional Administrator.

[FR Doc. 80-25157 Filed 8-18-80; 8:45 am]

BILLING CODE 6560-01-M

40 CFR Part 81

[FRL 1577-1]

Designation of Areas for Air Quality Planning Purposes; Attainment Status Designations—California

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rulemaking.

SUMMARY: This notice proposes to revise the attainment status designation of part of Kern County, California, for sulfur dioxide (SO_2). The San Joaquin Valley Air Basin (SJVAB) portion of Kern County is now designated nonattainment (primary) for SO_2. The EPA now proposes to redesignate part of that area to attainment for SO_2 and to leave the remainder with its present designation of nonattainment (primary).

The EPA invites public comments on the proposed redesignation. If a portion of Kern County is redesignated attainment, the requirements of Title I, Part D, of the Clean Air Act (CAA), as amended, would no longer apply to the area redesignated for SO_2.

DATE: Comments will be considered if received on or before September 18, 1980.

ADDRESSES: Comments should be directed to:

David Howekamp, Acting Chief, Air Technical Branch (A-4), Air and Hazardous Materials Division, EPA Region IX, 215 Fremont Street, San Francisco, California 94105.

Information pertinent to the proposed redesignation is available for public inspection during normal business hours at the EPA Region IX Office at the address above, and at the following locations:

Public Information Reference Unit, Room 2404 (EPA Library), 401 "M" Street, SW., Washington, D.C. 20460.
California Air Resources Board, 1102 "Q" Street, Sacramento, Calif. 95812.
Kern County APCD, 1700 Flower Street, Bakersfield, Calif. 93305.

FOR FURTHER INFORMATION CONTACT:

Wallace Woo, Acting Chief, Technical Analysis Section (A-4-3), Air Technical Branch, Air and Hazardous Materials Division, EPA Region IX, 215 Fremont Street, San Francisco, Calif. 94105, Attn.: Morris Goldberg, (415) 556-8065.

SUPPLEMENTARY INFORMATION:

State-Proposed Redesignation

Under section 107(d)(5) of the CAA, as amended, a state may revise its designations of attainment status and submit them to the EPA for approval.

The California Air Resources Board (ARB), in a letter to the EPA dated September 24, 1979, requested, in part, that all of the SJVAB portion of Kern County, with the exception of the "Oildale Area" northeast of Bakersfield, be redesignated to attainment for SO_2. Documentation to support the change of designation was attached. Other redesignations requested in the September 24 letter have been acted upon in a separate **Federal Register** notice.

The EPA, in a January 9, 1980 letter, notified the ARB that the recommended redesignation of the Midway-Sunset Oil Field portion of Kern County from nonattainment to attainment would be inappropriate. EPA policy requires a nonattainment designation for SO_2 for all areas with measured and/or modeled SO_2 violations resulting from existing sources. In accordance with section 107(d)(2) of the CAA, as amended, the EPA requested that the ARB provide additional information regarding modeled violations in the Midway-Sunset Oil Field in southwestern Kern County, as discussed below.

The ARB, in a February 7, 1980 letter to the EPA, reaffirmed "its recommendation for redesignation of the Midway-Sunset Oilfield area of Kern County as an attainment area," and stated, "predicted violations are based on the expected emissions from existing *and* projected sources in the area, under worst-case meteorological conditions."

Violations of the SO_2 Stantards

On November 15, 1978, Science Applications, Inc. (SAI) published Report No. SAI-78-963-LJ, entitled *Air Quality Impact of Proposed Oil-Fired Equipment in the Western Kern County Oil Fields as of July 1978*, Volumes I-III, prepared for Westside Oil Field Operators. That report, using the Climatological Dispersion Model (CDM), concluded that within the Midway-Sunset Oil Field area:

1. Existing sources are causing violations of the annual average SO_2 standard, and
2. Existing plus future sources will cause violations of the same standard.

The SAI Report also concludes, using the Texas Episodal Model (TEM), that:

1. Existing sources are causing violations of the 24-hour average SO_2 standard, and
2. Existing plus future sources will cause violations of the same standard.

On December 25, 1978, the Getty Oil Company measured a 24-hour average SO_2 concentration of 383 $\mu g/m^3$ at their Producers-Oildale monitor, and a 24-hour average of 430 $\mu g/m^3$ SO_2 at their Kern Front monitor. Both monitors are in the "Oildale Area".

For calendar year 1978, the ARB monitor at the Oildale-Kern County Fire Department recorded an annual average SO_2 concentration of 87 $\mu g/m^3$, as compared to the primary standard of 80 $\mu g/m^3$.

In January 1979, SRI International published a report entitled *Modeling of Stationary Air Pollution Sources in the Central and Western Kern County Oil Fields*, Volumes I and II, prepared for EPA Region IX. That report showed, using CDM, that existing sources, as well as existing plus future sources, are predicted to cause violations of the annual average SO_2 standard in the area northeast of Bakersfield ("Oildale Area").

Criteria for Attainment Status Designations for SO_2

1. One measured air quality violation within recent years is sufficient basis for a nonattainment designation, while two years of violation-free data at all monitoring sites, including sites located at places of expected maximum concentration, is necessary for a redesignation to attainment. Only if it is shown that recent air quality improvements are the result of recent enforceable emission reductions, may one year of violation-free data be sufficient for a redesignation to attainment.

2. One modeled air quality violation due to existing sources is sufficient basis for a nonattainment designation. Modeling is not required, but is the preferred method of demonstrating attainment when there is reason to believe that the monitoring sites which had violations previously are not located at places of expected maximum concentration due to existing sources.

3. Nonattainment areas may be as small as possible as long as all areas in which violations are expected are included. It is impossible to accurately define the area of a violation. Sufficient flexibility exists to allow an additional area, around the area with measured and/or expected violations, to be designated nonattainment. The additional area provides new sources the potential for additional sources of emission offsets and, as a buffer, prevents the construction of a source in the area from adversely impacting the area which has the measured or modeled air quality violations.

Proposed Boundaries of "Oildale Area"

40 CFR Parts 122-124 and 260-265

Proposed Boundaries of "Oildale Area"

In its September 24, 1979 letter, the ARB recommended that the nonattainment (primary) designation for the "Oildale Area" be retained. In an attachment to that letter, the "Oildale Area" is described as follows:

"Oildale Nonattainment Area for SO_2—An area circumscribed by the following lines: on the south from Kern River State Park at the Universal transmercator (UTM) line of 326,000 east; southwest to the intersection with State Highway 204 and northwest along Highway 204 to where it merges with State Highway 99, northwest along Highway 99 to the intersection with the line defined by 310,000 easting UTM coordinate; north to the intersection of the center line of Poso Creek, then east by southeast along Poso Creek until it intercepts the line running from the Kern River center line to the Poso Creek center line at the UTM coordinate 326,000 easting. (Refer to attached map for approximate boundaries.)"

Judging from that description and from the "attached map," it appears that the intended southeast boundary of the "Oildale Area" is the Kern River. Such a boundary seems inappropriate, in that it does not include all areas where violations have been predicted to occur by the SRI International Report.

EPA-Proposed Redesignation: Oildale Area

The EPA is therefore proposing that the "Oildale Area" be extended southward to State Highways 178 (Freeway) and 204. Such an extension is proposed to the nearest convenient and easily described boundary. It would include all areas where violations of the SO_2 standards are predicted to occur, and would provide a buffer zone of one to two miles.

The boundaries of the "Oildale Area" being proposed by the EPA are as follows:

Beginning at the intersection of State Highway (S.H.) 178 (Freeway) and Universal Transverse Mercator (UTM) coordinate 326,000 east (Zone 11), thence westerly and southwesterly along S.H. 178 (Freeway) to its intersection with S.H. 204 (Golden State Avenue), thence northwesterly along S.H. 204 to its intersection with S.H. 99, thence northwesterly along S.H. 99 to its intersection with UTM coordinate 310,000 east, thence northerly along said coordinate to its intersection with the center line of Poso Creek, thence easterly and southeasterly along said center line to its intersection with UTM coordinate 326,000 east, thence southerly along said coordinate to the point of beginning.

EPA-Proposed Redesignation: Midway-Sunset Area

Because of the modeled violations noted above of the primary (annual and 24-hour) standards for SO_2 in the northern portion of the Midway-Sunset Oil Field, the EPA is proposing to retain the nonattainment (primary only) designation for that area. The proposed North Midway-Sunset nonattainment area is described as follows:

Township 31 South, Range 22 East, Mt. Diablo Base and Meridian.

Public Comments

The EPA is particularly interested in receiving comments on whether (1) the ARB-proposed (Kern River) boundary of the "Oildale Area" should be accepted; (2) the EPA-proposed (S.H. 178/Freeway) boundary —or some other boundary south of the Kern River—should be adopted; or (3) the original (SJVAB portion of Kern County) nonattainment area designation should remain unchanged.

Effect of Redesignation

If a portion of Kern County is redesignated attainment for SO_2 as proposed (leaving the Oildale and Midway-Sunset areas under the nonattainment designation), the State would no longer be subject to the requirements of Part D of the CAA, as amended, for SO_2 in that portion of Kern County so redesignated. However, all of the SJVAB portion of Kern County remains subject to the requirements of Part D until the EPA approves such redesignation in a final rulemaking action. The Nonattainment Area Plan deadlines cannot be extended as a result of the reduction in size of a nonattainment area.

The EPA has determined that this action is "specialized" and therefore not subject to the procedural requirements of Executive Order 12044.

(Sections 107(d) and 301(a) of the Clean Air Act, as amended (42 U.S.C. 7407(d) and 7601(a)).)

Dated: July 22, 1980.

Paul De Falco, Jr.,

Regional Administrator.

BILLING CODE 6560-01-M

FEDERAL EMERGENCY MANAGEMENT AGENCY

44 CFR Part 67

[Docket No. FEMA-5828]

National Flood Insurance Program; Proposed Flood Elevation Determination; Correction; Kansas

AGENCY: Federal Insurance Administration, FEMA.

ACTION: Proposed rule; correction.

SUMMARY: This document corrects a Notice of Proposed Determinations of base (100-year) flood elevations for selected locations in the City of Lawrence, Douglas County, Kansas, previously published at 45 FR 37231 on June 2, 1980.

EFFECTIVE DATE: AUGUST 19, 1980.

FOR FURTHER INFORMATION CONTACT: Mr. Robert G. Chappell, National Flood Insurance Program, (202) 426–1460 or Toll Free Line (800) 424–8872 (In Alaska and Hawaii call Toll Free Line (800) 424–9080), Federal Emergency Management Agency, Washington, D.C. 20472.

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the correction to the Notice of Proposed Determinations of base (100-year) flood elevations for selected locations in the City of Lawrence, Douglas County, Kansas previously published at 45 FR 37231 on June 2, 1980, in accordance with Section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93–234), 87 Stat. 980, which added 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90–448), 42 U.S.C. 4001–4128, and 44 CFR 67.4(a)].

The location described as, "Upstream corporate limits at County Road," under the Source of Flooding of Hidden Valley Tributary, has been changed. The location should read, "Just downstream of corporate limits at County Road." The corresponding elevation of 834 feet remains unchanged.

Under the Source of Flooding of Hidden Valley Tributary, the following location descriptions and elevations should be added: "Just upstream of 23rd Street," with a corresponding elevation of 849 feet, and "About 3,000 feet upstream of 23rd Street," with a corresponding elevation of 877 feet.

The location described as, "Just upstream of Clinton Parkway," under the Source of Flooding of East Branch Yankee Tank Creek has been changed. The location should read, "Just upstream of 23rd Street." The corresponding elevation of 851 feet remains unchanged.

The location described as, "About 3,500 feet upstream of Clinton Parkway," under the Source of Flooding of East Branch Yankee Tank Creek, has been changed. The location should read, "About 3,500 feet upstream of 23rd Street." The corresponding elevation of 870 feet remains unchanged.

The elevation 829 feet which corresponds to the location described as, "Downstream corporate limits," under the Source of Flooding of Naismith Creek, has been changed. The elevation should be 828 feet. The location description remains unchanged.

The location described as, "About 1,000 feet upstream of Leonard Avenue," under the Source of Flooding of ATSF Tributary, has been changed. The location should read, "About 600 feet upstream of Leonard Avenue." The corresponding elevation of 861 feet remains unchanged.

The elevation 831 feet which corresponds to the location described as, "Mouth of Kansas River," under the Source of Flooding of Country Club-Hope Plaza Tributary, has been changed. The elevation should be 830 feet. The location description remains unchanged.

These changes will be reflected in the proof copies of the Flood Insurance Study and FIRM.

The listing appears correctly as follows:

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
Kansas	(C) Lawrence, Douglas County	Hidden Valley Tributary	Just downstream of corporate limits at County Road	*834
			Just upstream of 23rd Street	*849
			About 3,000 feet upstream of 23rd Street	*877
		East Branch Yankee Tank Creek	Just upstream of 23rd Street	*851
			About 3,500 feet upstream of 23rd Street	*870
		Naismith Creek	Downstream corporate limits	*828
		ATSF Tributary	About 600 feet upstream of Leonard Avenue	*861
		Country Club-Hope Plaza Tributary	Mouth at Kansas River	*830

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 28, 1968), as amended; 42 U.S.C. 4001–4128; Executive Order 12127)

Issued: July 31, 1980.

Gloria M. Jimenez,

Federal Insurance Administrator.

BILLING CODE 6718-03-M

44 CFR PART 67

[Docket No. FEMA-5881]

National Flood Insurance Program; Proposed Zone and Base Flood Elevation Determinations for the City of Pullman, Whitman County, Wash.

AGENCY: Federal Insurance Administration, FEMA.

ACTION: Proposed Rule.

SUMMARY: Technical information or comments are solicited on the proposed zones and base flood elevations as described below.

The proposed zones and base flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

DATES: The period for comment will be ninety (90) days following the second publication of this proposed rule in the newspaper of local circulation in the above-named community.

ADDRESSES: Maps and other information showing the detailed outlines of the flood-prone areas and the proposed zones and base flood elevations are available for review at City Hall, 325 Paradise, S.E., Pullman, Washington 99163.

Send comments to: The Honorable Pete Betkus, Mayor, City of Pullman, 325 Paradise, S.E., P.O. Box 615, Pullman, Washington 99163.

FOR FURTHER INFORMATION CONTACT: Mr. Robert G. Chappell, Acting Assistant Administrator, Program Implementation & Engineering Office, National Flood Insurance Program, 451 Seventh Street SW, Washington, D.C. 20410, (202) 755–6570 or toll free line (800) 424–8872 (in Alaska and Hawaii call toll free (800) 424–9080).

SUPPLEMENTARY INFORMATION: The Federal Insurance Administrator gives notice of the proposed zones and base flood elevations for the City of Pullman, Washington, in accordance with Section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93–234), 87 Stat. 980, which added Section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968, Pub. L. 90–448), 42 U.S.C. 4001–4128, and 44 CFR Part 67.

These zones and base flood elevations, together with the flood plain

#Depth in feet above

management measures required by § 60.3 of the program regulations, are the minimum that are required. It should not be construed to mean the community must change any existing ordinances that are more stringent in their flood plain management requirements. The community may at any time enact stricter requirements on its own, or pursuant to policies established by other Federal, State, or regional entities. The proposed zones and base flood elevations will also be used to calculate the appropriate flood insurance premium rates for new buildings and their contents and for the second layer of insurance on existing buildings and their contents.

The proposed base (100-year) flood elevations for selected locations in the recently annexed areas are:

Source of flooding	Location	Elevation, national geodetic vertical datum
South Fork Palouse River	West of Cleveland Street.	2,328
	Northernmost corporate limits.	2,323
Missouri Flat Creek	East of the intersection of Turner Drive with Route 27.	2,372
	East of the intersection of Larry Street with Route 27.	2,390
	Downstream of the Terre View Drive crossing.	2,400
Dry Fork Creek	West of the intersection of Sloop Road with Grand Street.	2,433

(National Flood Insurance Act of 1968 (Title XIII of Housing and Urban Development Act of 1968), effective January 28, 1969 (33 FR 17804, November 26, 1968), as amended; 42 U.S.C. 4001–4128; Executive Order 12127, 44 FR 19367; and delegation of authority to Federal Insurance Administrator)

Issued July 15, 1980.

Francis V. Reilly,

Acting Federal Insurance Administrator.

BILLING CODE 6718-03-M

44 CFR Part 67

[Docket No. FEMA-5780]

National Flood Insurance Program; Revision of Proposed Flood Elevation Determinations, Virginia

AGENCY: Federal Insurance Administration, FEMA.

ACTION: Proposed rule.

SUMMARY: Technical information or comments are solicited on the proposed base (100-year) flood elevations listed below for selected locations in the City of Salem, Virginia.

Due to recent engineering analysis, this proposed rule revises the proposed determinations of base (100-year) flood elevations published at 45 FR 13486 on February 29, 1980, and in the *Salem Times-Register*, published on February 7, 1980, and February 14, 1980, and hence supersedes those previously published rules.

DATES: The period for comment will be ninety (90) days following the second publication of this notice in a newspaper of local circulation in each community.

ADDRESSES: Maps and other information showing the detailed outlines of the floodprone areas and the proposed flood elevations are available for review at the Salem Municipal Building. Send comments to: Honorable William Paxton, Jr., Salem City Manager, P.O. Box 869, Municipal Building, Salem, Virginia 24153.

FOR FURTHER INFORMATION CONTACT: Mr. Robert G. Chappell, National Flood Insurance Program, Office of Flood Insurance, (202) 426–1460 or Toll Free Line (800) 424–8872, Federal Emergency Management Agency, Washington, D.C. 20472.

SUPPLEMENTARY INFORMATION: Proposed base (100-year) flood elevations are listed below for selected locations in the City of Salem, Virginia, in accordance with Section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93–234), 87 Stat. 980, which added Section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90–448)), 42 U.S.C. 4001–4128, and 44 CFR 67.4(a).

These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program. (NFIP).

These modified elevations will also be used to calculate the appropriate flood insurance premium rates for new buildings and their contents and for the second layer of insurance on existing buildings and their contents.

The proposed base (100-year) flood elevations are:

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)

BILLING CODE 6718-03-M

44 CFR Part 67

[Docket No. FEMA-5724]

National Flood Insurance Program; Revision of Proposed Flood Elevation Determinations

AGENCY: Federal Insurance Administration, FEMA.

ACTION: Proposed rule.

SUMMARY: Technical information or comments are solicited on the proposed base (100-year) flood elevations listed below for selected locations in the Township of Frankstown, Blair County, Pennsylvania.

Due to recent engineering analysis, this proposed rule revises the proposed determinations of base (100-year) flood elevations published at 44 FR 66445 on November 7, 1979, and in the *Altoona Mirror*, published on September 18, 1979, and September 25, 1979, and hence supersedes those previously published rules.

DATES: The period for comment will be ninety (90) days following the second publication of this notice in a newspaper of local circulation in each community.

ADDRESSES: Maps and other information showing the detailed outlines of the flood-prone areas and the proposed flood elevations are available for review at the Frankstown Township Municipal Building. Send comments to; Honorable Harry Mattern, Chairman of the Board of Supervisors of Frankstown, R.D. 2, Hollidaysburg, Pennsylvania 16648.

FOR FURTHER INFORMATION CONTACT: Mr. Robert G. Chappell, Federal Emergency Management Agency, Federal Insurance Administration, National Flood Insurance Program, (202) 426–1460 or Toll Free Lin. (800) 424–8872, Washington, D.C. 20-.'2.

SUPPLEMENTARY INFORMATION: Proposed base (100-year) flood elevations are listed below for selected locations in the Township of Frankstown, Blair County, Pennsylvania, in accordance with Section 110 of the Flood Disaster Protection Act of 1973 (Pub. L. 93–234), 87 Stat. 980, which added Section 1363 to the National Flood Insurance Act of 1968 (Title XIII of the Housing and Urban Development Act of 1968 (Pub. L. 90–448)), 42 U.S.C. 4001–4128, and 44 CFR 67.4(a).

These base (100-year) flood elevations are the basis for the flood plain management measures that the community is required to either adopt or show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These modified elevations will also be used to calculate the appropriate flood insurance premium rates for new buildings and their contents and for the second layer of insurance on existing buildings and their contents.

The proposed base (100-year) flood elevations are:

State	City/town/county	Source of flooding	Location	#Depth in feet above ground. *Elevation in feet (NGVD)
Pennsylvania	Frankstown, Township, Blair County.	Frankstown Branch, Juniata River	11,700' downstream Township Route 444	*877

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[BC Docket No. 80-504; RM-3578]

FM Broadcast Station in Wray, Colo.; Proposed Changes in Table of Assignments

AGENCY: The Federal Communications Commission.

ACTION: Notice of Proposed Rule Making

SUMMARY: This action proposes to assign Channel 252A to Wray, Colorado as the first FM channel in response to a petition filed by KRDZ Broadcasters, Inc.

DATE: Comments must be filed on or before October 6, 1980, and reply comments on or before October 27, 1980.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Mark N. Lipp, Broadcast Bureau, Area 202: 632–7792.

SUPPLEMENTARY INFORMATION:

In the matter of amendment of § 73.202(b), *Table of Assignments* FM Broadcast Stations (Wray, Colorado), BC Docket No. 80–504, RM–3578.

Adopted: August 6, 1980.

Released: August 14, 1980.

1. *Petitioner, Proposal, Comments.* (a) A petition for rule making [1] was filed by KRDZ Broadcasters, Inc. ("petitioner"), proposing the assignment of FM Channel 252A to Wray, Colorado, as that community's first FM assignment.

(b) Channel 252A could be assigned to Wray in compliance with the minimum distance separation requirements.

(c) Petitioner states it will apply for the channel if assigned.

2. *Demographic Data*—(a) *Location.* Wray is located in northeastern Colorado, approximately 240 kilometers (190 miles) ENE of Denver.

(b) *Population.* Wray 1,953; Yuma County 8,544.[2]

(c) *Local Aural Broadcast Service.* Daytime only AM Station KRDZ.

3. *Economic Considerations.* Petitioner did not provide community information. We request that it do so in comments.

4. In view of the fact that the proposed FM channel assignment would provide a first fulltime aural broadcast service to Wray, the Commission believes it appropriate to propose amending the FM Table of Assignments, § 73.202(b) of the Commission's rules, with regard to Wray, Colorado, as follows:

City	Channel No. Present	Channel No. Proposed
Wray, Colorado		252A

5. The Commission's authority to institute rule making proceedings, showings required, cutoff procedures, and filing requirements are contained in the attached Appendix and are incorporated by reference herein.

Note.—A showing of continuing interest is required by paragraph 2 of the Appendix before a channel will be assigned.

6. Interested parties may file comments on or before October 6, 1980, and reply comments on or before October 27, 1980.

7. For further information concerning this proceeding, contact Mark Lipp, Broadcast Bureau, (202) 632–7792. However, members of the public should

[1] Public Notice of the petition was given on February 20, 1980, Report No. 1215.

[2] Population figures are taken from the 1970 U.S. Census.

note that from the time a Notice of

connection with the decision in this

SUPPLEMENTARY INFORMATION:

City	Channel No. Present	Channel No. Proposed

3. *Cut-off procedures.* The following

DATE: Comments must be filed on or

note that from the time a Notice of Proposed Rule Making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel assignments. An *ex parte* contact is a message (spoken or written) concerning the merits of a pending rule making other than comments officially filed at the Commission or oral presentation required by the Commission.

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division, Broadcast Bureau.

Appendix

[BC Docket No. 80-504; RM-3578]

1. Pursuant to authority found in Sections 4(i), 5(d)(1), 303 (g) and (r), and 307(b) of the Communications Act of 1934, as amended, and § 0.281(b)(6) of the Commission's rules, it is proposed to amend the FM Table of Assignments, § 73.202(b) of the Commission's rules and regulations, as set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached.

2. *Showings required.* Comments are invited on the proposal(s) discussed in the Notice of Proposed Rule Making to which this Appendix is attached. Proponent(s) will be expected to answer whatever questions are presented in initial comments. The proponent of a proposed assignment is also expected to file comments even if it only resubmits or incorporates by reference its former pleadings. It should also restate its present intention to apply for the channel if it is assigned, and, if authorized, to build the station promptly. Failure to file may lead to denial of the request.

3. *Cut-off procedures.* The following procedures will govern the consideration of filings in this proceeding.

(a) Counterproposals advanced in this proceeding itself will be considered, if advanced in initial comments, so that parties may comment on them in reply comments. They will not be considered if advanced in reply comments. (See § 1.420(d) of Commission Rules.)

(b) With respect to petitions for rule making which conflict with the proposal(s) in this Notice, they will be considered as comments in the proceeding, and Public Notice to this effect will be given as long as they are filed before the date for filing initial comments herein. If they are filed later than that, they will not be considered in connection with the decision in this docket.

4. *Comments are reply comments; service.* Pursuant to applicable procedures set out in §§ 1.415 and 1.420 of the Commission's rules and regulations, interested parties may file comments and reply comments on or before the dates set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached. All submissions by parties to this proceeding or persons acting on behalf of such parties must be made in written comments, reply comments, or other appropriate pleadings. Comments shall be served on the petitioner by the person filing the comments. Reply comments shall be served on the person(s) who filed comments to which the reply is directed. Such comments and reply comments shall be accompanied by a certificate of service. (See § 1.420 (a), (b) and (c) of the Commission Rules.)

5. *Number of copies.* In accordance with the provisions of § 1.420 of the Commission's rules and regulations, an original and four copies of all comments, reply comments, pleading, briefs, or other documents shall be furnished the Commission.

6. *Public inspection of filings.* All filings made in this proceeding will be available for examination by interested parties during regular business hours in the Commission's Public Reference Room at its headquarters, 1919 M Street, NW., Washington, D.C.

[BC Docket No. 80-502; RM-3423]

FM Broadcast Station in Spokane, Wash.; Proposed Changes in Table of Assignments

AGENCY: The Federal Communications Commission.

ACTION: Notice of Proposed Rule Making.

SUMMARY: This action proposes to assign Channel 280A to Spokane, Washington as an eighth FM assignment in response to a petition from Thomas W. Read d.b.a. Read Broadcasting.

DATE: Comments must be filed on or before October 6, 1980, and reply comments on or before October 27, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Myra G. Kovey, Broadcast Bureau (Area 202) 632-7792.

SUPPLEMENTARY INFORMATION:

In the matter of amendment of § 73.202(b), *Table of Assignments,* FM Broadcast Stations. (Spokane, Washington), BC Docket No. 80-502, RM-3423.

Adopted: August 6, 1980.

Released: August 15, 1980.

1. Thomas W. Read d.b.a. Read Broadcasting ("Read") has filed a petition for rule making seeking assignment of Channel 280A to Spokane, Washington.[1] Read states that he will apply for the channel, if assigned.

2. A city of 170,516, in a county (Spokane) of 287,487 population (population figures from the 1970 U.S. Census), Spokane is currently served by nine AM stations (six full time and three daytime-only), and seven FM stations. Located in the extreme eastern part of the State near the Idaho border, the city is, according to Read, a trading, medical, shopping and transportation center for an agricultural region containing over one million people.

3. The assignment of Channel 280A to Spokane would cause preclusion to seven communities with populations exceeding 1,000 and no local aural service.[2] Petitioner lists alternative channels (237A and 285A) for Davenport, Chewelah, Deer Park, Medical Lake and Newport, Washington. Two other communities—Wilbur, Washington, and Priest River, Idaho—will also sustain preclusion. Thus, a showing of alternative available channels should be provided in comments for those two communities.

4. While Spokane's other FM assignments are Class C facilities, Read is willing to apply for and operate on a Class A channel. Hence intermixture is not a problem. See *Yakima, Washington,* 42 FCC 2d 548 (1973).

5. As the proposed assignement is within 402 kilometers (250 miles) of the U.S-Canada border, Canadian concurrence must be obtained.

6. In view of the foregoing, the Commission proposes to amend the FM Table of Assignments, § 73.202(b) of the Commission's rules, as follows:

City	Channel No.	
	Present	Proposed
Spokane, Washington	225, 229, 251, 255, 260, 269, 300.	225, 229, 251, 255, 260, 280A, 269, 300.

7. Authority to institute rule making proceedings, showings required, cut-off procedures, and filing requirements are contained in the attached Appendix and are incorporated by reference herein.

Note.—A showing of continuing interest is required by paragraph 2 of the Appendix before a channel will be assigned.

8. Interested parties may file comments on or before October 6, 1980, and reply comments on or before October 27, 1980.

9. For further information concerning this proceeding, contact Myra G. Kovey, Broadcast Bureau (202) 632-7792. However, members of the public should note that from the time a notice of proposed rulemaking is issued until it is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel assignments. An *ex parte* contact is a message (spoken or written) concerning the merits of a pending rule making other than comments officially filed at the Commission or oral presentation required by the Commission.

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division, Broadcast Bureau.

Appendix

[BC Docket No. 80-502 RM-3423]

1. Pursuant to authority found in Sections 4(i), 5(d)(1), 303(g) and (r), and 307(b) of the Communications Act of 1934, as amended, and § 0.281(b)(6) of the Commission's rules, it is proposed to amend the FM Table of Assignments, § 73.202(b) of the Commission's rules and regulations, as set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached.

2. *Showings required.* Comments are invited on the proposal(s) discussed in the Notice of Proposed Rule Making to which this Appendix is attached. Proponent(s) will be expected to answer whatever questions are presented in initial comments. The proponent of a proposed assignment is also expected to file comments even if it only resubmits or incorporates by reference its former pleadings. It should also restate its present intention to apply for the channel if it is assigned, and, if authorized, to build the station promptly. Failure to file may lead to denial of the request.

3. *Cut-off procedures.* The following procedures will govern the consideration of filings in this proceeding.

(a) Counterproposals advanced in this proceeding itself will be considered, if advanced in initial comments, so that parties may comment on them in reply comments. They will not be considered if advanced in reply comments. (See § 1.420(d) of Commission rules.)

(b) With respect to petitions for rule making which conflict with the proposal(s) in this Notice, they will be considered as comments in the proceeding, and Public Notice to this effect will be given as long as they are filed before the date for filing initial comments herein. If they are filed later than that, they will not be considered in connection with the decision in this docket.

4. *Comments and reply comments; service.* Pursuant to applicable procedures set out in §§ 1.45 and 1.420 of the Commission's rules and regulations, interested parties may file comments and reply comments on or before the dates set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached. All submissions by parties to this proceeding or persons acting on behalf of such parties must be made in written comments, reply comments, or other appropriate pleadings. Comments shall be served on the petitioner by the person filing the comments. Reply comments shall be served on the person(s) who filed comments to which the reply is directed. Such comments and reply comments shall be accompanied by a certificate of service. (See § 1.420(a), (b) and (c) of the Commission rules.)

5. *Number of copies.* In accordance with the provisions of § 1.420 of the Commission's rules and regulations, an original and four copies of all comments, reply comments, pleadings, briefs, or other documents shall be furnished the Commission.

6. *Public inspection of filings.* All filings made in this proceeding will be available for examination by interested parties during regular business hours in the Commission's Public Reference Room at its headquarters, 1919 M Street, N.W., Washington, D.C.

47 CFR Part 73

[BC Docket No. 80-503; RM-3587]

FM Broadcast Station in Ladysmith, Wis.; Proposed Changes in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Notice of Proposed Rule Making.

SUMMARY: Action taken herein proposes the assignment of a Class A FM channel to Ladysmith, Wisconsin, in response to a petition filed by Ruth Nelson. The proposed channel could provide for a second local FM commercial broadcast service to Ladysmith.

DATE: Comments must be filed on or before October 6, 1980, and reply comments on or before October 27, 1980.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Montrose H. Tyree, Broadcast Bureau, (202) 632-9660.

SUPPLEMENTARY INFORMATION:

In the matter of amendment of § 73.202(b), *Table of Assignments,* FM Broadcast Stations. (Ladysmith, Wisconsin), BC Docket No. 80-503, RM-3587.

Adopted: August 6, 1980.

Released: August 15, 1980.

1. *Petitioner, Proposal, Comments:*

(a) A petition for rule making [1] was filed by Ruth Nelson of Flambeau Broadcasting Co., licensee of Station WLDY(AM), Ladysmith, Wisconsin ("petitioner"), proposing the assignment of Channel 224A to Ladysmith, as that community's second FM assignment.

(b) The channel can be assigned to Ladysmith, provided the transmitter is located 6.3 kilometers (3.9 miles) southeast of Ladysmith.

(c) Petitioner states she will apply for the channel, if assigned.

2. *Community Data:*

(a) *Location.*—Ladysmith, seat of Rusk County, is located in northern Wisconsin, approximately 169 ° kilometers (105 miles) northeast of Minneapolis-St. Paul, Minnesota.

(b) *Population.*—Ladysmith—3,674; [2] Rusk County—14,236.

(c) *Local Aural Service.*—Ladysmith is served locally by fulltime AM Station WLDY and FM Station WWIB (Channel 279).

3. *Economic Considerations.*—Petitioner states that the economic base is provided by recreational activities and agricultural products. Petitioner has submitted demographic and economic data with respect to Ladysmith and its need for an additional FM broadcast service.

4. *Preclusion Study.*—The assignment of Channel 224A to Ladysmith would cause preclusion only on the co-channel to some communities in the following *counties: Wisconsin:* Oneida, Price, Lincoln, Taylor, Rusk, Iron, Chippewa, Eau Claire and Clark.

5. The assignment of Channel 224A to Ladysmith would result in intermixing a Class A channel and Class C channel (279). the Commission has a policy of permitting such intermixture where no other Class C channels are available for

[1] Public Notice of the petition was given on February 27, 1980, Report No. 1218.

[2] Population figures are taken from the 1970 U.S. Census.

[1] Public Notice of the petition was given on August 3, 1979, Report No. 1187.

[2] This assumes a transmitter located in the center of the city. There is now pending an application to use Channel 282 (allocated to Wallace, Idaho) at Kellogg, Idaho, which, if granted, would require a Channel 280A transmitter site at least 8 kilometers (5 miles) west of Spokane.

V 45 A G 19 80 UMI

assignment and (as here) the petitioner is willing to apply for the Class A channel in spite of the unfavorable competitive situation. *Yakima, Washington*, 42 F.C.C. 2d 548, 550 (1973); *Key West, Florida*, 45 F.C.C. 2d 142, 145 (1974). Petitioner offers moving the existing Station WWIB (Channel 279) to Cornell, as an alternative proposal, stating that although the Commission's Table of Assignments lists Station WWIB as being assigned to Ladysmith, it is not and never has been a Ladysmith station. However, since the station is licensed to serve Ladysmith, we do not agree that moving the assignment to Cornell would be desirable.

6. Since Ladysmith is located within 402 kilometers (250 miles) of the U.S.-Canadian border, the proposed assignment of Channel 224A to Ladysmith, Wisconsin, requires coordination with the Canadian Government.

7. In view of the foregoing information and the fact that the proposed assignment would provide a second local commercial FM broadcast service, the Commission proposes to amend the FM Table of Assignments, § 73.202(b) of the Commission's rules, with regard to Ladysmith, Wisconsin, as follows:

City	Channel No.	
	Present	Proposed
Ladysmith, Wisconsin	279	224A, 279

8. The Commission's authority to institute rule making proceedings, showings required, cut-off procedures, and filing requirements are contained in the attached Appendix and are incorporated by reference herein.

Note.—A showing of continuing interest is required by paragraph 2 of the Appendix before a channel will be assigned.

9. Interested parties may file comments on or before October 6, 1980, and reply comments on or before October 27, 1980.

10. For further information concerning this proceeding, contact Montrose H. Tyree, Broadcast Bureau, (202) 632-9660. However, members of the public should note that from the time a Notice of Proposed Rule Making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel assignments. An *ex parte* contact is a message (spoken or written) concerning the merits of a pending rule making other than comments officially filed at the Commission or oral presentation required by the Commission.

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division, Broadcast Bureau.

Appendix

[BC Docket No. 80-503 RM-3587]

1. Pursuant to authority found in Sections 4(i), 5(d)(1), 303 (g) and (r), and 307(b) of the Communications Act of 1934, as amended, and Section 0.281(b)(6) of the Commission's rules, it is proposed to amend the FM Table of Assignments, § 73.202(b) of the Commission's rules and regulations, as set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached.

2. *Showings required.*—Comments are invited on the proposal(s) discussed in the Notice of Proposed Rule Making to which this Appendix is attached. Proponent(s) will be expected to answer whatever questions are presented in initial comments. The proponent of a proposed assignment is also expected to file comments even if it only resubmits or incorporates by reference its former pleadings. It should also restate its present intention to apply for the channel if it is assigned, and, if authorized, to build the station promptly. Failure to file may lead to denial of the request.

3. *Cut-off procedures.*—The following procedures will govern the consideration of filings in this proceeding.

(a) Counterproposals advanced in this proceeding itself will be considered, if advanced in initial comments, so that parties may comment on them in reply comments. They will not be considered if advanced in reply comments. (See § 1.420(d) of Commission rules.)

(b) With respect to petitions for rule making which conflict with the proposal(s) in this Notice, they will be considered as comments in the proceeding, and Public Notice to this effect will be given as long as they are filed before the date for filing initial comments herein. If they are filed later than that, they will not be considered in connection with the decision in this docket.

4. *Comments and reply comments; service.*—Pursuant to applicable procedures set out in §§ 1.415 and 1.420 of the Commission's rules and regulations, interested parties may file comments and reply comments on or before the dates set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached. All submissions by parties to this proceeding or persons acting on behalf of such parties must be made in written comments, reply comments, or other appropriate pleadings. Comments shall be served on the petitioner by the person filing the comments. Reply comments shall be served on the person(s) who filed comments to which the reply is directed. Such comments and reply comments shall be accompanied by a certificate of service. (See § 1.420 (a), (b) and (c) of the Commission rules.)

5. *Number of copies.*—In accordance with the provisions of § 1.420 of the Commission's rules and regulations, an original and four copies of all comments, reply comments, pleadings, briefs, or other documents shall be furnished the Commission.

6. *Public inspection of filings.*—All filings made in this proceeding will be available for examination by interested parties during regular business hours in the Commission's Public Reference Room at its headquarters, 1919 M Street, NW., Washington, D.C.

BILLING CODE 6712-01-M

47 CFR Part 73

[BC Docket No. 80-449; RM-3576]

FM Broadcast Station in Smithfield, Utah; Proposed Changes in Table of Assignments

AGENCY: The Federal Communications Commission.

ACTION: Notice of Proposed Rule Making.

SUMMARY: This action proposes to assign Channel 280A to Smithfield, Utah, as the first FM channel in response to a petition filed by Cache Valley Broadcasting Company.

DATE: Comments must be filed on or before October 6, 1980, and reply comments on or before October 27, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Mark N. Lipp, Broadcast Bureau Area 202: 632-7792.

SUPPLEMENTARY INFORMATION:

In the matter of amendment of § 73.202(b), *Table of Assignments*, FM Broadcast Stations. (Smithfield, Utah), BC Docket No. 80-449, RM-3576.

Adopted: August 4, 1980.

Released: August 15, 1980.

1. *Petitioner, Proposal, Comments:*

(a) A petition for rule making [1] was filed by Cache Valley Broadcasting Company ("petitioner"), proposing the assignment of FM Channel 280A to Smithfield, Utah as the community's first local radio station.

(b) Channel 280A could be assigned to Smithfield in compliance with the minimum distance separation requirements.

(c) Petitioner states it will apply for the channel, if assigned.

2. *Demographic Data:*

(a) *Location.*—Smithfield is located in north central Utah near the Idaho border.

(b) *Population.*—Smithfield—3,342; Cache County—42,331.[2]

[1] Public Notice of the petition was given on February 20, 1980, Report No. 1215.

[2] Population figures are taken from the 1970 U.S. Census.

(c) *Local Aural Broadcast Service.*—None.

3. *Economic Considerations.*—Petitioner states that from 1970, to present, population has increased 50% while the population of Cache County has increased 27%. Economic indicators show 35 retail establishments in 1977, 6 wholesale establishments in 1977. Retail sales are up 15% from 1972 to 1977.[3]

4. In view of the fact that the proposed FM channel assignment could provide for a first local aural broadcast service to Smithfield, the Commission believes it appropriate to propose amending the FM Table of Assignments, § 73.202(b) of the Commission's Rules, with regard to Smithfield, Utah, as follows:

City	Channel No.	
	Present	Proposed
Smithfield, Utah	-----	280A

5. The Commission's authority to institute rule making proceedings, showings required, cutoff procedures, and filing requirements are contained in the attached Appendix and are incorporated by reference herein.

Note.—A showing of continuing interest is required by paragraph 2 of the Appendix before a channel will be assigned.

6. Interested parties may file comments on or before October 6, 1980, and reply comments on or before October 27, 1980.

7. For further information concerning this proceeding, contact Mark Lipp, Broadcast Bureau, (202) 632-7792. However, members of the public should note that from the time a Notice of Proposed Rule Making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel assignments. An *ex parte* contact is a message (spoken or written) concerning the merits of a pending rule making other than comments officially filed at the Commission or oral presentation required by the Commission.

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division, Broadcast Bureau.

[3] This information comes from the Bureau of Economic and Business research, 401 Business Building, University of Utah, Salt Lake City, Utah.

Appendix

[BC Docket No. 80-449 RM-3576]

1. Pursuant to authority found in Sections 4(i), 5(d)(1), 303(g) and (r), and 307(b) of the Communications Act of 1934, as amended, and § 0.28(b)(6) of the Commission's Rules, it is proposed to amend the FM Table of Assignments, § 73.202(b) of the Commission's rules and regulations, as set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached.

2. *Showings required.*—Comments are invited on the proposal(s) discussed in the Notice of Proposed Rule Making to which this Appendix is attached. Proponent(s) will be expected to answer whatever questions are presented in initial comments. The proponent of a proposed assignment is also expected to file comments even if it only resubmits or incorporates by reference its former pleadings. It should also restate its present intention to apply for the channel if it is assigned, and, if authorized, to build the station promptly. Failure to file may lead to denial of the request.

3. *Cut-off procedures.*—The following procedures will govern the consideration of filings in this proceeding.

(a) Counterproposals advanced in this proceeding itself will be considered, if advanced in initial comments, so that parties may comment on them in reply comments. They will not be considered if advanced in reply comments. (See § 1.420(d) of Commission rules.)

(b) With respect to petitions for rule making which conflict with the proposal(s) in this Notice, they will be considered as comments in the proceeding, and Public Notice to this effect will be given as long as they are filed before the date for filing initial comments herein. If they are filed later than that, they will not be considered in connection with the decision in this docket.

4. *Comments and reply comments; service.*—Pursuant to applicable procedures set out in §§ 1.415 and 1.420 of the Commission's rules and regulations, interested parties may file comments and reply comments on or before the dates set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached. All submissions by parties to this proceeding or persons acting on behalf of such parties must be made in written comments, reply comments, or other appropriate pleadings. Comments shall be served on the petitioner by the person filing the comments. Reply comments shall be served on the person(s) who filed comments to which the reply is directed. Such comments and reply comments shall be accompanied by a certificate of service. (See § 1.420(a), (b) and (c) of the Commission rules.)

5. *Number of copies.*—In accordance with the provisions of § 1.420 of the Commission's rules and regulations, an original and four copies of all comments, reply comments, pleadings, briefs, or other documents shall be furnished the Commission.

6. *Public inspection of filings.*—All filings made in this proceeding will be available for examination by interested parties during regular business hours in the Commission's Public Reference Room at its headquarters, 1919 M Street, NW., Washington, D.C.

47 CFR Part 73

[BC Docket No. 80-448; RM-3575]

FM Broadcast Station in Pasco, Wash.; Proposed Changes in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: Action taken herein proposes the assignment of a Class A FM channel to Pasco, Washington, in response to a petition filed by Tri-City Christian Center. The proposed channel could provide a first local commercial FM broadcast service to Pasco.

DATES: Comments must be filed on or before October 3, 1980, and reply comments must be filed on or before October 23, 1980.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Montrose H. Tyree, Broadcast Bureau, Area 202: 632-9660.

SUPPLEMENTARY INFORMATION:

In the matter of amendment of § 73.202(b), *Table of Assignments*, FM Broadcast Stations, (Pasco, Washington), BC Docket No. 80-448, RM-3575.

Adopted: July 31, 1980.

Released: August 15, 1980.

By the Chief, Policy and Rules Division:

1. *Petitioner, Proposal, Comments:*

(a) A petition for rulemaking [1] was filed by Tri-City Christian Center ("petitioner"), proposing the assignment of Channel 252A ot Pasco, Washington, as that community's first commercial FM assignment.

(b) The channel can be assigned to Pasco in compliance with the minimum distance separation requirements.

(c) Petitioner states it will apply for the channel, if assigned.

2. *Community Data:*

(a) *Location.*—Pasco, seat of Franklin County, is located approximately 290 kilometers (180 miles) southeast of Seattle, Washington, near the Oregon border. Pasco along with the

[1] Public Notice of the petition was given on February 20, 1980, Report No. 1215.

neighboring communities of Kennewick

DATES: Comments are due by October 14, 1980, and Reply comments by

(1975), the Commission expanded the policy making it applicable to stations in

comments regarding television stations

neighboring communities of Kennewick and Richland are known as the "Tri-Cities."

(b) *Population.*—Pasco 13,920; [2] Franklin County 25,616.

(c) *Local Aural Broadcast Service.*—Pasco is served locally by daytime AM Station KORD, full-time AM Station KONA and educational FM Station KOLU (Ch. 211C).

3. *Economic Consideration.*—Petitioner states that Pasco's economy is based on the river traffic of petroleum products and the shipment of agricultural products. It notes that the area to be served (known as Tri-Cities) was reported in a recent article in the Wall Street Journal as the fastest growing area in the United States. Economic and demographic information with respect to Pasco, has been submitted which demonstrate the need for an FM assignment.

4. *Preclusion Study.*—The assignment of Channel 252A to Pasco would cause new preclusion only on Channels 251 and 252A affecting communities in the northern portion of Wheeler County, Oregon, from using Channel 251. This assignment will also foreclose some communities in the following counties from an assignment on Channel 252A; *Washington:* Benton, Franklin and Walla Walla; *Oregon:* Gilliam, Morrow and Umatilla. Petitioner offers Channels 211A, 224A, 244A and 256A as possible alternate channels for some of the precluded areas. Petitioner states that in placing Channel 252A in Pasco, the preclusion area would be minimal and would serve more population than if it were allotted to any other area.

5. Since Pasco is located within 402 kilometers (250 miles) of the U.S.-Canadian border, the proposed assignment of Channel 252A to Pasco, Washington, requires coordination with the Canadian Government.

6. In view of the fact that the proposed FM channel assignment would provide for a first local commercial FM broadcast service in Pasco, Washington, the Commission believes it appropriate to propose amending the FM Table of Assignments, § 73.202(b) of the Commission's Rules with regard to Pasco, Washington, as follows:

City	Channel No.	
	Present	Proposed
Pasco, Washington		252A

[2] Population figures are taken from the 1970 U.S. Census.

7. The Commission's authority to institute rule making proceedings, showing required, cut-off procedures, and filing requirements are contained in the attached Appendix and are incorporated by reference herein.

NOTE.—A showing of continuing interest is required by Paragraph 2 of the Appendix before a channel will be assigned.

8. Interested parties may file comments on or before October 3, 1980, and reply comments on or before October 23, 1980.

9. For further information concerning this proceeding, contact Montrose H. Tyree, Broadcast Bureau, (202) 632–9660. However, members of the public should note that from the time a notice of proposed rule making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel assignments. An *ex parte* contact is a message (spoken or written) concerning the merits of a pending rule making other than comments officially filed at the Commission or oral presentation required by the Commission.

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division, Broadcast Bureau.

Appendix

[BC Docket No. 80–448 RM–3575]

1. Pursuant to authority found in Sections 4(i), 5(d)(1), 303(g) and (r), and 307(b) of the Communications Act of 1934, as amended, and Section 0.281(b)(6) of the Commission's Rules, IT IS PROPOSED TO AMEND the FM Table of Assignments, Section 73.202(b) of the Commission's Rules and Regulations, as set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached.

2. *Showings required.*—Comments are invited on the proposal(s) discussed in the Notice of Proposed Rule Making to which this Appendix is attached. Proponent(s) will be expected to answer whatever questions are presented in initial comments. The proponent of a proposed assignment is also expected to file comments even if it only resubmits or incorporates by reference its former pleadings. It should also restate its present intention to apply for the channel if it is assigned, and, if authorized, to build the station promptly. Failure to file may lead to denial of the request.

3. *Cut-off procedures.*—The following procedures will govern the consideration of filings in this proceeding.

(a) Counterproposals advanced in this proceeding itself will be considered, if advanced in initial comments, so that parties may comment on them in reply comments. They will not be considered if advanced in reply comments. (See § 1.420(d) of Commission Rules.)

(b) With respect to petitions for rule making which conflict with the proposal(s) in this Notice, they will be considered as comments in the proceeding, and Public Notice to this effect will be given as long as they are filed before the date for filing initial comments herein. If they are filed later than that, they will not be considered in connection with the decision in this docket.

4. *Comments and reply comments; service.*—Pursuant to applicable procedures set out in Sections 1.415 and 1.420 of the Commission's Rules and Regulations, interested parties may file comments and reply comments on or before the dates set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached. All submissions by parties to this proceeding or persons acting on behalf of such parties must be made in written comments, reply comments, or other appropriate pleadings. Comments shall be served on the petitioner by the person filing the comments. Reply comments shall be served on the person(s) who filed comments to which the reply is directed. Such comments and reply comments shall be accompanied by a certificate of service. (See § 1.420 (a), (b) and (c) of the Commission Rules.)

5. *Number of copies.*—In accordance with the provisions of Section 1.420 of the Commission's Rules and Regulations, an original and four copies of all comments, reply comments, pleadings, briefs, or other documents shall be furnished the Commission.

6. *Public inspection of filings.*—All filings made in this proceeding will be available for examination by interested parties during regular business hours in the Commission's Public Reference Room at its headquarters, 1919 M Street, N.W., Washington, D.C.

[BC Docket No. 80–438; FCC 80–479]

Representation of Stations by Representatives Owned by Competing Stations in the Same Area

AGENCY: Federal Communications Commission.

ACTION: Notice of Inquiry.

SUMMARY: The Commission has adopted an inquiry to obtain information and comments to determine whether it should continue or change its policy which prohibits a representative, owned wholly or partially by the licensee of a competing station in an area, from representing a rival station in the same area.

DATES: Comments are due by October 14, 1980, and Reply comments by October 31, 1980.

ADDRESSES: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Jack Estepp, Complaints and Compliance Division, 202–632–3860.

In the matter of representation of stations by representatives owned by competing stations in the same area, BC Docket No. 80–438.

Notice of Inquiry

Adopted: July 31, 1980.

Released: August 13, 1980.

1. Recently the Commission received a Petition for Deregulation, and requests for modification of Commission policy [1] which prohibits a representative, under common ownership of a station, from representing a rival station in the same area. It is the purpose of this Notice of Inquiry to gather information regarding this policy to determine whether the policy should be continued in its present form or changed in some manner.

2. In *Golden West Broadcasters,* 16 FCC 2d 918, 15 RR 2d 938 (1969), the Commission adopted a policy regarding sales representatives. The Commission held that representation of a station by a sales representative owned wholly or partially by a licensee of a competing station in the same community or service area was a violation of long-standing Commission policy proscribing cross-interests by licensees in more than one station in the same service in the same area. The Commission stated that its objective was the promotion and maintenance of full competition between such stations; that representation of a station by a licensee or licensee-owned organization which operates a station in the same service in the same area gives the licensee-representative a large stake in the financial well-being of the station it represents, and that this relationship necessarily militates against competition between the two stations. Further, the Commission stated that the policy was based on its concern for potential impairment of competition, so that is was not necessary to find actual injury to competition, and that such representation was antithetical to those policies which are the underpinnings of the multiple ownership rules: the promotion of maximum diversification of program and service viewpoints. In the proceeding concerning *Combination Advertising Rates and Other Joint Sales Practices,* 51 FCC 2d 679, 32 RR 2d 1527 (1975), the Commission expanded the policy making it applicable to stations in all broadcast services. Later the Commission modified the policy to permit representation of one or more separately owned television stations by a representative owned wholly or partially by the licensee of a standard broadcast station or FM broadcasting station in the same area, and vice versa. *Combination Advertising Rates and Other Joint Sales Practices,* 59 FCC 2d 894, 37 RR 2d 785 (1976).

3. While a representative owned wholly or partially by a competing station in an area may not represent a rival station in the same area, the Commission has stated that it will permit representation of more than one station in an area if the representative is not owned by a competitor. In the proceeding concerning *Combination Rates and Other Joint Sales Practices,* 51 FCC 2d 679, 32 RR 2d 1527 (1975), the Commission stated in regard to representing more than one station in an area:

> We do believe it would serve the public interest to restrict such multiple representation at this time. We have no evidence of anti-competitive results from multiple representation, and we note from the tenor of comments that there are insufficient radio representatives available to represent all stations desiring representation, with the smaller stations experiencing the greatest difficulty. We also note that independent television stations, particularly UHF stations, have difficulty in obtaining representation. While a representative may represent two or more separately owned stations in the same community, it may not sell them in combination. For example, it will be expected that such representatives will not sell or offer to sell time in combination for two separately owned stations in the same community, will enter into separate contracts with clients for each station represented and will leave all decisions as to contracting for the sale of time, including rates charged to each individual licensee. We are not unmindful that questions may arise as to unfair practices because of multiple representation. Therefore, we will consider on a case-by-case basis any such questions and should we receive information that unfair practices result, we will consider this matter further.

4. Thus, in accordance with the present policy, a representative may represent any number of stations, except a representative owned by a television station may not represent a rival television station in the same area and a representative owned by a radio station may not represent a rival (AM or FM) radio station in the same area.

5. All the recent requests for change of Commission policy have concerned representation of radio stations, but we believe that comments should be elicited on all aspects of the policy. Thus, comments regarding television stations are requested also. [2]

6. The Petition for Deregulation filed by Torbet Radio (Torbet) states that the number of national radio representatives has diminished with 30 radio sales representatives going out of business in the past 12 years. It attributes this to the extremely high cost of maintaining offices in major markets and to the need for extensive research material which has required more personnel and utilization of high cost computer facilities. Torbet states that there is a very limited number of national sales representative firms, that the number will continue to diminish, and that most of the large representative firms are affiliated with owners of broadcast stations which makes fewer representatives available in markets where they are affiliated in ownership. Torbet points out that another limiting factor is that some representatives, because of competitive considerations, will not represent stations in a market where the stations are competing for the same audience. Torbet contends that if the policy were changed a greater number of stations would be competing for national advertising business.

7. Parties commented that it is commonplace for national radio representatives (not affiliated with a radio station in the area) to act as sales agents for more than one station in an area, that there have been no abuses and that the situation would not change if representatives were allowed to expand the practice in markets where affiliated stations operate.

8. Other comments assert that a sales representative generally takes no part in programming or other operational decisions of the stations represented, including those stations with whom they are affiliated in ownership. The representative is merely a sales agent for the station, receives no confidential information and sells time based upon demographics. In order for the representative to obtain maximum income it must sell as much time as possible on each station it represents and there is no economic incentive for a sales representative to favor a station with which it is affiliated. Also a representative does not decide how much time an advertiser will purchase or on what stations the advertising will be placed since these decisions are made by the advertiser and his agent, the advertising agency. Thus, it is asserted that it is unrealistic to believe

[1] These requests were filed by McGavren Guild, Inc., Torbet Radio and Buckley Radio Sales, Inc.

[2] We propose no change and request no comments with regard to § 73.658(i) of the Rules which provides that networks may not represent affiliates for non-network time.

V 45 AG 1980 UMI

that a sales representative can significantly affect the advertiser-station relationship because of bias in favor of one station.

9. Buckley comments that the choice of sales representatives should be left to the parties and if a licensee is dissatisfied it can obtain another representative. It argues that the Commission should focus on whether the public is injured as a result of representation by a licensee-related sales representative and points out that ABC is permitted to operate television, AM and FM stations in Los Angeles and to provide multiple radio networks serving several competing stations in the Los Angeles market. Buckley contends that such concentration of program activities far exceeds any concentration by representation of a rival radio station by a licensee-owned representative in the same area.

10. We are requesting information concerning our policy as to licensee-owned representatives. The policy was adopted to assure open and full competition between competing stations. At this time we have an outstanding proceeding for deregulation, *Deregulation of Radio*, 73 FCC 2d 457, 46 RR 2d 237 (1979), which is founded on the basis of substantial competition between stations, and we will scrutinize comments carefully to assure that we are not undermining the premise for this deregulation proceeding. In any event, so we can be more fully informed, we seek information on the following:

(a) To what degree, if any, do sales representatives provide guidance or consultation on the program service provided by the stations they represent?

(b) To what degree, if any, would there be a lessening of economic competition between two separately owned stations in the same area if one owns a sales representative company that represents the other?

(c) To what degree, if any, would representation in a market by a representative owned by another station in that market result in access to confidential business information that would not normally be available to competitors?

(d) Should the policy as to representatives be repealed or modified in some manner?

(e) If the policy were changed to permit a representative owned by a licensee to represent a rival station in the same area, should it be qualified to permit such representation only until the Commission received a complaint that the practice was causing harm?

(f) If so, what showing should be made by a complainant?

(g) Should the policy as it pertains to television stations be different from that relating to radio stations?

(h) Should the policy be applied if the stations do not compete for the same audience?

(i) What factors should the Commission consider in determining whether stations are competing in an area?

(j) Do radio networks represent separately owned radio stations in areas where the network, or company under common ownership of the network, is licensed to operate a radio station? Examples of such network representation are requested.

(k) Should the policy regarding radio networks be different from that pertaining to non-network representatives?

11. Parties filing comments may also provide any additional pertinent information they believe will be useful to the inquiry.

12. Authority for the institution of this proceeding, is found in Sections 4(i) and 403 of the Communications Act of 1934, as amended, and § 1.1 of the rules.

13. Pursuant to the applicable procedures set out in §§ 1.4, 1.46 and 1.415 of the Commission's rules, interested persons may file comments on or before October 14, 1980, and reply comments on or before October 31, 1980. All relevant and timely comments and reply comments will be considered by the Commission before final action is taken in this proceeding. In reaching its decision, the Commission may also take into account other relevant information before it, in addition to the specific comments invited by this Notice.

14. In accordance with the provisions of § 1.419 of the Rules, an original and five copies of all comments, replies, pleadings, briefs and other documents shall be furnished the Commission. Participants who wish each Commissioner to have a personal copy may file six additional copies, and members of the general public may submit one copy of their comments. Responses will be available for public inspection during regular business hours in the Commission's Broadcast and Docket Reference Room at its Headquarters in Washington, D.C.

Federal Communications Commission.

BILLING CODE 6712-01-M

47 CFR Part 73

[BC Docket No. 80-505; RM-3393]

TV Broadcast Stations in Jacksonville, Lumberton, Roanoke Rapids and Rockingham, North Carolina; Farmville and Kenbridge, Virginia; Proposed Changes in Table of Assignments

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rule making.

SUMMARY: Action take here proposes (1) assignment of new television channels to Lumberton, Roanoke Rapids and Rockingham, North Carolina—all to be reserved for noncommercial educational use; (2) reservation for noncommercial educational use of an existing assignment at Jacksonville, North Carolina and (3) shifting of a reserved assignment from Kenbridge, Virginia to Farmville, Virginia.

DATE: Comments must be filed on or before October 14, 1980, and reply comments on or before November 3, 1980.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT: Myra G. Kovey, Broadcast Bureau, (Area 202) 632-7792.

SUPPLEMENTARY INFORMATION:

Adopted: August 8, 1980.

Released: August 15, 1980.

By the Chief, Policy and Rules Division:

1. Citing the need for statewide noncommercial educational service of high quality and reliability, the University of North Carolina ("UNC") has filed a petition for rule making [1] seeking three new reserved television channels and one reservation of an existing assignment. As the proposal now stands, all of UNC's contemplated facilities can be constructed and operated in conformity with our minimum distance separation requirements and without site restrictions of any kind.[2] UNC states that it will apply for the requested channels, if assigned.[3]

2. With respect to UNC's specific requests, petitioner plans first to serve the north central portion of North Carolina with a new Channel *36

[1] Public Notice of the petition was given on July 11, 1979, Report No. 1183.

[2] Supplements to UNC's original petition have eliminated several problems of short spacing. The Association of Maximum Service Telecasters, Inc., which opposed the original filing because of these problems, has accordingly withdrawn its objection.

[3] UNC is currently the licensee of eight noncommercial educational television stations and five translator stations.

assignment at Roanoke Rapids (pop. 13,508, 1970 U.S. Census). This facility would provide a first noncommercial educational service to 48,900 persons, petitioner claims, and an improved service to many others.

3. Reserving for noncommerical educational use the existing Channel 19 assignment at Jacksonville (1970 pop. 16,289) would provide a first noncommerical educational service to 105,000 persons in the southeastern coastal area of the State, UNC continues.[4] Assigned to Jacksonville in 1968, Channel 19 has never been occupied, indicating, UNC argues, a total lack of interest in its use on a commerical basis.

4. Channels *31 at Lumberton (1970 pop. 16,961), and *53 at Rockingham (1970 pop. 5,852), would serve the south central portion of the State, UNC concludes, providing a new Grade A service to 137,000 persons and an improved service to many others now poorly served by existing facilities. Channel *31 at Kenbridge, Virginia, would have to be deleted to accommodate the Lumberton request. UNC has requested that the channel be reassigned to Farmville, Virginia—a shift to which the Virginia Public Telecommunications Council does not object.

5. The Commission is persuaded that a rule making proceeding should be instituted, it being our opinion that the new and improved noncommerical educational service planned by UNC could confer a substantial benefit to the public. Accordingly, we propose to amend the Television Table of Assignments, § 73.606(b) of the Commission's Rules as follows:

City	Channel No.	
	Present	Proposed
Jacksonville, North Carolina	19	*19
Lumberton, North Carolina		*31
Roanoke Rapids, North Carolina		*36
Rockingham, North Carolina		*53
Farmville, Virginia		*31
Kenbridge, Virginia	*31	

6. Authority to institute rule making proceedings, showings required, cut-off procedures, and filing requirements are contained in the attached Appendix and are incorporated by reference herein.

Note.—A showing of continuing interest is required by paragraph 2 of the Appendix before a channel will be assigned.

[4] UNC has applied for authority to construct an educational television station on Channel 19 in Jacksonville.

7. Interested parties may file comments on or before October 14, 1980, and reply comments on or before November 3, 1980.

8. For further information concerning this proceeding, contact Myra G. Kovey, Broadcast Bureau, (202) 632-7792. However, members of the public should note that from the time a Notice of Proposed Rule Making is issued until it is no longer subject to Commission consideration or court review, all *ex parte* contact are prohibited in Commission proceedings, such as this one, which involve channel assignments. An *ex parte* contact is a message (spoken or written) concerning the merits of a pending rule making other than comments officially filed at the Commission or oral presentation required by the Commission.

Federal Communications Commission.

Henry L. Baumann,

Chief, Policy and Rules Division, Broadcast Bureau.

Appendix

1. Pursuant to authority found in Sections 4(i), 5(d)(1), 303(g) and (r), and 307(b) of the Communications Act of 1934, as amended, and Section 0.281(b)(6) of the Commission's rules, it is proposed to amend the TV Table of Assignments, § 73.606(b) of the Commission's Rules and Regulations, as set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached.

2. *Showings required.* Comments are invited on the proposal(s) discussed in the Notice of Proposed Rule Making to which this Appendix is attached. Proponent(s) will be expected to answer whatever questions are presented in initial comments. The proponent of a proposed assignment is also expected to file comments even if it only resubmits or incorporates by reference its former pleadings. It should also restate its present intention to apply for the channel if it is assigned, and, if authorized, to build the station promptly. Failure to file may lead to denial of the request.

3. *Cut-off procedures.* The following procedures will govern the consideration of filings in this proceeding.

(a) Counterproposals advanced in this proceeding itself will be considered, if advanced in initial comments, so that parties may comment on them in reply comments. They will not be considered if advanced in reply comments. (See § 1.420(d) of Commission Rules.)

(b) With respect to petitions for rule making which conflict with the proposal(s) in this Notice, they will be considered as comments in the proceeding, and Public Notice to this effect will be given as long as they are filed before the date for filing initial comments herein. If they are filed later than that, they will not be considered in connection with the decision in this docket.

4. *Comments and reply comments; service.* Pursuant to applicable procedures set out in § 1.415 and 1.420 of the Commission's Rules and Regulations, interested parties may file comments and reply comments on or before the dates set forth in the *Notice of Proposed Rule Making* to which this Appendix is attached. All submissions by parties to this proceeding or persons acting on behalf of such parties must be made in written comments, reply comments, or other appropriate pleadings. Comments shall be served on the petitioner by the person filing the comments. Reply comments shall be served on the person(s) who filed comments to which the reply is directed. Such comments and reply comments shall be accompanied by a certificate of service. (See § 1.420(a), (b) and (c) of the Commission Rules.)

5. *Number of copies.* In accordance with the provisions of Section 1.420 of the Commission's Rules and Regulations, an original and four copies of all comments, reply comments, pleadings, briefs, or other documents shall be furnished the Commission.

6. *Public inspection of filings.* All filings made in this proceeding will be available for examination by interested parties during regular business hours in the Commission's Public Reference Room at its headquarters, 1919 M Street, NW., Washington, D.C.

[FR Doc. 80-25192 Filed 8-18-80; 8:45 am]

BILLING CODE 6712-01-M

47 CFR Part 90

[FR Docket No. 80-416; RM-3428]

Amendment of Part 90 of the Commission's Rules and Regulations to allow the use of digital voice modulation in the Power Radio Service

AGENCY: Federal Communications Commission.

ACTION: Notice of Proposed Rule Making.

SUMMARY: The FCC proposes to amend its rules to permit the use of digital voice modulation in the Power Radio Service. This proposed amendment is in response to a petition filed by the Utilities Telecommunications Council.

DATES: Comments must be filed on or before October 8, 1980, and reply

decisions under 49 U.S.C. 10928 to

comments on or before November 7, 1980.

ADDRESSES: Federal Communications Commission, Washington, DC 20544.

FOR FURTHER INFORMATION CONTACT: William P. Berges, Private Radio Bureau (202) 632–6497.

SUPPLEMENTARY INFORMATION:

Adopted: July 23, 1980.

Released: August 15, 1980.

By the Commission:

1. The Utilities Telecommunications Council (UTC) has filed a petition (RM–3428), requesting amendment of Part 90 of the Commission's Rules, to allow the use of digital voice modulation in the Power Radio Service for security purposes.

2. In support, UTC noted that Power Radio Service licensees provide essential utilities services to the public and that interruption of these services can have a detrimental effect on the public welfare. UTC also pointed ut that there is concern both in the Federal Government [1] and in the utilities industry about attempts to intercept communications of utilities in general and nuclear power facilities in particular. As part of their security precautions, UTC said that utilities would like to secure some of their more sensitive communications through digital voice scrambling systems.

3. Presently we authorize analog but not digital scrambling techniques in the Power Radio Service. However, analog modulation can be easily intercepted. Digital modulation can be encrypted and provides a much higher degree of communications security. The use of digital voice modulation is permitted in the Police and Fire Radio Services only.[2] We limited the use of digital modulation to those services when we adopted the interim standards for digital system in our *First Report and Order* in Docket No. 21142,[3] because of potential conflicts with ordinary voice operations.

4. We have considered UTC's petition carefully and we believe it should be granted. Apparently, Power Radio Service licensees often require a high degree of security in their radio communications. We also recognize that the frequency coordination is very effective in the Power Radio Service. In our First Report and Order in Docket No. 21142, we said: "... we believe that considering the untried nature of digital voice modulation, it would be prudent to restrict its authorization to those services where re-use of a frequency in a particular geographic area is at a minimum, or where such use is carefully coordinated among licensees engaged in essentially similar activities." It appears that the Power Radio Service meets these tests.

5. Accordingly, we propose to amend Section 90.207 to permit digital modulation (F3Y and F9Y) in the Power Radio Service.

6. Authority for issuance of this Notice is contained in Section 4(i) and 303(r) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i) and 303(r). Pursuant to procedures set out in § 1.415 of the Rules and Regulations, 47 CFR 1.415, interested persons may file comments on or before October 8, 1980, and reply comments on or before November 7, 1980. All relevant and timely comments will be considered by the Commission before final action is taken in this proceeding. In reaching its decision, the Commission may take into consideration information and ideas not contained in the comments, provided that such information or a writing indicating the nature and source of such information is placed in the public files and provided that the fact of the Commission's reliance on such information is noted in the Report and Order.

7. In accordance with the provisions of Section 1.419 of the Rules and Regulations, 47 CFR 1.419, formal participants shall file an original and 5 copies of their comments and other materials. Participants wishing each Commissioner to have a personal copy of their comments should file an original and 11 copies. Members of the general public who wish to express their interest by participating informally may do so by submitting one copy. All documents will be available for public inspection during regular business hours in the Commission's Public Reference Room at its headquarters in Washington, D.C.

8. For further information concerning this document, you may contact William P. Berges, (202) 632–6497.

Federal Communications Commission.

William J. Tricarico,

Secretary.

Part 90 of the Commission's Rules would be amended as follows:

1. In § 90.207, paragrqaph (k) is amended to read as follows:

§ 90.207 Types of emission.

* * * * *

(k) For stations in the Fire, Police, and Power Radio Services utilizing digital voice modulation in either the scrambled or unscrambled mode F3Y emission will be authorized. Authorization to use F3Y is construed to include the use of F9Y emission subject to the provisions of paragraphs (a), (b), and (d) of § 90.233.

2. In § 90.212 paragraph (b) is amended to read as follows:

§ 90.212 Provisions relating to the use of scrambling devices arid digital voice modulation.

* * * * *

(b) The use of digital scrambling techniques or digital voice modulation requires the specific authorization of F3Y emission, and this emission will be authorized only to stations in the Police, Fire and Power Radio Services, subject to the provisions of paragraph (d) of this section.

BILLING CODE 6712-01-M

[1] See e.g. § 73.55 of the Nuclear Regulatory Commission's Rules and Regulations (CFR § 73.55) pertaining to the requirements for nuclear power facilities to protect themselves against nuclear sabotage.

[2] See generally, *First Report and Order*, Docket No. 21142, FCC 78–70, released February 9, 1978, and *Second Report and Order* Docket No. 21142, FCC 79–756, released December 3, 1979, in which we authorized digital voice emission in the Police and Fire Radio Services.

[3] See *First Report and Order*, Docket No. 21142, supra, at para. 5.

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1100

[Ex Parte No. 55 (Sub-No. 36)]

Administrative Appeals From Motor Carrier Board Decisions; Discontinuance of Proposed Rules

AGENCY: Interstate Commerce Commission.

ACTION: Notice of Discontinuance of Proposed Rules.

SUMMARY: By notice in this proceeding published at 44 FR 22765 (April 17, 1979), the Commission proposed rules which would make single Commissioner appellate action on Motor Carrier Board decisions administratively final. In Ex Parte No. MC–67 (Sub-No. 9), *Revised temporary Authority Rules*, 45 FR 45525 (July 3, 1980), the Commission issued final rules which abolished the Motor Carrier Board and delegated appellate jurisdiction on temporary authority

decisions under 49 U.S.C. 10928 to Review Boards. Accordingly, no purpose would be served by the rules proposed in this proceeding, and the proceeding will be discontinued.

FOR FURTHER INFORMATION CONTACT:

Paul Grossman, 202–275–7976

Edward E. Guthrie, 202–275–7691

It is ordered:

The proceeding is discontinued.

Dated: August 11, 1980.

By the Commission, Chairman Gaskins, Vice Chairman Gresham, Commissioners Stafford, Clapp, Trantum, Alexis and Gilliam.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035-01-M

Notices

main laboratory components: a gas

Under the authority of Section 523 of

Office of the Secretary

Notices

Federal Register
Vol. 45, No. 162
Tuesday, August 19, 1980

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

Biocontrol Laboratory, Moore Air Base, Mission, Tex.; Issuance of Negative Declaration

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of availability of Environmental Assessment and Negative Declaration.

SUMMARY: This gives notice that the Animal and Plant Health Inspection Service is not preparing an environmental impact statement concerning the proposed construction of a Biocontrol Laboratory at Moore Air Base (USDA facility), Mission, Texas. The proposed Biocontrol Laboratory would be used to rear biological agents which have been shown to be capable of controlling crop pests.

The environmental assessment of this action indicates that a similar type facility at Moore Air Base has not caused significant adverse local, regional, or national impacts on the environment in the past. There are no adverse environmental impacts anticipated in the future for this new facility. No significant controversy has been associated with this project. As a result of these findings, it has been determined that the preparation and review of an environmental impact statement is not needed for this action.

FOR FURTHER INFORMATION CONTACT: Copies of the environmental assessment are available upon request from Dr. John H. Green, Architectural Engineering Branch, Administrative Services Division, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Federal Building, 6505 Belcrest Road, Hyattsville, Maryland 20782 (301–436–8237).

SUPPLEMENTAL INFORMATION: This notice has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified as "not significant".

The Animal and Plant Health Inspection Service is responsible for controlling both diseases and pests of plants and animals. One major activity of this agency is controlling insects and other pests which are harmful to animals and agricultural crops. Up to now the main methods of controlling these pests has been by use of chemical pesticides.

The demonstrated past and present successes of biocontrol projects have shown biological agents to be a more economically and environmentally prudent alternative to chemical control of agriculturally harmful insects and other pests. The proposed Biocontrol Laboratory will be especially designed and engineered to meet the specific growing requirements of biological agents used in biocontrol projects.

The proposed facility will have three segregated areas for rearing up to three different biological agents in confinement in order to avoid cross contamination.

The Moore Air Base facility has already been used by the U.S. Department of Agriculture for research and development of biocontrol agents. The proposed new Biocontrol Laboratory will augment this growing and important program with a facility specifically designed for the purpose and incorporating updated technology. No administrative action will be taken until September 3, 1980.

Done at Washington, D.C., this 12th day of August 1980.

Harry C. Mussman,

Administrator, Animal and Plant Health Inspection Service.

[FR Doc. 80-24690 Filed 8-18-80; 8:45 am]

BILLING CODE 3410-34-M

Construction of the National Monitoring and Residue Analysis Laboratory, Gulfport, Miss.

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of availability of Environmental Assessment and Negative Declaration.

SUMMARY: This gives notice that the Animal and Plant Health Inspection Service is not preparing an environmental impact statement concerning the construction of a new laboratory facility to house the National Monitoring and Residue Analysis Laboratory, Gulfport, Mississippi. Most of the laboratory functions to be performed in the proposed laboratory facility already exist and are presently being performed throughout several other buildings which comprise the Animal and Plant Health Inspection Service's Gulfport facility. The environmental assessment of this proposed action indicates that the existing laboratory functions have not caused significant adverse local, regional or national impacts upon the environment in the past. There are no adverse environmental impacts anticipated in the future for this proposed action. No significant controversy has been associated with this project. As a result of these findings, it has been determined that the preparation and review of an environmental impact statement is not needed for this action.

FOR FURTHER INFORMATION CONTACT: Copies of the environmental assessment are available upon request from Dr. John H. Green, Architectural Engineering Branch, Administrative Services Division, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Room 271, Federal Building, 6505 Belcrest Road, Hyattsville, Maryland 20782 (301–436–8237).

SUPPLEMENTAL INFORMATION: This notice has been reviewed under USDA procedures established in Secretary's Memorandum 1955 to implement Executive Order 12044 and has been classified as "not significant."

The Animal and Plant Health Inspection Service, through its Plant Protection and Quarantine programs, is responsible for collecting agricultural, forestry and other plant samples throughout the nation. These samples are sent to the Animal and Plant Health Inspection Service facility at Gulfport for laboratory analysis to determine pesticide or other chemical residues. The proposed new laboratory facility would combine several existing laboratory units into a more efficient laboratory system. The new facility would be specifically designed for the housing and operation of two of the main laboratory components: a gas liquid chromatography unit coupled in operation to a mass spectophotometer for more efficient and rapid analysis of plant material extracts. The rest of the proposed new laboratory facility would be technical and administrative support to the gas liquid chromatography and mass spectrophotometry units. No administrative action will be taken until September 3, 1980.

Done at Washington, D.C., this 12th day of August 1980.

Harry C. Mussman,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410-34-M

Farmers Home Administration

[FCDA No. 10.420]

Rural Self-Help Housing Technical Assistance; Self-Help Rehabilitation/Repair Assistance Grants

AGENCY: Farmers Home Administration, USDA.

ACTION: Notice.

SUMMARY: The Farmers Home Administration (FmHA) has the ability to provide grants, under the authority in Section 523 of Title V of the Housing Act of 1949, to public and private nonprofit organizations to administer programs of technical and supervisory assistance to aid low-income families to rehabilitate their homes through the mutual self-help method. The families normally finance their homes with section 502 rural housing loans and Section 504 rural housing rehabilitation loans and/or grants, but also may utilize other financial resources.

Rural areas have about one-fourth of the nation's population and 60 percent of its substandard housing. The nonmetopolitan household has been substantially more likely to have a leaky roof or holes in the floor of the house than the urban household. That is partly explained by the fact that there is a 20 percent better chance that they are living in a pre-1940 house. There were 1.9 million households living in substandard housing in 1975. Nearly all of these households were low-to-moderate income. Consequently, the solution to their housing needs is not new construction, rather the solution is the rehabilitation of existing housing. Rehabilitation is more than the structural improvement of housing units, it also includes the installation of necessary plumbing, including hot running water.

Under the authority of Section 523 of Title V of the Housing Act of 1949, FmHA proposes to increase the use of the self-help housing rehabilitation and repair provisions of the Act, and to evaluate the effectiveness of that program. Subpart I of Part 1933, Chapter XVIII, Title 7, Code of Federal Regulations, governs the program. 7 CFR 1933.410 will be followed in preparing preapplications and applications. Since the intention of FmHA is to work toward expanding the use of self-help repair and rehabilitation, FmHA will develop an evaluation plan. Such an evaluation plan could provide for determining, among other things:

A. If the mutual self-help method is economically and socially feasible for housing rehabilitation and repair.

B. What are the relationships, between (a) type of work proposed and hours of labor contributed by families and (b) type of work proposed and the size of the group needed to accomplish the completion of job.

7 CFR 1933.409(a)(1)–(a)(3) provides special conditions that must be met before technical assistance grant funds may be used for repair and rehabilitation purposes.

Applicants will submit an original and 1 copy of proposal (Application) to the FmHA District Office within 45 days of the publishing of this Notice. The District Office will review and make written comments, and submit the original and copy of each proposal to the FmHA State Director within 14 days. The State Director will review each proposal and recommend no more than three, with comments, to FmHA National Office for review. Those not recommended will be advised of appeal rights under 7 CFR 1900–B.

It is anticipated that approximately $1,000,000 will be initially available for funding of TA grants for self-help repair and rehabilitation proposals.

FOR FURTHER INFORMATION CONTACT: Mr. Cliff Herron, Multiple Family Housing Loan Division, Room 5337, Farmers Home Administration, telephone 202–447–7207.

The FmHA programs and projects which are affected by this instruction are subject to State and local clearinghouse review in the manner delineated in FmHA Instruction 1901–H.

Dated: August 7, 1980.

Gordon Cavanaugh,

Administrator, Farmers Home Administration.

BILLING CODE 3410-07-M

Office of the Secretary

Citizens' Advisory Committee on Equal Opportunity; Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act notice is hereby given of a public meeting of the USDA Citizens' Advisory Committee on Equal Opportunity on September 7–9 in Room 218A, Administration Building, 14th and Independence Avenue, Washington, D.C. commencing at 8:30 a.m.

The purpose of the meeting is to consider USDA's programs and opportunities for the rural population. The agenda will include representatives from the Office of the Assistant Secretary for Rural Development with a specific segment on Farmer's Home Administration.

The meeting is open to the public to observe Committee operations. Interested persons may make written comments to and obtain further information regarding the Committee from:

Elda R. Inoue, Office of the Assistant Secretary for Administration, Room 212E Admin Building, Washington, D.C. 20250, Phone: 202/447–7247.

ARMS CONTROL AND DISARMAMENT AGENCY

General Advisory Committee; Meeting

Notice is hereby given in accordance with Section 10(a)(2) of the Federal Advisory Committee Act, 5 U.S.C. Appendix I (the Act) and paragraph 8.b. of Office of Management and Budget Circular No. A–63 (revised March 27, 1974) (the OMB Circular), that a meeting of the General Advisory Committee (GAC) is scheduled to be held on September 11, 1980 from 10 a.m. to 6 p.m. and on September 12, 1980 from 8:30 a.m. to 2 p.m. at 2201 C Street, NW, Washington, DC, in Room 5941.

The purpose of the meeting is for the GAC to receive briefings and hold discussions concerning arms control and related issues which will involve national security matters classified in accordance with Executive Order 12065 dated June 28, 1978.

The meeting will be closed to the public in accordance with the determination of August 8, 1980 made by the Director of the U.S. Arms Control and Disarmament Agency pursuant to Section 10(d) of the Act and paragraph

PS 34–70, Flurorinated Ethylene-Propylene

CS 192–53, General Purpose Vinyl Plastic

CS 202–58, Industrial Life and Hinged

8.d.(2) of the OMB Circular that the meeting will be concerned with matters of the type described in 5 U.S.C. 552(b)(1). This determination was made pursuant to a delegation of authority from the Office of Management and Budget dated June 25, 1973, issued under the authority of Executive Order 11686 dated October 7, 1972 and continued by Executive Order 11769 dated February 21, 1974.

Dated: August 14, 1980.

Walter L. Baumann,
Acting Advisory Committee, Management Officer.

Merchant Marine and Fisheries Capital Construction Funds; Applicable Rates of Interest on Nonqualified Withdrawals

Under the authority in section 607(h)(4) of the Merchant Marine Act, 1936, (46 U.S.C. 1101), as amended by section 21 of the Merchant Marine Act of 1970 (84 Stat. 1031), we hereby determine and announce that the applicable rate of interest on the amount of additional tax attributable to any nonqualified withdrawals from a capital construction fund established under section 607 of the Act shall be 10.36 percent, with respect to nonqualified withdrawals made in the taxable year beginning in 1980.

The determination of the applicable rate of interest with respect to nonqualifed withdrawals was computed according to the joint regulations issued under the Act (46 CFR Part 391 § 391.7(e)(2)(ii)) by multiplying 8 percent by the ratio which (a) the average yield on 5-year Treasury securities for the calendar year immediately preceding the beginning of such taxable year, bears to (b) the average yield on 5-year Treasury securities for the calendar year 1970. The applicable rate so determined was computed to the nearest one-hundredth of 1 percent.

Dated: August 11, 1980.

Samuel B. Nemirow,
Assistant Secretary for Maritime Affairs.

Richard A. Frank,
Administrator, National Oceanic and Atmospheric Administration.

Donald C. Lubick,
Assistant Secretary of the Treasury.

BILLING CODE 1505-01-M

National Bureau of Standards

Status Report on Withdrawal of Voluntary Product Standards

AGENCY: Department of Commerce, National Bureau of Standards.

ACTION: Maintenance, Retention, Replacement, and Withdrawal of certain Voluntary Product Standards.

On June 19, 1980, the Department of Commerce (Department) announced in the **Federal Register** (45 FR 41475-6) the withdrawal, effective August 18, 1980, of 80 documents classifed as Voluntary Product Standards. The withdrawl announcement was made in accordance with a revisions to the Procedures for the Development of Voluntary Product Standards (15 CFR Part 10) which was announced in a separate notice in that same issue of the **Federal Register** (45 FR 41401-08) and which went into effect on June 19, 1980. The revised Procedures specify six criteria which must be met for the department to sponsor the development or maintenance of a standard. Section 10.13 of the revised Procedures provided that within the period ending August 18, 1980, interested parties could submit a request to the director of the National bureau of Standards (NBS) to retain a particular standard or standards in accordance with those specified criteria. Several such requests have been received, and determinations have been reached on those requests as indicated below.

Based on proposals from the proponent organizations identified after the following titles, the following product standards will continue to be sponsored by the Department:

PS 1-74, Construction and Industrial Plywood; American Plywood Association
PS 20-70, American softwood Lumber Standard; American Lumber Standards Committee
PS 56-73, Structural Glued Laminated Timber; American Institute of Timber Construction
PS 73-77, Carbonated Soft Drink Bottles; Glass Packaging Institute

Based on documented activity within a private standards-writing organization, the following standards will be retained by NBS for the stated periods of time to permit the orderly transfer of sponsorship of such standards from the Department to the identified organizations:

PS 13-69 Uncorded Slab Urethane Foam for Bedding and Furniture cusioning; American society for Testing and Materials; 24 months
PS 15-69, Custom Contact-Molded Reinforced-Polyester Chemical-Resistant Process Equipment; Society of the Plastics Industry; 12 months
PS 17-69, Polyethylene-sheeting (construction, Industrial, and Agricultural Applications); Society of the Plastics Industry; 12 months
PS 23-70, Horticultural Grade Perlite; the Perlite Institute; 12 months
PS 24-70, Melamine Dinnerware (Alpha-Cellulose Filled) for Household Use; Society of the Plastics Industry; 12 months
PS 25-70, Heavy-Duty Alpha-Cellulose-Filled Melamine Tableware; Society of the Plastics Industry; 12 months
PS 27-70, Mosaic-Parquet Hardwood Slat Flooring; American Parquet Association; 6 months
PS 29-70, Plastic Heat-Shrinkable Film; Society of the Plastics Industry; 12 months
PS 30-70, School Chalk; the Crayon, Water Color and Craft Institute, Inc.; 18 months
PS 31-70, Polystyrene Plastic Sheet; Society of the Plastics Industry; 12 months

PS 34-70, Flurorinated Ethylene-Propylene (FEP) Plastic Lined Steel Pipe and Fittings; Society of the Plastics Industry; 12 months
PS 36-70, Body Measurements for the Sizing of Boys' Apparel; Mail Order Association of America; 24 months
PS 42-70, Body Measurements for the Sizing of Women's Patterns and Apparel; Mail Order Association of America; 24 months
PS 45-71, Body Measurements for the Sizing of Apparel for Young Men (Students); Mail Order Association of America; 24 months
PS 46-71, Flame-Resistant Paper and Paperboard; American society for Testing and Materials; 18 months
PS 51-71, Hardwood and Decorative Plywood; Hardwood Plywood Manufacturers Association; 24 months
PS 52-71, Polytetrafluoroethylene (PTFE) Plastic ; Society of the Plastics Industry; 12 months
PS 53-72, Glass-Fiber Reinforced Polyester Structural Plastic Panels; Society of the Plastics Industry; 12 months
PS 54-72, Body Measurements for the Sizing of Girls' Apparel; Mail Order Association of America; 24 months
PS 57-73, Cellulosic Fiber Insulation Board; American Hardboard Association; 6 months
PS 58-73, Basic Hardboard; American Hardboard Association; 6 months
PS 59-73, Prefinished Hardboard Paneling; American Hardboard Association; 6 months
PS 60-73, Hardboard Siding; American Hardboard Association; 6 months
PS 62-74, Grading of Diamond Powder in Sub-Sieve Sizes; Industrial Diamond Association of America; 12 months
PS 63-75, Latex Foam Mattresses for Hospitals; American Society for Testing and Materials; 24 months

PS 67-76, Marking of Gold Filled and Rolled Gold Plate Articles Other Than Watchcases; Jewelers Vigilance Committee; 36 months
PS 68-76, Marking of Articles Made of Silver in Combination with Gold; Jewelers Vigilance Committee; 36 months
PS 69-76, Marking of Articles Made Wholly or in Part of Platinum; Jewelers Vigilance Committee; 36 months
PS 70-76, Marking of Articles Made of Karat Gold; Jewelers Vigilance Committee; 36 months
PS 71-76, Marking of Jewelry and Novelties of Silver; Jewelers Vigilance Committee; 36 months
CS 98-62, Artists' Oil Paints; Artists Equity Association, Inc.; 18 months
CS 130-60, Color Materials for Art Education in Schools; The Crayon, Water Color and Craft Institute, Inc.; 18 months
CS 138-55, Insect Wire Screening; Insect Screening Weavers Association; 12 months
CS 151-50, Body Measurements for the Sizing of Apparel for Infants, Babies, Toddlers and Children (for the Knit Underwear Industry); Mail Order Association of America; 24 months
CS 192-53, General Purpose Vinyl Plastic Film; Society of the Plastics Industry; 12 months
CS 201-55, Rigid Polyvinyl Chloride Sheets; Society of the Plastics Industry; 12 months
CS 227-59, Polyethylene Film; Society of The Plastics Industry; 12 months
CS 245-62, Vinyl-Metal Laminates; Society of the Plastics Industry; 12 months
CS 257-63, TFE-Fluorocarbon (Polytetrafluoroethylene) Resin Molded Basic Shapes; Society of the Plastics Industry; 12 months
CS 288-65, Hide Trim Pattern for Domestic Cattlehides; National Hide Association; 12 months
CS 274-66, TFE-Fluorocarbon (Polytetrafluoroethylene) Resin Sintered Thin Coatings for Dry Film Lubrication; Society of the Plastics Industry; 12 months
R 2-62, Bedding Products and Components; National Association of Bedding Manufacturers; 12 months
R 192-63, Crayons and Related Art Materials for School Use (Types, Sizes, Packages, and Colors); the Crayon, Water Color and Craft Institute, Inc.; 18 months

The following standards have been replaced by standards published by private standards-writing organizations and, therefore, Department of Commerce sponsorship is no longer needed for them:

PS 28-70, Rigid Poly (Vinyl Chloride) (PVC) Profile Extrusions replaced by ASTM D 3678-78, Specification for Rigid Poly (Vinyl Chloride) (PVC) Profile Extrusions
PS 43-71, Fluorinated Ethylene-Propylene (FEP) Plastic Tubing replaced by ASTM D 3296-74, Specification for FEP-Fluorocarbon Resin Tubing
PS 47-71, Heat-Shrinkable Fluorocarbon Plastic Tubing replaced by ASTM D 2902-75, Specification for Fluorocarbon Resin Heat-Shrinkable Tubing
PS 55-72, Rigid Poly (Vinyl Chloride) (PVC) Plastic Siding replaced by ASTM D 3679-79 Specification for Rigid Poly (Vinyl Chloride) (PVC) Siding
CS 11-63, Moisture Regain of Cotton Yarns replaced by ASTM D 1909-77 Standard Table of Commercial Moisture Regains for Textile Fibers and ASTM D 2494-74 Standard Method of Test for Commercial Weight of a Shipment of Yarn or Man-Made Staple Fiber
CS 21-58, Interchangeable Taper-Ground Joints, Stopcocks, Stoppers, and Spherical-Ground Joints replaced by ASTM E 675-79 Standard Specification for Interchangeable Stopcocks and Stoppers, ASTM E 676-79 Standard Specification for Interchangeable Taper-Ground Joints, and ASTM E 677-79 Standard Specification for Interchangeable Spherical-Ground Joints
CS 75-56, Automatic Mechanical-Draft Oil Burners Designed for Domestic Installations replaced by ANSI Z 91.2-1976 Performance Requirements for Automatic Pressure Atomizing Oil Burners of the Mechanical-Draft Type
CS 191-53, Flammability of Clothing Textiles replaced by ASTM D 1230-61 (1972) Test for Flammability of Clothing Textiles
CS 202-56, Industrial Lifts and Hinged Loading Ramps replaced by ANSI MH14.1-1976 Industrial Loading Dockboards (Ramps)
CS 209-57, Vinyl Chloride Plastics Garden Hose replaced by ASTM D 3901-80 Standard Consumer Product Specification for Graden Hose
CS 236-66, Mat-Formed Wood Particleboard replaced by ANSI A 208.1-1979 Mat-Formed Particleboard

In the absence of any request for retention or maintenance, the following standards will be withdrawn, as previously announced, on August 18, 1980:

PS 4-66, Standard Stock Light-Duty 1-3/8-and 1-3/4-inch Thick Flush-type Interior Steel Doors and Frames
PS 6-66, Trim for Water-Closet Bowls, Tanks and Urinals (Dimensional Standards)
PS 28-70, Glass Stopcocks with Polytetrafluoroethylene (PTFE) Plugs
PS 38-70, Steel Bi-fold Closet Door Units, Frames, and Trim
PS 40-70, Package Quantities of Green Olives
PS 41-70, Package Quantities of Instant Mashed Potatoes
PS 44-71, Paper Ice Bag Sizes
PS 48-71, Package Quantities of Cubed, Sized, Crushed, and Block Ice
PS 49-71, Portable Picnic Coolers
PS 50-71, Package Quantities of Toothpaste
CS 5-65, Pipe Nipples; Brass, Copper, Steel, and Wrought Iron
CS 46-65, Hosiery Lengths and Sizes Excluding Women's
CS 234-61, Measurements for Stretch Socks and Anklets
CS 242-62, Standard Stock Commercial 1-3/4-Inch Thick Steel Doors and Frames
CS 269-65, Aluminum Alloy Chain Link Fencing
R 46-55, Tissue Wrapping Paper
R 222-46, Hot-Rolled Carbon Steel Bars and Bar-Size Shapes
R 264-61, Standard Sizes of Oil-Hardenable Flat, Ground Tool Steel Stock

In accordance with section 10.1(e) of the revised Procedures for the Development of Voluntary Product Standards and by agreement with the Consumer Product Safety Commission, the Department will retain sponsorship of the following two Product Standards until such time as arrangements for their sponsorship by a private standards-writing organization can be made:

PS 66-75, Safety Requirements for Home Playground Equipment
PS 72-76, Toy Safety

BILLING CODE 3510-13-M

Office of the Secretary

Economic Advisory Board; Meeting

Pursuant to the provisions of section 10(a)(2) of the Federal Advisory Committee Act as amended, 5 U.S.C. App. 1976, notice is hereby given that the meeting of the Department of Commerce Economic Advisory Board will be held on Monday, September 22, 1980, from 9:30 a.m. to 4:00 p.m. in Room 4830 Main Commerce Building, 14th Street and Constitution Avenue, N.W., Washington, D.C.

The Board was established by the Secretary of Commerce on January 12, 1967. The purpose of the Board is to advise the Secretary of Commerce on economic policy issues. The intended agenda for this meeting is as follows:

- A review of the economic outlook by major sector.
- A discussion of the outlook for prices and employment and of strategies for sustaining economic growth and dealing with inflation.

A limited number of seats will be available to the public on a first-come, first-serve basis. Public participation will be limited to request for clarification of items under discussion. Additional statements or inquiries may be submitted to the chair before or after the meeting. Copies of the minutes will be available on request 30 days after the meeting.

Additional information concerning this meeting may be obtained by contacting Ms. Virginia R. Marketti, Office of the Chief Economist for the Department of Commerce, Room 4848, Department of Commerce, Washington, D.C. 20230, Telephone (202) 377-3523.

Dated: August 14, 1980.

Courtenay M. Slater,

Chief Economist for the Department of Commerce.

BILLING CODE 3510-17-M

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

Increasing the Import Restraint Levels for Certain Man-Made Fiber Textile Products from Singapore

August 13, 1980.

AGENCY: Committee for the Implementation of Textile Agreements.

ACTION: Increasing the consultation level for other man-made fiber yarn wholly of non-continuous filament, in Category 604, exported from Singapore during the agreement year which began on Januray 1, 1980 from 700,000 pounds to 975,610 pounds.

(A detailed description of the textile categories in terms of T.S.U.S.A. numbers was published in the Federal Register on February 28, 1980 (45 FR 13172), as amended on April 23, 1980 (45 FR 27463)).

SUMMARY: By an exchange of letters, the Governments of the United States and Singapore have agreed, pursuant to the terms of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of September 21 and 22, 1978, as amended, to increase the consultation level previously established for man-made fiber textile products in Category 604 to 975,610 pounds during the 12-month period which began on January 1, 1980.

EFFECTIVE DATE: August 18, 1980.

FOR FURTHER INFORMATION CONTACT: Ronald J. Sorini, International Trade Specialist, Office of Textiles and Apparel, U.S. Department of Commerce, Washington, D.C. 20230. (202/377-5423)

SUPPLEMENTARY INFORMATION: On December 20, 1979, there was published in the Federal Register (44 FR 75440) a letter dated December 14, 1979 from the Chairman of the Committee for the Implementation of Textile Agreements to the Commissioner of Customs, which established levels of restraint for certain specified categories of cotton, wool and man-made fiber textile products, including Category 604, produced or manufactured in Singapore, which may be entered into the United States for consumption, or withdrawn from warehouse for consumption, during the twelve-month period which began on January 1, 1980 and extends through December 31, 1980. In accordance with the terms of the bilateral agreement, the United States Government has agreed to increase the consultation level for Category 604 to 975,610 pounds during the agreement year which began on January 1, 1980. Accordingly, in the letter published below the Chairman of the Committee for the Implementation of Textile Agreements directs the Commissioner of Customs to prohibit entry of man-made fiber textile products in Category 604 in excess of the adjusted twelve-month level of restraint.

Arthur Garel,

Acting Chairman, Committee for the Implementation of Textile Agreements.

U.S. Department of Commerce International Trade Administration

Committee for the Implementation of Textile Agreements

August 13, 1980.

Commissioner of Customs,
Department of the Treasury,
Washington, D.C. 20229.

Dear Mr. Commissioner: This directive further amends, but does not cancel, the directive issued to you on December 14, 1979 by the Chairman, Committee for the Implementation of Textile Agreements, concerning imports into the United States of certain cotton, wool and man-made fiber textile products, produced or manufactured in Singapore.

Under the terms of the Arrangement Regarding International Trade in Textiles done at Geneva on December 20, 1973, as extended on December 15, 1977; pursuant to the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of September 21 and 22, 1978, as amended, between the Governments of the United States and Singapore; and in accordance with the provisions of Executive Order 11651 of March 3, 1972, as amended by Executive Order 11951 of January 6, 1977, you are directed to prohibit, effective on August 18, 1980 and for the twelve month period which began on January 1, 1980 and extends through December 31, 1980, entry into the United States for consumption and withdrawal from warehouse for consumption of man-made fiber textile products in Category 604, produced or manufactured in Singapore, in excess of 975,610 pounds.[1]

The action taken with respect to the Government of Singapore and with respect to imports of man-made fiber textile products from Singapore has been determined by the Committee for the Implementation of Textile Agreements to involve foreign affairs functions of the United States. Therefore, these directions to the Commissioner of Customs, which are necessary for the implementation of such actions, fall within the foreign affairs exception to the rule-making provision of 5 U.S.C. 553. This letter will be published in the Federal Register.

Sincerely,

Arthur Garel,

Acting Chairman, Committee for the Implementation of Textile Agreements.

[FR Doc. 80-25188 Filed 8-18-80; 8:45 am]

BILLING CODE 3510-25-M

[1] The level of restraint has not been adjusted to reflect any imports after December 31, 1979.

DEPARTMENT OF DEFENSE

Defense Logistics Agency

Finding of No Significant Impact Disposal of FS Smoke

The Defense Property Disposal Service (DPDS), a field activity of the Defense Logistics Agency (DLA), plans

to dispose of approximately 3.7 million pounds of FS Smoke (sulfur trioxide-chlorosulfonic acid mixture). The FS Smoke is currently located at the Naval Weapons Support Center, Crane, Indiana (3,225 drums); Naval Weapons Station, Earle, Colts-Neck, New Jersey (574 drums); and U.S. Army Ammunition Plant, McAlester, Oklahoma (400 drums).

Consistent with the intent of Section 102(2) of the National Environmental Policy Act of 1969, Council on Environmental Quality Regulations (40 CFR 1500-1508) and DoD Directive 6050.1, notice is hereby given that an Environmental Impact Statement is not being prepared for this action. An Environmental Assessment has been completed from which it has been determined that this action will not have a significant impact on the human environment.

The recommended course of action is to offer the FS Smoke for sale. The FS Smoke will be offered for sale "as is-where is". The appropriate terms and conditions (e.g., environmental protection, transporting hazardous materials, indemnification, and work practice standards) will be included in the invitation for bid and the sale of the item will be accomplished in accordance with prescribed sale procedures, including the use of an end-use certificate. These actions are considered to be sufficient to minimize the risk of environmental pollution as a result of implementing the proposed action. If sales actions fail, the FS Smoke will be disposed of through service contract by one or a combination of the following methods:

a. Burial in a hazardous waste landfill.
b. Chemical treatment.
c. Incineration.
d. Continued storage.

Any of the above alternatives must be effected in accordance with provisions of the Resources Conservation and Recovery Act (RCRA).

The Environmental Assessment may be reviewed in the office of Mr. George M. Jonas, Jr., Chief, Environmental Branch, Defense Property Disposal Service, Battle Creek, Michigan 49016. A limited number of copies of the Environmental Assessment are available from the same office to fill single copy requests.

Dated: August 13, 1980.

Lawrence R. Smith,

Colonel, USA, Staff Director, Installation Services and Environmental Protection.

[FR Doc. 80-25213 Filed 8-18-80; 8:45 am]

BILLING CODE 3620-01-M

DELAWARE RIVER BASIN COMMISSION

Notice of Public Hearing; Approval of Projects

Notice is hereby given that the Delaware River Basin Commission will hold a public hearing on Wednesday, August 27, 1980, commencing at 1:30 p.m. The hearing will be part of the Commission's regular August business meeting which is open to the public. Both the hearing and the meeting will be held at the Goddard Conference Room, at the Commission's offices, 25 State Police Drive, West Trenton, New Jersey. The subject of the hearing will be applications for approval of the following projects as amendments to the Comprehensive Plan pursuant to Article 11 of the Compact and/or as project approvals pursuant to Section 3.8 of the Compact.

1. *Forest Lakes Water Company (D-74-94 CP).* A well water supply project to serve the Forest Lakes community in Andover Township, Sussex County, N.J. Designated as Well No. 3, the new facility will be used as backup for an existing well and is expected to yield up to 230,000 gallons per day.

2. *Pennsylvania Department of Environmental Resources (D-80-6 CP and D-80-7 CP).* A water supply system and sewage collection and treatment facility to serve the French Creek State Park in Union Township, Berks County, and Warwick Township, Chester County, Pa. Two wells with a design capacity of 280,000 gallons per day will be utilized. The sewage treatment facility will provide removal of 85% of BOD with ultimate disposal by spray irrigation.

3. *Larchmont Farms (D-79-3).* A well water supply project to provide water supplies on the subject farm in Upper Pittsgrove Township, Salem County, N.J. Two wells are expected to yield up to a combined maximum of 1.4 million gallons per day, which will be used for supplemental irrigation of 230 acres of fruit crops.

4. *Clair Taylor (D-79-41).* A well water supply project at the subject farm in Cedarville, Cumberland County, N.J. A maximum of 12 million gallons per month would be withdrawn and used for irrigation of crops.

5. *Clair Taylor (D-80-56).* A surface water withdrawal at the subject farm in Lawrence Township, Cumberland County, N.J. A maximum of 16 million gallons per month would be withdrawn from Cedar Lake on Cedar Creek and used for irrigation of 80 acres of crops.

6. *Totten Farms (D-80-5).* A well water supply project at the subject farm in North Hanover Township, Burlington County, N.J. The well is expected to yield about 290,000 gallons per day and would be used for the irrigation of crops.

7. *Rocco Infante, Jr. (D-80-53).* A surface water withdrawal to serve the subject farm in Upper Freehold Township, Monmouth County, N.J. A maximum of 20 million gallons per month would be withdrawn from an unnamed tributary of Doctors Creek and used for irrigation of 100 acres of crops.

8. *Ellis F. Herbert (D-80-54).* A surface water withdrawal at the subject farm in Upper Freehold Township, Monmouth County, N.J. A maximum of 6 million gallons per month would be withdrawn from an unnamed tributary of Assunpink Creek and used for irrigation of 30 acres of crops.

9. *Joseph Klein and Son (D-80-55).* A surface water withdrawal at the subject farm in Upper Freehold Township, Monmouth County, N.J. A maximum of 30 million gallons per month would be withdrawn from Doctors Creek and used for the irrigation of 150 acres of crops.

Documents relating to the above-listed projects may be examined at the Commission's offices. Persons wishing to testify at this hearing are requested to register with the Secretary prior to the date of the hearing.

Dated: August 13, 1980.

W. Brinton Whitall,

Secretary.

BILLING CODE 6360-01-M

DEPARTMENT OF EDUCATION

National Advisory Council for Career Education; Meeting

AGENCY: Department of Education, National Advisory Council for Career Education.

ACTION: Notice.

SUMMARY: This notice sets forth the schedule and proposed agenda of forthcoming meeting of the National Advisory Council for Career Education. It also describes the functions of the Council. Notice of the meetings is required pursuant to Section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463). This documnet is intended to notify the general public of their opportunity to attend.

DATE: September 11-12, 1980.

ADDRESS: Hubert Humphrey Building, 200 Independence Avenue, S.W., Room 403A-425A, Washington, D.C. 20201.

FOR FURTHER INFORMATION CONTACT: Nancy N. Swandby, Department of Education, Office of Career Education,

7th and D Streets, S.W., ROB 3, Room 3108A, Washington, D.C. 20202, (202) 245–2331.

The National Advisory Council for Career Education is established under Section 406 of the Education Amendments of 1974, Pub. L. 93–380, (88 Stat. 552, 553). The Council is directed to:

Advise the Secretary of Education and the Assistant Secretary for Elementary and Secondary Education on the implementation of Section 406 of the Education Amendments of 1974, Sections 331–336 of the Education Amendments of 1976, and the Career Education Incentive Act and carry out such advisory functions as it deems appropriate, including reviewing the operation of these sections and all other programs of the Department of Education pertaining to the development and implementation of career education, evaluating their effectiveness in meeting the needs of career education throughout the United States, and in determining the need for further legislative remedy in order that all citizens may benefit from the purposes of career education as described in Section 406 and in the Career Education Incentive Act.

The Secretary, to the extent practicable, seeks the advice and assistance of the Council concerning the lifelong learning activities authorized by Sec. 133 of Part B of Title I of the Higher Education Act of 1965, as amended.

The meeting of the Council shall be open to the public. The meeting will be held on Thursday, September 11 and Friday, September 12, 1980 and will begin at 9 A.M. and end at 4:30 P.M. The meeting will be held at the Hubert Humphrey Building, 200 Independence Avenue, S.W., Washington, D.C. 20201.

The proposed agenda includes:

Council Discussion—Old Business
Career Education and Postsecondary Education
Career Education and Adult Education
Council Discussion—New Business

Records shall be kept of all Council proceedings and shall be available after the meeting for public inspection at the Office of Career Education located at 7th and D Streets, S.W., Room 3100, Washington, D.C. 20202.

Signed at Washington, D.C. on August 12, 1980.

John Lindia,

Delegate National Advisory Council for Career Education.

[FR Doc. 80-25306 Filed 8-18-80; 8:45 am]

BILLING CODE 4000-01-M

DEPARTMENT OF ENERGY

Economic Regulatory Administration

[Docket No. ERA-FC-80-002; OFC Case Nos. 61020-9140-01-12, 61020-9140-05-12, 61420-9140-06-12]

Availability of Tentative Staff Determination

AGENCY: Economic Regulatory Administration, Department of Energy.

ACTION: Notice of availability of tentative staff determination.

SUMMARY: On December 31, 1980, Convent Chemical Corporation (Convent or the Company) filed a petition with the Economic Regulatory Administration (ERA) of the Department of Energy (DOE) for an order permanently exempting each of three new major fuel burning installations (MFBI) from the provisions of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act) (42 U.S.C. 8301 *et seq.*), which prohibit the use of petroleum or natural gas as a primary energy source in certain new MFBIs. Applicable criteria for petitioning for exemptions from the prohibitions of FUA are published at 10 CFR Part 500, *et seq.* (Interim Rules). ERA published Final Rules relating to New Facilities on June 6, 1980, (45 FR 38276 and 38302) which became effective August 5, 1980.

The MFBIs for which the petition was filed are a field erected, coal-fired boiler (identified as Unit 31–F–1 or Unit 1) and two package boilers (identified as Units 31–F–5 and 31–F–6, or Unit 5 and Unit 6, or waste-gas boilers) to be installed at Convent's new industrial chemical plant, Convent, Louisiana.

The design operating characteristics of the three boilers are:

	Boiler 31-F-1	Boiler 31-F-5	Boiler 31-F-6
Size:			
Input (MMBtu/hr)	303	176	181
Output (MMBtu/hr)	250	150	150
Steam output: Thousand lbs/hr	250	150	150
Fuel capabilities	(1)	(2)	(3)

[1] Coal, natural gas, No. 2 fuel oil.
[2] Natural gas and a mixture of waste-gas and natural gas.
[3] Natural gas and a mixture of waste-gas and natural gas or No. 2 fuel oil.

Note.—The waste-gas proposed to be used in the fuels mixture is a process by-product composed of mostly hydrogen gas and water (wet hydrogen gas).

Convent proposed to burn a mixture of coal and natural gas or No. 2 fuel oil in Unit 1, to burn a mixture of waste gas (a gaseous by-product of its chlorine-caustic process and EDC process plants) and natural gas in Unit 5, and to burn a mixture of waste gas and natural gas or No. 2 fuel oil in Unit 6. Convent contended that the waste gas by-product is an alternate fuel because it is a by-product of industrial operations. Convent proposed to burn No. 2 fuel oil in Unit 1 and Unit 6 only as a back-up fuel in the event natural gas becomes unavailable.

Convent stated that, when the new chemical plant is operating normally according to design specifications, producing products and the waste gas by-product at anticipated volumes, the amount of natural gas or Btu equivalent in No. 2 fuel oil used in its proposed fuel mixtures will not exceed 25 percent of the total annual Btu heat input of the primary energy source of each boiler. The Company submitted a duly authorized certification to that effect for each unit.

ERA accepted the petition for a permanent exemption to burn a fuels mixture in each boiler on January 30, 1980. Notice of that acceptance was published in the **Federal Register** on Tuesday, February 5, 1980 (45 FR 7828). The publication of the Notice of Acceptance started a 45-day public comment period pursuant to Section 701 of FUA. Interested persons were also afforded an opportunity to request a public hearing. The period for submitting written comments and to request a public hearing closed on March 2, 1980. A public hearing was not requested and no written comments were received.

ERA staff has reviewed the information contained in the record of this proceeding to date. A Tentative Staff Determination has been made recommending that ERA issue an order that would grant the requested permanent exemptions to use a fuels mixture of natural gas or No. 2 fuel oil and coal in Unit 1; natural gas and waste gas in Unit 5; and natural gas or No. 2 fuel oil and waste gas in Unit 6.

A public file containing a copy of the Tentative Staff Determination and other documents and supporting material on this proceeding is available upon request at: ERA Room B–110, 2000 M Street, NW., Washington, D.C., Monday–Friday, 8:00 a.m.–4:30 p.m.

ERA will issue a final order, in accordance with Sections 501.68 and 503.38 of the final rules, granting or denying the petition for permanent exemptions within six months after the public comment period provided for in this notice has closed unless ERA extends such period. Notice of any extension, together with a statement of the reasons therefore, will be published in the **Federal Register.**

DATES: Written comments on the Tentative Staff Determination and requests for a public hearing are due on or before September 13, 1980.

ADDRESSES: Fifteen copies of written comments, and any request for a public hearing shall be submitted to: Economic Regulatory Administration, Case Control Unit, Box 4629, Room 3214, 2000 M Street, NW., Washington, D.C. 20461. Docket Number ERA–FC–80–002 should be printed clearly on the outside of the envelope and the document contained therein.

FOR FURTHER INFORMATION CONTACT:

Constance L. Buckley, Chief, New MFBI Branch, Office of Fuels Conversion, Economic Regulatory Administration, 2000 M Street, NW., Room 3128, Washington, D.C. 20461, Phone (202) 653–4226.

Edward J. Peters, Jr., Case Manager, New MFBI Branch, Office of Fuels Conversion, Economic Regulatory Administration, 2000 M Street, NW., Room 3126–A, Washington, D.C. 20461, Phone (202) 653–4253.

Allan Stein, Office of the General Counsel, Department of Energy, 1000 Independence Avenue, SW., Room 6G–087, Washington, D.C. 20585, Phone (202) 252–2967.

SUPPLEMENTARY INFORMATION:

Concurrent with its petition for permanent exemptions Convent petitioned ERA pursuant to 10 CFR Section 505.15 of ERA's Interim Rules for a temporary public interest exemption for Units 1, 5 and 6 to permit the Company to burn natural gas in Unit 5 and natural gas or No. 2 fuel oil in Units 1 and 6 as the primary energy source in the respective units, while the production units and ancillary equipment are started up, tested, and brought up to normal operation, producing products and by-products at design specification rates. The amount of natural gas or No. 2 fuel oil used by each unit would decrease as sufficient waste gas became available. Natural gas or No. 2 fuel oil would represent no more than 25 percent of the annual Btu heat input of each unit by August 1981. ERA rejected the petition for public interest exemptions for Units 1, 5, and 6 as incomplete and advised the Company of this action by letter dated January 30, 1980.

Convent also requested ERA to classify the waste gas by-product of its chlorine-caustic and EDC processes as an alternate fuel in accordance with the provisions of 10 CFR 500.2 of the Interim Rules which defines as an alternate fuel waste gas from industrial operations. The term industrial for this purpose does not pertain to refineries.

Convent described its waste gas as by-products of its chlorine-caustic processes and its EDC process. The composition of this waste gas by volume is:

Element	Percent*
Hydrogen	58
Water	25
Methane	7
Nitrogen	6
Oxygen	4
Total	100

*Convent states that the percentage may vary from time to time due to operating conditions at the processing plants.

After staff analysis of the chemical plant operation, ERA staff concluded that by any criteria under consideration to define a "refinery" for this purpose, Convent's chemical plant operation would not be included in such a definition. Accordingly, ERA has determined that this plant is an industrial operation and classified the above described waste gas from the chlorine-caustic and EDC processing operations as an alternate fuel. Convent was notified of this action on June 9, 1980.

To qualify for a permanent fuels mixture exemption a petitioner must demonstrate to the satisfaction of ERA that:

(1) He proposes to use a mixture of natural gas or petroleum and an alternate fuel as a primary energy source; and

(2) The amount of petroleum or natural gas proposed for use in the mixture will not exceed the minimum percentage of the total annual Btu heat input of the primary energy sources used by the installation needed to maintain operational reliability consistent with maintaining a reasonable level of fuel efficiency.

If a mixture exemption is granted, ERA may not require that the percentage of petroleum or natural gas used in the mixture be less than 25 percent of the total annual Btu heat input of the primary energy sources used by the installation.

In addressing the eligibility requirements, and the evidentiary requirements in § 505.28 (a) and (c)(4) of the Interim Rules, Convent states that it will be using a mixture of sub-bituminous coal and natural gas or No. 2 fuel oil as the primary energy source in Unit 1, a mixture of waste gas and natural gas as the primary energy source in Unit 5, and a mixture of waste gas and natural gas or No. 2 fuel oil as the primary energy source in Unit 6.

Convent certified that the total amount of natural gas or its oil Btu equivalent proposed to be used in Unit 1 will not exceed 25 percent of the total annual Btu heat input of the primary energy sources used by the unit. The Company also certified that after the plant testing and start-up are completed and the plant has been proved capable of operation at design capacity the amount of natural gas proposed to be used in Unit 5, and the amount of natural gas or the fuel oil Btu equivalent to be used in Unit 6 will not exceed 25 percent of the total annual Btu heat input of the primary energy sources used by each unit. Convent expects to reach normal operation by August 1981.

When the plant becomes fully operational and is producing waste gas reliably and in sufficient quantities to become the primary energy source for the waste gas Units 5 and 6, Convent estimates that its range of annual consumption of natural gas or No. 2 fuel oil will, depending upon the balance of the steam producing system and the operating mode of the plant, be:

Boiler	Volumes (million CF)	Trillion Btu heat input	Percentage of total annual Btu heat input
31–F–1:			
Coal		[1] 1.565–1.934	77–95
Natural gas [2]	93–449	.097–.467	5–23
31–F–5:			
Waste gas		.551–.636	77–89
Natural gas	75–157	.078–.163	11–23
31–F–6:			
Waste gas		.551–.636	77–89
Natural gas [2]	75–157	.078–.163	11–23

[1] Based on sub-bituminous coal (11,000 Btu/lb) consumption at a rate of 21,906 lbs/hr.
[2] Boilers 31–F–1 and 6 have the capability to burn No. 2 fuel oil equivalent as a back-up fuel if natural gas is not available.

Convent estimates that the initial plant start-up period will take approximately 12 months. This period includes start-up and testing of each of the three boilers, the EDC plant and the chlorine-alkali plants individually, and the subsequent integration of the several units into a working, reliable plant at which time the waste gas stream from the processing units will become available as the primary energy source for the mixture used in Units 5 and 6. These 12 months have been divided into two phases for planning purposes. The first period begins when the waste gas boilers are mechanically completed in October 1980, and ends approximately three months later in December 1980. In the three month period some waste gas

V 45 A G 19 80 UMI

will be produced and used, but not in sufficient quantity to be effectively used as the primary energy source for the fuels mixture used in either of the two waste gas boilers.

The second period covers the following eight months (January thru August 1981) during which the coal-fired Unit 1 will be brought on line and the individual process plants will become fully integrated into a workable whole, meeting plant design specifications. During this time the whole plant will begin to produce sufficient quantities of waste gas to burn in the waste gas boilers. Depending on the frequency and severity of problems arising during this final period, Convent estimates that the consumption of natural gas required for total plant start-up and break-in will drop considerably as the waste gas by-product becomes available in sufficient quantity to be used as the primary source of energy in the fuels mixture.

The proposed amount of natural gas or fuel oil equivalent to be used and the percentage of total Btu input during the 12 month period is estimated as follows:

	Natural gas volume (million CF)	Natural gas heat input (billion Btus)	Alternate fuel heat input (billion Btus)	Percentage of total Btu heat input attributable to natural gas
October Through December 1980				
Boiler:				
31-F-1	(Not ready for operation)			
31-F-5	202	210	5	97
31-F-6	[1] 202	210	6	97
January Through August 1981				
Boiler:				
31-F-1	[1] 231	240	930	21
31-F-5	124	129	358	27
31-F-6	[1] 124	129	358	27

[1] Or No. 2 fuel oil Btu equivalent.

As the plant moves into its normal operating mode, producing products and the waste gas by-products, all available waste gas will be utilized in a mixture with natural gas for burning in Unit 5, and with natural gas or No. 2 fuel oil for burning in Unit 6 until in August 1981, when the plant reaches its normal operating mode, the natural gas used in the fuels mixture for Unit 5 and the natural gas or fuel oil equivalent used in the fuel mixture for Unit 6 will represent less than 25 percent of the total annual Btu heat input of each boiler.

Prior to such time, to achieve the normal operating rate of the plant, and of each boiler using the proposed fuels mixture, some additional natural gas is needed for use in Unit 5, and additional natural gas or No. 2 fuel oil equivalent is needed for use in Unit 6. ERA staff are persuaded that this additional natural gas or oil—Convent estimates that an additional 326 million CF of natural for Unit 5 and an additional 326 million CF of natural gas, or No. 2 fuel oil equivalent for Unit 6, is required during this period for each waste gas boiler—would not exceed the minimum percentage of the total Btu heat input of the primary energy sources of the unit needed to maintain reliability of operation of the units, consistent with maintaining a reasonable level of fuel efficiency.

Based upon its review and analysis, the ERA staff has tentatively determined that Convent demonstrated that, pursuant to Section 212(d) of the Act and the applicable Interim Rules, it is eligible for the requested permanent fuels mixture exemptions for each of the three new boilers. Therefore, ERA's staff recommends that ERA issue an order granting Convent the requested permanent exemptions from the prohibitions of Title II of the Act in order to burn a mixture of coal and natural gas or No. 2 fuel oil in Unit 1, a mixture of waste gas and natural gas in Unit 5, and a mixture of waste gas and natural gas or No. 2 fuel oil in Unit 6, provided the amount of natural gas or oil to be used in each unit, after the first commencement of normal plant production, in August 1981, does not exceed 25 percent of the total annual Btu heat input of the primary energy sources used by each installation.

This recommendation takes into account the purposes for which the minimum percentage of natural gas provided by a fuels mixture exemption is to be used, i.e., to maintain reliability of operation, consistent with maintaining a reasonable level of efficiency. Therefore, should this exemption be granted, ERA will not exclude any fuel from the definition of primary energy source for the purpose of unit ignition, start-up, testing, flame stabilization, and control uses for each of the three subject boilers.

It is further recommended that, under the terms and conditions of this order, Convent be permitted to use the amounts of natural gas or No. 2 fuel oil in units 5 and 6 necessary to start, test, and obtain a useable and reliable waste gas stream from the process units for use in the fuels mixture proposed for units 5 and 6. It is recommended that such amounts not exceed 326 million CF of natural gas in unit 5, and not exceed 326 million CF of natural gas or No. 2 fuel oil Btu equivalent in Unit 6.

On the basis of the environmental analysis provided by the Office of Fuels Conversion, and reviewed by the Office of Environment, in consultation with the Office of the General Counsel, DOE has concluded that the issuing of an order granting these exemptions will not be a major Federal action significantly affecting the quality of the human environment, within the meaning of the National Environmental Policy Act. Accordingly, neither an environmental impact statement nor an environmental assessment is required.

Terms and conditions: Section 214(a) of the Act gives ERA the authority to attach terms and conditions to any order granting an exemption. Based upon the information furnished by Convent, and upon the results of the staff analysis, the ERA staff has tentatively determined and recommends that any order that would grant the exemptions described above should, pursuant to Section 214 of the Act, be on the following terms and conditions:

(1) Convent will, within thirty (30) days of the date of this order, provide ERA with a compliance plan setting forth a complete schedule of milestones for the full completion and start-up of the plant. If, as the work in the facility progresses, a completion date is missed, or it appears that a milestone will be delayed for more than thirty (30) days, Convent shall report such occurrence to ERA giving the reasons therefor and an appraisal of the effect, if any, the delay will have on the final completion of the plant and compliance with this order;

(2) Convent will make effective use of each of the fuel conservation measures identified and listed in its Fuels Decision Report furnished with its petition for exemptions and operate each unit in a fuel efficient manner;

(3) Consistent with required compliance with any pertinent rules or regulations concerning the acquisition or distribution of natural gas that are administered by the Federal Energy Regulatory Commission or any appropriate State regulatory agency, Convent is to be urged to make all reasonable efforts to obtain and use natural gas instead of No. 2 fuel oil in units 1 and 6. Further, if while under this order, Convent decides to modify unit 5 in such a way as to make it capable of buring No. 2 fuel oil, or other petroleum product, Convent must notify ERA, prior to such modification, of its intention to convert the unit to petroleum and petition ERA for an exemption from the prohibitions of the Act in the event it wishes to use petroleum in the unit.

(4) Convent must notify ERA, in writing at the address given in item 8 of the commencement of the first use of natural gas or oil in each of units 1, 5, and 6.

(5) Natural gas may be used in unit 5 in an amount not to exceed 326 million CF during the one year period following the commencement date of the use of natural gas in the unit for the purpose of start-up and testing the unit and providing the process steam to establish the reliable generation of the waste gas in sufficient quantities to become one of the primary energy sources of the fuels mixture in the normal operating mode;

(6) Natural gas or No. 2 fuel oil (not to exceed the Btu equivalent of natural gas) may be used in unit 6 in an amount not to exceed 326 million CF during the one year period following the commencement date of the use of natural gas or No. 2 fuel oil in the unit for the same purposes described in item 5 above;

(7) In 1981, within 30 days after the anniversary of the first use natural gas or oil in each boiler Convent shall submit, to the address noted in item 8 below, an annual report containing the following:

(a) A duly executed certification that the amount of natural gas or No. 2 fuel oil used in unit 1 did not exceed 25 percent of the total annual Btu heat input of the primary energy source of the unit;

(b) A duly executed certification that for the first year after the commencement of the use of natural gas in unit 5, that the amount of natural gas consumed did not exceed 326 million CF; and

(c) A duly executed certification that for the first year after the commencement of the use of natural gas or No. 2 fuel oil in unit 6 that the amount of natural gas consumed did not exceed 326 million CF of natural gas or the Btu heat input equivalent of No. 2 fuel oil;

(8) In accordance with the reporting requirements in section 503.38(g) of the Final Rules, Convent will submit an annual report to the Economic Regulatory Administration (ERA), Case Control Unit (Fuel Use Act), Box 4629, Room 3214, 2000 M Street, NW, Washington, DC 20461, each year, beginning in 1982, within 30 days after the anniversary of the first use of natural gas or oil in each boiler, containing the following:

(a) A duly executed certification that the amount of natural gas or No. 2 fuel oil used in unit 1 did not exceed 25 percent of the total annual Btu heat input of the primary energy source of the unit;

(b) A certification that the amount of natural gas used in unit 5 did not exceed 25 percent of the total annual Btu heat input of the primary energy sources of the unit; and

(c) A certification that the amount of natural gas or No. 2 fuel oil used in unit 6 did not exceed 25 percent of the total annual Btu heat input of the primary energy sources of the unit; and

(9) In addition, Convent will include in its annual report:

(a) Identification of the actual quantities of coal (in tons), waste gas (in MCF), natural gas (in MCF), and No. 2 fuel oil (in bbls) used during the year in each boiler as well as the heating value (in Btu's) of each of these fuels. The following format for quantities will be used for each boiler:

Fuel types; Amounts used (tons) (MCF) (Bbls); Btu equivalent; Percentage of annual fuel consumption

(b) Identification of any new fuel conservation measures employed at the site during the year, estimate of the fuels savings achieved, and assessment of the effectiveness of the conservation measures in energy savings.

This Tentative Staff Determination does not constitute a decision by ERA to grant the requested exemptions. Such a determination will be made in accordance with 10 CFR 501.68 of the Final Rules on the basis of the entire record of this proceeding, including any comments received on the Tentative Staff Determination.

Issued in Washington, DC on August 13, 1980.

Robert L. Davies,

Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

BILLING CODE 6450-01-M

Canadian Crude Oil Allocation Program Supplemental Allocation Notice for the July 1 Through September 30, 1980 Allocation Period

In accordance with the provisions of the Mandatory Canadian Crude Oil Allocation Regulations, 10 CFR Part 214, the Economic Regulatory Administration (ERA) of the Department of Energy (DOE) hereby issues a supplemental allocation notice to reflect revised export levels of Canadian heavy crude oil for the month of August 1980.

ERA issued a supplemental allocation notice for August 1980 on July 11, 1980 (45 FR 48181, July 18, 1980), reflecting previously announced export levels of Canadian heavy crude oil. Since that notice was issued, the Canadian National Energy Board (NEB) has increased exports of heavy crude oil for August 1980 from 31,620 B/D to 56,793 B/D; exports of light crude oil for August 1980 remain at 50 B/D. The sole purpose of this notice is to revise the heavy crude oil allocations for August that were issued on July 11, 1980; otherwise, the July 11 notice is correct and remains in effect.

Allocation of Canadian Heavy Crude Oil

The NEB has advised ERA that the authorized export level for Canadian heavy crude oil for the month of August 1980 is revised from 31,620 B/D to 56,793 B/D.

Ashland Oil Inc., Koch Refining Co., and Laketon Asphalt Refining, Inc., all of whom submitted nominations for Canadian heavy crude oil for the July through September allocation period, have advised ERA of changes in their respective nominations for heavy crude oil for the month of August. Ashland advised ERA that it would be able to accept only 1,926 B/D of Canadian heavy crude oil at its St. Paul Park, Minnesota, refinery in August. Koch advised that because of the late notice of additional heavy crude oil availability, recent crude oil deliveries, and a planned refinery shutdown, it would be unable to take more than 27,540 B/D of heavy crude oil in August. Laketon declined any heavy crude oil for August because the volume it would have received would have been to small to tender to pipelines. ERA has given effect to the changes in the nominations of these firms in the allocations of heavy crude oil assigned for August.

In allocating heavy crude oil for August, ERA has used the following procedures, which are set forth in § 214.31(a)(3). The first priority refineries for which nominations had been received were allocated heavy

than the number of rights already provisions of the Powerplant and

supply at a cost which does not 6G-087, Washington, D.C. 20585, plant. GE states that the new unit will

crude oil equal to one-fourth of their base period volumes of Canadian heavy crude oil. The nominations for first priority refineries (Ashland—St. Paul Park; Koch—Pine Bend; and Murphy—Superior) were less than the refineries' base period volumes of heavy crude oil and less than the total heavy crude oil available for allocation, so these refineries were assigned allocations equal to their nominations. Pursuant to § 214.31(a)(3)(iii), second priority refineries for which nominations were received were allocated heavy crude oil equal to one-fourth of their respective base period volumes of Canadian heavy crude oil. Since the allocable supply of Canadian heavy crude oil was greater than the number of rights already calculated, the remaining additional rights were issued to second priority refineries nominating for heavy crude oil on a pro rata basis with respect to their base period volumes of Canadian light and heavy crude oil pursuant to § 214.31(a)(3)(v). No rights were issued under § 214.31(a)(3) (ii) or (iv) because all nominations for first priority refineries were satisfied under § 214.31(a)(3)(i).

The issuance of Canadian heavy crude oil rights, expressed in barrels/day, for August 1980 to refiners and other firms nominating for heavy crude oil for the July–September allocation period is revised as follows:

	Refiner/refinery	Base period volumes [1] Canadian total	Base period volumes [1] Canadian heavy crude	Nomination	Allocation
Priority:					
II	Ashland—Buffalo, NY	36,752	4,719	2,800	2,800
II	Ashland—Findley, OH	2,198	2,165	1,300	1,300
I	Ashland—St. Paul Park, MN	44,707	4,803	7,000	[2] 1,926
I	Koch—Pine Bend, MN	74,383	68,692	95,000	[2] 27,540
II	Laketon—Laketon, IN	141	131	200	[2] 0
II	Mobil—Buffalo, NY	24,995	0	6,036	1,410
II	Mobil—Ferndale, WA	45,444	0	10,975	2,563
II	Mobil—Joliet, IL	14,606	12,474	12,989	12,584
I	Murphy—Superior, WI	25,625	5,372	6,000	6,000
II	Union—Lemont, IL	11,711	0	20,000	680
Total Priority I					35,466
Total Priority II					21,327
Total I and II					56,793

[1] Base period volume for the purposes of this notice means average number of barrels of Canadian crude oil included in a refinery's crude oil runs to stills or consumed or otherwise utilized by a facility other than a refinery during the base period (November 1, 1974, through October 31, 1975) on a barrels per day basis. For the base period volumes of all priority refineries, see Allocation Notice issued December 29, 1979 (45 FR 1664, January 8, 1980).

[2] Nomination limited to this volume for August 1980 only. See preceding discussion in text.

Please Note Change of Address: All reports and applications made under this notice should be addressed to: Canadian Crude Oil Allocation Program, 2000 M Street NW., Room 6318, Washington, D.C. 20461.

This notice is issued pursuant to Subpart G of ERA's regulations governing its administrative procedures and sanctions, 10 CFR Part 205. Any person aggrieved hereby may file an appeal with DOE's Office of Hearings and Appeals in accordance with Subpart H of 10 CFR Part 205. Any such appeal shall be filed on or before September 18, 1980.

Issued in Washington, D.C., on August 11 1980.

Doris J. Dewton,

Assistant Administrator Office of Petroleum Operations, Economic Regulatory Administration.

[FR Doc. 80-25114 Filed 8-18-80; 8:45 am]

BILLING Code 6450-01-M

[Docket No. ERA–FC–80–018]; (OFC Case No. 55118–1648–20–12)

General Electric Co.; Acceptance of Petition for Exemption Regarding the Powerplant and Industrial Fuel Use Act of 1978

AGENCY: Economic Regulatory Administration, Department of Energy.

ACTION: Notice of Acceptance of Petition for Exemption Pursuant to the Interim Rule Implementing the Powerplant and Industrial Fuel Use Act of 1978.

SUMMARY: On April 16, 1980, The General Electric Company (GE) filed a petition with the Economic Regulatory Administration (ERA) of the Department of Energy (DOE) for an order permanently exempting a new major fuel burning installation (MFBI) from the provisions of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act) (42 U.S.C. 8301 *et seq.*), which prohibit the use of petroleum and natural gas as a primary energy source in certain new MFBIs. The basis for the exemption is the lack of an alternate fuel supply at a cost which does not substantially exceed the cost of using imported petroleum as a primary energy source in the unit for which the exemption is requested.

The MFBI for which the petition is filed is a new package boiler (identified as Unit No. 20) to be installed at GE's Central Powerhouse Building Number 31 located at Pittsfield, Massachusetts. The unit has a design heat input rate of 159 million Btu's per hour and will be capable of burning either No. 6 fuel oil, natural gas, or vapor phase oil providing 150,000 pounds of steam per hour at 200 psig. Under § 505.22 of the Interim Rule implementing FUA (Interim Rule) GE has requested a permanent exemption for this unit due to the lack of a supply of coal, wood, electricity, on-site gasification products, and several fuel mixture combinations at a cost which does not substantially exceed the cost of using imported oil.

Section 202(a) of FUA imposes statutory prohibitions against the use of natural gas and petroleum as a primary energy source by new MFBIs which consist of a boiler. ERA's decision in this matter will determine whether GE will be granted a permanent exemption to use natural gas and/or petroleum as the primary energy source for unit No. 20.

ERA determined that the petition is complete in accordance with § 501.3(c) of the Interim Rule, and on May 9, 1980, notified GE of acceptance of its petition for filing.

On June 6, 1980, ERA published its Final Rule on Criteria for Petitions for Exemptions from the Prohibitions of the Act for New Facilities (45 FR 38302), which revoked, upon publication, §§ 503.5 and 505.5 of the Interim Rule (10 CFR 503.5 and 505.5), which prescribed the cost calculation methodology that was to be used in connection with certain provisions of FUA. By Notice of Proposed Rulemaking (NOPR) published in the **Federal Register** on June 23, 1980 (45 FR 42190), ERA proposed a new cost calculation methodology for use with such provisions, including the § 505.22 exemption for lack of an alternate fuel supply at a cost which does not substantially exceed the cost of using imported petroleum, and called for public comment. A Final Rule on the cost calculation methodology is anticipated to be issued as 10 CFR 503.6 shortly after the close of the public comment period on August 20, 1980, to take effect 60 days after **Federal Register** publication. Accordingly, at this time there is no effective methodology for performing the cost calculation required by § 505.22. Nevertheless, as this petition was filed with ERA prior to the revocation of Interim Rule § 505.5, GE was given the option, as provided in the NOPR (45 FR 42190) of having ERA (1) analyze the petition using the NOPR as quidance or (2) hold the petitionin abeyance pending finalization of the cost calculation methodology. On July 31, 1980, GE requested that its petition be processed as expeditiously as possible using the NOPR as guidance. ERA is proceeding with its analysis accordingly. However, ERA will take no final administrative action with respect to the petition until it adopts a final rule for cost calculation methodology.

Although ERA has found GE's petition acceptable for filing, ERA retains the right to request additional relevant information from GE at any time during the pendency of these proceedings where circumstances may so require.

A review of the petition is provided in the Supplementary Information section below.

As provided for in sections 701(c) and (d) of FUA and §§ 501.31 and 501.33 of the Interim Rule, interested persons are invited to submit written comments in regard to this matter, and any interested person may submit a written request that ERA convene a public hearing.

DATES: Written comments are due on or before October 3, 1980. A request for public hearing must also be made on or before October 3, 1980.

ADDRESSES: Fifteen copies of written comments or a request for a public hearing shall be submitted to: Economic Regulatory Administration, Case Control Unit, Box 4629, Room 2313, 2000 M Street, NW, Washington, DC 20461.

Docket No. ERA–FC–80–018 should be printed on the outside of the envelope and the document contained therein.

FOR FURTHER INFORMATION CONTACT:

Constance L. Buckley, Chief, New MFBI Branch, Office of Fuels Conversion, Economic Regulatory Administration, 2000 M Street, NW., Room 3128, Washington, D.C. 20461, Phone (202) 653–4226.

Doug Mitchell, Office of the General Counsel, Department of Energy, 1000 Independence Avenue, SW., Room 6G–087, Washington, D.C. 20585, Phone (202) 252–2967.

Anthony M. Vaitekunas, Case Manager, New MFBI Branch, Office of Fuels Conversion, Economic Regulatory Administration, 2000 M Street, NW., Room 3207, Washington, D.C. 20461, Phone (202) 653–4237.

William L. Webb, Office of Public Information, Economic Regulatory Administration, 2000 M Street, NW., Room B–110, Washington, D.C. 20461, Phone (202) 653–4055.

SUPPLEMENTARY INFORMATION: ERA published its Interim Rule implementing the provisions of Title II of the Powerplant and Industrial Fuel Use Act of 1978 (FUA or the Act)(42 U.S.C. 8301 *et seq.*) in the **Federal Register** on May 17, 1979 (44 FR 28950). The Act prohibits the use of natural gas and petroleum as a primary energy source in certain new units unless an exemption for such use has been granted by ERA.

On June 6, 1980, ERA published in the **Federal Register** its Final Rule on Criteria for Petitions for Exemption from the Prohibitions of the Act for New Facilities (45 FR 38,302). The Final Rule revoked Interim Rule sections pertaining to the cost calculation methodology (10 CFR 503.5 and 505.5), effective June 6, 1980. The cost calculation methodology must be used in connection with those provisions of FUA that require a determination of whether the cost of using an alternate fuel as a primary energy source substantially exceeds the cost of using imported petroleum as a primate energy source. A Notice of Proposed Rulemaking applicable to the cost calculation methodology (NOPR) was issued by ERA on June 13, 1980, and was published in the **Federal Register** on June 23, 1980 (45 FR 42190). ERA will issue a final rule on the cost calculation methodology shortly after the close of the public comment period on August 20, 1980, which will become effective 60 days following **Federal Register** publication. ERA cannot take final administrative action with respect to a petition which requires the use of a cost calculation until a final rule has become effective.

The new MFBI for which the permanent exemption based upon the lack of an alternate fuel supply at a cost that does not substantially exceed the cost of using imported petroleum as requested is a package boiler with a design heat input rate of 159 million Btu's per hour, a steam generating capacity of 150,000 pounds per hour, and is capable of burning No. 6 fuel oil, natural gas, or vapor phase oil, which is a waste product from the transformer manufacturing process conducted at the plant. GE states that the new unit will replace three existing, less efficient, older, oil-fired units, and will be used to provide steam for normal plant needs.

GE filed its petition for exemption under § 505.22 of the Interim Rule. On August 5, 1980, § 505.22 was superseded by § 503.32 of the Final Rule. To qualify for this exemption under § 503.32 of the Final Rule, the petitioner must demonstrate to the satisfaction of ERA that:

(1) A good faith effort has been made to obtain an adequate and reliable supply of an alternate fuel for use as a primary energy source of the quality and quantity necessary to conform with the design and operational requirements of the proposed unit; and

(2) The cost of using such a supply would substantially exceed the cost of using imported petroleum as a primary energy source during the useful life of the proposed unit as defined in § 503.6 (Cost Calculation—NOPR, 45 FR 42199).

In addressing the eligibility requirements for this exemption GE states that it has analyzed each of the alternate fuels suggested by ERA during the discussions prior to submission of the petition. The fuel alternatives GE considered were coal, wood, electricity, low or medium Btu gas generated through on-site gasification, stoker fired wood with an oil or gas overfire mixture, and a coal-oil slurry.

GE performed the cost calculations in accordance with the Interim Rule and determined that for each of the alternate fuels and mixtures considered, the 1.3 cost ratio specified in the Interim Rule was exceeded. On that basis, GE contends that it qualifies for a permanent exemption from the prohibitions of Title II of FUA.

ERA hereby gives notice that GE's petition for a permanent exemption has been accepted for filing. As the petition was filed with ERA prior to the revocation of Interim Rule § 505.5, GE was given the option provided in the NOPR (45 FR 42190) of having ERA (1) analyze the petition using the NOPR as guidance or (2) hold the petition in abeyance pending finalization of the cost calculation methodology. (The proposed rule will implement the cost calculation provisions of FUA, including the provision applicable to § 503.32 of the Final Rule for New Facilities.) In accordance with GE's request of July 31, 1980, that the petition be processed as expeditiously as possible using the NOPR as guidance, ERA is proceeding with its analysis. ERA will not, however, take any final action on this exemption request until the final rule on the cost calculation methodology (§ 503.6) is promulgated and becomes effective.

Although ERA has found the GE petition acceptable for filing, ERA retains the right to request additional relevant information from GE at any time during the pendency of these proceedings where circumstances may so require.

As set forth in § 501.3(d) of the Final Rule, the acceptance of the petition by ERA does not constitute a determination that GE is entitled to the exemption requested.

The public file containing documents on these proceedings and supporting materials is available for inspection upon request at: Economic Regulatory Administration, Room B–110, 2000 M Street, NW, Washington, DC, Monday–Friday, 8:00 am–4:30 pm.

Issued in Washington, DC, on August 11, 1980.

Robert L. Davies,

Assistant Administrator, Office of Fuels Conversion, Economic Regulatory Administration.

Office of Hearings and Appeals

Cases Filed; Week of July 25 through August 1, 1980

During the week of July 25 through August 1, 1980, the appeals and applications for exception or other relief listed in the Appendix to this Notice were filed with the Office of Hearings and Appeals of the Department of Energy.

Under DOE procedural regulations, 10 CFR Part 205, any person who will be aggrieved by the DOE action sought in these cases may file written comments on the application within ten days of service of notice, as prescribed in the procedural regulations. For purposes of the regulations, the date of service of notice is deemed to be the date of publication of this Notice or the date of receipt by an aggrieved person of actual notice, whichever occurs first. All such comments shall be filed with the Office of Hearings and Appeals, Department of Energy, Washington, D.C. 20461.

George B. Breznay,

Deputy Director, Office of Hearings and Appeals.

August 12, 1980.

List of Cases Received by the Office of Hearings and Appeals

[Week of July 25 through Aug. 1, 1980]

Date	Name and location of applicant	Case No.	Type of submission
July 25, 1980	Chevron U.S.A. Inc., San Francisco, California	BEJ–0109, BED–0109.	Motions for Protective Order and Discovery. If Granted: Chevron U.S.A. Inc., would enter into a Protective order with Zitro Energy Consultants, Inc., regarding the release of proprietary information to Chevron in connection with Zitro Energy's Application for Exception (Case No. DEE–2884). Discovery would be granted to Chevron in connection with Zitro Energy's Application for Exception.
July 25, 1980	Commonwealth Oil Refining Co., Inc., San Antonio, Texas.	BEE–1308	Exception from the Entitlements Program. If Granted: Commonwealth Oil Refining Co., Inc., would receive an exception from the provisions of 10 CFR 211.67, which would modify its entitlements purchase obligations with respect to Alaskan North Slope crude oil, prospectively and on a retroactive basis for the months of May and June 1980.
July 25, 1980	Conoco, Inc., Washington, D.C	BED–0069, BEH–0069.	Motions for Discovery and Evidentiary Hearings. If Granted: Discovery would be granted to Conoco, Inc., and an Evidentiary Hearing would be convened in connection with the Statements of Objections submitted in response to the December 21, 1979, Proposed Decision and Order (Case No. DEE–5748) issued to Union Oil Company of California.
July 25, 1980	Shell Oil Company, Houston, Texas	BEE–1307	Price Exception (Section 212.73). If Granted: Shell Oil Company would be permitted to sell at stripper well prices the crude oil produced from the South Wasson (Clearfork) unit located in Yoakum County, Texas.
July 25, 1980	Amerada Hess Corporation, Washington, D.C	BEE–1310	Price Exception. If Granted: Amerada Hess Corporation would receive an exception from the provisions of 10 CFR Part 212, Subpart E, which would permit the firm to pass through in the prices it charges for regulated products sold in the State of Connecticut the full amount of the increased costs resulting from the recently enacted Connecticut gross receipts tax.
July 28, 1980	Atlantic Richfield Company, Los Angeles, California	BEE–1311	Price Exception. If Granted: Atlantic Richfield Company would receive an exception from the provisions of 10 CFR Part 212, Subpart E, which would permit the firm to pass through in the prices it charges for regulated products sold in the State of New York the full amount of the increased costs resulting from the recently enacted New York gross receipts tax.
July 28, 1980	Crown Central Petroleum, Baltimore, Maryland	BES–0087, BST–0087.	Requests for Stay and Temporary Stay. If Granted: Crown Central Petroleum would receive a stay and a temporary stay of the provisions of 10 CFR 211.9, pending a final determination on its Application for Exception (Case No. DEE–7756).
July 28, 1980	Dow Chemical U.S.A., Washington, D.C	BEJ–0110	Motion for Protective Order. If Granted: Dow Chemical U.S.A., would enter into a Protective Order with Marathon Oil Company regarding the exchange of proprietary information between the two firms in connection with Dow Chemical's Application for Exception (Case No. BEE–0285).
July 28, 1980	Laketon Asphalt Refining, Evansville, Indiana	BEE–1312	Exception from the Entitlements Program. If granted: Laketon Asphalt Refining would receive an exception from the provisions of 10 CFR 211.67, with respect to its entitlements sales transactions with Sector Refining, Inc.
July 28, 1980	Publicker Industries, Inc., Washington, D.C	BEA–0435	Appeal of Entitlements Notice. If granted: The February 1979 Entitlements Notice would be modified with respect to Publicker Industries, Inc.'s entitlements purchase obligations.
July 28, 1980	Publicker Industries, Inc., Washington, D.C	BSG–0030	Request for Special Redress. If granted: Publicker Industries, Inc., would be issued entitlements in order to reduce the firm's entitlements purchase obligations published in the February 1979 Entitlements Notice.
July 28, 1980	Richardson Ayres, Jobber Inc., Washington, D.C	BRD–1241	Motion for Discovery. If granted: Discovery would be granted to Richardson Ayres, Jobber Inc., in connection with the Statement of Objections submitted by the firm in response to the May 14, 1980, Proposed Remedial Order (Case No. BRO–1241), issued to Richardson Ayres by the Economic Regulatory Administration.
July 28, 1980	Shell Oil Company, Houston, Texas	BEE–1309	Price Exception. If granted: Shell Oil Company would receive an exception from the provisions of 10 CFR Part 212, Subpart E, which would permit the firm to pass through in the prices it charges for regulated products sold in the State of Connecticut the full amount of the increased costs resulting from the recently enacted Connecticut gross receipts tax.
July 29, 1980	Exxon Company, U.S.A., Washington, D.C	BSG–0031	Request for Special Redress. If granted: The Director of the Division of Freedom of Information and Privacy Act Activities would release certain information to Exxon Company, U.S.A., thereby complying with a May 23, 1979, Decision and Order (Case No. DFA–0378).

List of Cases Received by the Office of Hearings and Appeals—Continued

[Week of July 25 through Aug. 1, 1980]

Date	Name and location of applicant	Case No.	Type of submission
July 29, 1980	Federation of American Scientists, Washington, D.C.	BFA–0436	Appeal of Information Request Denial. If granted: The Federation of American Scientists would receive access to a document entitled "National Security and the Comprehensive Test Ban Treaty—UCRL—52911."
July 29, 1980	Golden Eagle Refining, Washington, D.C	BEE–1313	Exception from the Entitlements Program. If granted: Golden Eagle Refining would receive an exception from the provisions of 10 CFR 211.67, which would modify its entitlements purchase obligations.
July 29, 1980	Orloski's Service Stations, Inc., Wilkes-Barre, Pennsylvania.	BEA–0437	Appeal of Assignment Order. If granted: The July 14, 1980, Assignment Order issued to Orloski's Service Stations, Inc., by the Economic Regulatory Administration, Region III, would be modified to increase the base period volume of motor gasoline assigned to Orloski's.
July 29, 1980	Winston Refining Company, Washington, D.C	BEJ–0112 through BEJ–0115.	Motions for Protective Orders. If granted: Winston Refining Company would enter into Protective Orders with Permian Corporation, Mobil Oil Corporation, Gulf Oil Corporation, and Cities Service Company, regarding the exchange of proprietary information in connection with the firm's Application for Temporary Exception (Case No. BEL–1284).
July 30, 1980	American Petrofina, Inc., Washington, D.C	BEE–1316	Exception from the Entitlements Program. If granted: American Petrofina, Inc., would receive an exception from the provisions of 10 CFR 211.67, which would modify its entitlements purchase obligations with respect to Alaskan North Slope crude oil retroactively for the month of April 1980.
July 30, 1980	Atlantic Richfield Company, Los Angeles, California	BEJ–0111	Motion for Protective Order. If granted: Atlantic Richfield Company would enter into a Protective Order with Chevron U.S.A. Inc., regarding the exchange of proprietary information between the two firms in connection with Arco's Application for Exception (Case No. BEE–1294).
July 30, 1980	Standard Oil Company of Indiana (Amoco), Chicago, Illinois.	BEE–1314	Price Exception. If granted: Standard Oil Company of Indiana (Amoco), would receive an exception from the provisions of 10 CFR Part 212, Subpart E, which would permit the firm to pass through in the prices it charges for regulated products sold in the State of Connecticut the full amount of the increased costs resulting from the recently enacted Connecticut gross receipts tax.
July 30, 1980	Winston Refining Company, Washington, D.C	BEJ–0116	Motion for Protective Order. If granted: Winston Refining Co. would enter into a Protective Order with Standard Oil Company of Indiana (Amoco) regarding the exchange of proprietary Application for Temporary Exception (Case No. BEL–1284).
July 31, 1980	Dow Chemical U.S.A., Washington, D.C	BEJ–0118	Motion for Protective Order. If granted: Dow Chemical U.S.A. would enter into a Protective Order with Cities Service Company regarding the exchange of proprietary information between the two firms in connection with Dow Chemical's Application for Exception (Case No. BEE–0285).
July 31, 1980	Fannon Petroleum Service, Inc., Alexandria, Virginia	BXE–1318	Extension of relief granted in *Fannon Petroleum Service, Inc.*, 4 DOE ¶ 81,133 (September 17, 1979). If granted: Fannon Petroleum Services, Inc., would continue to receive an exception from the provisions of 10 CFR Part 211, which permits the firm to receive an allocation of unleaded motor gasoline for the purpose of blending gasohol.
July 31, 1980	Gulf Oil Corporation, Houston, Texas	BED–0070	Motion for Discovery. If granted: Discovery would be granted to Gulf Oil Corporation in connection with the Statement of Objections submitted by the firm in response to the May 19, 1980, Proposed Decision and Order (Case No. DXE–5784) issued to Allied Oil Company.
July 31, 1980	Little America Refining Co., Inc., Washington, D.C	BST–0085	Request for Temporary Stay. If granted: Little America Refining Co., Inc., would receive a temporary stay of the provisions of 10 CFR 211.67, pending a final determination on its Application for Temporary Exception (Case No. BEL–0085) and Application for Stay (Case No. BES–0085).
July 31, 1980	Southland Oil Company/VGS Corporation, Jackson, Mississippi.	BEL–0080	Temporary Exception from the Entitlements Program. If granted: Southland Oil Company/VGS Corporation would receive a temporary exception from the provisions of 10 CFR 211.67, which would modify its entitlements purchase obligations for the year 1979.
July 31, 1980	Universal Utilities Inc., Hicksville, New York	BRR–0068, BST–0068, BRT–0068.	Request for Modification; Requests for Stay and Temporary Stay. If granted: The January 30, 1978, Consent Order issued to Universal Utilities, Inc., by the Economic Regulatory Administration would be modified. Universal Utilities would receive a stay and a temporary stay of the Consent Order pending a final determination on its Request for Modification

List of Cases Involving the Standby Petroleum Product Allocation Regulations for Motor Gasoline

If granted: The following firms would be granted relief which would increase their base period allocation of motor gasoline.

[Week of 7/25/80 Through 8/1/80]

Name	Case No. and date	State
Echo Bay Resort	BEE–1315, 7/30/80	DC.
Hull Grocery, Inc	BEN–0049, 7/29/80	GA.
J. A. Nere Company, Inc	BEN–0048, 7/29/80	VA.
Ted's Service Center	BEE–1319, 7/31/80	MA.

BILLING CODE 6450-01-M

Issuance of Decisions and Orders; Week of June 30 Through July 4, 1980

During the week of June 30 through July 4, 1980, the decisions and orders

summarized below were issued with respect to appeals and applications for exception or other relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions that were dismissed by the Office of Hearings and Appeals.

Appeals

Foster Associates, Inc., Washington, D.C., freedom of information, BFA–0358

Foster Associates, Inc. filed an Appeal from a partial denial by the Assistant Administrator of the Office of Fuels Conversion of the Economic Regulatory Administration of a Request for Information which the firm had submitted under the Freedom of Information Act (the FOIA). In considering the Appeal, the DOE found that the release of the information initially withheld under exemption (b)(4) was not likely to cause the firms involved in the Major Fuel Burning Installation Coal Conversion Report substantial competitive harm and should therefore be released to the public.

Mark F. Grady, Iowa City, Iowa, freedom of information BFA–0359

Professor Mark F. Grady filed an Appeal from a denial by the Assistant Administrator of Regulations and Emergency Planning of the Economic Regulatory Administration of a request for information that Professor Grady had submitted under the Freedom of Information Act. The DOE found that certain of the documents initially withheld under Exemption 5 should be released to the public in whole or in part. In addition, the DOE remanded the request for a further search for responsive documents.

Petroleum International Associates, Inc., Somerville, N.J., middle distillates, DRA–0212.

Petroleum International Associates, Inc. (PIA) filed an Appeal of an Ancillary Order which DOE Region II issued to the firm on August 10, 1978 in connection with a Letter of Compliance and a Consent Order which were entered into between the FEA and two of PIA's suppliers of middle distillates. In the Ancillary Order, Region II directed PIA to pass through to its customers the refunds which PIA had received as restitution for prior overcharges. In its Appeal, PIA raised numerous objections concerning the legality, timeliness and factual basis of the Ancillary Order. The firm also contended that it was financially incapable of complying with the Ancillary Order and that the terms of the Order were simplistic, vague and contradictory. In considering PIA's Objections, the DOE found that Region II possessed the requisite authority to issue an Ancillary Order to PIA concerning the refunds it had received and that the issuance of such had been timely. The DOE also found that (i) the Ancillary Order contained a sufficient finding that PIA should be required to pass through the refunds received and (ii) the mere passage of time between PIA's receipt of the refunds and the issuance of the Ancillary Order did not shift the burden to the DOE to show that the firm had not already passed through the refunds to its customers. The DOE rejected PIA's contention that its technical compliance with the FEA regulations in its prior handling of the refunds undermined the validity of the refund provisions set forth in the Ancillary Order. It further found that the firm had not established in a convincing manner that it was without sufficient assets to comply with the Ancillary Order. Finally, the DOE held that the Ancillary Order's refund provisions were a valid exercise of the agency's discretionary authority and that they provided sufficiently clear and unambiguous instructions to allow the firm to divide the refund monies among its known purchasers of affected products. The DOE found, however, that the Ancillary Order should be modified to specify how refunds attributable to unidentified customers should be distributed and to allow PIA to deduct reasonable administrative expenses not to exceed $5,000 from the refund monies it has already received from its suppliers. On the basis of these findings, the DOE affirmed the validity of the August 10 Ancillary Order as modified by this Decision and Order.

Requests for Exception

Acme Amoco, Acme, Mich., BEO–0077, motor gasoline

Acme Amoco filed an Application for Exception from the provisions of 10 C.F.R. Part 211 which, if granted, would result in an increase in the firm's base period allocation of motor gasoline. In a Proposed Decision and Order issued to the firm, the DOE reached the tentative determination that Acme's request for additional gasoline should be denied. The DOE found that, contrary to the firm's assertions, motorists in Acme's marketing area were not experiencing gasoline shortage of a unique nature. The DOE also determined that Acme could meet its monthly operating expenses and earn a reasonable profit in the absence of exception relief. In considering Acme's Objections to the Proposed Order, the DOE affirmed its initial conclusion that motorists in Acme's marketing area were not experiencing significantly greater difficulty in obtaining gasoline than those in other parts of the country. The DOE also noted that Acme does not require exception relief in order to operate profitably and that, although the firm had significantly altered its mode of operation, it had ample opportunity to realize the benefits from that change prior to the implementation of the new base period for gasoline allocation. Accordingly, the DOE denied Acme's exception request.

Cunningham Oil Co., Inc., Columbus, Ga., DEE–3490, motor gasoline

Cunningham Oil Company, Inc. filed an Application for Exception from the provisions of 10 C.F.R. § 211.102 in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request, the DOE determined that the firm was not experiencing a serious financial hardship or gross inequity. Accordingly, exception relief was denied.

Dock's Chevron Station, Pascagoula, Miss., BEO–0423, motor gasoline

Dock's Chevron Station filed an Application for Exception from the provisions of 10 C.F.R. Part 211 which, if granted, would result in an increase in the firm's base period allocation of motor gasoline. In a proposed Decision and Order issued to the firm, the DOE reached the tentative determination that Dock's request should be denied. This determination was based upon an analysis of the firm's financial and operating posture which indicated that Dock's could meet its monthly operating expenses and earn a reasonable profit in the absence of exception relief. However, an evaluation of Dock's Objections to the Proposed Order revealed that, contrary to the conclusion reached in the Proposed Order, Dock's current gasoline allocation was not sufficient to enable the firm to operate the station profitably. The DOE also noted that Dock's made significant improvements at the station and was experiencing increased demand for gasoline as a result of its decision to operate the outlet on a full-time basis; a major alteration in the ongoing business practice of the firm. In this regard, the DOE found that the previous operator of the outlet was seriously ill during the updated base period and was therefore unable to operate on a full-time basis. This situation resulted in gasoline sales during the updated base period which were not representative of the outlet's normal level of business activity. Therefore the DOE determined that Dock's exception request should be granted.

Elk Store, Axtell, Tex., BEO–0203 motor gasoline

On May 24, 1979, Elk Store filed an Application for Exception from the provisions of 10 C.F.R. Part 211, in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request, the DOE determined that Elk Store's allocation should be increased in order to prevent the firm's community from suffering an unfair distribution of burdens as a result of the DOE allocation regulations. In granting relief to the firm the DOE rejected the claim raised by Mobil Oil Corporation, Elk Store's ultimate supplier, that Elk Store should not be granted exception relief in final form since Mobil had not received adequate notice of the exception proceeding.

Ethanol Corp., Los Angeles, Calif., BEE–0119, gasohol

Ethanol Corporation filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an allocation of unleaded gasoline for use in its gasohol production and marketing program. In considering the request, the DOE found that the firm was not in an advantageous position to further the national objective of increasing the use of gasohol. Futhermore, the DOE determined that Ethanol Corporation had not shown that it was suffering a gross inequity as a result of the DOE regulatory programs.

Farwest Taxicabs, Seattle, Wash., BEO–0508, motor gasoline

Farwest Taxicabs filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an increased base period allocation of motor gasoline. In considering the request, the DOE found that exception relief was necessary to enable the firm to expand its participation in a low cost transportation program for elderly and handicapped citizens and to institute a ride sharing program.

Faulkland Exxon, Wilmington, Del., BEO–0478, motor gasoline

Faulkland Exxon filed an Application for Exception from the provisions of 10 CFR Part 211 which, if granted, would result in an increase in the firm's base period allocation of motor gasoline. In a Proposed Decision and Order issued to the firm, the DOE reached the tentative determination that Faulkland's request should be denied. This determination was based upon the DOE's conclusion that motorists in Faulkland's marketing area were not experiencing significantly greater difficulty in obtaining gasoline than those in other areas of the country. The DOE also concluded that Faulkland could meet its monthly operating expenses and earn a reasonable profit in the absence of exception relief. In considering the firm's Objections to the Proposed Order, the DOE affirmed its conclusion that motorists in Faulkland's market area were not experiencing a disproportionate burden resulting from the nation's gasoline shortage. The DOE also rejected Faulkland's contention that highway construction in its vicinity during the updated base period resulted in a significantly reduced gasoline purchases at the outlet. The DOE noted that gasoline purchasing activity at the outlet failed to increase significantly subsequent to the completion of the construction work. Accordingly, the DOE denied Faulkland's exception request.

Fuller's 66, Salt Lake City, Utah, DEE–2520, retail outlet

Fuller's 66 filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request, the DOE rejected the assertion that the operation of the current gasoline allocation regulations are causing any financial difficulties which the firm alleges it is experiencing. Accordingly, exception relief was denied.

Gold Oil Co., Belleville, Ill., BEX–0454, motor gasoline

Gold Oil Company filed an Application for Exception in which it requested that it be assigned to a new, lower-priced base period supplier for the period January through June 1980. In considering the Gold request, the DOE determined that the hardship which it found in the previous analysis of Gold's competitive situation in *Gold Oil Co.*, Case Nos. DEE–4344 and DEN–4344 (October 25, 1979) (unpublished Decision) was continuing. The DOE therefore concluded that exception relief should be granted and directed the Economic Regulatory Administration to select a new supplier for Gold for the period January through June 1980.

Justice Exxon, Columbus, Ohio, BEO–0247, motor gasoline

Justice Exxon filed an Application for Exception from the provisions of 10 C.F.R. Part 211 in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request, the DOE found that the firm had failed to demonstrate that it was adversely affected to a significant degree as a result of the DOE motor gasoline allocation regulations. Accordingly, exception relief was denied.

Kane's Furniture Corp., St. Petersburg, Fla., BEO–0157, motor gasoline

Kane's Furniture Corporation, a bulk purchaser of motor gasoline, requested an exception from the provisions of 10 C.F.R. Part 211 to permit it to receive an increase in its base period allocation of gasoline. The basis of the request was an increase in the number of vehicles in the Kane's delivery and service fleet. In considering the request, the DOE found that Kane's had failed to demonstrate that obtaining a portion of its motor gasoline supplies from retail sales outlets would cause the firm to experience a gross inequity, serious hardship, or unfair distribution of burdens. Accordingly, exception relief was denied.

Lyte and Co., Los Angeles, Calif., BXE–0727, crude oil

Lyte and Company filed an Application for Exception from the provisions of 10 C.F.R., Part 212, Subpart D. Exception relief was granted to permit Lyte and Company to sell at upper tier ceiling prices 100 percent of the crude oil produced from the Skeeter Slaughter Lease.

Marine Oil Co., Fulton, Ky.; Exxon Oil Co., U.S.A., Washington, D.C., BEE–0398, BES–0212, BEA–0212, motor gasoline

Exxon Oil Company, U.S.A. filed an Application for Stay and Appeal of an assignment order issued to the firm by the Region IV Office of Petroleum Operations of the DOE. The assignment order was issued pursuant to a Proposed Decision and Order issued to Marine Oil Company by the Office of Hearings and Appeals and directed Exxon to supply Marine Oil Company with specified volumes of motor gasoline for the period January through June 1980. Exxon also filed a Statement of Objections to the issuance of the Proposed Decision and Order in final form. In considering Exxon's submissions, the Office of Hearings and Appeals determined that the relief granted to Marine Oil Company was necessary to relieve the firm of a serious financial hardship which it was experiencing as a result of its supplier's uncompetitively high wholesale prices for motor gasoline. The Office of Hearings and Appeals further determined that Exxon had been given a full opportunity to comment on the merits of both the Proposed Decision and Order and the assignment order.

In conclusion, the Office of Hearings and Appeals found that the assignment orders had been properly issued. Accordingly, the Office of Hearings and Appeals ordered that Exxon's Statement of Objections be denied and the Proposed Decision and Order issued to Marine Oil Company be issued in final form. In addition, the Office of Hearings and Appeals further ordered that Exxon's Appeal be denied and the firm's Application for Stay be dismissed.

Sun Production Co., Inc., Dallas, Tex., DEE–1483, crude oil

On August 11, 1978, the Sun Production Company, Inc. (Sun) filed an Application for Exception from amendments to 10 C.F.R. § 211.67 which the Economic Regulatory Administration (ERA) of the Department of Energy issued in proposed form on November 1, 1978. These regulatory amendments would expand the scope of the Entitlements Program to include certain non-refining uses of crude oil. In considering the request, the DOE found that the market for the firm's crude oil produced from its Felda Field, located in South Florida, was not affected by the proposed regulatory amendments, and there was no evidence presented that these amendments would be enacted in the foreseeable future. Accordingly the DOE determined that the Sun Application for Exception should be dismissed without prejudice to a refiling at a later date.

Village Marathon, Arlington Heights, Ill., BEO–0386, motor gasoline

Village Marathon filed an Application for Exception from the provisions of 10 C.F.R. § 221.102 in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request, the DOE determined that the residents of the market area served by the firm were not experiencing a gross inequity or an unfair distribution of burdens. Accordingly, exception relief was denied.

Weatherite, Los Angeles, Calif., DEE–6511, motor gasoline

Weatherite filed an Application for Exception from the provisions of 10 C.F.R. Part 211 in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request, the DOE found that the firm failed to demonstrate that it would suffer a gross inequity, unfair distribution of burdens or serious hardship in the absence of exception relief. Accordingly, exception relief was denied.

Request for Temporary Exception

Thomas P. Reidy, Inc., Washington, D.C., BEL–0054 motor gasoline

Thomas P. Reidy, Inc. filed an Application for Temporary Exception from the requirement that it irrevocably elect by June 30, 1980, one of two alternative regulatory mechanisms for determining its maximum allowable selling price for motor gasoline. (10 C.F.R. § 212.93(a)(5)). In considering the Application, the DOE determined that Reidy had failed to demonstrate that it will be irreparably injured if it was required to comply with the election provision or that

V 45 A G 19 80 UMI

there was a likelihood that it will succeed on the merits of its exception request. The Reidy temporary exception request was therefore denied.

Request for Stay

Young Refining Corp., Douglasville, Ga., BES–0062, crude oil

Young Refining Corporation filed an Application for Stay from the requirement that it purchase entitlements during the month of June 1980 to account for its crude oil receipts and runs to stills during the month of April 1980 pursuant to the provisions of 10 C.F.R. § 211.67. In considering the request, the DOE noted that a Proposed Decision and Order had been issued to the firm on June 30, 1980, which tentatively determined that Young should be relieved of all of its entitlement purchase obligation for a period of time which included June 1980. In addition, the DOE determined that the firm did not possess the financial resources to purchase its entire entitlements purchase obligation during June 1980. Young's stay request was therefore granted.

Request for Temporary Stay

Oasis Petroleum Corp.; Trans-Texas Petroleum; BLT, Inc.; Research Fuels, Inc., Culver City, Calif., DST–0042, DEE–2942, DES–2942, DST–2942, DEE–3430, DES–3430, DST–3430, DSG–0071, motor gasoline

A number of petitions for administrative relief were filed in connection with a controversy between Oasis Petroleum Corporation and Research Fuels, Inc., which arose primarily from a series of October 1978 agreements in which RFI transferred 84 retail motor gasoline outlets to Oasis and assigned to Oasis its right to receive motor gasoline from certain suppliers. The DOE determined that no action should be taken on these petitions since the DOE had already addressed the issues raised in the submissions in a tentative decision issued in a separate special redress proceeding and since the United States District Court for the Northern District of Texas had in any event enjoined the DOE from taking action on certain of these issues. Accordingly, the petitions were dismissed without prejudice.

Supplemental Orders

Caribou Four Corners, Inc., Afton, Wyo., BEX–0065, crude oil

On June 2, 1980, the DOE issued a Decision and Order to Caribou Four Corner's, Inc., staying that firm's obligation to purchase entitlements as required by 10 C.F.R. § 211.67 to the extent specified in a Proposed Decision and Order which was issued to the firm on June 2, 1980.

Genico Distributors, Inc., Austin, Tex., BEX–0074, crude oil

The DOE issued a Supplemental Order in order to make a technical correction to its Decision and Order in *Genico Distributors, Inc.*, 5 DOE ¶ ——, Case Nos. BSG–0024 and BST–0024 (June 24, 1980).

Highway Oil, Inc., Topeka, Kans., BEX–0052, Gasohol

On April 25, 1980, the DOE issued an Order requiring Highway Oil, Inc. to show cause why the DOE should not revoke previously granted exception relief which increased the firm's base period allocation in the amount of 300,000 gallons of unleaded gasoline per month in connection with Highway's gasohol blending and marketing operations. *Highway Oil, Inc.*, 5 DOE ¶ —— BEX–0049 (April 25, 1980). In considering the material submitted by Highway pursuant to the April 25 Order, the DOE concluded that the exception relief should be rescinded since Highway's current gasohol operations are substantially different from the gasohol operations which Highway had projected in its exception application and which the DOE had accepted as the basis for the approval of exception relief.

Plateau, Inc., Washington, D.C., BEX–0070, crude oil

On June 30, 1980, the DOE issued a Decision and Order to Plateau, Inc. staying that firm's obligation to purchase entitlements as required by 10 C.F.R. § 211.67 to the extent specified in a Proposed Decision and Order which was issued to the firm on June 30, 1980.

Sage Creek Refining Co., Cowley, Wyo., BEX–0073, crude oil

On June 30, 1980, the DOE issued a Decision and Order to Sage Creek Refining Company staying that firm's obligation to purchase entitlements as required by 10 C.F.R. § 211.67 to the extent specified in a Proposed Decision and Order which was issued to the firm on June 30, 1980.

Southland Oil Co., Jackson, Miss., BEX–0066, crude oil

On June 2, 1980, the DOE issued a Decision and Order to Southland Oil Company staying the firm's obligation to purchase entitlements as required by 10 CFR § 211.67 to the extent specified in a Proposed Decision and Order which was issued to the firm on June 2, 1980.

Thriftway Co., Washington, D.C., BEX–0075, crude oil

On June 30, 1980, the DOE issued a Decision and Order to Thriftway Company staying that firm's obligation to purchase entitlements as required by 10 C.F.R. § 211.67 to the extent specified in a Proposed Decision and Order which was issued to the firm on June 30, 1980.

Warrior Asphalt Company of Alabama, Tuscaloosa, Ala., BEX–0067, crude oil

On June 2, 1980, the DOE issued a Decision and Order to Warrior Asphalt Company of Alabama staying that firm's obligation to purchase entitlements as required by 10 CFR § 211.67 to the extent specified in a Proposed Decision and Order which was issued to the firm on June 2, 1980.

Young Refining Corp., Washington, D.C., BEX–0068, crude oil

On June 2, 1980, the DOE issued a Decision and Order to Young Refining Corporation staying that firm's obligation to purchase entitlements as required by 10 CFR § 211.67 to the extent specified in a Proposed Decision and Order which was issued to the firm on June 2, 1980.

Remedial Orders

In the following cases involving Proposed Remedial Orders and/or Interim Remedial Orders for Immediate Compliance, no Statements of Objections were filed. The DOE therefore issued the orders in final form.

Company Name, Case No. and Location

Bert Jones, BRW–0055, Stillwell, OK.
Herbert Menard d.b.a. Berwick Exxon, BRW–0053, Berwick, LA.
James E. Porter, BRW–0054, Oklahoma City, OK.

Interim Orders

The following firms were granted Interim Exception relief which implements the relief which the DOE proposed to grant in an order issued on the same date as the Interim Order:

Company Name, Case No., and Location

O.K. Petroleum Products Corp., DEN–6685, New York, NY
R&W Motor Sales, BEN–0040, Taunton, MA.

Petitions Involving the Motor Gasoline Allocation Regulations

The following firm filed an Application for Exception, Temporary Exception, Stay, and/or Temporary Stay from the provisions of the Motor Gasoline Allocation Regulations. The request, if granted, would result in an increase in the firm's base period allocation of motor gasoline. The DOE issued a Decision and Order which determined that the request be granted.

Company Name, Case No., and Location

Energy Unlimited, BEO–0572, Elm Grove, WI.

Petitions Involving the Motor Gasoline Allocation Regulations

The following firms filed Applications for Exception, Temporary Exception, Stay, and/or Temporary Stay from the provisions of the Motor Gasoline Allocation Regulations. The request, if granted, would result in an increase in the firm's base period allocation of motor gasoline. The DOE issued Decisions and Orders which determined that the requests be denied.

Company Name, Case No., and Location

Ernie's General Store, DEE–3763, Stockton, CA.
Koenig Texaco, BEO–0498, Salida, CO.
Leo's One Stop Mart, DEE–4764, Chehalis, WA.
Los Osos Petroleum Products, DEE–6376, Los Osos, CA.
Mount Vernon Sunoco, DEE–5206, Alexandria, VA.
Riverside Shell, DEO–0335, N. Riverside, IL.
Petrolics, Inc., BEE–0266, Austin, TX.
Riggs Gas & Grocery, BEO–0058, Scurry, TX.
San-Ann Service, Inc., DXE–5354, Washington, DC.
Savoley & Shepard Sunoco Station, DEE–5352, Lowell, MA.
The W. Gordon Smith Co., DEE–6658, Eden Prairie, MN.
Wedge Service Station, Inc., BEO–1052, Elmsford, NY.
Westwood Tune-up Service, BEO–0051, Los Angeles, CA.

Dismissals

The following submissions were dismissed without prejudice to refiling at a later date:

Company Name and Case No.

Bartco Associates, DEE–5091.
Clarence Berner, BEE–0685.
Gas Appliance Mfgs. Association, BXE–1220.
Matthews Oil Co., Inc., DEE–7026.
O. K. Petroleum Products Corporation, DES–6685; DEST–6685.
Oil City Petroleum Company, Inc., BEE–1199.
Two J's Auto Clinic, DEE–5066.
Vickers Petroleum Corporation, DSG–0060.

Copies of the full text of these Decisions and Orders are available in the Public Docket Room of the Office of Hearings and Appeals, Room B–120, 2000 M Street, N.W., Washington, D.C. 20461, Monday through Friday, between the hours of 1:00 p.m. and 5:00 p.m., e.d.t., except Federal holidays. They are also available in *Energy Management: Federal Energy Guidelines*, a commercially published loose leaf reporter system.

Thomas L. Wieker,

Deputy Director, Office of Hearings and Appeals.

August 12, 1980.

[FR Doc. 80–25095 Filed 8–18–80; 8:45 am]

BILLING CODE 6450–01–M

Issuance of Decisions and Orders; Week of July 7 through July 11, 1980

During the week of July 7 through July 11, 1980, the decisions and orders summarized below were issued with respect to appeals and applications for exception or other relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions that were dismissed by the Office of Hearings and Appeals.

Appeals

Collier, Shannon, Rill, Edwards & Scott, Washington, D.C., BFA–0367, freedom of information

Collier, Shannon, Rill, Edwards & Scott filed an Appeal from a denial by the Regional Counsel of the Economic Regulatory Administration Region II of a Request for Information which the firm had submitted under the Freedom of Information Act (the FOIA). In considering the Appeal, the DOE found that portions of the requested document which was initially withheld in its entirety under Exemption 5 should be released to the public. Important issues that were considered in the Decision and Order were whether the requested document was protected either by the deliberative process privilege, the attorney-client privilege, or the attorney work-product privilege and therefore exempt from mandatory disclosure under the FOIA pursuant to Exemption 5.

Charles Varon, San Francisco, Calif., BFA–0389, freedom of information

On June 6, 1980, Charles Varon filed an Appeal from a determination that had been issued to him by the Director of the Division of Program Support of the Office of Military Application. In that determination it was stated that no records exist which are responsive to requests for information that the Appellant had submitted pursuant to the Freedom of Information Act. In his Appeal, the Appellant contended that the DOE improperly had failed to identify documents responsive to his requests and had failed to conduct a sufficient research for responsive documents. In considering the Appeal, the DOE fund that the Appellant's requests did not "reasonably describe" the records sought within the meaning of the Act. Therefore the matter was remanded to allow the DOE to offer assistance to the requester pursuant to 10 CFR 1004.4(c)(2).

Remedial Order

Ferguson Oil Co., Oklahoma City, Okla., DRO–0270, DRS–0270, crude oil

Ferguson Oil Company objected to a Proposed Remedial Order on the grounds that the facts and issues raised by the PRO were identical to those involved in pending court cases and that the PRO proceeding should be held in abeyance pending resolution of these cases. Subsequent to the filing of Ferguson's Statement of Objections, court decisions were issued which supported DOE's position on the matters involved in the Ferguson PRO proceeding. The DOE issued the Ferguson PRO in final form and dismissed the Application for Stay.

Requests For Modification and/or Rescission

Doe Office of Procurement Operations, Washington, D.C., BMR–0043, Freedom of Information

The DOE Office of Procurement Operations filed an Application for Modification of *International Biomass Institute*, 5 DOE ¶ 80,135 (1980), which granted in part an Appeal which the Institute had submitted under the Freedom of Information Act. In considering the Application, the Office of Hearings and Appeals found that the Office of Procurement Operations had not met the regulatory requirements of showing "significantly changed circumstances," 10 CFR 205.134(b)(2) and the Application was denied. The material ordered to be released in *International Biomass Institute* was released to the requester.

Office of Enforcement, Washington, D.C., BRR–0064, crude oil

Office of Enforcement filed a Motion for Reconsideration of an Order which the Office of Hearings and Appeals issued in *Shenandoah Oil Corp.*, 5 DOE ¶ 80,105 (1980), requiring the Office of Enforcement to explain the basis for its finding that a certain tract did not qualify for "very large tract" treatment under Ruling 1977–1, 42 FR 3628 (January 19, 1977). In considering the Motion the DOE determined that Enforcement must explain the basis for crucial determinations in Remedial Orders it issues. The Motion for Reconsideration was therefore denied.

Requests for Exception

Airport DX Service, Des Moines, Iowa, BEO–0557, Motor Gasoline

Airport DX Service filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an increase in its base period allocation. In considering the request, the DOE found that the firm had leased and invested in the retail outlet after the updating of the base period and was adversely affected by its own discretionary business decision rather than the regulatory program. Accordingly, exception relief was denied.

Donald E. Batey, Petaluma, Calif., BEO–0796, motor gasoline

Donald E. Batey filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an increased base period allocation of motor gasoline. In considering the request, the DOE found that any operating difficulties which the firm was experiencing were the result of its own discretionary business decisions and were not the result of DOE regulations. Accordingly, exception relief was denied.

The Citizen Tribune, Morristown, Tenn., BEO–0136, motor gasoline

The Citizen Tribune filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an increase in its motor gasoline allocation. In considering the request, the DOE found that the updated base period did not represent an anomalous period in the firm's operations and that the allocation regulations were not causing the firm a serious hardship, gross inequity or unfair distribution of burdens. Accordingly, exception relief was denied.

Foregione's Service Station, Mayfield, Pa., DEO–0369, motor gasoline

Forgione's Service Station filed an Application Exception from the provisions of 10 CFR Part 211 in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request the DOE found that exception relief was necessary to prevent the firm from experiencing a severe financial hardship as a result of its inability to market its gasoline at the maximum lawful profit margin of 10.8 cents per gallon. Accordingly, exception relief was granted.

General Telephone Company of the Northwest, Inc., Everett, Wash., BEO–0573, motor gasoline

General Telephone Company of the Northwest, Inc. filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an increase in its motor gasoline allocation. In considering the request, the DOE found that the allocation regulations were not making it impossible for the applicant to provide service to its customers or causing the applicant any other hardship, inequity or unfair distribution of burdens. Accordingly, exception relief was denied.

Georgia Pacific Corp., Bellingham, Wash., BEE–0759 gasohol

Georgia Pacific Corporation filed an Application for Exception sought an increase in its base period allocation of unleaded gasoline for use in denaturing alcohol. This denatured alcohol is then sold for use in blending gasohol. In considering the request, the DOE found that exception relief was

necessary to insure continued production of

Southeast Regional Center of the Office of

requirement that it make refunds pursuant to

necessary to insure continued production of alcohol for blending gasohol. Accordingly, exception relief was granted.

Good Chevrolet, Renton, Wash., BEO–0629, motor gasoline

Good Chevrolet filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an increased base period allocation of motor gasoline. In considering the request, the DOE found that the firm had failed to demonstrate that its business activities would be significantly adversely affected if exception relief was denied. Accordingly, exception relief was denied.

Han-D-Sac Drive-In Grocery, Bartlett, Tenn., BEO–0267, motor gasoline

Han-D-Sac filed an Application for Exception from the provisions of 10 CFR 211.102 in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request, the DOE determined that the firm was not experiencing a gross inequity. Accordingly, the firm's request was denied.

Perfection Products Co., Waynesboro, Ga., BXE–1216; Poeway, Inc., Wisconsin Rapids, Wis., BXE–1217; Louisville Tin & Stove Co., Louisville, Ky., BXE–1218; Williams Furnace Co., Le Maride, Calif., BXE–1219; United States Stove Co., Chattanooga, Tenn., BXE–1221; Martin Industries, Florence, Ala., BXE–1222; Locke Stove Co., Kansas City, Mo., BXE–1223; Readybuilt Products & Co., Baltimore, Md., BXE–1224; Suburban Manufacturing Co., Dayton, Tenn., BXE–1225; test procedures

Perfection Products Co., *et al.*, filed Applications for Extension of Exception relief previously granted in *Perfection Products Co.*, 4 DOE ¶ 81,096 (1979). In their joint submission, the applicants requested that the exception from the provisions of 10 CFR Part 430 which relieved them of the obligation to perform energy efficiency tests on vented gas space heaters with manual and modulating controls and vented oil heaters with vaporizing-type burners be extended beyond July 1, 1980. In considering the request, the DOE found that the circumstances which led to the prior approval of exception relief had not changed and that reimposition of the testing requirements would impose a gross inequity on the applicants. Accordingly, the Applications for Exception were granted.

Ron's Arco Station, Woodbury, N.J. DEO–0337, motor gasoline

Ron's Arco Station filed an Application for Exception from the provisions of 10 CFR Part 211 in which the firm sought an increase in its base period allocation of motor gasoline. In considering the request, the DOE found that the firm was not experiencing an unfair distribution of burdens, gross inequity or serious hardship in the absence of exception relief. Accordingly, exception relief was denied.

T. J.'s Service Station, Collier County, Fla., BEO–0305, motor gasoline

T. J.'s Service Station filed a Statement of Objections to the issuance in final form of a Proposed Decision and Order in which the Southeast Regional Center of the Office of Hearings and Appeals tentatively determined that the firm's request for an increase in its base period allocation of motor gasoline should be denied. In considering the Statement of Objections, the DOE found that although the community around T. J.'s Service Station had experienced a reduction in its base period supplies of motor gasoline as a result of station closings in the area, a local jobber planned to reopen one of the closed stations in the near future and that this latter event would eliminate any reduction in the community's allocation supplies. The DOE also found that community residents and travelers were encountering no current difficulties in obtaining product. Accordingly, exception relief was denied.

V.I.P. Limousine, Inc., Stamford, Conn., BEO–1018, motor gasoline

V.I.P. Limousine, Inc. (VIP), filed an Applicatin for Exception from the provisions of 10 CFR Part 211. In this Application, the firm sought an increased allocation of motor gasoline for use in its "group ride program" (GRP). In its Decision, the DOE indicated what information is necessary in order for it to evaluate the potential level of energy conservation associated with the GRP. In considering the firm's request, however, the DOE found that V.I.P. had failed to demonstrate that its GRP would in fact result in a significant reduction of energy consumption in its operating area. Accordingly, the DOE denied the firm's request.

Van Wert Manufacturing Co., Peckville, Pa., BEE–1051; Yukon Industries, St. Paul, Minn., BEE–1066; Stadler Corp., Carlisle, Mass., BEE–1074; Combo Furnace Co., Grand Rapids, Minn., BEE–1113; Charmaster Products, Inc., Grand Rapids, Minn., BEE–1144; test procedures

Van Wert Manufacturing Company, *et al.* filed Applications for Exceptions from the provisions of 10 CFR Part 430, Appendix N. In their submissions, the applicants requested that they be relieved of the requirement to perform energy efficiency and fuel utilization tests for their multi-fuel furnaces and boilers. In considering the requests, the DOE found that the test procedures applicable to multi-fuel furnaces and boilers yielded inappropriate results and that the applicants would suffer agross inequity in the absence of relief. Accordingly, the exeption applications were granted.

Zenith Oil Co., Minneapolis, Minn., DEE–2556, No. 2 heating oil

Zenith Oil Company filed an Application for Exception in which the firm would be relieved from the obligation to comply with the terms of a Remedial Order issued to it. In considering the firm's request, the DOE determined that Zenith would not experience a serious financial hardship if it were required to make refunds to customers who were overcharged, as required by the Remedial Order.

Request for Stay

Milder Oil Co., Washington, D.C., BES–0079, BST–0007, crude oil

Milder Oil Company filed an Application for Temporary Stay and Stay from the requirement that it make refunds pursuant to a Consent Order agreed to by the firm and DOE Office of Enforcement. In considering the Application, the DOE determined that Milder had presented no persuasive argument that postponement of its refund obligation was necessary to prevent a serious hardship to the firm or to further the public interest. Milder's stay request was therefore denied.

Request for Temporary Stay

Petroleum Delivery Service, Inc., Fort Lauderdale, Fla., BST–0005, motor gasoline

Petroleum Delivery Service, Inc. filed an Application for Temporary Stay of an Interim Order issued to Southern Bell Telephone and Telegraph Company granting Southern Bell's request for a termination of its supplier/purchaser relationship with the applicant. The DOE determined that Petroleum Delivery Service was not experiencing a substantial irreparable injury due to the Interim Order. The DOE also noted that the applicant had not filed a timely response to Southern Bell's Motion for Interim Order and that it is generally inappropriate to grant stay relief when an applicant did not avail itself of the opportunity to contest the Interim Order before it was issued. Accordingly, the Application for Temporary Stay was denied.

Supplemental Order

Marathon Oil Co., Findlay, Ohio, BEX–0077, motor gasoline.

On April 17, 1980 the Office of Hearings and Appeals issued a Decision and Order granting the Marathon Oil Company (Marathon) Appeal of a February 19, 1980 Order issued by the Region IV Economic Regulatory Administration assigning Marathon to supply Publix Oil Company, Inc. with 65,572,475 gallons of motor gasoline per year at Tennessee terminals. In response to an Order issued by the United States District Court for the Eastern District of Tennessee on May 1, 1980 the Office of Hearings and Appeals issued a Supplemental Order staying the April 17 Appeal Decision and temporarily reinstating the February 19 Assignment Order. On July 9, 1980, however, the Court granted summary judgment in favor of the defendants DOE and Marathon, and dissolved the preliminary injunction. The Office of Hearings and Appeals therefore issued this Supplemental Order reinstating the April 17 Decision which rescinded the February 19 Assignment Order.

Protective Orders

The following firms filed Applications for Protective Orders. The applications, if granted, would result in the issuance by the DOE of the proposed Protective Order submitted by the firm. The DOE granted the following applications and issued the requested Protective Order as an Order of the Department of Energy:

Company Name, Case No., and Location

Chevron, USA, United Refining Co., BEJ–0095, Washington, DC.
Little America Refining Co., Inc. et al., BEJ–0098; Mobil Oil Corp., BEJ–0097; Texaco, Inc., BEJ–0098; Chevron, USA, BEJ–0099; Cities Service Wyoming Refining Co., BEJ–0100; Washington, DC.

Interim Orders

The following firms were granted Interim Exception relief which implements the relief which the DOE proposed to grant in an order issued on the same date as the Interim Order:

Company Name, Case No. and Location

Antonio Vricella, BEN–0289, Somerville, MA.
Angelo & Sons, BEN–0784, Revere, MA.

Petitions Involving the Motor Gasoline Allocation Regulations

The following firms filed Applications for Exception, Temporary Exception, Stay, and/or Temporary Stay from the provisions of the Motor Gasoline Allocation Regulations. The requests, if granted, would result in an increase in the firms' base period allocation of motor gasoline. The DOE issued Decisions and Orders which determined that the requests be denied.

Company Name, Case No. and Location

Bill Johnson's Chevron Service, BEO–0490, Los Angeles, CA.
Black Jack Service Station, BEO–0320, Flourissant, MO.
Country Super Store, BEO–0729, Bogalusa, LA.
Dave's Texaco Station, BEO–1114, Brighton, MA.
Huling's, BEO–0652, Seattle, WA.
Mayo's D–X Service Station, BEO–0615 Dresden, TN.
Miami Beach Texaco, BEO–0746, Washington, DC.
Tyler Texaco Station, DEE–5826, Hollister, CA.
Zionsville Standard Station, BEO–0251;
Old Orchard Car Wash, BEO–0436;
Checko's & Mike's Esso Service Station, BEO–0187;
The Tanner Co., BEO–0620;
Interstate Standard, BEO–0298;
Hayes Arco, BEO–0411;
San Jose State University; BEO–0472;
Jarrell's Exxon, BEO–1037;
Sharp Texaco, BEO–1040, Zionsville, IN.

Dismissals

The following submissions were dismissed without prejudice to refiling at a later date:

Company Name and Case No.

Central Texas Energy Supplier's, Inc., DST–0019.
Chevron, USA, BED–0361.
Dow Chemical, USA, BEO–1167.
Foster Oil Co., DRO–0314.
Ft. Washington Car, BEE–1109; BES–1109.
Great Lakes Research Corp., BEO–0999.
Green's Gas & Go, DEE–5800.
Greiner Welding and Fabricating, Inc., DEE–7466.
Ken's Mobil, DEE–6636.
Mobil Oil Corp., DES–0400; BST–0400.
Office of Enforcement, BRS–0064.
Quincy Oil, Inc., DEE–0447; DED–0006; DED–0007.
Trends Publishing Inc., BFA–0406.
Union 76 Service, DEE–7284.

Copies of the full text of these Decisions and Orders are available in the Public Docket Room of the Office of Hearings and Appeals, Room B–120, 2000 M Street, N.W. Washington, D.C. 20461, Monday through Friday, between the hours of 1:00 p.m. and 5:00 p.m., e.d.t., except Federal holidays. They are also avaialble in *Energy Management: Federal Energy Guidelines*, a commercially published loose leaf reported system.

George B. Breznay,
Deputy Director, Office of Hearings and Appeals.

Objections to Proposed Remedial Orders Filed; Week of July 14 through July 18, 1980

During the week of July 14 through July 18, 1980, the notices of objection to proposed remedial orders listed in the Appendix to this Notice were filed with the Office of Hearings and Appeals of the Department of Energy.

Any person who wishes to participate in the proceeding the Department of Energy will conduct concerning the proposed remedial orders described in the Appendix to this Notice must file a request to participate pursuant to 10 CFR 205.194 within 20 days after publication of this Notice (September 8, 1980). The Office of Hearings and Appeals will then determine those person who may participate on an active basis in the proceeding and will prepare an official service list, which it will mail to all persons who filed requests to participate. Persons may also be placed on the official service list as non-participants for good cause shown.

All requests to participate in these proceedings should be filed with the Office of Hearings and Appeals, Department of Energy, Washington, D.C. 20461.

George B. Breznay,
Deputy Director, Office of Hearings and Appeals.
August 12, 1980.

Remedial Orders

Eldon Spencer Oils, Inc., Port Byron, Ill., BRO–1273, motor gasoline and middle distillates

On July 16, 1980, Eldon Spencer Oils, Inc., 1510 North High Street, Port Byron, Illinois 61275, filed a Notice of Objection to a Proposed Remedial Order which the DOE Central District Office of Enforcement issued to the firm on June 12, 1980. In the PRO the Central District found that during the period from November 1, 1973 through March 31, 1975 the firm had failed to maintain records sufficient to demonstrate that its prices were in compliance with the maximum lawful selling prices under the terms of 6 CFR 150.359(c) and 10 CFR 212.93(a) and had in fact charged prices in excess of what was permitted by those regulatory provisions with respect to sales of regular motor gasoline, No. 1 and No. 2 fuel oils and diesel fuels. According to the PRO, the Eldon Spencer Oils, Inc. violation resulted in $162,805.86 of overcharges.

Exxon Company, U.S.A., Houston, Tex., BRO–1274, motor gasoline

On July 17, 1980, Marathon Oil Company, Findlay, Ohio filed a Notice of Objection to a Proposed Remedial Order which the Southwest District Office of Special Counsel issued to Exxon Company, U.S.A. on May 9, 1980. In the PRO the Southwest District concluded that under the pertinent allocation regulations, the exchange agreement consummmated in the months of March, April, and May 1978 between Exxon and Hydrocarbon Trading and Transport Company, Inc. established a supplier/purchaser relationship between Exxon and Hydrocarbon. According to the PRO, Exxon's refusal in March, April and May of 1979 and 1980 to supply Hydrocarbon with the amount of motor gasoline that was supplied to Hydrocarbon in the corresponding months of the base period pursuant to the exchange agreements constitutes a violation of 10 CFR 211.9(a). The PRO orders Exxon to bring itself into compliance with 10 CFR 211.9(a) by offering to sell Hydrocarbon its base period entitlement of gasoline for the months of March, April and May 1979 and 1980.

Fontana Marine Service, Fontana, Wis., BRO–1268, motor gasoline

On July 14, 1980 Fontana Marine Service on Lake Geneva, Fontana, Wisconsin filed a Notice of Objection to a Proposed Remedial Order which the DOE Central District Office of Enforcement issued to the firm on June 18, 1980. In the PRO the Central District found that during the period from August 1, 1979 to May 31, 1980, Fontana charged prices for motor gasoline in excess of the maximum lawful selling price. According to the PRO the Fontana violation resulted in $2,040 of overcharges.

Shatz Bros. Marine Center, Inc., Brooklyn, N.Y., BRO–1272, motor gasoline

On July 15, 1980 Shatz Brothers Marine Center, Inc., 3148 Voorhies Ave., Brooklyn, New York 11235, filed a Notice of Objection to a Proposed Remedial Order which the DOE Northeast District Office of Enforcement issued to the firm on June 12, 1980. In the PRO the Northeast District found that during the period April 22, 1980 to May 27, 1980 Shatz Bros. charged prices significantly in excess of the maximum lawful selling price permitted by 10 CFR, Part 212, and engaged in practices in violation of other provisions of Part 212. According to the PRO the Shatz Brothers Marine Center, Inc., violations resulted in $420.90 of overcharges.

Occupational Exposure

ENVIRONMENTAL PROTECTION AGENCY

[FRL 1577-7; PF 196]

Certain Pesticide Chemicals; Filing of Pesticide Petitions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: This notice announces that certain companies have filed requests with the EPA to establish tolerances for residues of pesticide chemicals in or on raw agricultural commodities.

ADDRESS: Written comments and inquiries should be directed to the: Designated Product Manager (PM), Registration Division (TS–767), Office of Pesticide Programs, Environmental Protection Agency, 401 M Street, SW, Washington, D.C. 20460.

Written comments may be submitted while a petition is pending before the Agency. The comments are to be identified by the document control number "[PF–196]" and the specific petition number. All written comments filed pursuant to this notice will be available for public inspection in the Product Manager's office from 8:00 a.m. to 4:00 p.m., Monday through Friday, excluding holidays.

SUPPLEMENTARY INFORMATION: EPA gives notice that the following pesticide petitions have been submitted to the Agency to establish tolerances for residues of certain pesticide chemicals in or on certain raw agricultural commodities in accordance with the Federal Food Drug and Cosmetic Act. The analytical method for determining residues, where required, is given in each specific petition.

PP OF2357. Monsanto Co., 1101 7th St., NW, Washington, D.C. 20036. Proposes amending 40 CFR 180.211 by increasing the tolerance for the combined residues of the herbicide 2-chloro-*N*-isopropylacetanilide and its metabolities (calculated as 2-chloro-*N*-isopropylacetanilide) in or on the raw agricultural commodity sorghum forage from "3.0 parts per million (ppm)" to "4.5 ppm." The proposed analytical method for determining residues is gas chromatography using a FID or nitrogen specific detector. (PM 25, Robert J. Taylor, Rm. E–359, 202/755–2196)

PP OF2379. Mobay Chemical Corp., PO Box 4913, Kansas City, MO 64120. Proposes amending 40 CFR 180.330 by establishing tolerances for the residues of the insecticide *S*-[2-ethylsulfinyl]ethyl] *0,0*-dimethyl phosphorothioate and its cholinesterase-inhibiting metabolites in or on the following raw agricultural commodities:

Commodities	Part per million
Beans, dried	0.01
Bean vines, dried	0.2

The petition also proposes to revise the tolerances for the following commodities:

Commodities	Part per million
Beans, forage	2
Beans, succulent	0.5

The proposed analytical method for determining residues is a gas-liquid chromatographic procedure utilizing a phosphorus specific detector. (PM 16, William H. Miller, Rm. E–343, 202/426–9458)

PP OF2382. E. I. DuPont de Nemours and Co., Inc., Wilmington, DE 19898. Proposes amending 40 CFR Part 180 by establishing tolerances for the combined residues of the fungicide hexazinone (3-cyclohexyl-6-(dimethylamino)-1-methyl-1,3,5-triazine-2,4 (1*H*, 3*H*)-dione and its metabolites (calculated as hexazinone) in or on the following raw agricultural commodities:

Commodities	Part per million
Alfalfa, forage and hay	5
Meat, fat, and meat byproducts (except liver) of cattle, goats, horses, hogs, and sheep	0.05
Milk	0.05
Liver of cattle, goats, horses, hogs, and sheep	0.1

The proposed analytical method for determining residues is by nitrogen selective gas chromatography. (PM 23, Richard Mountfort, Rm. E–351, 202/755–1397)

PP OF2193. Dow Chemical Co., PO Box 1706, Midland, MI 48640. Proposes that 40 CFR 180.342 be amended by revising the tolerance limitations for residues of the insecticide chlorpyrifos in or on the raw agricultural commodity peanut forage from "15 ppm" to "20 ppm". The proposed analytical method for determining residues is by gas chromatography using a hydrogen flame ionization detector. (PM 12, Jay Ellenberger, Rm. E–303, 202/426–2635)

PP OF2383. Allan H. Bonnell, Brumbaugh, Graves, Donohue, and Raymond, 30 Rockefeller Plaza, NY, NY 10020. Proposes that 40 CFR 180.1001 be amended to establish an exemption from the requirement of a tolerance for *Trichoderma viride sensu* Bisby and *Trichoderma polysporum* Rifai. (PM 21, Eugene Wilson, Rm. E–349, 202/755–1809.

BILLING CODE 6560-01-M

[OPTS–51114; FRL 1578–2]

Primary Amyl Nitrates; Premanufacture Notice

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: Section 5(a)(1) of the Toxic Substances Control Act (TSCA) requires any person who intends to manufacture or import a new chemical substance to submit a premanufacture notice (PMN) to EPA at least 90 days before manufacture or import commences. Section 5(d)(2) requires EPA to publish in the **Federal Register** certain information about each PMN within 5 working days after receipt. This Notice announces receipt of a PMN and provides a summary.

DATE: Written comments by September 28, 1980.

ADDRESS: Written comments to: Document Control Officer (TS–793), Office of Pesticides and Toxic Substances, Environmental Protection Agency, 401 M St., SW, Washington, DC 20460, 202–755–8050.

FOR FURTHER INFORMATION CONTACT: Cindy Work, Premanufacturing Review Division (TS–794), Office of Pesticides and Toxic Substances, Environmental Protection Agency, 401 M St., SW, Washington, DC 20460, 202/426–3980.

SUPPLEMENTARY INFORMATION: Section 5(a)(1) of TSCA [90 Stat. 2012 (15 U.S.C. 2604)], requires any person who intends to manufacture or import a new chemical substance to submit a PMN to EPA at least 90 days before manufacture or import commences. A "new" chemical substance is any substance that is not on the Inventory of existing substances compiled by EPA under Section 8(b) of TSCA. EPA first published the Initial Inventory on June 1, 1979. Notice of availability of the Initial Inventory was published in the **Federal Register** of May 15, 1979 (44 FR 28558). The requirement to submit a PMN for new chemical substances manufactured or imported for commercial purposes became effective on July 1, 1979.

EPA has proposed premanufacture notification rules and forms in the **Federal Register** issues of January 10, 1979 (44 FR 2242) and October 16, 1979 (44 FR 59764). These regulations, however, are not yet in effect. Interested persons should consult the Agency's Interim Policy published in the **Federal Register** of May 15, 1979 (44 FR 28564) for guidance concerning premanufacture notification requirements prior to the effective date of these rules and forms. In particular, see page 28567 of the Interim Policy.

A PMN must include the information listed in section 5(d)(1) of TSCA. Under section 5(d)(2) EPA must publish in the **Federal Register** nonconfidential information on the identity and use(s) of the substance, as well as a description of any test data submitted under section 5(b). In addition, EPA has decided to publish a description of any test data submitted with the PMN and EPA will publish the identity of the submitter unless this information is claimed confidential.

Publication of the section 5(d)(2) notice is subject to section 14 concerning disclosure of confidential information. A company can claim confidentiality for any information submitted as part of a PMN. If the company claims confidentiality for the specific chemical identity or use(s) of the chemical, EPA encourages the submitter to provide a generic use description, a nonconfidential description of the potential exposures from use, and a generic name for the chemical. EPA will publish the generic name, the generic use(s), and the potential exposure descriptions in the **Federal Register.**

If no generic use description or generic name is provided, EPA will develop one and after providing due notice to the submitter, will publish an amended **Federal Register** notice. EPA immediately will review confidentiality claims for chemical identity, chemical use(s), the identity of the submitter, and for health and safety studies. If EPA determines that portions of this information are not entitled to confidential treatment, the Agency will publish an amended notice and will place the information in the public file, after notifying the submitter and complying with other applicable procedures.

After receipt, EPA has 90 days to review a PMN under section 5(a)(1). The section 5(d)(2) **Federal Register** notice indicates the date when the review period ends for each PMN. Under section 5(c), EPA may, for good cause, extend the review period for up to an additional 90 days. If EPA determines that an extension is necessary, it will publish a notice in the **Federal Register.**

Once the review period ends, the submitter may manufacture the substance unless EPA has imposed restrictions. When the submitter begins to manufacture the substance, he must report to EPA, and the Agency will add the substance to the Inventory. After the substance is added to the Inventory, any company may manufacture it without providing EPA notice under section 5(a)(1)(A).

Therefore, under the Toxic Substances Control Act, a summary of the Data taken from the PMN is published herein.

Interested persons may, on or before September 28, 1980, submit to the Document Control Officer (TS–793), Rm. E–447, Office of Pesticides and Toxic Substances, 401 M St., SW, Washington, DC 20460, written comments regarding this notice. Three copies of all comments shall be submitted, except that individuals may submit single copies of comments. The comments are to be identified with the document control number "[OPTS–51114]" and the PMN number. Comments received may be seen in the above office between 8:00 a.m. and 4:00 p.m., Monday through Friday, excluding holidays.

(Sec. 5, 90 Stat. 2012 (15 U.S.C. 2604))

Dated: August 13, 1980.

Douglas G. Bannerman,

Acting Deputy Assistant Administrator for Chemical Control.

PMN 80–188

Close of Review Period. October 28, 1980.

Manufacturer's Identity. Ethyl Corp., 451 Florida Blvd., Baton Rouge, LA 70801.

Specific Chemical Identity. Primary amyl nitrates.

The following summary is taken from data submitted by the manufacturer in the PMN.

Use. Diesel fuel cetane improver.

Production Estimates. Claimed confidential.

Physical/Chemical Properties.

Density—0.998

Boiling point—305–314°F (150–155°C).

Flash point—156°F.

Toxicity Data

Skin irritation test (rabbits, rats)—Mild skin irritant. Growth inhibitor when applied dermally.

Inhalation study (rabbits, guinea pigs, rats, cats)—Exposure to 12.3 mg/liter for one hour was lethal to most mice in the study. Rabbits, guinea pigs, rats, and cats (in that order) were less susceptible.

Occupational Exposure

Activity	Potential route(s)	No.[1]	Maximum duration of exposure
Manufacture	Inhalation	4	8 hr/da; 160 da/yr.
Processing	Inhalation, dermal	8	2 hr/da; 30 da/yr.

[1] Potentially exposed workers.

Environmental Release/Disposal. The submitter claims that environmental release of the PMN substance will be minimal. Inorganic solid wastes, packaged in drums, will be disposed of in an approved chemically secure landfill.

Receipt of Applications to Conditionally Register Pesticide Products Entailing Changed Use Patterns

AGENCY: Environmental Protection Agency (EPA)

ACTION: Notice.

SUMMARY: This notice publishes applications submitted by Ameron to conditionally register pesticide products entailing changed use patterns.

ADDRESS: Written comments to: Richard Mountfort, Product Manager (PM) 23, Registration Division (TS–767), Office of Pesticide Programs, Environmental Protection Agency, 401 M St. SW., Washington, D.C. 20460.

SUPPLEMENTARY INFORMATION: Ameron, Protective Coating Division has submitted to EPA applications to conditionally register pesticide products entailing changed use patterns.

Notice of approval or denial of these applications to register pesticide products will be announced in the **Federal Register.** Except for such material protected by section 10 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended (92 Stat. 819; 7 U.S.C. 136), the test data and other scientific information deemed relevant to the registration decision may be made available after approval under provisions of the Freedom of Information Act. The procedure for requesting such data will be given in the **Federal Register** if an application is approved. Notice of receipt of these applications do not indicate a decision by the Agency on the applications.

Interested persons are invited to submit written comments on these applications. Comments may be submitted, and inquiries directed, to the product manager. The comments must be received on or before September 18, 1980, and should bear a notation

indicating the document control number "[OPP–C31038]" and the applicable file symbol or registration number. Comments received within the specified time period will be considered before a final decision is made; comments received after the specified time period will be considered only to the extent possible without delaying processing of the application. The label furnished by the applicant, as well as all written comments filed pursuant to this notice, will be available for public inspection in the product manager's office from 8:00 a.m. to 4:00 p.m., Monday through Friday, excluding holidays.

Applications Received

EPA File Symbol 8120–GL. Antifouling Red/Gray. Ameron, Protective Coating Div., 201 North Berry Street, Brea, CA 92621. Active Ingredient: tributyltin oxide 9.38% and diiodomethyl-para-tolyl sulfone 7.92%. The application proposes an aquatic impact use pattern. This is the first aquatic impact use pattern proposed for the chemical diiodomethyl-para-tolyl sulfone.

EPA File Symbol No. 8120–GG. Antifouling Red/Green. Ameron. Active Ingredient: tributyltin oxide 11.66% and diiodomethyl-para-tolyl sulfone 8.55%. The application proposes an aquatic impact use pattern. This is the first aquatic impact use pattern proposed for the chemical diiodomethyl-para-tolyl sulfone.

EPA File Symbol No. 8120–GT. Antifouling Red/White. Ameron. Active ingredient: tributyltin oxide 8.09% and diiodomethyl-para-tolyl sulfone 8.00%. The application proposes an aquatic impact use pattern. This is the first aquatic impact use pattern proposed for the chemical diiodomethyl-para-tolyl sulfone.

Dated: August 13, 1980.

Douglas D. Campt,

Director, Registration Divison, Office of Pesticide Programs.

BILLING CODE 6560–01–M

[FRL 1577–6; OPP 50497]

Renewal of Experimental Use Permits

The Environmental Protection Agency (EPA) has issued renewals of experimental use permits to the following applicants. Such permits are in accordance with, and subject to, the provisions of 40 CFR Part 172, which defines EPA procedures with respect to the use of pesticide for experimental purposes.

1023–EUP–35. The UpJohn Co., Agricultural R&D, Kalamazoo, MI 49001. This experimental use permit allows the use of 539 pounds of the pesticide amitraz (*N'*-2,4-dimethylphenyl)-*N*-[[2,4-dimethylphenyl]imino]methyl]-*N*-methylmethanimidamide in or on lemons, grapefruits, oranges, and tangerines. A total of 280 acres are involved. The program is authorized only in the States of Arizona, California, Florida, and Texas. The permit is being renewed under the special conditions that the pesticide be used on fresh market fruit only and that orchards in which animals graze not be treated. The experimental program is effective from July 17, 1980 to July 17, 1981. (PM 12, Jay Ellenberger, Rm. E–303, 202/426–2635)

8399–EUP–3. The Great Western Sugar Co., Agricultural Research Center, 11939 Sugarmill Road, Longmont, CO 80501. This experimental use permit allows the use of 70 pounds of the plant growth regulator propylene on sugarbeets to evaluate reduction of sucrose loss. A total of 20,000 tons of sugarbeet roots (harvested) are involved. The program is authorized only in the State of Colorado. The experimental program is effective from August 30, 1980 to August 30, 1981. A temporary exemption from the requirement of a tolerance has been established. (PM 25, Robert J. Taylor, Rm. E–359, 202/755–2196

Interested persons wishing to review the experimental use permits are referred to the designated Product Manager, Registration Division (TS–767), Office of Pesticide Programs, EPA, 401 M Street SW, Washington, DC 20406. It is suggested that such persons call before visiting the EPA, so that the appropriate file may be made conveniently available for review purposes. The files are available for inspection from 8:00 a.m. to 4:00 p.m., Mondays through Fridays, excluding holidays.

(Sec. 5, 92 Stat. 189 as amended, (7 U.S.C. 136))

Dated: August 13, 1980.

Douglas D. Campt,

Pennsylvania Department of Agriculture; Specific Exemption to Use Fenvalerate

Correction

In FR Doc. 80–17343 appearing on page 38443 in the issue of Monday, June 9, 1980, make the following correction:

In the third column of page 38443, fourth line, "Pydin . . ." should have read "Pydrin . . .".

BILLING CODE 1505–01–M

[FRL 1577–5; PP 9G2183/T266]

Hercon Products Group; Renewal of Temporary Exemption From Requirement of Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has renewed a temporary exemption from the requirement of a tolerance for residues of the insecticide (*Z*)-11-hexadecenal with (*z*)-9-tetradecenal in or on cottonseed when used as a pheromone to disrupt mating in tobacco budworms and bollworms.

ADDRESS: Written comments to: Franklin D. R. Gee, Product Manager (PM) 17, Registration Division (TS–767), Office of Pesticide Programs, Rm. E–341, Environmental Protection Agency, 401 M St., SW, Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: Franklin D. R. Gee, (202–426–9417) at the above address.

SUPPLEMENTARY INFORMATION: On May 1, 1979 EPA issued a notice that published in the **Federal Register** (44 FR 25506) that Hercon Products Group, Herculite Products, Inc., 1107 Broadway, NY, NY 10010, had filed a pesticide petition (PP 9G2183). The petition requested that an exemption from the requirement of a tolerance be established for residues of the insecticide (*Z*)-11-hexadecenal with (*z*)-9-tetradecenal in or on the raw agricultural commodity cottonseed when used as a pheromone to disrupt mating in the tobacco budworm and bollworm. This temporary exemption expired April 3, 1980.

Hercon Products Group has requested a renewal of the temporary exemption to permit the marketing of cottonseed treated in accordance with the experimental use permit which is being renewed under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended (92 Stat. 819; 7 U.S.C. 136).

The scientific data reported and all other relevant material have been evaluated and it has been determined that renewal of the temporary exemption from the requirement of a tolerance will protect the public health. Therefore, the temporary exemption has been renewed under the condition that the pesticide be used in accordance with the experimental use permit with the following provisions:

1. The total amount of the active insecticide to be used must not exceed the amount authorized in the experimental use permit.

2. Hercon must immediately notify the EPA of any findings from the experimental use permit or the temporary tolerance that have a bearing on safety. The firm will also keep records of production, distribution, and performance, and on request make the records available to any authorized officer or employee of the EPA or the Food and Drug Administration.

This temporary exemption from the requirement of a tolerance expires July 21, 1981. Residues in or on the above raw agricultural commodity after the expiration date will not be considered actionable if the pesticide is legally applied during the term of, and in accordance with, the provisions of the experimental use permit and temporary exemption from the requirement of a tolerance. The temporary exemption may be revoked if the experimental use permit is revoked or if any scientific data or experience with the pesticide indicate such revocation is necessary to protect the public health.

(Sec. 408(j), 68 Stat. 516, (21 U.S.C. 346a(j)))

Dated: August 13, 1980.

Douglas D. Campt,

Director, Registration Division, Office of Pesticide Programs.

BILLING CODE 6712–01–M

Trinity Broadcasting of Denver, Inc. and LUB Television Associates, Ltd.; Hearing Designation Order

Adopted: August 5, 1980.

Released: August 15, 1980.

By the Chief, Broadcast Bureau:

In the matter of applications of Trinity Broadcasting of Denver, Inc., Denver, Colorado (BC Docket No. 80–500, Filed No. BPCT–5057) and LUB Television Associates Limited, a limited partnership, d.b.a. La Unidad Broadcasting Corporation, Denver, Colorado (BC Docket No. 80–501, Filed No. BPCT–5097): for construction permit.

1. The Commission, by the Chief, Broadcast Bureau, acting pursuant to delegated authority, has under consideration the above-captioned mutually exclusive applications,[1] filed by Trinity Broadcasting of Denver (Trinity) and LUB Television Associates Ltd. (LUB) for a new commercial television station on Channel 31, Denver, Colorado.[2]

LUB Television Associates Ltd.

2. The financial data submitted by LUB indicates that $117,135 will be required to construct and operate the proposed station for three months, itemized as follows:

Legal	$15,000	
Engineering	5,000	
Installation	20,000	
Miscellaneous	5,000	
Total construction costs	$45,000	
Operating Expenses (includes costs of equipment, land and building lease)		72,135
Total proposed expenditures		$117,135
To meet these expenditures LUB intends to rely upon:		
Capital contributions		$250,000
Bank loan (less interest and principal)		88,220
Network guarantee		100,000
Total funds available		$438,220

3. Analysis of the financial data presented in paragraph 2 leads to the following conclusions:

(a) Regarding the capital contributions, the Commission is unable to determine whether these funds can be relied upon. The balance sheets of stock subscribers Quintana, Rodriquez and Duran indicate that they do not have sufficient liquid assets to meet their combined commitments of $85,000. The balance sheets were not submitted pursuant to the instructions contained in Paragraph 4(b), Page 3, Section III, Form 301. In some instances, liabilities were not segregated into current and long term items. Where this is not done, all liabilities must be assumed to be

[1] These applications were filed under the procedures adopted in *Adjudicatory Re-regulation Proposals*, 58 FCC 2d 865 (1976). Subsequently, the Commission adopted new procedures. *Revised Procedures For the Processing of Contested Broadcast Applications*. 45 RR 2d 1220 (1979). Accordingly, these applications will be considered under the revised procedures. Furthermore, the matters sought to be raised by the parties in issue pleadings have been considered herein only to the extent they relate to qualifications issues specifically included in this order.

[2] Several amendments were tendered for filing by Trinity after the cut-off date for amending as a matter of right. Acceptance of Trinity's amendments is unopposed and, since the information contained in these amendments is required to be reported under Section 1.65 of the Rules, these amendments will be accepted for filing.

current. Furthermore, information has

particularly those of Black or Hispanic

Section 311(a)(2) of the Communications

c. MDS, IFTS, CATV licensees (HBO, Showtime) and other non-licensees

States, or is contrary to the public

TPAFBO to police any member of any other

current. Furthermore, information has not been submitted to show that other non-liquid assets can be relied upon to provide funds to meet commitments. Therefore, a question arises, as to the availability of the $85,000 in stock subscription capital as a source of funds.

(b) LUB proposes to lease broadcast equipment (transmitter, antenna, etc.) from Spanish International Network (SIN), and also proposes to lease the land and buildings on which it is to operate. However, there is no indication that SIN is an equipment manufacturer or in the business of buying and leasing broadcast equipment. Subsequently, LUB is required to submit a balance sheet or a financial statement from SIN showing that it possesses the "net liquid assets" necessary to purchase the equipment and lease same to LUB, (see paragraph 4(b), Section III, page 3, Form 301). If these requirements are not met, LUB is considered to have to pay $208,000 in cash for its equipment. In addition, the $100,000 in proposed advertising revenue will not be considered under the new 90 day rule unless prepaid.[3] Accordingly, limited financial issues will be specified against LUB under (a) and (b), supra.

4. LUB indicates that its programming proposal is in response to the community needs and problems. However, LUB has not sufficiently described the broadcast matter, nor has the applicant made a showing as to which programs are responsive to which problems and needs. Accordingly, a limited ascertainment issue will be specified.

Trinity Broadcasting of Denver

5. Trinity has failed to comply with certain requirements of the *Primer on Ascertainment of Community Problems by Broadcast Applicants*, 27 FCC 2d 650, 21 RR 2d 1507 (1971). From the information before us, it appears that the applicant has failed to survey leaders of significant population groups set forth in its demographic study. *Voice of Dixie, Inc.*, 45 FCC 2d 1027, 29 RR 2d 1127 recon. den. 47 FCC 2d 526, 30 RR 2d 851 (1974). Trinity has submitted a list of approximately 200 "Community Leaders." However, it is not possible to determine whether any minority or ethnic leaders have been surveyed, particularly those of Black or Hispanic origin. Accordingly, a limited ascertainment issue will be specified.

6. Except as indicated by the issues specified below, the Commission finds Trinity Broadcasting of Denver and LUB Television Associates Ltd. legally, financially, technically and otherwise qualified. Since these applications are mutually exclusive, the Commission is unable to make the statutory finding that grant of the applications will serve the public interest, convenience and necessity. The applications must therefore be designated for hearing on the issues set out below.

7. Accordingly, it is ordered, that, pursuant to Section 309(e) of the Communications Act of 1934 as amended, the above-captioned applications are designated for hearing in a consolidated proceeding, to be held before an Administrative Law Judge at a time and place to be specified in a subsequent Order, upon the following issues:

(1) To determine, whether Trinity, complied with Question and Answer 7 of the *Primer* by interviewing leaders of minority/ethnic groups, and if not, the effect on the applicant's basic qualifications.

(2) To determine, with respect to LUB:

(a) whether stock subscribers have sufficient liquid assets to meet their commitments.

(b) whether SIN possesses the "net liquid assets" necessary to purchase broadcast equipment and lease same to LUB.

(c) whether, in light of the evidence adduced pursuant to (a) and (b) above, applicant is financially qualified to construct and operate as proposed.

(d) whether the programming proposal reflects an evaluation of its ascertained needs and problems, and if not, the effect on the applicant's basic qualifications.

(3) To determine, on a comparative basis, which of the applications would better serve the public interest.

(4) To determine, in light of the evidence adduced pursuant to the foregoing issues, which of the applications should be granted.

8. It is further ordered, that to avail themselves of the opportunity to be heard, the applicants herein, pursuant to § 1.221(c) of the Commission's Rules, in person or by attorney, within twenty (20) days of the mailing of this Order, shall file with the Commission, in triplicate, a written appearance stating an intention to appear on the date fixed for hearing and to present evidence on the issues specified in this Order.

9. It is further ordered, that the applicants herein shall, pursuant to Section 311(a)(2) of the Communications Act of 1934 as amended, and § 73.3594 of the Commission's rules, give notice of the hearing within the time and in the manner prescribed in such rule, and shall advise the Commission of the publication of such notice as required by § 73.3594(g) of the Rules.

Federal Communications Commission.

Jerold L. Jacobs,

Chief, Broadcast Facilities Division.

[FR Doc. 80-25214 Filed 8-18-80; 8:45 am]

BILLING CODE 6712-01-M

[3] The Commission notes that "there are 90 days between the initial start-up period between commencement of broadcast operations and the point in time where advertising accounts begin to remit revenue." (*New Financial Qualifications Standard for Broadcast Television Applicants*, FCC 79-299, May 11, 1979). Therefore, anticipated revenue will not be considered unless the advertising is paid in advance.

National Industry Advisory Committee, Broadcast Services Subcommittee; Meeting

August 15, 1980.

Pursuant to the provisions of the Public Law 92-463, announcement is made of a public meeting of the Broadcast Services Subcommittee of the National Industry Advisory Committee to be held Thursday, September 11, 1980. The Subcommittee will meet at the National Association of Broadcasters in the Board Room, located at 1771 N Street, NW., Washington, D.C. at 10 a.m.

Purpose: To consider proposals related to the Emergency Broadcast System (EBS).

Agenda items

1. Opening remarks by Chairman.
2. Comments by Mr. John W. Macy, Jr., Director of the Federal Emergency Management Agency (FEMA).
3. Emergency Broadcast System (EBS) tests:
   a. Propose nationwide test of the EBS, combining the Weekly Off-the-Air Monitoring Test with the Closed Circuit Test (CCT);
   b. Include participation of TV networks and non-affiliated stations in the CCT at least once a year;
   c. Provide evening time windows for the purpose of conducting a CCT;
   d. Carriage of EBS Emergency Activation Notifications (EAN) on *all* AP and UPI Subscriber networks.
4. In lieu of— ". . . in voluntary cooperation with the FCC and other authorities have developed this system etc., etc.," change the weekly off-the-air test announcement to either of the following:
   a. . . . in voluntary cooperation with the Federal Communications Commission and the Federal Emergency Management Agency . . .; or
   b. . . . in voluntary cooperation with Federal, State and local authorities. . . .
5. Presentation of Working Group report by Granville Klink on the FEMA Studio Transmitter Link (STL) and Broadcast Station Protection Program (BSPP) proposal.
6. Develop recommendation regarding adding other representatives to the Subcommittee from:
   a. Equipment manufacturers;
   b. Satellite carriers;
   c. MDS, IFTS, CATV licensees (HBO, Showtime) and other non-lincensee organizations like MUSAK.
7. Consider approval of draft EBS Activation postcard.
8. Consider approval of FCC, FEMA, NWS, NIAC Agreement.
9. FEMA and Nuclear Regulatory Commission (NRC) presentations regarding "A prompt Notification System" relative to nuclear power plants.
10. Other business.
11. Adjournment.

BILLING CODE 6712-01-M

FEDERAL MARITIME COMMISSION

Agreements Filed

The Federal Maritime Commission hereby gives notice that the following agreements have been filed with the Commission for approval pursuant to section 15 of the Shipping Act, 1916, as amended (39 Stat. 733, 75 Stat. 763, 46 U.S.C. 814).

Interested parties may inspect and obtain a copy of each of the agreements and the justifications offered therefor at the Washington Office of the Federal Maritime Commission, 1100 I, Street, N.W., Room 10218; or may inspect the agreements at the Field Offices located at New York, N.Y.; New Orleans, Louisiana; San Francisco, California; Chicago, Illinois; and San Juan, Puerto Rico. Interested parties may submit comments on each agreement, including requests for hearing, to the Secretary, Federal Maritime Commission, Washington, D.C., 20573, on or before September 8, 1980, in which this notice appears. Comments should include facts and arguments concerning the approval, modification, or disapproval of the proposed agreement. Comments shall discuss with particularity allegations that the agreement is unjustly discriminatory or unfair as between carriers, shippers, exporters, importers, or ports, or between exporters from the United States and their foreign competitors, or operators to the detriment of the commerce of the United States, or is contrary to the public interest, or is in violation of the Act.

A copy of any comments should also be forwarded to the party filing the agreements and the statement should indicate that this has been done.

Agreement No. T-21-7.

Filing Party: Ronald L. Laumbach, Cargill, Incorporated, Law Department, P.O. Box 9300, Minneapolis, Minnesota 55441.

Summary: Agreement No. T-21-7, between Sacramento-Yolo Port District (Port) and Cargill, Inc. (Cargill), modifies the basic agreement which provides for the lease to Cargill of a grain terminal facility at Sacramento, California. The purpose of the modification is to increase the monthly rental to $8,000, and to increase the minimum tonnage of the commodities to be transported from the grain elevator by deep sea vessel to 1,250,000 tons for the five-year period ending June 30, 1985.

Agreement No.: T-3917.

Filing Party: Edward W. Wellman, Jr., Cummings & Lockwood, One Atlantic Street, Stamford, Connecticut 06904.

Summary: Agreement No. T-3917, between Farrell Lines, Inc. (Farrell) and Howland Hook Marine Terminal Corporation, (Howland Hook) sets forth the terms and conditions for Farrell's use of its wholly-owned subsidiary, Howland Hook. Agreement No. T-3917 consolidates and restates the contractual relationships between the parties, originally set forth in Agreements Nos. T-2903, T-2903-B and T-2903-3. Pursuant to the terms of the agreement, Howland Hook supplies all marine terminal services at the Port of New York to Farrell. As compensation, Farrell will pay Howland Hook all fixed and variable costs, as set forth in the agreements.

Agreement No.: 6010-24.

Filing Party: Charles F. Warren, Warren & Associates, P.C., 1100 Connecticut Avenue N.W., Washington, D.C. 20036.

Summary: Agreement No. 6010-24 amends the basic agreement of the Straits/New York Conference to clarify the voting procedures under Article 10(a).

Agreement No.: 7540-34.

Filing Party: Seymour H. Kligler, Esquire, Brauner Baron Rosenzweig Kligler Sparber & Bauman, (The Firm of Herman Goldman), Attorneys at Law, 120 Broadway, New York, New York 10271.

Summary: Agreement No. 7540-34 modifies the basic agreement of the Leeward and Windward Islands and Guianas Conference to expressly provide that members may agree upon and publish credit rules including a bonding and/or security requirement and/or provisions denying credit.

Agreement No.: 8483-12.

Filing Party: Robert B. Yoshitomi, Esquire, Lillick, McHose & Charles, Attorneys for the Trans-Pacific American Flag Berth Operators, Two Embarcadero Center, San Francisco, California 94111.

Summary: Agreement No. 8483-12 amends the first paragraph of Article 12(a)(2) of the Trans-Pacific American Flag Berth Operators' (TPAFBO) Agreement by (1) adding language which permits the neutral body employed by TPAFBO to police any member of any other conference or rate-fixing agreement or any independent carrier in any trade, and (2) providing that the neutral body need not divulge to TPAFBO, its interests in any conference, rate agreement or independent carrier in whose behalf it acts. In addition, Article (11)(a)(2)(i) is amended by deleting reference to a two-thirds majority vote, inasmuch as TPAFBO sets tariff rates and practices by unanimous vote.

Agreement No.: 10399.

Filing Party: William H. Fort, Esquire, Kominers, Fort, Schlefer and Boyer, 1776 F Street, Northwest, Washington, D.C. 20006.

Summary: Agreement No. 10399 is a settlement agreement among Moore McCormack Lines, Incorporated (Mooremac), Empresa Lineas Maritimas Argentinas, S.A. (ELMA), and A/S Ivarans Rederi (Ivaran) that emanated from a Court proceeding wherein Ivaran has contested the Commission's approval of Agreement No. 10349. Ivaran agrees to pay Mooremac and ELMA $25,919 apiece in settlement of all outstanding obligations owed by Ivaran to the national-flag lines under Agreement No. 10349. Mooremac and ELMA on the one hand, and Ivaran on the other, agree to give up any claim with respect to any money owed to them by the other under Agreement No. 10349. After approval, Ivaran agrees to withdraw its appeal, all three parties agree to cooperate in effecting dismissal of the Court proceeding, and Ivaran agrees not to take an active part in the proceeding if it is not dismissed. The agreement stipulates that there will be no further recovery with respect to Agreement No. 10349, regardless of any disposition by the Court. The agreement will become null and void unless the Commission, within 120 days of filing, either approves the agreement or deems that its approval is not required.

Agreement No.: 10400.

Filing Party: J. D. Straton, Jr., Director Rates and Conferences, Moore McCormack Lines, Incorporated, 2 Broadway, New York, New York 10004.

Summary: Agreement No. 10400, between Robin Line (Robin), a service of Moore McCormack Lines, Inc., and Mediterranean Shipping Company (MSC), provides for a transshipment agreement for the transportation of general cargo in the trade between the U.S. Atlantic ports and ports in Mozambique, Tanzania, Kenya and Somalia, with transshipment at a port in South or East Africa, in the Cape Town/Mombasa range. The through rates are to be in accordance with Robin Line Outward Tariff in effect at time of shipment. The division of net through freight revenue and transshipment expenses, including storage charges, are to be divided one-third to MSC and two-thirds to Robin. The agreement may be terminated by either party upon 6 months' written notice to the other party.

Dated: August 14, 1980.

3. Citicorp, New York, New York

By order of the Federal Maritime Commission.

[Independent Ocean Freight Forwarder License No. 1844]

Peninsula Air Delivery; Order of Revocation

On May 2, 1980, Peninsula Air Delivery, P.O. Box 668, Mountain View, CA 94042, requested the Commission to revoke its Independent Ocean Freight Forwarder License No. 1844.

Therefore, by virtue of authority vested in me by the Federal Maritime Commission as set forth in Manual of Orders, Commission Order No. 201.1 (Revised), section 5.01(c), dated August 8, 1977;

It is ordered, That Independent Ocean Freight Forwarder License No. 1844 issued to Peninsula Air Delivery, be and is hereby revoked effective May 2, 1980, without prejudice to reapplication for a license in the future.

It is further ordered, That Independent Ocean Freight Forwarder License No. 1844 issued to Peninsula Air Delivery, be returned to the Commission for cancellation.

It is further ordered, That a copy of this Order be published in the Federal Register and served upon Peninsula Air Delivery.

Robert G. Drew,
Director, Bureau of Certification and Licensing.

BILLING CODE 6730-01-M

FEDERAL RESERVE SYSTEM

Arbuckle Bancorp. Inc.; Formation of Bank Holding Company

Arbuckle Bancorp., Inc., Sulphur, Oklahoma, has applied for the Board's approval under section 3(a)(1) of the Bank Holding Company Act (12 U.S.C. 1842(a)(1)) to become a bank holding company by acquiring 80 per cent or more of the voting shares of First Oklahoma Bank & Trust Company, Sulphur, Oklahoma. The factors that are considered in acting on the application are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Kansas City. Any person wishing to comment on the application should submit views in writing to the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551 to be received no later than September 11, 1980. Any comment on an application that requests a hearing must include a statement of why a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute and summarizing the evidence that would be presented at a hearing.

Board of Governors of the Federal Reserve System, August 11, 1980.

Cathy L. Petryshyn,
Assistant Secretary of the Board.

BILLING CODE 6210-01-M

Bank Holding Companies; Proposed de Novo Nonbank Activities

The bank holding companies listed in this notice have applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) § 225.4(b)(1) of the Board's Regulation Y (12 CFR 225.4(b)(1)), for permission to engage *de novo* (or continue to engage in an activity earlier commenced *de novo*), directly or indirectly, solely in the activities indicated, which have been determined by the Board of Governors to be closely related to banking.

With respect to each application, interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices." Any comment on an application that requests a hearing must include a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of that proposal.

Each application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank indicated for that application. Comments and requests for hearings should identify clearly the specific application to which they relate, and should be submitted in writing and received by the appropriate Federal Reserve Bank not later than September 11, 1980.

A. *Federal Reserve Bank of New York* (A. Marshall Puckett, Vice President) 33 Liberty Street, New York, New York 10045:

1. Chemical New York Corporation, New York, New York (investment advisory activities; Colorado, New Mexico, Wyoming, Utah, Idaho and Montana): to engage through its subsidiary, Van Devanter & Hock, Inc., in activities that may be carried on by an investment advisor, including offering portfolio investment advice to individuals, corporations, governmental entities and other institutions on both a discretionary and non-discretionary basis. These activities would be conducted from an office in Denver, Colorado, serving Colorado, New Mexico, Wyoming, Utah, Idaho and Montana.

2. Citicorp, New York, New York (finance company activities; Illinois, Indiana, Michigan, Wisconsin, Iowa, Minnesota, Montana, Nebraska, North Dakota, South Dakota): to engage through its subsidiary Citicorp Private Capital, Inc., in finance company activities including the making or acquiring of loans and other extensions of credit with primary emphasis on loans to business enterprises and large loans to individuals. These activities would be conducted from an office in Chicago, Illinois serving the ten states listed in the caption of this notice.

BILLING CODE 6210-01-M

Bellevue Service Co.; Proposed Acquisition of Bellevue Service Company Insurance Agency

Bellevue Service Company, Bellevue, Iowa, has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.4(b)(2) of the Board's Regulation Y (12 CFR 225.4(b)(2)), for permission to retain voting shares of Bellevue Service Company Insurance Agency, Bellevue, Iowa.

Applicant states that the proposed subsidiary would continue to engage in the sale of credit-related life, accident and health insurance in connection with the extension of credit by Applicant's bank subsidiary. These activities would be performed from offices of Applicant's subsidiary in Bellevue, Iowa, and the geographic area to be served is Jackson County, Iowa. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interest, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Chicago.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than September 11, 1980.

Board of Governors of the Federal Reserve System, August 11, 1980.

BILLING CODE 6210-01-M

First Bank Holding Company of Colorado; Formation of Bank Holding Company

First Bank Holding Company of Colorado, Lakewood, Colorado, has applied for the Board's approval under section 3(a)(1) of the Bank Holding Company Act (12 U.S.C. 1842(a)(1)) to become a bank holding company by acquiring 100 percent of the voting shares of First Bank Holding Company, Lakewood, Colorado, and thereby indirectly acquire 100 percent (less directors' qualifying shares) of FirstBank of Westland, N.A., Lakewood, Colorado, FirstBank of Wheat Ridge, N.A., Wheat Ridge, Colorado, FirstBank of North Longmont, N.A., Longmont, Colorado, FirstBank of Castle Rock, N.A., Costle Roch, Colorado, FirstBank of West Arvada, N.A., Colorado, FirstBank of Minturn, Minturn, Colorado, FirstBank of Vail, Vail, Colorado, FirstBank of Erie, Erie, Colorado, FirstBank of Gunbarrel, N.A., Boulder, Colorado, FirstBank of Academy Park, Lakewood, Colorado, FirstBank of Villa Italia, N.A., Lakewood, Colorado, FirstBank of Governor's Ranch, N.A., Denver, Colorado, and FirstBank of South Longmont, N.A., Longmont, Colorado. The factors that are considered in acting on the application are set forth in section 3(c) of the Act (12 U.S.C. 1842(c)).

First Bank Holding Company of Colorado, Lakewood, Colorado, has also applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.4(b)(2)) of the Board's Regulation Y (12 CFR 225.4(b)(2)), for permission to engage in data processing, credit-related insurance activities, and acting as insurance agent for its subsidiary banks. The data processing activities would be performed from an office in Lakewood, Colorado and will serve Jefferson, Denver and Eagle Counties, Colorado. The credit-related insurance agency activities would be performed from the following: FirstBank of Westland, N.A., Westland, Colorado, FirstBank of Vail, Vail, Colorado, FirstBank of Wheat Ridge, N.A., Wheat Ridge, Colorado, FirstBank of Erie, Erie, Colorado, FirstBank of Minturn, Minturn, Colorado, FirstBank of North Longmont, N.A., Longmont, Colorado, FirstBank of Gunbarrel, N.A., Boulder, Colorado, FirstBank of Castle Rock, N.A., Castle Rock, Colorado, FirstBank of Academy Park, Lakewood, Colorado, FirstBank of South Longmont, N.A., Longmont, Colorado, FirstBank of West Arvada, N.A., Arvada, Colorado, FirstBank of Villa Italia, N.A., Lakewood, Colorado, and FirstBank of Governor's Ranch, N.A., Denver, Colorado and the geographic area to be served is the same as that served by those of Applicant's subsidiary banks listed herein. Applicant's insurance agent activities would be performed from an office in Lakewood, Colorado and would serve the banks listed in the preceding sentence. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Kansas City.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than September 12, 1980.

Board of Governors of the Federal Reserve System, August 13, 1980.

BILLING CODE 6210-01-M

How-Win Development Co.; Proposed Retention of How-Win Insurance Agency

How-Win Development Co., Cresco, Iowa, has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.4(b)(2) of the Board's Regulation Y (12 CFR 225.4(b)(2)), for permission to retain How-Win Insurance Agency, Cresco, Iowa.

Applicant states that the subsidiary would continue to engage in the sale of credit life and credit accident and health insurance directly related to extensions of credit by Cresco Union Savings Bank, Cresco, Iowa. These activities would be performed from offices of Applicant's subsidiary bank in Cresco, Iowa, and the geographic area to be served is within a nine-mile radius of Cresco, Iowa. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Minneapolis.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than September 12, 1980.

Board of Governors of the Federal Reserve System, August 12, 1980.

Cathy L. Petryshyn,

Assistant Secretary of the Board.

BILLING CODE 6210-01-M

Iowa Bancorporation; Proposal To Continue To Engage in Insurance and Lending Activities

Iowa Bancorporation, Des Moines, Iowa, has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.4(b)(2) of the Board's Regulation Y (12 CFR 225.4(b)(2)), for permission to continue to engage in the activities of general insurance in a town with a population of less than 5,000 and in making extensions of credit. These activities would be performed from offices of Applicant's subsidiary in LaPorte City, Iowa, and the geographic areas to be served are Black Hawk County, Iowa. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in

accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Chicago.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than August 29, 1980.

Board of Governors of the Federal Reserve System, August 13, 1980.

Cathy L. Petryshyn,

Assistant Secretary of the Board.

BILLING CODE 6210-01-M

P & D Company of Stewartville, Inc.; Proposed Continuation of Insurance Agency Activities

P & D Co. of Stewartville, Inc., Stewartville, Minnesota, has applied, pursuant to section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.4(b)(2) of the Board's Regulation Y (12 CFR 225.4(b)(2)), for permission to continue to engage in general insurance agency activities in a community where the population does not exceed 5,000.

Applicant states that it would engage in activity of selling. These activities would be performed from offices of Applicant's subsidiary in Stewartville, Minnesota, and the geographic area to be served is an area within a fifteen mile radius of Stewartville, Minnesota. Such activities have been specified by the Board in § 225.4(a) of Regulation Y as permissible for bank holding companies, subject to Board approval of individual proposals in accordance with the procedures of § 225.4(b).

Interested persons may express their views on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

The application may be inspected at the offices of the Board of Governors or at the Federal Reserve Bank of Minneapolis.

Any views or requests for hearing should be submitted in writing and received by the Secretary, Board of Governors of the Federal Reserve System, Washington, D.C. 20551, not later than September 12, 1980.

Board of Governors of the Federal Reserve System, August 12, 1980.

FEDERAL TRADE COMMISSION

Continental Grain Co.; Early Termination of the Waiting Period of the Premerger Notification Rules

AGENCY: Federal Trade Commission.

ACTION: Granting of request for early termination of the waiting period of the premerger notification rules.

SUMMARY: Continental Grain Company is granted early termination of the waiting period provided by law and the premerger notification rules with respect to the proposed acquisition of certain assets of Central Soya Company, Inc., The grant was made by the Federal Trade Commission and the Assistant Attorney General in charge of the Antitrust Division of the Department of Justice in response to a request for early termination submitted by Central Soya. Neither agency intends to take any action with respect to this acquisition during the waiting period.

EFFECTIVE DATE: August 6, 1980.

FOR FURTHER INFORMATION CONTACT: Naomi Licker, Attorney, Premerger Notification Office, Bureau of Competition, Room 303, Federal Trade Commission, Washington, D.C. 20580 (202) 523-3894.

SUPPLEMENTARY INFORMATION: Section 7A of the Clayton Act, 15 U.S.C. 18a, as added by Title II of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Commission and Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act permits the agencies, in individual cases, to terminate this waiting period prior to its expiration and requires that notice of this action be published in the **Federal Register.**

By direction of the Commission.

GENERAL SERVICES ADMINISTRATION

[F-80-14]

Delegation of Authority to the Secretary of Defense

1. *Purpose.*—This delegation authorizes the secretary of Defense to represent, in conjunction with the Administrator of General Services, the consumer interests of the executive agencies of the Federal Government in proceedings before the Arizona Corporation Commission involving intrastate telecommunications service rates.

2. *Effective date.*—This delegation is effective immediately.

3. *Delegation:* a. Pursuant to the authority vested in me by the Federal Property and Administrative Services Act of 1949, 63 Stat. 377, as amended, particularly sections 201(a)(4) and 205(d) (40 U.S.C. 481(a)(4) and 486(d)), authority is delegated to the Secretary of Defense to represent the consumer interests of the Federal executive agencies before the Arizona Corporation Commission involving the application of the Mountain States Telephone and Telegraph Company for an increase in its rates for intrastate telecommunications services. The authority delegated to the Secretary of Defense shall be exercised concurrently with the Administrator of General Services.

b. The Secretary of Defense may redelegate this authority to any officer, official, or employee of the Department of Defense.

c. This authority shall be exercised in accordance with the policies, procedures, and controls prescribed by the General Services Administration, and shall be exercised in cooperation with the responsible officers, officials, and employees thereof.

Dated: August 4, 1980.

Ray Kline,

Acting Administrator of General Services.

BILLING CODE 6820-25-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. 80P-0004/CP]

Tomato Juice Deviating From Identity Standard; Amendment of Temporary Permit for Market Testing

AGENCY: Food and Drug Administration.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) announces the amendment of a temporary permit issued to Libby, McNeill & Libby, Inc., to market test tomato juice from concentrate to which ascorbic acid is added to attain a vitamin C level of 4 milligrams per fluid ounce. This action enables Libby, McNeill & Libby, Inc., to improve the quality of information to be derived from the market test by increasing the areas of distribution.

DATES: This amended permit is effective for 15 months beginning on the date the new food is introduced into or caused to be introduced into interstate commerce, but no later than August 11, 1980. However, the permit may terminate sooner depending upon the final action on FDA's proposal to amend the standard of identity for tomato juice published in the **Federal Register** of May 9, 1978 (43 FR 19864). If the proposal is affirmed, the permit will terminate on the effective date of the final regulation. If the proposal is rejected, the permit will expire 30 days after such negative ruling on the proposal.

FOR FURTHER INFORMATION CONTACT: F. Leo Kauffman, Bureau of Foods (HFF-214), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202-245-1164.

SUPPLEMENTARY INFORMATION: A temporary permit was issued to Libby, McNeill & Libby, Inc., under 21 CFR 130.17, to facilitate market testing of foods deviating from the requirements of the standards of identity promulgated under section 401 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 341). Notice of the issuance of the permit was published in the **Federal Register** of May 13, 1980 (45 FR 31498).

Libby, McNeill & Libby, Inc., has requested that the temporary permit issued to it on May 6, 1980, be amended by increasing the permitted areas of distribution to include the State of New Mexico. The company indicated that the exclusion of New Mexico from the areas of distribution requested in its application for a temporary permit was an inadvertent error on its part. Accordingly, FDA is amending the temporary permit issued to Libby on May 6, 1980, to include New Mexico in one of the permitted areas of distribution. Distribution in New Mexico is subject to the same requirements as stated in one temporary permit.

Dated: August 11, 1980.

William F. Randolph,

Acting Associate Commissioner for Regulatory Affairs.

Health Services Administration

National Advisory Council on the National Health Service Corps.; Meeting

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), announcement is made of the following National Advisory body scheduled to meet during the month of September 1980:

Name: National advisory Council on the National Health Service Corps.

Date and Time: September 15-17, 1980, 9:00 a.m., September 15—9 a.m.-5 p.m., September 16—Site Visits, September 17—9 a.m.-12 noon.

Place: Tower Suite, Peachtree Plaza Hotel, 210 Peachtree Street, Atlanta, Ga. 30303.

Open for entire meeting, except a formal meeting of the Council will not be held on Tuesday, September 16, due to the Council members visiting National Health Service Corps sites located in the Atlanta area.

Purpose: The Council will advise and make appropriate recommendations on the National Health Service Corps (NHSC) program as mandated by legislation. It will also review and comment on proposed regulations promulgated by the Secretary under provisions of the legislation.

Agenda: Agenda items include discussions of: Organization of new Bureau for NHSC; the NHSC scholarship program; student assistance programs; recruitment policies; and status of legislation and funding situation.

The meeting is open to the public for observation and participation. Anyone wishing to participate, obtain a roster of members, or other relevant information, should write to or contact MS. CHARLOTTE WALCH, National Health Service Corps, Health Service Administration, Parklawn Building, Room 6A-14, 5600 Fishers Lane, Rockville, Md. 20857. Telephone: (301) 443-4046.

Agenda items are subject to change as priorities dictate.

Dated: August 12, 1980.

Public Health Service

First-Year Student Enrollment Decreases for Health Professions Schools

The Department of Health and Human Services announces that the schools of medicine, osteopathy, dentistry, pharmacy, optometry, podiatry, veterinary medicine and public health (health professions schools) may request decreases in their first-year student enrollments that are above the statutory requirements and below the number assured when they accepted Health Professions Construction Grants, Part B, Title VII, Public Health Service Act (42 U.S.C. 293). The affected grantees wishing to decrease their first-year student enrollments may request the decrease by submitting a revision to their approved Health Professions Construction Program application with supporting data. Applications from health professions schools may not seek a decrease below the number assured for the Health Professions Capitation Program and the statutory requirement of the Construction Program.

The affected schools will be individually notified of the procedures to be followed based on this announcement.

Questions concerning this announcement should be directed to: Director, Bureau of Health Facilities, Health Resources Administration, PHS, Center Building, Room 5-22, 3700 East-West Highway, Hyattsville, Maryland 20782. Phone: 301-436-7700.

Request for additional information, materials and data regarding this matter should be directed to: Grants Management Officer, Bureau of Health Facilities, Health Resources Administration, Center Building, Room 5-22, 3700 East-West Highway, Hyattsville, Maryland 20782, Phone: 301-436-7363.

Dated: August 14, 1980.

[Docket No. NI-26]

Intended Environmental Impact Statements

The Department of Housing and Urban Development gives notice that an Environmental Impact State (EIS) is intended to be prepared for each of the following projects under HUD programs as described in the appendices of the Notice: Fairway Apartments, Fulton County, Georgia; and Madrona Hills Estates, Willow Creek Basin, adjacent to Eugene, Oregon. This Notice is required by the Council on Environmental Quality under its rules (40 CFR Part 1500).

Interested individuals, governmental agencies, and private organizations are invited to submit information and comments concerning a particular project to the specific person or address indicated in the appropriate part of the appendices.

Particularly solicited is information on reports or other environmental studies planned or completed in the project area, issues and data which the EIS should consider, recommended mitigating measures and alternatives, and major issues associated with the proposed project. Federal agencies having jurisdiction by law, special expertise or other special interests should report their interests and indicate their readiness to aid the EIS effort as a "cooperating agency."

Issued at Washington, D.C., August 13, 1980.

Richard H. Broun,

Director, Office of Environmental Quality.

Appendix

EIS on Fairway Apartments, Fulton County, Ga.

The Atlanta Area Office of the Department of Housing and Urban Development (HUD) is preparing an Environmental Impact Statement (EIS) on a project described below and solicits comments and information for consideration in the EIS.

Description. The proposed 120 unit Section 8 development will be located on West Campbellton Street approximately 0.50 miles northwest of downtown Fairburn, Fulton County, Georgia. The schedule calls for a DEIS to be prepared in October 1980.

Need. The EIS is being prepared due to HUD's internal NEPA implementation policy (24 CFR 50). The project is in close proximity to Atlanta International Airport, and there may be noise problems. There has also been a considerable amount of public controversy concerning the project.

Alternatives. The EIS will consider the alternatives of funding as proposed, funding with modifications, or rejection of proposal.

Scoping. HUD plans to hold a scoping meeting for the purposes of deciding significant issues and selecting data which the EIS should address., The scoping meeting will be held at 10:00 A.M., Friday August 22, 1980, in Room 1700 of the Richard B. Russell Federal Building, 75 Spring Street, Atlanta, Georgia.

Comments. Comments should be forwarded within 21 days of publication in the Federal Register to Harry Walls, Evironmental Clearance Officer, Room 576, Richard B. Russell Federal Building, 75 Spring Street, Atlanta, Georgia 30303 (or call (404) 221-4036).

EIS on Madrona Hills Estate, Willow Creek Basin, adjacent to Eugene, Oreg.

The Portland Area Office of the U.S. Department of Housing and Urban Development intends to prepare an Environmental Impact Statement for Madrona Hills Estates, a Planned Community. The proposed project is a phased development of a planned community in the Willow Creek Basin Adjacent to the city ot Eugene, Oregon. Interested agencies, organizations and individuals are invited to provide comments and information which the EIS should address.

Description. The project will include a residential community of mixed single-family subdivisions, townhouse condominiums and multi-family rental apartments (430 acres); a neighborhood Community Center and Conference Facility providing a focus for neighborhood activities (35 acres); a Public Golf Course, open space, parks, jogging and bicycle paths, nature trails and natural preserves (167 acres); plus additional specialized open space park land as an integral part of each development phase. The project site is generally bounded on the north by Highway 126 (West Eleventh Avenue), on the east and south by Willow Creek Road and on the west by Greenhill Road. Annexation and rezoning of the 630 acre site is requested from the City of Eugene for R-1 residential densities of 1-10 units per acre. The proposed development schedule extends over a fifteen year period beginning with construction of a Public Golf Course and residential development in 1980 and ending in 1995.

Need. The HUD thresholds established by 24 CFR 50 §§ 50.31(b) require that an EIS be

developed. It is important to note that only preliminary planning has been completed. EIS supplements will be required for the more detailed planning of each development phase.

Alternatives Perceived. The alternatives to this project are: (1) No action, which permits incremental growth by individual developers; and (2) Development without HUD/FHA participation.

Scoping. This notice invites comments as part of the scoping process of 40 CFR, Parts 1500-1508, §§ 1501.7 to determine the scope of issues to be addressed and for indentifying the significant issues related to the proposed action. We are requesting the Environmental Protection Agency, USDA—Soil Conservation Service and DOT—Federal Highway Administration to be cooperative agencies. A scoping meeting is tentatively scheduled for August 29, 1980 at the Portland Area Office of HUD located at 520 S.W. Sixth Avenue in Portland, Oregon for 10:00 A.M. (Please contact Area Office to find out definite time for meeting.)

Comments. Comments and information should be sent to: Clifford T. Sanfranski, Environmental Clearance Officer, U.S. Department of Housing and Urban Development, 520 S.W. Sixth Avenue, Portland, Oregon 97204. Comments should be written or telephoned to (503) 221-2701 (FTS 423-2701) on or before September 9, 1980.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[INT DEIS 80-51]

South Coast and Curry Sustained Yield Units Timber Management Plan: Draft Environmental Impact Statement; Public Hearing and DEIS Availability

AGENCY: Bureau of Land Management, Interior.

SUMMARY: Pursuant to Section 102(2)(c) of the National Environmental Policy Act of 1969, the Department of the Interior, Bureau of Land Management, has prepared a draft environmental impact statement for the South Coast and Curry Sustained Yield Units. The draft analyzes the impacts of implementing a 10-year timber management plan (along with eight alternatives to that plan) on public lands within the Coos Bay District in southwestern Oregon.

Public reading copies will be available for review at the following locations:

Bureau of Land Management, Office of Public Affairs, 18th and C Streets, NW, Washington, D.C. 20240
Bureau of Land Management, Office of Public Affairs, 729 N.E. Oregon Street, Portland, OR 97208
Bureau of Land Management, Coos Bay District Office, 333 S. Fourth Street, Coos Bay, OR 97420
Oregon State Library, State Library Building, Salem, OR 97310
Oregon State University Library, Government Document Section, Corvallis, OR 97331
Portland State University Library, 724 S.W. Morrison, Portland, OR 97201
Southern Oregon State College Library, Ashland, OR 97520
Southwestern Oregon Community College Library, Coos Bay, OR 97420
Umpqua Community College Library, Roseburg, OR 97420
Bandon Public Library, City Hall, Bandon, OR 97411
Brookings Public Library, 420 Alder, Brookings, OR 97415
University of Oregon Library, Government Document Section, Eugene, OR 97403
Lane Community College Library, Eugene, OR 97401
Gold Beach Public Library, Colvin St., Gold Beach, OR 97444
Coos Bay Public Library, 525 W. Anderson, Coos Bay, OR 97420
Douglas County Library, County Courthouse, Roseburg, OR 97470
North Bend Public Library, 1925 McPherson Ave., North Bend, OR 97459.

A limited number of copies are available upon request from the Bureau of Land Management, Oregon State Office, or the Coos Bay District Office at the above addresses.

Oral and/or written comments will be received at formal hearings held at 1:00 p.m. and 7:00 p.m. on October 1, 1980 at the Public Library auditorium in Coos Bay, Oregon.

ADDRESS: Written comments on the Draft EIS may be sent to: State Director (911.1), Bureau of Land Management, Oregon State Office, P.O. Box 2965, Portland, OR 97208.

All comments must be postmarked no later than October 16, 1980.

For further information contact: Richard Bonn, Statement Leader, Oregon State Office, Telephone: (503) 231-6953.

Dated: August 11, 1980.

Ed Hastey,

Associate Director.

[NM 40873]

New Mexico; Notice of Application

August 5, 1980.

Notice is hereby given that, pursuant to Section 28 of the Mineral Leasing Act of 1920 (30 U.S.C. 185), as amended by the act of November 16, 1973 (87 Stat. 576), Conoco, Inc. has applied for one 6-inch and one 4-inch natural gas pipelines right-of-way across the following lands:

New Mexico Principal Meridian, New Mexico

T. 18 S., R. 31 E.,
Sec. 1: NE¼SE¼;
Sec. 11: SE¼SE¼;
Sec. 12: NW¼NE¼, NE¼NW¼, S½NW¼, W½SW¼;
Sec. 14: N½NE¼, SW¼NE¼, SE¼NW¼, N½SW¼, SW¼SW¼;
Sec. 15: SE¼SE¼;
Sec. 22: N½NE¼, SW¼NE¼, SE¼NW¼, E½SW¼;
Sec. 27: NE¼NW¼, W½W½;
Sec. 34: S½NE¼, W½NW¼, N½SW¼, NW¼SE¼;
Sec. 35: S½NW¼, E½SW¼.
T. 17 S., R. 32 E.,
Sec. 28: S½NE¼NE¼NW¼, S½NE¼NW¼, E½SW¼;
Sec. 29: SE¼NE¼, N½SE¼, SW¼SE¼;
Sec. 31: N½SE¼, SW¼SE¼.
T. 18 S., R. 32 E.,
Sec. 6: Lot 5, 6, E½NW¼.

These pipelines will convey natural gas across 10.585 miles of public land in Eddy and Lea Counties, New Mexico.

The purpose of this notice is to inform the public that the Bureau will be proceeding with consideration of whether the application should be approved, and if so, under what terms and conditions.

Interested persons desiring to express their views should promptly send their name and address to the District Manager, Bureau of Land Management, P.O. Box 1397, Roswell, New Mexico 88201.

James H. O'Connor,

District Manager.

BILLING CODE 4310-03-M

INTERSTATE COMMERCE COMMISSION

[Ex Parte No. MC-120]

Denial of Petition To Relax Entry on the Transportation of Small Shipments Weighing 500 Pounds or Less

AGENCY: Interstate Commerce Commission.

ACTION: Notice of discontinuance of rulemaking proceeding.

SUMMARY: The Commission previously published a notice of the filing of a petition seeking institution of a rulemaking proceeding for the purpose of possibly making a general finding that the public convenience and necessity require the transportation of small shipments of general commodities, with the usual exceptions, weighing 500 pounds or less, and to establish new regulations allowing expedited certification and pricing flexibility for carriers wishing to transport these small shipments. Petitioner's proposal envisioned the issuance of a master certificate of public convenience and necessity authorizing this transportation by any necessity authorizing this transportation by any carrier which demonstrates its fitness to conduct these operations. The Motor Carrier Act of 1980 specifically prohibits the master certificate approach to granting operating authority. Accordingly, the petition is denied and this proceeding is discontinued.

FOR FURTHER INFORMATION CONTACT: Thomas J. Barry, (202) 275–7982 or Edward E. Guthrie, (202) 275–7691.

SUPPLEMENTARY INFORMATION: By petition filed August 8, 1978 (published at 43 FR 37329 (August 22, 1978)), Trailways, Inc., a motor common carrier of passengers, their baggage, and express, requested the Commission to propose rules which would make a general finding that the public convenience and necessity require the transportation of small shipments of general commodities, with the usual exceptions, weighing 500 pounds or less, and to establish new regulations allowing expedited certification and pricing flexibility for carriers wishing to transport these small shipments. Petitioner proposed that a master certificate be issued, based upon the general finding of public convenience and necessity, authorizing new or existing carriers to provide any and all of the services which the small shipper might demand, including forwarding, consolidation, pickup and delivery, and over-the-road transportation. To perform these services under the proposed master certificate, an applicant would have oly to establish that it is fit, financially and otherwise, to conduct small shipments service.

Section 5 of the Motor Carrier Act of 1980 (Pub. L. 96–296, 94 Stat. 795), added a new subsection (b) to 49 U.S.C. 10922 which, as pertinent, provides as follows:

(b)(3) The Commission may not make a finding relating to public convenience and necessity under paragraph (1) of this subsection which is based upon general findings developed in rulemaking proceedings.

In adding this provision to the Interstate Commerce Act, Congress clearly intended to prevent the Commission from pursuing the master certificate approach.

On the other hand, by adopting subsection (b)(4)(D) to this section Congress provided abbreviated (fitness only) licensing provisions for the transportation of shipments weighing 100 pounds or less if transported in a motor vehicle in which no one package exceeds 100 pounds. Applications to provide this service are governed by our interim rules in Ex Parte No. 55 (Sub-No. 43), 45 FR 45534, and Ex Parte No. 55 (Sub-No. 43A), 45 FR 45545. Interested persons may consult these documents or contact their nearest field office.

It is the intention of this Commission to implement and administer as fully and expeditiously as possible the will of Congress as expressed in the new legislation. Accordingly, the petition is denied and this proceeding is discontinued.

This decision does not significantly affect the quality of the human environment or the conservation of energy resources.

This notice is issued under authority of 49 U.S.C. 10321 and 5 U.S.C. 553.

Decided: August 7, 1980.

By the Commission, Chairman Gaskins, Vice-Chairman Gresham, Commissioners Stafford, Clapp, Trantum, Alexis, and Gilliam.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035-1-M

[Volume No. OP 2–012]

Permanent Authority Decisions; Decision-Notice

The following applications, filed on or after July 3, 1980, are governed by Special Rule 247 of the Commission's Rules of Practice, see 49 CFR 1100.247. Special rule 247 was published in the **Federal Register** of July 3, 1980, at 45 FR 45539.

Persons wishing to oppose an application must follow the rules under 49 CFR 1100.247(B). A copy of any application, together with applicant's supporting evidence, can be obtained from any applicant upon request and payment to applicant of $10.00.

Amendments to the request for authority are not allowed. Some of the applications may have been modified prior to publication to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exception of those applications involving duly noted problems (e.g., unresolved common control, fitness, water carrier dual operations, or jurisdictional questions) we find, preliminarily, that each applicant has demonstrated its proposed service warrants a grant of the application under the governing section of the Interstate Commerce Act. Each applicant is fit, willing, and able to perform the service proposed, and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations. Except where noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In the absence of legally sufficient protests in the form of verified statements filed within 45 days of publication of this decision-notice (or, if the application later becomes unopposed) appropriate authority will be issued to each applicant (except those with duly note problems) upon compliance with certain requirements which will be set forth in a notice that the decision-notice is effective. Within 60 days after publication an applicant may file a verified statement in rebuttal to any statement in opposition.

To the extent that any of the authority granted may duplicate an applicant's other authority, the duplication shall be construed as conferring only a single operating right.

Note.—All applications are for authority to operate as a motor common carrier in interstate or foreign commerce over irregular routes, unless noted otherwise. Applications for motor contract carrier authority are those where service is for a named shipper "under contract".

Volume No. OP1–010

Decided: August 7, 1980.

By the Commission, Review Board Number 1, Members Carleton, Joyce and Jones.

MC 96750 (Sub-6F), filed August 1, 1980. Applicant: TRUCKING UNLIMITED, 9215 Sorensen Ave., Santa Fe Springs, CA 90670. Representative: Bobbie F. Albanese, 13215 E. Penn Street, Suite 310, Whittier, CA 90602. Transporting *general commodities* (except used household goods, hazardous or secret materials, and sensitive weapons and munitions), for the United States Government, between points in the U.S.

Note.—Issuance of a certificate in this proceeding shall cancel Certificate of Registration MC 96750 (Sub-2).

MC 120761 (Sub-65F), filed July 30, 1980. Applicant: NEWMAN BROS. TRUCKING COMPANY, P.O. Box 18728, Fort Worth, TX 76118. Representative: A. William Brackett, 1108 Continental Life Bldg., Forth Worth, TX 76102. Transporting *shipments weighing 100 pounds or less,* if transported in a motor vehicle in which no one package exceeds 100 pounds, between points in the U.S.

Decision-Notice

Decided: August 12, 1980

The following applications, filed on or after July 3, 1980, are governed by Special Rule 247 of the Commission's Rules of Practice, see 49 CFR 1100.247. Special rule 247 was published in the **Federal Register** on July 3, 1980, at 45 FR 45539.

Persons wishing to oppose an application must follow the rules under 49 CFR 1100.247(B). Applications may be protested *only* on the grounds that applicant is not fit, willing, and able to provide the transportation service and to comply with the appropriate statutes and Commission regulations. A copy of any application, together with applicant's supporting evidence, can be obtained from any applicant upon request and payment to applicant of $10,000.

Amendments to the request for authority are not allowed. Some of the applications may have been modified prior to publication to conform to the Commission's policy of simplifying grants of operating authority.

Findings

With the exception of those applications involving duly noted problems (e.g., unresolved common control, fitness, water carrier dual operations, or jurisdictional questions) we find, preliminarily, that each applicant has demonstrated its proposed service warrants a grant of the application under the governing section of the Interstate Commerce Act. Each applicant is fit, willing, and able to perform the service proposed, and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations. Except where noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In the absence of legally sufficient protests in the form of verified statements filed on or before October 2, 1980 (or, if the application later becomes unopposed) appropriate authority will be issued to each applicant (except those with duly noted problems) upon compliance with certain requirements which will be set forth in a notice that the decision-notice is effective. Within 60 days after publication an applicant may file a verified statement in rebuttal to any statement in opposition.

To the extent that any of the authority granted may duplicate an applicant's other authority, the duplication shall be construed as conferring only a single operating right.

By the Commission, Review Board Number 2, Members Chandler, Eaton, and Liberman.

Agatha L. Mergenovich,

Secretary.

Note.—All applications are for authority to operate as a motor common carrier in interstate or foreign commerce over irregular routes, unless noted otherwise. Applications for motor contract carrier authority are those where service is for a named shipper "under contract".

Agatha L. Mergenovich,

Secretary.

[FR Doc. 80–00000 Filed 00–00–80; 8:45 am]

BILLING CODE 7035–01–M

Permanent Authority Decisions; Decision-Notice

The following applications, filed on or after July 3, 1980, are governed by Special Rule 247 of the Commission's Rule's of Practice, see 49 CFR 1100.247. Special rule 247 was published in the Federal Register on July 3, 1980, at 45 FR 45539.

Persons wishing to oppose an application must follow the rules under 49 CFR 1100.247(B). Applications may be protested *only* on the grounds that applicant is not fit, willing, and able to provide the transportation service and to comply with the appropriate statutes and Commission regulations. A copy of any application, together with applicant's supporting evidence, can be obtained from any applicant upon request and payment to applicant of $10.00.

Amendments to the request for authority are not allowed. Some of the applications may have been modified prior to publication to conform to the Commission's policy of simplifying grants of operating authority.

FINDINGS: With the exception of those applications, involving duly noted problems (e.g., unresolved common control, fitness, water carrier dual operations, or jurisdictional questions) we find, preliminarily, that each applicant has demonstrated its proposed service warrants a grant of the application under the governing section of the Interstate Commerce Act. Each applicant is fit, willing, and able to perform the service proposed, and to conform to the requirements of Title 49, Subtitle IV, United States Code, and the Commission's regulations. Except where noted, this decision is neither a major Federal action significantly affecting the quality of the human environment nor a major regulatory action under the Energy Policy and Conservation Act of 1975.

In the absence of legally sufficient protests in the form of verified statements filed on or before October 3, 1980 (or, if the application later becomes unopposed) appropriate authority will be issued to each applicant (except those with duly noted problems) upon compliance with certain requirements which will be set forth in a notice that the decision-notice is effective. On or before October 20, 1980 an applicant may file a verified statement in rebuttal to any statement in oppostion.

To the extent that any of the authority granted may duplicate an applicant's other authority, the duplication shall be construed as conferring only a single operating right.

V 45 A G 1980 UMI

Note.—All applications are for authority to operate as a motor common carrier in interstate or foreign commerce over irregular routes, unless noted otherwise. Applications for motor contract carrier authority are those where service is for a named shipper "under contract".

Volume No. OP1-011

Decided: August 7, 1980
By the Commission, Review Board Number 1, Members Carleton, Joyce and Jones.

MC 200 (Sub-481F), filed August 1, 1980. Applicant: RISS INTERNATIONAL CORPORATION, P.O. Box 100, 215 W. Pershing Road, Kansas City, MO 64141. Representative: H. Lynn Davis (same address as applicant). Transporting *meats, meat products and meat byproducts, and articles distributed by meat-packing houses,* as described in sections A and C of Appendix 1 to the report in *Descriptions in Motor Carrier Certificates,* 61 M.C.C. 209 and 766 (except hides and commodities in bulk), from points in Finney County, KS, to points in CT, DE, ME, MD, MA, NH, NJ, NY, PA, RI, VT, VA, WV, AL, FL, GA, MS, NC, SC, TN, IL, IA, IN, KS, KY, MI, MN, MO, NE, ND, OH, SD, WI, and DC.

MC 29910 (Sub-282F), filed July 29, 1980. Applicant: ARKANSAS-BEST FREIGHT SYSTEM, INC., 301 South 11th St., Fort Smith, AR 72901. Representative: Don A. Smith, P.O. Box 43, 510 North Greenwood Ave., Fort Smith, AR 72902.

I—Over Regular Routes Transporting:

(A) *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, cement in packages, and those requiring special equipment), (1) between Albuquerque, NM, and El Paso, TX, from Albuquerque over U.S. Hwy 85 to Las Cruces, NM, then over U.S. Hwy 80 to El Paso, and return over the same route, serving all intermediate points, restricted at Belen, NM, and points north thereof to traffic moving to or from points south of Belen, and further restricted at Hatch, NM, and points south thereof to traffic moving to or from points north of Hatch, (2) between Ogden, UT, and Albuquerque, NM, from Ogden over U.S. Hwy 89 to junction U.S. Hwy 50, then over U.S. Hwy 50 to junction U.S. Hwy 63 (formerly U.S. Hwy 160), then over U.S. Hwy 163 to junction U.S. Hwy 666, then over U.S. Hwy 666 to junction U.S. Hwy 66, then over U.S. Hwy 66 to Albuquerque, and return over the same route, serving the intermediate points of Salt Lake City, Provo and Ogden Arsenal, UT, and the off-route points of Hill Field, Naval Supply Depot near Ogden, UT, and the Geneva Steel Mills near Provo and those within five miles of Salt Lake City, restricted against traffic moving between points in UT, and further restricted to traffic moving on Government bills of lading when moving between points north of but not including Salt Lake City, (3) between Hatch and Deming, NM, over NM Hwy 26, serving the intermediate points of Florida and Nutt, NM, (4) between Deming and Columbus, NM, over NM Hwy 11, serving all intermediate points, (5) between Deming and Hachita, NM, from Deming over U..S Hwy 70 to junction NM Hwy 81, then over NM Hwy 81 to Hachita, and return over the same route, serving all intermediate points between Hachita and junction U.S. Hwy 70 and NM Hwy 81, (6) between Deming and Rodeo, NM, over U.S. Hwy 80, serving all intermediate points, (7) between Lordsburg and Animas, NM, from Lordsburg over U.S. Hwy 80 to junction NM Hwy 338, then over NM Hwy 338 to Animas, and return over unnumbered Hwy to Lordsburg, serving all intermediate points, (8) between El Paso, TX, and Deming, NM, over U.S. Hwy 80, serving the intermediate points of Akela and Cambray, NM, and the off-route points of the Corrilitos Ranches, 10 miles south of U.S. Hwy 80, The Johnson Ranch, 5 miles south of Cambray, The Jernigan Ranch, 4 miles northwest of Akela, The Birchfield Ranch, 20 miles southwest of Akela, and Wemple, NM, (9) between El Paso, TX, and Hatch, NM, from El Paso over alternate U.S. Hwy 80 to junction U.S. Hwy 80, then over U.S. Hwy 80 to Las Cruces, NM, then over U.S. Hwy 85 to Hatch, and return over the same route, serving the off-route points of Radium Springs, Leasburg, Ricon, Hill, and Dona Ana, NM, (10) between El Paso, TX, and Artesia, NM, from El Paso over U.S. Hwy 62 to Carlsbad, NM, then over U.S. Hwy 285 to Artesia, and return over the same route, serving all intermediate points, (11) between Tularosa and Vaughn, NM, over U.S. Hwy 54, serving all intermediate points, (12) between Roswell and Artesia, NM, from Roswell over NM Hwy 2 (formerly unnumbered Hwy) to junction U.S. Hwy 285, then over U.S. Hwy 285 to Artesia, and return over the same route, serving the intermediate points of Dexter, Hagerman, Lake Arthur, Cottonwood and Espuella, NM, (13) between Hagerman and Roswell, NM, over NM Hwy 2, serving all intermediate points, and (14) between El Paso, TX, and San Antonio, NM, from El Paso over U.S. Hwy 54 to Carrizozo, then over U.S. Hwy 380 to San Antonio, and return over the same route, serving all intermediate points south of but not including Carrizozo, NM, and the off-route point of Holloman Air Force Base near Alamogordo, NM.

(B) *dangerous articles and explosives,* (1) between El Paso, TX, and Artesia, NM, from El Paso over U.S. Hwy 62 to Carlsbad, NM, then over U.S. Hwy 285 to Artesia and return over the same route, serving the off-route points in NM east of U.S. Hwy 285 and within 25 miles of Carlsbad, and (2) between Tularosa and Vaughn, NM, over U.S. Hwy 54, serving all intermediate points.

(C) *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), (1) between Albuquerque, NM, and U.S. Engineers Project No. 76, approximately 7 miles southeast of Albuquerque, over unnumberd Hwy, serving no intermediate points, (2) between Las Cruces and White Sands Proving Grounds, NM (located approximately 27 miles east of Las Cruces), from Las Cruces over U.S. Hwy 70 to junction with unnumbered Hwy, then over the unnumbered Hwy to White Sands Proving Grounds, and return over the same route, serving all intermediate points, (3) between Albuquerque and Farmington, NM, from Albuquerque over U.S. Hwy 85 to junction NM Hwy 44 near Bernalillo, NM, then over NM Hwy 44 to Bloomfield, then over NM Hwy 17 to Farmington, and return over the same route, serving no intermediate points, (4) between San Antonio and El Paso, TX, from San Antonio over U.S. Hwy 87 to Comfort, TX, then over TX Hwy 27 to junction U.S. Hwy 290, then over U.S. Hwy 290 to junction U.S. Hwy 80, then over U.S. Hwy 80 to El Paso, and return over the same route, serving all intermediate points, and the off-route points of Royalty, Crane, and Iraan, TX, (5) between Dallas, TX, and Albuquerque, NM, from Dallas, TX, over U.S. hwy 180 to Snyder, TX, then over U.S. Hwy 84 to Ft. Sumner, NM, then over U.S Hwy 60 to Encino, NM, then over U.S. Hwy 285 to Clines Corners, NM, then over U.S. Hwy 66 to Albuquerque and return over the same route, (6) between Post, TX, and Tularosa, NM, from Post over U.S. Hwy 380 to Hondo, NM, then over U.S. Hwy 70 to Tularosa and return over the same route, restricted to traffic originating at or destined to points in NM, (7) between Tularosa and Roswell, NM, over U.S. Hwy 70, serving all intermediate points and the off-route point of Ruidoso, NM, (8) between Road Forks, NM, and Tucson, AZ, (a) from Road Forks, NM, over Interstate Hwy 10 (NM Hwy 14) to junction AZ Hwy 86 at the NM-AZ state line, then over AZ Hwy 86 to junction U.S. Hwy 80 at or near Benson, AZ, then over U.S. Hwy 80 to Tucson, AZ, and return over the same route, serving all intermediate points except Benson, AZ, and (b) between Road Forks, NM, and Tucson, AZ, over Interstate Hwy 10, (9) serving Hollywood, NM, as an intermediate points in connection with carrier's otherwise authorized regular-route between Dallas, TX, and Tularosa, NM, restricted to traffic originating at or destined to points in NM, (10) between Phoenix and Tucson, AZ, over Interstate Hwy 10, serving no intermediate points, restricted against traffic moving between Phoenix, AZ, and points in its commercial zone, on the one hand, and, on the other, Tucson, AZ, and points in its commercial zone, (11) between Lordsburg and Deming, NM, from Lordsburg over NM Hwy 90 to Silver City, NM, then over U.S. Hwy 180 to Deming and return over the same route, serving all intermediate points and the off-route points of Hanover, Santa Rita, Tyrone and the Phelps-Dodge mine site near Tyrone, NM, (12) between Post, TX, and Roswell, NM, over U.S. Hwy 380, serving no intermediate points and serving Post, TX, for purpose of joinder only, (13) between Snyder, TX, and Carlsbad, NM, over U.S. Hwy 180, serving no intermediate points, and serving Snyder, TX, for purpose of joinder only, (14) serving Clovis, NM, as an intermediate point in connection with carrier's otherwise authorized regular-route operations between Dallas, TX, and Albuquerque, NM, (15) serving the facilities of Phelps-Dodge Corp., located in Hidalgo County, NM, as an off-route point in connection with carrier's otherwise authorized regular-route operations, and (16) serving the site of the Little Mountain, UT, Production Testing Facility of the Marquardt Aircraft Company plant approximately 11 miles west of Ogden, UT, as an off-route point in connection with carrier's otherwise authorized regular-route operations over U.S. Hwy 91.

(D) *general commodities* (except those of unusual value, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment) (1) between Las Cruces and San Antonio, NM, from Las Cruces over U.S. Hwy 70 to Alamogordo, NM, then over U.S. Hwy 54 to Carrizozo, NM, then over U.S. Hwy 380 to San Antonio, and return over the same route, serving the White Sands Missile Range, NM, as an off-route point, and (2) between Artesia, NM, and junction U.S. Hwys 82 and 54, over U.S. Hwy 82, serving all intermediate points, and the site of the U.S. Government Solar Furnace, approximately 3.5 miles north of Cloudcroft, NM, as an off-route point.

II—Over Irregular Routes Transporting:

(A) *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), between points in those parts of Luna, Grant, and Dona Ana Counties, NM, south of U.S. Hwy 80.

III—Alternate Routes for Operating Convenience Only Transporting:

(A) *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, cement in packages, and those requiring special equipment) (1) between Ogden and Salt Lake City, UT, over U.S. Hwy 91, serving no intermediate points, restricted to traffic moving on Government bills of lading (2) between El Paso, TX, and the site of the White Sands Missile Range, NM, from El Paso over U.S. Hwy 54 to junction unnumbered Hwy approximately 4 miles north of El Paso, then over unnumbered Hwy to the White Sands Missile Range, and return over the same route, serving no intermediate points, and serving off-route points in NM east of U.S. Hwy 285 and within 30 miles of Carlsbad, NM, in connection with carrier's otherwise authorized regular-route operations between El Paso, TX, and Artesia, NM (3) between El Paso, TX, and Las Cruces, NM, from El Paso across the Rio Grande River to junction NM Hwy 28, then over NM Hwy 28 to Las Cruces, and return over the same route, serving no intermediate points and serving Las Cruces for purpose of joinder only, and (4) between Shiprock and Farmington, NM, over U.S. Hwy 550, serving no intermediate points, restricted against traffic moving between Farmington, NM, and points in its commercial zone, on the one hand, and, on the other, Salt Lake City, UT, and its commercial zone and points beyond Salt Lake City, UT.

(B) *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment) (1) between Albuquerque, NM, and junction NM Hwy 45 and U.S. Hwy 85, from Albuquerque over U.S. Hwy 66 to junction NM Hwy 45, then over NM Hwy 45 to junction U.S. Hwy 85 (about 7 miles north of Los Lunas, NM), and return over the same route, serving no intermediate points, but serving points in the El Paso, TX and Albuquerque, NM commercial zones as intermediate and off-route points in connection with carrier's otherwise authorized regular-route operations between El Paso, TX, and Albuquerque, NM (2) between Vaughn and Roswell, NM, over U.S. Hwy 285, serving no intermediate points, and (3) between Carlsbad, NM, and Ft. Stockton, TX, over U.S. Hwy 285, serving no intermediate points, and serving Carlsbad, NM, for purpose of joinder only.

Condition: To the extent that the certificate in this proceeding authorizes the transportation of classes A and B explosives, it will expire 5 years from the date of issuance.

Note.— Applicant intends to tack this authority to its existing regular-route authority.

MC 61440 (Sub-195F), filed August 4, 1980. Applicant: LEE WAY MOTOR FREIGHT, INC., 3401 N.W. 63rd St., Oklahoma City, OK 73116. Representative: Richard H. Champlin, P.O. Box 12750, Oklahoma City, OK 73157. Transporting *general commodities* (except household goods as defined by the Commission, and classes A and B explosives), serving points in TX as off-route points in connection with applicant's otherwise authorized regular-route operations.

MC 69281 (Sub-56F), filed August 4, 1980. Applicant: THE DAVIDSON TRANSFER & STORAGE CO., a Corporation, 698 Fairmount Ave., Baltimore, MD 21204. Representative: David W. Ayers, P.O. Box 58, Baltimore, MD 21203. *Over regular routes,* transporting *general commodities* (except those of unusual value, classes A and B explosives, household goods as defined by the Commission, commodities in bulk, and those requiring special equipment), (1) between Allentown and Reading, PA, over PA Hwy 222, and (2) between Allentown and Pottsville, PA, from Allentown over PA Hwy 309 to junction PA Hwy 209, then over PA Hwy 209 to Pottsville, and return over the same route, serving all intermediate points, and serving all other points in Berks and Schuylkill Counties, PA, as off-route points.

Note.—Applicant intends to tack this authority with its existing regular-route authority at Allentown, PA.

MC 111231 (Sub-308F), filed August 1, 1980. Applicant: JONES TRUCK LINES, INC., 610 East Emma Ave., Springdale, AR 72764. Representative: Don A. Smith, P.O. Box 43, 510 North Greenwood Ave., Fort Smith, AR 72902. Transporting (1) *plastic pipe, fittings, gaskets, and sealer,* and (2) *accessories for plastic pipe,*

BILLING CODE 7035–01–M

[Ex Parte No. 311]

Expedited Procedures for Recovery of Fuel Costs

Decided: August 12, 1980.

In our decisions of May 13, 20, 27, June 3, 10, 17, 24, July 1, 8, 15, 22, and 29, and August 5, 1980, a 13-percent surcharge was authorized on all owner-operator traffic, and on all truckload traffic whether or not owner-operators were employed. We ordered that all owner-operators were to received compensation at this level.

The weekly figures set forth in the appendix for transportation performed by owner-operators and for truckload traffic is 13.4-percent. We are authorizing that the 13-percent surcharge for this traffic remain in effect, and that all owner-operators are to receive compensation at this level.

No change is authorized in the 2.3-percent surcharge on less-than-truckload (LTL) traffic performed by carriers not utilizing owner operators, the 1.3-percent surcharge for United Parcel Service, nor in the 5.0-percent surcharge authorized for the bus carriers.

Notice shall be given to the general public by mailing a copy of this decision to the Governor of each State and to the Public Utilities Commissions or Boards of each State having jurisdiction over transportation, by depositing a copy in the Office of the Secretary, Interstate Commerce Commission, Washington, D.C., for public inspection and by delivering a copy to the Director, Office of the Federal Register for publication therein.

It is ordered: This decision shall become effective Friday, 12:01 a.m. August 15, 1980.

By the Commission. Chairman Gaskins, Vice Chairman Gresham, Commissioners Stafford, Clapp, Trantum, Alexis, and Gilliam. Chairman Gaskins absent and not participating.

Agatha L. Mergenovich,
Secretary.

TA–W–9153; Island Creek Coal

Long-and-Short-Haul Applications for Relief (Formerly Fourth Section Application)

August 13, 1980.

These applications for long-and-short-haul relief have been filed with I.C.C.

Protests are due at the ICC on or before September 3, 1980. No. 43854, Southwestern Freight Bureau, Agent, (No. B–81), increased rates on common salt, in carloads, between points in Southwestern Territory, as published in Supplement 210 to its Tariff ICC SWFB 2004–J, to become effective September 10, 1980. Grounds for relief—revised rate structure. No. 43855, Southwestern Freight Bureau, Agent, (No. B–72), increased rates on rice, rice products and related commodities, in carloads, between stations in Southwestern Territory, on the one hand, and stations in Eastern, Illinois, Southern, Southwestern and Western Territories, on the other hand. Rates are published in Supp. 209 to its Tariff ICC SWFB 2004–J, Supp. 321 to ICC SWFB 2005–J, Supp. 305 to ICC SWFB 2007–H, Supp. 263 to ICC SWFB 3282–D, and Supp. 176 to ICC SWFB 4390, to become effective September 13, 1980. Grounds for relief—additional revenue to offset increased operating costs. By the Commission.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035-01-M

[Ex Parte No. 380]

Status of Carrier-Affiliated Shippers' Agents

AGENCY: Interstate Commerce Commission.

ACTION: Notice of extension of time to file comments in declaratory order proceeding.

SUMMARY: On July 3, 1980, a declaratory order proceeding was instituted to determine the lawfulness of a railroad's establishing a subsidiary consolidation company to act as an exempt shipper's agent under 49 U.S.C. 10562(4).

The purpose of this document is to give notice that the time for filing comments in this proceeding is extended to September 18, 1980.

DATE: Comments should be filed by September 18, 1980.

ADDRESSES: Send an original and 15 copies, if possible, of any comments to: Ex Parte No. 380, Room 5416, Office of Proceedings, Interstate Commerce Commission, Washington, D.C. 20423.

Send one copy of comments to each of petitioners' representatives:

M. J. Barron, Vice President—Marketing, Detroit, Toledo & Ironton Railroad Co., One Parkland Boulevard, Dearborn, MI 48126.

Lawrence Berman, 747 Third Avenue, New York, NY 10017.

S. S. Eisen, 370 Lexington Avenue, New York, NY 10017.

FOR FURTHER INFORMATION CONTACT: Mark S. Shaffer, (202) 275–7531 or Donald J. Shaw, Jr., (202) 275–7292.

SUPPLEMENTAL INFORMATION: Robert H. Shertz, on behalf of the Local and Short Haul Carrier National Conference of the American Trucking Association, has filed a written request that the time for filing comments in this proceeding (a notice of institution of a declaratory order proceeding published at 45 FR 45410, July 3, 1980) be extended until September 18, 1980. The Conference contends that it needs the time extension to contact its numerous members and properly prepare comments reflecting the members' positions.

We believe the requested extension for the filing of comments is warranted. The extension would provide sufficient time for the Conference to gather the information it needs from its members so that meaningful comments may be filed. The 30-day extension would not, on the other hand, delay the proceeding for an unreasonable period of time.

Accordingly, the time for filing comments in this proceeding is extended to September 18, 1980.

Decided: August 13, 1980.

By the Commission, Robert C. Gresham, Acting Chairman.

Agatha L. Mergenovich,

Secretary.

BILLING CODE 7035-01-M

[Docket No. 37343]

U.S. Railroads; Petition for Declaratory Order; Elimination of Grain Tables From General Rate Increase Master Tariff

AGENCY: Interstate Commerce Commission.

ACTION: Elimination of Grain Tables from General Rate Increase Master Tariff.

SUMMARY: The United States railroads filed a request on December 21, 1979 for the authority to eliminate grain tables from master tariffs publishing rail general rate increases. In a notice served March 19, 1980 (45 FR 19407, March 25, 1980) the Commission sought public comments on the proposed elimination. Nineteen parties responded, all favorably to the proposal. We have found that the grain tables have outlived their original purpose and have become a costly burden. Elimination of these tables will lead to tariff simplification and a reduction in publishing and other related costs. This elimination will apply on all future railroad general rate increases.

ADDRESS: Copies of this decision may be obtained from: The Office of the Secretary, Interstate Commerce Commission, Washington, D.C. 20423.

FOR FURTHER INFORMATION CONTACT: Richard Felder or Jane Mackall, (202) 275–7693.

This action will not significantly affect either the quality of the human environment or conservation of energy resources.

Dated: August 6, 1980.

By the Commission, Chairman Gaskins, Vice Chairman Gresham, Commissioners Stafford, Clapp, Trantum, Alexis and Gilliam.

Agatha L. Mergenovich,

Secretary.

Correction

In FR Doc. 80–17502, appearing at page 39960 in the issue of Thursday, June 12, 1980, please make the following correction:

On page 39971, second column, first full paragraph, under MC 107452, in the 23rd line, "SN" should read "ND". In the next line "MN" should read "NM".

BILLING CODE 1505-01-M

DEPARTMENT OF LABOR

Mine Safety and Health Administration

[Docket No. M–80–89–C]

Galveston Coal Co., Inc.; Petition for Modification of Application of Mandatory Safety Standard

Galveston Coal Co., Inc., Box 6, Bypro, KY 41612, has filed a petition to modify the application of 30 CFR 75.1719 (illumination) to its No. 1 Mine located in Floyd County, Kentucky. The petition is filed under section 101(c) of the Federal Mine Safety and Health Act of 1977.

A summary of the petitioner's statements follows:

1. This petition concerns the installation of lighting on the petitioner's mining machines.

2. The petitioner states that due to the thinness of the seams there is not sufficient clearance between the top of the equipment and the mine roof to allow for installation of lighting.

3. For this reason, the petitioner requests a modification of the application of the standard.

Request for Comments

Persons interested in this petition may furnish written comments on or before September 18, 1980. Comments must be filed with the Office of Standards, Regulations and Variances, Mine Safety and Health Administration, Room 627, 4015 Wilson Boulevard, Arlington, Virginia 22203. Copies of the petition are available for inspection at that address.

Dated: July 9, 1980.

Frank A. White,

Director, Office of Standards, Regulations and Variances.

BILLING CODE 4510-43-M

Office of the Secretary

Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974 (19 U.S.C. 2273) the Department of Labor herein presents summaries of determinations regarding eligibility to apply for worker adjustment assistance issued during the period August 4–8, 1980.

In order for an affirmative determination to be made and a certification of eligibility to apply for adjustment assistance to be issued, each of the group eligibility requirements of Section 222 of the Act must be met.

(1) that a significant number of proportion of the workers in the workers' firm, or an appropriate subdivision thereof, have become totally or partially separated,

(2) that sales or production, or both, of the firm or subdivision have decreased absolutely, and

(3) that increases of imports of articles like or directly competitive with articles produced by the firm or appropriate subdivision have contributed importantly to the separations, or threat thereof, and to the absolute decline in sales or production.

Negative Determinations

In each of the following cases it has been concluded that at least one of the above criteria has not been met.

TA–W–7625; RCA Corporation, Indianapolis, Indiana

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of records did not increase as required for certification.

TA–W–7621; Rockwell International, La Palma, California

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of wheels did not increase as required for certification.

TA–W–8284; Keystone Resources, Greensboro, Georgia

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of aluminum casting alloys did not increase as required for certification.

TA–W–8190–91; Allegheny Ludlum Steel, Wallingford, Connecticut

The investigation revealed that criterion (2) has not been met.

TA–W–9167; White Automotive Service, Inc., Allen Park, Michigan

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–7926; Police, Fire & Street Departments, Parma, Ohio

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–7622; Aileen, Incorporated, Brookneal, Virginia

The investigation revealed that criterion (3) has not been met. Separations from the subject plant resulted from a transfer of production to other domestic facilities.

TA–W–9151; Island Creek Coal Company, Gund Prep Plant, Sidney, Kentucky

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of coal and coke did not increase as required for certification.

TA–W–9152; Island Creek Coal Company, Big Creek Mine #1, Sidney, Kentucky

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of coal and coke did not increase as required for certification.

TA–W–9153; Island Creek Coal Company, Big Creek Mine #2, Sidney, Kentucky

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of coal and coke did not increase as required for certification.

TA–W–7798; Crucible, Inc., Midland Pennsylvania

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of alloy steel bars and stainless steel sheet and strip did not increase as required for certification.

TA–W–8269; General Motors Corporation, G.M. Division, Edina, Montana

The investigation revealed that criterion (3) has not been met. A substantial portion of the parts produced at the Edina Plant are replacement parts for automobiles produced prior to Model Year 1979.

TA–W–8273; South Western Rail Production, TS Inc., Wellington, Texas

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7917; Industrial Transport, Cleveland, Ohio

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–7927; DND Teletronics, Utica, New York

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7604; Henry Richards Co., Hamden, Connecticut

The investigation revealed that criterion (1) has not been met.

TA–W–8120; Rockport Log and Shake, Copalis Crossing, Washington

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7619; Elco Industries Inc., Southington, Connecticut

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

V 4 5 A G 1 9 8 0 UMI

TA–W–8160; GF Business Equip, Crenlo Division, Rochester, Montana

With respect to workers producing electronic modular enclosures, the investigation revealed that criterion (2) has not been met.

With respect to workers producing cabs for agricultural tractors, the investigation revealed that criterion (3) has not been met. Imports of cabs for agricultural tractors are negligilbe.

TA–W–7808; Max Alaways Mill, Sedro Woolley, Washington

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–8825; Commercial Steel Treating, Madison Heights, Michigan

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–7399; Uniroyal Merchandising Company, Houston, Texas

The investigation revealed that criterion (3) has not been met. Separations from Uniroyal Merchandising Company resulted from a general decline in the demand for passenger car tires.

TA–W–8211; Selmear Company, Elkhart, Indiana

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of woodwind instruments did not increase as required for certification.

TA–W–8086–8090; Greif and Company, Fredricksburg, Virginia, Baltimore, Maryland, Everett, Pennsylvania, Hanover, Pennsylvania, Verona, Virginia

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7950; U.S. Steel Corporation, Texas Works, Baytown, Texas

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of welded steel pipe and carbon steel plate did not increase as required for certification.

TA–W–7882; Hurn Shingle Mill, Concrete, Washington

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7848; Levi Strauss Company, San Francisco, California

The investigation revealed that criterion (3) has not been met. Separations from the subject firm resulted from a transfer of production to another domestic facility.

TA–W–7676; International Packings Company, Bristol, New Hampshire

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–8201; Newport Tire Center, Inc., Springfield, Missouri

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–8960; Dearborn Refining Company, Dearborn, Michigan

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–8776; Val-Kro Inc., Buffalo, New York

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–8693; Goddeyne Manufacturing Company, Bay City, Michigan

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–8296; Bowling and Hildebrand Truck, Raleigh, West Virginia

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–8155; Georgia Pacific Corporation, Woodland, Maine

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–8098; New England Drawn Steel, Mansfield, Massachusetts

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7903; Cassens Transport, Edwardsville, Illinois

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–7837; Colt Industrial, Haralson Metal Plant, Bremen, Georgia

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7880; Edmonton Manufacturing Company, Edmonton, Kentucky

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7787; Allegheny-Ludlum Steel, W. Leechburg Works, West Leechburg, Pennsylvania

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of stainless sheet, stainless strip, stainless plate, and silicon sheet did not increase as required for certification.

TA–W–7888; Allegheny-Ludlum Steel, Brackenridge, Pennsylvania

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of stainless sheet, stainless strip, stainless plate, and silicon sheet did not increase as required for certification.

TA–W–8394; The Budd Company, Red Lion Plant, Automotive Frame Operations, Philadelphia, Pennsylvania

The investigation revealed that criterion (3) has not been met. A survey of customers indicated that increased imports did not contribute importantly to worker separations at the firm.

TA–W–7939; Stauffer Chemical Company, Food Ingredients Division, South Portland, Maine

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of Carrageenan did not increase as required for certification.

TA–W–8842; White Automotive Service, Inc., Toledo, Ohio

The investigation revealed that the workers do not produce an article as required for certification under Section 223 of the Act.

TA–W–8690; Brewster Finishing Company, Paterson, New Jersey

The investigation revealed that criterion (3) has not been met. Aggregate U.S. imports of finished fabric did not increase as required for certification.

Affirmative Determinations

In each of the following cases, it has been concluded that all of the criteria have been met, and certifications have been issued covering workers totally or partially separated from employment on or after the designated dates.

TA–W–7995; Dawn Fashion Leather, New York, New York

A certification was issued covering all workers of the firm separated on or after April 24, 1979.

TA–W–7822; Apex Hip and Ridge, Inc., Humptulips, Washington

A certification was issued covering all workers of the firm separated on or after April 11,1979.

TA–W–8081; D & G Shake Company, Inc., Amanda Park, Washington

A certification was issued covering all workers of the firm separated on or after April 10, 1979.

TA–W–7530; Taurus Manufacturing Company, Blairsville, Pennsylvania

A certification was issued covering all workers of the firm separated on or after June 1, 1979.

TA–W–8423; York Luggage Corpration, Lambertville, New Jersey

A certification was issued covering all workers of the firm separated on or after May 12, 1979.

TA–W–7695; Paul's Auto Ignition, Inc., Yonkers, New York

A certification was issued covering all workers of the firm separated on or after April 25, 1979.

TA–W–8005; Southeastern Garment, Clinton, North Carolina

A certification was issued coverning all workers of the firm separated on or after July 1, 1979.

TA–W–7581–7581 A; Henry Guttman, Inc., Coat Fair, Inc., New York, New York

A certification was issued covering all workers of the firm engaged in employment related to the production of women's coats, jackets, and raincoats who were separated on or after June 22, 1979.

TA–W–7465; Acme Precision Products, Inc., Detroit, Michigan

With respect to workers producing automobile moulding, a certification was issued for workers separated from employment on or after March 3, 1979.

With respect to workers producing drives, criterion (2) has not been met.

With respect to workers producing light bezels and door handle assemblies, a survey of customers revealed that increased imports did not contribute importantly to the separation of workers.

TA–W–8613; Gereral Motors Corporation, General Motors Assembly Division, Fairfax, Kansas.

A certification was issued covering all workers of the firm separated on or after December 1, 1979.

I hereby certify that the aforementioned determinations were issued during the period August 4–August 8, 1980. Copies of these determinations are available for inspection in Room S–5314, U.S. Department of Labor, 200 Constitution Avenue, N.W., Washington, D.C. 20210 during normal working hours or will be mailed to persons who write to the above address.

This meeting is for the purpose of Panel review, discussion, evaluation, and recommendation on applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including discussion of information given in confidence to the agency by grant applicants. In accordance with the determination of the Chairman published in the **Federal Register** of February 13, 1980, these sessions will be closed to the public pursuant to subsections (c) (4), (6) and 9(b) of section 552b of Title 5, United States Code.

Further information with reference to this meeting can be obtained from Mr. John H. Clark, Advisory Committee Management Officer, National Endowment for the Arts, Washington, D.C. 20506, or call (202) 634–6070.

Dated: August 7, 1980.

John H. Clark,

Director, Office of Council and Panel Operations, National Endowment for the Arts.
